which may be found fault with—but the soul  
of poetry is so forcibly felt, that we cannot  
stoop to words.

The other principal poem, Sebastian, is  
a Spanish tale of convents and cavaliers,  
of gallant adventure and romantic love,  
laid in the war of the succession, and  
containing some descriptions of the  
scenery of the east coast of Spain. The  
poem is in the irregular Italian metre,  
and about the same length as the Angel  
of the World. This, with the miscella-  
neous poetry which concludes the vol-  
ume, we purpose noticing in our next.

*Journals of Two Expeditions into the In-  
terior of New South Wales; under-  
taken by order of the British Govern-  
ment, in the Years 1817-18.* By John  
Oxley, Surveyor General of the Ter-  
ritory, and Lieutenant R. N. Lon-  
don, 1820. 4to. pp. 408.

As a Government Report, the matter  
contained in this volume, and as a sur-  
veyor, the author's exertions to perform  
the duty allotted to him, are worthy of  
much praise; but as a book for general  
information, or interesting narrative of

travelling adventures, it certainly does  
not appear to us to be worthy of pub-  
lication in so large and so extensive a  
form. The entire substance of these  
expeditions might reasonably have been  
comprized in a small octavo; and the  
maps and charts, on a fair scale, might  
have been so executed as to render the  
whole a moderate, instead of an extra-  
vagant work. A journey of four or five  
hundred miles into the wilds and mo-  
rasses of New South Wales, could hardly  
be productive of events to fill a 50s. tome;  
and, in point of fact, we would under-  
take to state all its material results in  
50 pages. We shall have therefore the  
less trouble in presenting a very full  
analysis of it in small compass to our  
readers; and we are sorry, that with all  
our research, and with the review of  
Wentworth's Statistical Description of  
New South Wales to boot, (for which see  
pages 641 and 647 of the *Literary  
Gazette* for 1819), we shall be able to  
give only a very imperfect idea of this  
part of the world.

The first expedition went down the Lach-  
lan river, through a miserable barren coun-  
try, till the stream was lost in swamps:  
the party then crossed the country about 150  
miles to the Macquarie river, up which they  
returned to Bathurst, after an absence of  
19 weeks. The expedition of 1818, on the  
contrary, proceeded down the Macquarie till  
that river, (supposed by Mr. Wentworth to be  
2000 miles long, and to disembody itself on  
the Western coast;) was also swallowed up in  
a marshy plain, which Mr. Oxley presumes to  
be the border of an inland sea; and thence  
the explorers directed their course due east,  
and regained the coast at the mouth of a  
river called the Hastings, above a hundred  
miles to the north of Port Jackson. Thus,  
we see that a very unimportant part of the  
interior of Holland was explored; and in  
these routes very little is developed either  
respecting the natives, natural history, bot-  
any, or other matters of consequence to be  
known. We simply learn that journeying  
was difficult; and that fish, emus, kangar-  
oos, and black swans, were caught and  
eaten by our harrassed countrymen. The  
natives seen were merely scattered families,  
shy and timid; and on the sea coast more  
numerous and treacherous. Every hill and  
valley, pond and streamlet, was christened  
after some minister of state, governor, judge,  
or great man; and whatever the settlers may  
be in Botany Bay, if these appellations re-  
main, it will be impossible to call the country  
by bad names.

We subjoin the few scanty notices of the  
aborigines.

"A native was seen about half a mile from  
our fires: the dogs attacked him, and when  
called off, he ran away shouting most lustily;  
he was a very stout man, at least six feet  
high, entirely naked, with a long bushy beard,  
he had no arms of any kind.

"Two of the men, who were about a mile  
ahead of the main party, fell in with a small  
native family, consisting of a man, two wo-  
men, and three children, the eldest about  
three years old. The man was very stout  
and tall; he was armed with a jagged spear,  
and no friendly motions of the men (who  
were totally unarmed), could induce him to  
lay it aside, or suffer them to approach him:  
during the short time they were with him,  
he kept the most watchful eye upon them;  
and when the men calling the dogs together  
were about to depart, he threw down with  
apparent fierceness the little bark gunnash  
which had sheltered him and his family dur-  
ing the night, and made towards the river,  
calling loudly and repeatedly, as if to bring  
others to his assistance: he was quite naked,  
except the netted band round the waist, in  
which were women's. The women were  
covered with skins over their shoulders, and  
the two younger children were slung in  
them on their backs.

"We had just pitched our tent when  
hearing the noise of the stone hatchet, made  
by a native in climbing a tree, we stole si-  
lently upon him, and surprised him just as  
he was about to descend: he did not perceive us  
until we were immediately under the tree;  
his terror and astonishment were extreme.  
We used every friendly motion in our power  
to induce him to descend, but in vain: he  
kept calling loudly, as we supposed for some  
of his companions to come to his assistance;  
in the mean time he threw down to us the  
game he had procured (a ringtailed opossum)  
making signs for us to take it up: in a short  
time another native came towards us, when  
the other descended from the tree. They  
trembled excessively, and, if the expression  
may be used, were absolutely *intoxicated*  
with fear, displayed in a thousand antic  
motions, convulsive laughing, and singular  
motions of the head. They were both youths  
not exceeding twenty years of age, of good  
countenance and figure, but most horribly  
marked by the skin and flesh being raised in  
long stripes all over the back and body;  
some of those stripes were full three-quar-  
ters of an inch deep, and were so close to-  
gether that scarcely any of the original skin  
was to be seen between them. The man who  
had joined us, had three or four small opos-  
sums and a snake, which he laid upon the  
ground, and offered us. We led them to our  
tent, where their surprise at every thing they  
saw clearly showed that we were the first  
white men they had met with; they had  
however either heard of or seen tomahawks,  
for upon giving one to one of them, he clasp-  
ed it to his breast and demonstrated the  
greatest pleasure. After admiring it for some  
time they discovered the broad arrow, with  
which it was marked on both sides, the im-  
pression of which exactly resembles that  
made by the foot of the emu; it amused  
them extremely, and they frequently pointed  
to it and the emu skins which we had with  
us. All this time they were paying great at-  
tention to the roasting of their opossums,  
and when they were scarcely warm through,  
they opened them, and, taking out the fat of  
the entrails, presented it to us as the choicest

morsel; on our declining to receive it they ate it themselves, and again covered up the opossums in the hot ashes. When they were apparently well done, they laid them, the snake, and the things we had presented them with, on the ground, making signs that they wished to go; which of course we allowed them to do, together with their little store of provisions and such things as we were able to spare them. The collection of words which we had made at the depot on the Lachlan, we found of no use, as they did not understand a single one. They had neither of them lost the upper front tooth, though apparently men grown.

"Some of the baggage horses, which were a mile or two behind the others, came up to the tents, with nine natives, who had joined them on the road: they were entirely unarmed, and there was but one mogo, or stone hatchet, among them; we had reason to suppose that their women and children were at no great distance, as they were observed to hide themselves when the men were first seen. The greater part of them had either seen or heard of white men, as they were neither alarmed nor astonished at what they saw. I should think that the loss of the front upper tooth is not common to every tribe, as several of these men retained it, although others were without it; the wearing of a stick, or bone, through the cartilage of the nose, appeared common to all of them. They remained about an hour with us; we gave them the fore-quarter of a kangaroo, and putting our remaining pork into a bag, we distributed the iron hoops of the keg in small pieces among them; these were received with as much pleasure as an European would have felt at being presented with the like quantity of gold. It was impossible distinctly to make out anything that they wished to express, by reason of the variety of their gestures; but their frequent pointing to the south-east (the direction of Bathurst), induced us to believe that they thought we were going there, a conjecture which we did all in our power to confirm. Wishing, if possible, to learn if they knew anything of the river, a fishing hook was given to one of them, but he did not seem to understand the use of it until Mr. Evans drew the resemblance of a fish, and made signs that the hook was to take it, when they immediately understood him, and pointing to the east made signs that the fish were there; but our endeavours to learn the distance of the river were wholly fruitless. They appeared a harmless, inoffensive race of people, extremely cautious of giving offence, and never touching anything until they had first by signs obtained permission.

"Few traces of natives have been observed, either on the river, or since we quitted it. The population of this country must be extremely small: as the natives derive their chief support from opossums, squirrels, and rats, which are known to frequent barren scrubs and hollow trees, such neighbourhoods are unquestionably frequented by them in preference to the open country and river banks. It must be a mere accident that enables the natives to kill either a kangaroo or emu: as

to fish, they certainly are ignorant of the manner of taking them by hook and line."

"June 18.—As we were on the point of setting forward, a large party of natives made their appearance on the opposite side of the river: they set up a most loud and discordant noise, making signs, as well as we could understand them, for us to depart and go down the river. After beating their spears and waddies together for about a quarter of an hour, accompanied by no friendly gestures, they went away up the river, while we pursued our course in an opposite direction.

"The natives (on the Macquarie) appear numerous in these regions of apparent desolation: we fell in with several parties in the course of the day, in the whole probably not less than forty, and many fires were seen to the north. Being a mile or two ahead of our party in a thick brush, I came suddenly upon three men; two ran off with the greatest speed; the third, who was older and a little lame, first threw his firestick at me, and next (seeing me still advance) a waddie, but with such agitation, that though not more than a dozen paces distant, he missed both me and my horse. I returned to my party, and in company with them surprised the native camp; we found there eight women and twelve children, just on the point of departing with their infants in their cloaks on their backs; on seeing us, they seized each other by the hand, formed a circle, and threw themselves on the ground, with their heads and faces covered. Unwilling to add to their evident terror, we only remained a few minutes, during which time the children frequently peeped at us from beneath their cloths; indeed, they seemed more surprised than alarmed: the mothers kept uttering a low and mournful cry, as if entreating mercy. In the camp were several spears, or rather lances, as they were much too ponderous to be thrown by the arm; these were jagged: there were also some elamongs (shields), clubs, chisels, and several work bags filled with every thing necessary for the toilet of a native belle; namely, paint and feathers, necklaces of teeth, and nets for the head, with thread formed of the sinews of the opossum's tail for making their cloaks. The men belonging to the camp were heard shouting at no great distance; their affection for their families was not, however, sufficiently powerful to induce them to attempt their rescue from the hands of such unfabulous centaurs, as we doubtless appeared to them."

"Burial.—"Almost directly under the hill near our halting-place, we saw a tumulus, which was apparently of recent construction (within a year at most). It would seem that some person of consideration among the natives had been buried in it, from the exterior marks of a form which had certainly been observed in the construction of the tomb and surrounding spats. The form of the whole was semicircular. Three rows of seats occupied one half, the grave and an outer row of seats the other; the seats formed segments of circles of fifty, forty-five, and forty feet each, and were formed by the soil being trencued up from between them. The cen-

tre part of the grave was about five feet high, and about nine long, forming an oblong pointed cone.

"I hope I shall not be considered as either wantonly disturbing the remains of the dead, or needlessly violating the religious rites of an harmless people, in having caused the tomb to be opened, that we might examine its interior construction. The whole outward form and appearance of the place was so totally different from that of any custom or ceremony in use by the natives on the eastern coast, where the body is merely covered with a piece of bark and buried in a grave about four feet deep, that we were induced to think that the manner of interring the body might also be different. On removing the soil from one end of the tumulus, and about two feet beneath the solid surface of the ground, we came to three or four layers of wood, lying across the grave, serving as an arch to bear the weight of the earthly cone or tomb above. On removing one end of those layers, sheet after sheet of dry bark was taken out, then dry grass and leaves in a perfect state of preservation, the wet or damp having apparently never penetrated even to the first covering of wood. We were obliged to suspend our operation for the night, as the corpse became extremely offensive to the smell, resolving to remove on the morrow all the earth from the top of the grave, and expose it for some time to the external air before we searched farther.

"July 30.—Employed in preparing dead cypress trees for the timber of the raft. The rain continued throughout the day without intermission, and prevented us from making much progress with it. This morning we removed all the earth from the tomb and grave, and found the body deposited about four feet deep in an oval grave, four feet long and from eighteen inches to two feet wide. The feet were bent quite up to the head, the arms having been placed between the thighs. The face was downwards, the body being placed east and west, the head to the east.

"It had been very carefully wrapped in a great number of opossum skins, the head bound round with the net usually worn by the natives, and also the girdle: it appeared after being enclosed in those skins to have been placed in a larger net, and then deposited in the manner before mentioned. The bones and head showed that they were the remains of a powerful tall man. The hair on the head was perfect, being long and black; the under part of the body was not totally decayed, giving us reason to think that he could not have been interred above six or eight months. Judging from his hair and teeth, he might have been between thirty and forty years of age: to the west and north of the grave were two cypress trees, distant between fifty and sixty feet; the sides toward the tomb were barked, and curious characters deeply cut upon them, in a manner which, considering the tools they possess, must have been a work of great labour and time. Having satisfied our curiosity, the whole was carefully re-interred, and restored as near as possible to the station in which it was found." (To be concluded next No.)

## TURNER'S TRAVELS IN THE LEVANT.

Mr. Turner having travelled over so much of interesting ground, and written a great deal (if not very strikingly) about it, we take up his third octavo for a concluding notice. This volume, like the others, is neatly ornamented; and, with the exception of two wood impressions of persons hanged, in good taste: the author surely did not intend these as practical puns on head and tail pieces. Its text consists of accounts of several of the Grecian Islands, and of travels through parts of Asia Minor: to which, by way of addenda, Mr. Turner has thrown in the notes from his common place book, forming the most agreeable portion of his publication, unincumbered with the verbiage of a heavily wrought narrative.

Much of the poetical admiration of the Romaika dance, is dispelled by the following real description of it, as witnessed at Melasso (where, by the by, there are some very fine ruins). The Proestos, in whose house Mr. Turner lodged, had his daughter married; and the author says—

"In the evening he invited me to the marriage, and being glad of such an opportunity of seeing their customs, I went at eight o'clock. I found two rooms full of men singing and drinking; the women were all retired together in another room, from which the men were excluded. After drinking for two hours, the men, at half past eight, descended into the court-yard, where they were met by the women, and such as wished to dance formed a ring, in which I counted forty of them. The music played slow time, and they all danced round a blazing mangal (pan of charcoal) which one man staid in the middle to replenish occasionally. Had the dance been of the sprightliest tune, they were so crowded that they could only move very slow: but, without any doubt, the romaika is the stupidest dance ever invented. The dancers move slowly round, making alternately one step forward and another backward; the men sung as they moved round, but the women remained quite silent and looked excessively melancholy. A party of Greeks, all in their holiday array, and assembled in the air among beautiful and romantic scenery, must always have an interesting and picturesque appearance; and it is only on this account (and on considering the general passion for praising any thing foreign), that I can imagine how any traveler can have expressed any applause of so stupid a dance as the romaika. On my observing the gloomy appearance of the women, a Greek near me told me that they would think it a shame to laugh or talk in the presence of men. Men and women were all dressed in their holiday clothes, in which I saw no difference from those of their countrymen in Constantinople and elsewhere, except that some of the women wore red gowns embroidered with gold, which fiery they would not dare to show in the capital; and that all of them protruded from under these splendid robes, a foot without a stocking, though decorated with an embroidered shoe. I distinguished two pretty women

among them, one thirteen and the other fourteen years old, both married: indeed there were much younger wives. There were two children ten years old, one of whom had been married six months, and the other a year. Nay, there was one ten years old, who had been married two years; the father of this latter one would not give his consent, but her lover gave 100 piastres to the Aga, and by his assistance seized her by force."

Proceeding chiefly along the coast of Anatolia, the author's observations are more entertaining, and his remarks on antiquities, theatres, &c. possess greater novelty; but we can only copy the annexed.

"It is curious to observe the gradual disuse of Greek among the Greeks, produced by the change of their residence. In Greece the Turks speak only Greek; in Constantinople the Greeks speak both Greek and Turkish, but only the former to each other; in Asia Minor, along the coast, they can speak Greek when addressed in it, but talk Turkish to each other, as they did here at Ooliabat. And in the interior parts of Asia Minor they know no other language than Turkish."

The addenda must supply our remaining extracts: it is thus introduced.

"A traveller gathers some information, and meets with some incidents which he cannot weave into the narrative of his journal: I have therefore kept this chit-chat to place it at the end, having always written it down on the spot where it excited my attention. I shall begin with what I observed of the Turks, then detail what struck me of the Arabs, and finish with what I saw and heard of the Greeks."

From the Turkish anecdotes we select the following.

"If a baker sell light bread, for the first offence he is forgiven, or but slightly punished; for the second he is bastinadoed, and for the third beheaded; if the master be not found, his apprentice suffers."

"If a butcher sell bad meat, he is nailed by the ear to his own door-post from sun-rise to sun-set: I remember seeing a Greek butcher nailed thus, and the fellow had the impudence to say to me—'You see me tormented as our Saviour was.'"

"The Turks lately punished a pirate by flaying him alive: they began at the head, but when they came to the breast, the man died with the agony."—1812.

"A Turk was lately beheaded at Buyukdereh (by order of the Grand Vizier, who was walking about in disguise) for having sold, for twenty-four paras, a quantity of chestnuts, of which the price was fixed at twelve paras."—1812.

"The Turks wash a corpse before they bury it, supposing that it is to appear before its Creator, and ought therefore to be quite clean. When it is in the grave, the Imam (priest) addresses it and tells it which road it is to take to arrive in Paradise, and advises it to follow the suggestions of its good genius and reject those of its evil one."

"The Turks acknowledge the existence of Christ as a prophet, and even detail some of the miracles he performed. They call us

infidels because we have not the same faith in Mahomet, who, say they, is the prophet foretold by Moses in the 18th Chapter of Deuteronomy (Verse 15), and the Comforter promised by Christ in the 16th Chapter of St. John, 7th verse. The Greeks, on the contrary, say that Mahomet is the prophet described in the 19th chapter of Revelation, 20th verse."

"At the Courban Bairam (which happens a month or six weeks after the Ramadan) they sacrifice rams and lambs, every man one and the rich eighteen or twenty: these are afterwards eaten or given to the poor. F.'s pun was excellent, 'I suppose that is the reason they call it the *buy ram*.'"

"There is an amusing account in the Koran of Solomon's interview with the Queen of Sheba, which states that the King, being anxious to see her legs, covered the floor with glass placed over water in which were fish; this made her Majesty lift up her robe, to avoid wetting it, and the king thus discovered that her legs were covered with hair."—Sale's Koran, chap. 27.

"A few years ago an English sailor at Smyrna went into an open mosque at the time of prayer: seeing the Turks kneeling and bowing, he flung down his hat and knelt down too. After prayers they seized on him, and took him before the Cady as a convert to Mahometanism. As he could not be made to understand their questions, the dragoman of the English consul was sent for, through whom he was asked if it were his wish to become a Turk. 'No!' he said, he would see them ——— first. 'Why then did you go into the mosque?' 'Why, I saw a church-door open, and I thought any body might go into a church. I have not been in one for three years before, and ——— me if I ever go into one again, if I can't do so without turning Turk.' It was not without great difficulty that the Turks were dissuaded from putting a turban on him by force."

"They (the Turks) account thus for an earthquake: in the bowels of the earth is deposited, say they, a huge fish, and when the Deity is incensed by the crimes of mankind, he gives this fish a violent blow on the tail, which makes it jump about, and the force of its motion agitates the earth."

"The Turks allow that their Emperor may kill, every day, fourteen of his subjects with impunity and without impeachment of tyranny, because, say they, he does many things by divine impulse, the reason of which it is not permitted to them to know. I have been told that a pasha of three tails is authorized by law to cut off five heads a day, a pasha of two tails three, and a pasha of one tail one."

"A mollah (judge) of Jerusalem, being disturbed at night by dogs, ordered all those animals in Jerusalem and its environs to be killed, and thus excited a mutiny among the people, who are forbidden by the Koran to kill any beast unless it be hurtful, or necessary for the nourishment of man. Having, however, by the authority of the Muffi, his father, succeeded in obtaining obedience to his orders, he was emboldened to

issue another still more capricious. The flies being very troublesome to him during the heat of the summer, he ordered that every artisan should bring him every day forty of these insects on a string under pain of a severe fine, and he caused this ridiculous sentence to be severely enforced."

"When a Grand Vizier is favourably disposed (*i. e.*) without banishing him or putting him to death) it is signified to him by a chinoux from the Sultan, who goes to his table and wipes the ink out of his golden pen; this he understands as the sign of his dismissal: if his fate be more severe, he receives an order from the Sultan to await his sentence in a small kiosk (summer-house) just outside of the walls of the Seraglio, where he sits sometimes four or six hours, before the messenger comes to tell him whether he is to be banished or put to death."

"Hussein, Captain Pasha (the famous one who fought at Cheshmeh) when in the bay of Smyrna once, with his fleet, seeing one of his ships run foul of another, ordered the captain on board and beheaded him immediately."

"The same Hussein had a Jew physician called in one day to relieve him from an aching tooth; the clumsy fellow unfortunately drew the wrong one, but as the agony of extraction drowned the pain for a time, he got away undetected; the pain soon returned, and a few days after Hussein meeting the man on the Bosphorus, stopped him and had every tooth in his head drawn."

"The best Otto (Uttar) of Roses in Turkey is made at Casandjik, a small village about a day's journey from Adrianople, where there are large fields of roses for seven or eight miles of country. The proof of its goodness is its easily freezing, being biting to the tongue, and, if put on paper, and dried by the fire, leaving no stain."

From the remaining recollections we take these, respecting the Greeks.

"Greeks may marry a third wife, but not a fourth; by our old travellers, it appears that 150 years ago they could only go as far as a second; in 100 years more, perhaps a fourth will be allowed."

"Every Papas (priest) is buried, sitting up in a chair, but this custom has nothing to do with his wife's promising not to marry again, as Aaron Hill writes."

"The Greeks always expect that the weather, whatever it may be, will change on a Friday."

"At Cousouanki (the village where I passed the night between Boudroun and Melasso), in the coffee-houses, some Greeks were talking to each other about me, before they knew I understood them; they said that Englishmen travelled because they believed that if they died abroad their souls would return to England and animate the body of a child of twelve years old, and thus recommence life; I found this absurdity was believed by the Greek Bishop of Akhisar."

"A Greek, in Melasso, told me that there are miraculous powers in the medals of Constantine the Great, and that if one of them were put on a sieve, it would prevent water running through; he swore to me *μὴ γὰρ*

*ψέω* (by his faith) that he had seen this effect produced by them."

"I heard some Greeks in the coffee-house at Yeronta (Miletus), give, as a reason for Englishmen travelling, that they knew by books where treasures were hid, and that, on finding them, they change, by magic, the pieces of money into flies and make them fly to their houses in England; on arriving at which they again become pieces of money. These fellows tried hard to make me believe in the holy fire at Jerusalem, and told me of many miracles lately performed by the Greek priests of their neighbourhood: they were very confident of being soon liberated from the Turks, and said that this would be accomplished by themselves in three years at most, without the help of the Russians, or any other European power. They said, that all the knowledge of the Europeans, was derived from the Greeks of Constantinople (under the Lower Empire) who were very learned men, who had shut up all the diseases that afflict human nature in a column at Constantinople, so successfully that mankind would never have been afflicted by them again, had not a Jew broken the column. This last is, probably, some fable founded on the brazen pillar in the Hippodrome."

"A Greek woman thinks it unlucky to begin cutting out a gown or making any article of dress on a Tuesday or a Saturday."

"The Greeks think sneezing a good omen; it is a sign their friend or lover remembers them: they will give the name of a friend, or a lover, to each of their fingers of one hand, and suddenly taking hold of one when they sneeze, think themselves remembered by the person whom the finger they have hold of represents."

"The Greek women will put apple pips into the fire or candle; if they jump, it is a sign their friend or lover remembers them; the contrary if they lie quiet."

This superstition resembles that of putting peas in the fire in England on Midsummer-eve, and nuts in Scotland on "Hallowe'en."

The author concludes his work with some strangely inappropriate poetry. The sentiments are well enough, but it is an odd sort of thing altogether to place such a matter at the end of a book of travels; and though we felt a peculiar interest in the fate of one of the relatives, whose loss he deploras (at least we presume so from the identity of name); we must say, that his verse is sadly out of keeping here.

To conclude with a paragraph of useful information. The Greek Islands belonging to the Porte, and their computed population, are 19 in number, with a total of 112,400 souls. viz. Naxos 15,000, Paros 7000, Tino 20,000, Milos 7000, Sira 4000, Zia 5000, Thermis 4000, Argentiera 700, Milo 5000, Amorgo 1500, Polycastron 2000, Santorino 13,000, Nanhio 1500, Astampalla 2000, Nio 3000, Antiparos 200. Andros 15,000, Serpho 3000, Siphanto 7000. The tribute amounts in all to 280,000 Turkish piastres. There are besides Islands of the Archipelago, belonging (as recorded at the Porte) to the Captain Pasha, to the government, to the Steward of the Household,

and to the Mufti; a long enumeration, including Cyprus, Candia, Rhodes, Mytilen, Cos, Tenedos, Scio, &c. &c.; only 31, however, pay tribute to the captain Pasha.

#### HUBER ON ANTS.

[Dr. Johnson's Translation, continued.]

Our preceding extracts furnished a view into the interior of the ants' hill, and displayed the extraordinary motions of these insects, in the care of the rising generation. Pursuing the same subject, we learn, that—

"The insect, in the state of pupa, has acquired the figure it will always preserve; nothing seems wanting but strength and a little more consistence: it is also as large as it will ever be; all its members are distinct, one single pellicle envelopes them. The ant, under this form, continues to move for some moments after its quitting the state of larva, but it soon becomes immovable: it afterwards changes gradually in colour, passing from a fine white to a pale yellow; then becoming red, and in several species, brown, almost verging to black. The rudiments of wings may at this time be seen in those which are destined to fly. The pupa has still many attentions to receive from the workers; the greater part are enclosed in a tissue spun by themselves before their metamorphosis; but they cannot, like other insects, liberate themselves from this covering by effecting an opening in it with their teeth. They have scarcely the power of moving; their covering is of too compact a texture, and formed of too strong a silk, to allow of their tearing it without the assistance of the workers. But how do these indefatigable attendants ascertain the proper moment for this process?—If they possessed the faculty of hearing, we might imagine they knew the fit time, from some noise produced in the interior of the prison by the insects whose development has commenced; but there is no indication favouring this opinion; it is probable they have a knowledge of it from some slight movements that take place within, which they ascertain through the medium of their antennae; for these organs are endowed with a sensibility, of which it would be difficult to form a just idea: whatever it be, they are never deceived."

"Let us still follow them in that labour, wherein are displayed, as it regards their charge, a zeal and an attachment which would justly merit our attention, even were they the real parents of these insects: how much greater then must be our astonishment, when we consider that they bear no further relation to them, than that of being born under the same roof. Several males and females lay in their enveloping membrane in one of the largest cavities of my glazed ant-hill. The Labourers, assembled together, appeared to be in continual motion around them. I noticed three or four mounted upon one of these cocoons, endeavouring to open it with their teeth at that extremity answering to the head of the pupa; they began thinning it, by tearing away some threads of silk where they wished to pierce it; and at length, by dint of pinching and biting this tissue, so extremely difficult to break, they formed in it a vast

number of apertures. They afterwards attempted to enlarge these openings, by tearing or drawing away the silk; but these efforts proving ineffectual, they passed one of their teeth into the cocoon, through the apertures they had formed, and by cutting each thread, one after the other, with great patience, at length effected a passage, of a line in diameter, in the superior part of the web. They now uncovered the head and feet of the insect to which they were desirous of giving liberty, but before they could release it, it was absolutely necessary to enlarge the opening; for this purpose these guardians cut out a portion in the longitudinal direction of the cocoon, with their teeth alone, employing these instruments as we are in the habit of employing a pair of scissors. A considerable degree of agitation prevailed in this part of the ant-hill; a number of ants were occupied in disengaging the winged individual of its envelope; they took repose and relieved each other by turns, evincing great eagerness in seconding their companions in this undertaking. To effect its speedy liberation, some raised up the portion or *bundlette* cut out in the length of the cocoon; whilst others drew it gently from its imprisonment. When the ant was extricated from its enveloping membrane, it was not, like other insects, capable of enjoying its freedom, and taking flight: nature did not will it that it should so soon be independent of the labourers. It could neither fly, nor walk, nor without difficulty stand; for the body was still confined by another membrane, from which it could not, by its own exertions, disengage itself.

"In this fresh embarrassment, the labourers did not forsake it; they removed the satin-like pellicle which embraced every part of the body, drew the antennae gently from their investment, then disengaged the feet and the wings, and lastly, the body, the abdomen, and its peduncle. The insect was now in a condition to walk and receive nourishment, for which it appeared there was urgent need. The first attention therefore, paid it by the guardians, was that of giving it the food it had placed within their reach.

"The ants in every part of the ant-hill were occupied in giving liberty to the males, females, and young labourers, that were still enveloped. On being dispossessed of their coverings, the remnants were collected and placed aside in one of the most distant lodges of their habitation; for these insects observe the greatest order and regularity. Some species of ants remove these shreds to a distance from the ant-hill; others cover the exterior surface of their nest with them, or collect them in particular apartments."

Such are the principal features in the rearing of the young of these minute in size but wonderfully populous and industrious colonies. We pass over slightly the flights of the male and female ants from their native hill, and the process for establishing new nations. The details are extremely curious for the naturalist, but may as well yield room, in pages read by all ages and classes, to other and as interesting particu-

lars. Our selections here are consequently less ample than we should otherwise have made them.

"The male and female ants, when they take a long flight from the ant-hill, do not show that singular instinct which guides bees, wasps, and other insects, in again finding their habitation. This instinct consists, in their knowing how to move in every direction around their abode, without straggling, in order to examine its position, and the several places in its vicinity. We may be soon convinced of this by displacing a hive. The first day the bees never venture abroad, unless they have previously visited all the neighbouring objects: they turn round on all sides, keeping an eye upon their dwelling, without which, it may be readily conceived, it would be impossible they could return. The Queen Bee does the same when she goes forth to meet her paramour in the air. But our winged ants, on the contrary, when they quit the ant-hill, keep their hack continually towards it, and go off in a right line to a distance, from which it would be no easy matter to perceive it. We might from this infer, that they would never return to it. But I did not confine myself entirely to this observation; for I kept sentry, from the time of their departure until night, and even several days in succession, to be fully assured they did not return to the ant-hill. In this way I have arrived at the conviction, that their return is one of those fables with which we have been a long time amused. What, then, becomes of these insects, accustomed as they have been, to live in a convenient spacious abode, sheltered from every inclemency of the weather, and receiving every attention from the labourers, suddenly relying upon their own guidance, deprived of all these advantages?"

"We know that in the class of insects with four membranous wings, the males are destitute of offensive weapons, and do not possess that admirable apparatus which the greater part of females put in use in the establishment of their family; they have neither chisel-shaped teeth, nor stings, nor ovipositors (*torieres*). The several ants we remark among the greater number of bees and wasps, ichneumons and tenthrines, &c. are exercised by the females alone, or by the labourers, their representatives. The defence of the nest is also confided to them; the males, after attending to the office of reproduction, become useless to the family of which they are members. The life of male ants cannot be of long duration; deprived of their attendants, incapable of providing their own subsistence, and returning no more to the ant-hill that gave them birth, how can it possibly be of any long continuance? Their life is either naturally limited to a few weeks, or hunger will speedily terminate it: whatever it be, they disappear in a little time after the period of their amours; but they never fall victims, as happens with bees, to the fury of the labourers."

"At the period when the career of males is terminated, that of the females is scarcely commenced: they bear the germs of future generations, and these germs are fecundated.

Their history is closely connected with the history of ant-hills, and embraces several curious, and hitherto unknown, particulars."

One of the most remarkable of these is, the fact that the female ant immediately, and voluntarily strips off her own wings, and thus becomes domesticated! Then commences the charge of the numerous labourers who attach themselves to her.

"The females are conducted into the interior of the nest, and commence by being entirely dependent upon the workers. The latter, hanging to each of their legs, guard them with assiduity, and never permit them to go out. They nourish them with the greatest care, and conduct them into quarters whose temperature appears the best adapted to them; but they do not abandon them an instant. Each of these females loses, by degrees, the desire of quitting her abode. Her abdomen increases in size: at this period, she no longer experiences constraint. She has still a constant guard; a single ant accompanies her every where, and provides for her necessities. The greater part of the time the worker rests upon its abdomen, with its posterior legs stretched out upon the ground. It appears to be a sentinel stationed to survey the female's actions, and to seize the first moment when she begins to lay, to carry off the eggs. It is not always the same ant which follows her; this is relieved by others, who succeed it without interruption; but when the maternity of the female is well known, they commence by rendering her that homage which the bees evince for their queen. A court of from ten to fifteen ants continue follow her; she is incessantly the object of their cares and caresses; all are eager to collect around her, offer her nourishment, and conduct her in their mandibles, through difficult and ascending passages. They also lead her through all the different quarters of the ant-hill. The eggs, taken up by the labourers, at the instant of their being laid, are collected around her. When she seeks repose, a group of ants environ her. Several females live in the same nest; they show no rivalry; each has her court; they pass each other uninjured, and sustain, in common, the population of the ant-hill; but they possess no power; which, it would seem, entirely lodges with the neuters. However, as they receive the same honours as queen bees, I shall sometimes give them the titles of queens."

"In whatever apartment," says Gould, "a queen ant condescends to be present, she commands obedience and respect. A universal gladness spreads itself through the whole cell, which is expressed by particular acts of joy and exultation. They have a peculiar way of skipping, leaping, and standing upon their hind legs, and prancing with the others. These frolics they make use of, both to congratulate each other when they meet, and to show their regard for the queen. Some of them gently walk over her, others dance round her, and all endeavour to exert their loyalty and affection. She is generally encircled with a cluster of attendants, who, if you separate them from her, soon collect themselves into a body, and inclose her in the midst. However romantic this description may appear, it may easily be proved by an obvious experi-

The workers, small as they are, even carry their bulky sovereign ladies about, taking the task in turns as they are fatigued ! and the close of the drama, as stated in a note by the translator, is worthy of its progress.

"The attachment of the labourers to the females would appear to extend even beyond the existence of the latter; for, when a pregnant female dies, five or six labourers rest near her, and during several days, brush and kiss her continually, either in token of lasting affection, or that by these means they hope to reanimate her."

#### *A Monody on the Death of Mr. Grattan.* pp. 8.

A very feeling and poetical effusion has been published at Ridgway's, to the memory of Mr. Grattan; no action of whose life did him more honour than his mode of leaving it. May his dying advice have all the effect it ought to have upon the country which he loved, and to which he left this invaluable legacy. Though the poem is so short, we cannot resist impropotional quotation.

Grattan! the triumph o'er death,  
Thy fervid days' in jestic close,  
Thy kindling hope, and bright resolve,  
Bequeath'd to me, with thy parting breath,  
A boon as great as aught thy mind  
E'er strove to win for human kind.  
We catch a glimpse of unknown powers,  
Of the coming world than ours,  
Seeing, that high and holy views  
Such glories o'er thy couch diffuse,  
That life can nought more precious give,  
Than thus, like thee, to cease to live.

Thy patriot heart desir'd to exhale  
Its latest sigh within the pale  
Where Chatham, deeply honour'd, fell,  
Dying, like him, in duty's path,  
Heav'n check'd this wish—not in its wrath,  
But lest thy rising soul should trace,

In those it lov'd on Earth so well,  
Such pangs as time can ne'er efface,  
Had other eyes or hearts than thine  
Bestow'd the last and dearest cares,  
For, blest and blessing in each tie  
The charities of life supply,

'Twas thine domestic joys to prove,  
Through a long line of circling years,  
Whose mingling radiance but appears  
One summer's day of weeded lore.

When, on Ierne's emerald shore,  
Thou saw'st her grateful myriads pour,  
Her cliffs all kindling into life,  
As swift receded from thy view

That beautiful theatre of strife,  
The land that found thee always true—  
The workings of thy mighty mind  
Must in their circle have combin'd,  
Of thought, of feeling, passion, more

ment. If you place a queen ant, with her retinue under a glass, you will, in a few moments, be convinced of the honour they pay, and esteem they entertain for her." In reference to no rivalry being experienced, he says, "You may sometimes expect to find two Yellow Queens in the same colony. I have once or twice met with three. They most usually reside in the same lodgement, and live together in perfect harmony and union."—T.

Than e'en thy eloquence could reach—  
Too deep for tears, too strong for speech.  
The multitude, with fond respect,  
Avails each mark of feeling check'd:  
The light wave, rippling on the shore,  
Was plainly heard—the parting air,  
But when this hollow'd silence broke,  
When e'er thy voice was heard to swell,  
In one magnificent farewell,

As if thy country's Genius spoke.— \* \* \*  
Yet though thy name illum'd th' historic page,  
As Patriot Statesman, Orator, and Sage,  
Though nations blest and rival scapes hung  
On the commanding accents of thy tongue—  
There was a dully beauty in thy life,  
In Nature's lap, remote from toil and strife,  
Soothing deep Sorrow with this dearer boast,  
Who nearest saw, admir'd and lov'd thee most.

We believe this tribute to be from a lady's pen.

#### DESCRIPTION OF ODESSA.

[From the German of Dr. Meissner, lately published at Halle.]

Those who visit Odessa for commercial purposes usually travel by sea, while those who visit it for the sake of the baths, generally go by land. The latter mode of travelling is attended by many inconveniences: in the *Steppes*\*, it is very difficult to obtain a sufficient number of horses. If a party chuse to travel in the Polish fashion, that is to say, in the form of a small caravan, they employ hired horses, and take along with them every thing that may be requisite for the space of four or five days. This supply includes not only provisions, but also water and wood. The latter articles are greatly needed by the Colonists, with whom the Russian Government has endeavoured to people the *Steppes*; though they have, it is true, in some measure supplied the want of water by means of cisterns, and have substituted dry dung for fuel. I know of nothing more tedious than travelling across the *Steppes*, those immeasurable levels, bounded only by the horizon. At sea, the element itself, the activity of the ship's crew, and in calm weather, the anxiety for a favourable gale, contribute to keep the mind unceasingly employed. But the monotony of immense plains, covered only with grass and gigantic chisties, is in the highest degree oppressive to the senses. It is seldom that even a solitary, misshapen tree, marks the spot where the colonist has constructed his hut, half buried under-ground. Troops, and the *Bands of the Steppes*, as they are called, are the only occupants of this soil, which is fertile, though the present as well as the next generation, must labour hard for its cultivation ere their posterity can hope to derive from it, the means of subsisting with comfort. To the above wants, may be added that of materials for building, which are only to be procured at Severinowka, a place belonging to Count Severin Potocki; it furnishes a light calcareous kind of stone, of which Odessa is principally built.

When it is recollected that 30 years ago, the inhabitants of this place lived beneath tents, and that from the village and the little

\* The Russian Deserts.

Tartar Fort of the Inlet of Kalfajeb, a town has risen whose population is calculated at 28,000; the rapidity of the improvement naturally excites astonishment. Odessa is most advantageously situated for trade; it lies between the mouths of two important rivers, the Dnieper and the Dniester, about 6 miles distant from each, and vessels readily seek shelter in the bay against the storms which render navigation so dangerous in the Black Sea. In the year 1796, the town received its present name from the Empress Catharine; but it owes its prosperity to the Emperor Alexander, who appointed the Duke de Richelieu to be Governor of Bessarabia and the Crimea. The Duke watched over the welfare of Odessa with paternal tenderness; the population continued to increase every year; and it was not until he had ensured the happiness of thousands that he left the place, accompanied by the prayers and blessings of both rich and poor.

The situation of Odessa is by no means picturesque, the houses of the town extend as far as the *Steppes*, and the sea-shore is flat and without vegetation. In dry weather the dust is unbearable, and in the rainy season the unpaved streets are covered with deep mud. The mixture of oriental dresses, manners, and languages, however, presents a most lively and novel picture. A stranger might imagine himself transported into one of the trading towns of the Levant; for though the majority of the population are Russians, yet the Greeks and Karais (a Jewish sect from some of the eastern countries) are exceedingly numerous. Their bazars contain all the produce of the East, from shawls down to rose-pastilles; and the Italian language is universally understood. On festival-days the liberal-minded merchants here permit a species of amusement, which the oppressors of the Greeks do not suffer them to enjoy in their native country, namely, a dramatic performance in the modern Greek language. The piece which I saw represented, certainly bore even less resemblance to the ancient Greek drama, than the performers did to their glorious ancestors; it was a translation from a Russian play. I was, however, much pleased to hear, in the recitation of the actors, those harmonious tones, which I had never been able to discover in the common conversation of the modern Greeks; the *ore rotunda loqui* was the only circumstance which served to remind me of the ancient Hellas.

With respect to diversity of languages, nothing can be more interesting than the conversation-rooms of the Quarantine-Establishment at Odessa. They consist of long galleries, 5 or 6 feet in breadth, with a partition on either side. Behind one of these barriers, are the foreigners of the Quarantine house, and behind the other the merchants of the town. In general, foreigners are not detained here until it be ascertained that they are free from all plague infection. As soon as their ships are laden with grain, they are permitted to depart, and from behind the partitions above mentioned, they transact business with the inhab-

bitants of the town. I happened to be at Odessa in the year 1816, a period when many countries were visited by scarcity, and Russia, through her super-abundance, was destined to supply the greater part of Europe. Upwards of 300 vessels of all countries were constantly lying in the harbour waiting to take in their cargoes. In the Quarantine Establishment, almost all the languages of Europe and of the East resounded at the same moment, whilst every one endeavoured to drown the voice of his neighbour, and the inhabitant of the South accompanied every word with an expressive gesture. The whole scene forcibly reminded me of the lines of Dante:—

*Diverse lingue, orribili favelle,  
Parole di dolore, accenti d'ira  
Facevan un tumulto, il qual s'aggira  
Sempre in quel aria.*

In the years 1812 and 1813, 3000 of the inhabitants of Odessa were carried off by the plague. It is said, that a Turk, who escaped quarantine, spread the infection among the dancers of the Opera. Another more poetic story, is that a swallow lighted on a ship that had the plague on board, and carried off some feathers for her nest. Some time after, a child picked up a young swallow which had fallen from this very nest, and his whole family were immediately infected. The nature of the disease was not immediately known; but the plague soon spread over a great part of the surrounding country.

## ORIGINAL CORRESPONDENCE.

### CHELTENHAM WATERS.

(Having in a review of a pamphlet, published by Dr. Neale, on the subject of the Cheltenham Waters, (a subject of infinite importance to a very numerous class of invalids), expressed that opinion of the statements therein contained, which they, *prima facie*, appeared to warrant; we have felt bound by a sense of candour and impartiality, to yield a place to the subjoined letter, from Dr. Newell, on the other side. We will not say—

"Who shall decide when doctors disagree;" for, referring to the quantum of human health and life which is at stake, we consider this matter to be highly worthy of being settled; and venture to suggest to those concerned at Cheltenham, the expediency and propriety of having the wells carefully analyzed by some eminent and disinterested chemist, whose name will carry authority with it; and lay the results honestly before the public.

With regard to Mr. Halpin's pamphlet, mentioned in our last, all we shall say at present is, that it takes the same line of argument with Dr. Newell's letter; but it is more personal, and somewhat coarse. Affidavits are produced, as if this were a hard-swearing horse-dealer's case, at Nisi Prius, or a trial at the Old Bailey. In such a contest, the Literary Gazette can take no share: private vilifying cannot affect the question at issue, which is no less than the salubrity or insalubrity of these celebrated Spas; and having by the following insertion, put both parties before the public, we shall, in whatever future articles the subject may demand, avoid, as far as possible, the criminatory part of it; while we give our best attention, in our study or

on the spot, to those scientific investigations which appear to be so absolutely necessary to set Cheltenham right in the eyes of the country.]

To the Editor of the Literary Gazette.

Cheltenham, June 30th, 1820.

SIR,—After reading an article in the Literary Gazette of June 24th, upon the subject of Cheltenham Waters, to which is subjoined extracts from a pamphlet recently published by Dr. Neale, upon their nature and qualities, I was much struck with the very partial nature of the statement there given of these celebrated springs.

I must claim attention from your candour and liberality, while I attempt to shew you that Dr. Neale's representations are in some instances erroneous, and in others quite unfounded.

It will perhaps be best, in the first place, to settle the character of Dr. Neale's publication, by stating to the public, through the medium of your paper, the circumstances under which it was published, and the views it was intended to answer; after which I will concisely state to you a history of the numerous wells of this place, and the medicinal properties of the waters they contain.

From recent exposures which have taken place at Cheltenham, it appears that the pamphlet in question was written for the express purpose of recommending the water of the old well; and Dr. Neale actually received one hundred pounds, as a reward for the services it was calculated to produce; besides which, to use Dr. Neale's own words, "Certain advantages were held out to me, as likely to arise to myself individually from this undertaking, as all the expenses of advertising, printing, and publishing the pamphlet, were to be defrayed by Captain Matthews (the renter of the old well), as well as whatever expenses might arise, should I be exposed to legal proceedings, from the revenge or resentment of the other proprietors; in short, I was to be borne out harmless in the affair, and was offered, verbally, a subsequent interest to accrue conditionally."

This statement requires no comment. It is not therefore to be wondered at, that in order to fulfil his agreement, Dr. Neale should have gone a good deal out of his way, in commenting upon the rival establishments; and that he should have made use of assertions to establish his point, which I trust I shall shew are untrue in themselves, as well as contradicted by all medical experience.

To make good what I have advanced, I must beg leave to remark, that the well of water which Dr. Neale designates as the original Spa Water, and to recommend which was the principal motive of his pamphlet, was never examined by Dr. Fothergill at all, though he gives its contents as the analysis of that celebrated physician; and, for any thing Dr. Neale can know to the contrary, it may contain as much muriate of soda as either of the wells at the Montpellier or Sherborne Spas, which he so much condemns.

The fact is, that the original spring, and which was analyzed many years ago by Dr.

Fothergill, became dried up, or nearly so, as much as ten or twelve years since; and the well, which was not more than six or eight feet deep, was sunk about two years ago to the depth of seventy feet, where water was found in the clay, just as it is found in all the new wells.

What the medicinal quality of this water is, as well as that of the other numerous wells here, I will notice hereafter; but must first attend to Dr. Neale's extraordinary assertions, of the deleterious nature of muriate of soda or common sea salt, in the proportion contained in Mr. Thompson's wells.

In what school of medicine or what field of experience he obtained this notion, he has not explained to us; but when he asserts that muriate of soda, in the quantity that is found in Cheltenham water, is capable of exciting into inordinate action the blood vessels, and, to use his own words, "that many a torpid liver, which might have remained for years in a quiescent state, comparatively harmless to its possessor, has been speedily thrown into violent inflammatory action, succeeded by suppuration, and the patient been hurried into the grave sooner by some years than would have happened had he not been put on a course of these stimulating waters;" and that, "in one instance, a fatal apoplexy had been produced, to his own knowledge"—he asserted what he cannot prove; and although this assertion was well calculated to answer his own purpose, and to instill into the public mind a prejudice highly injurious to the reputation of the Cheltenham springs, it will have little influence on the minds of medical men of experience on the spot or elsewhere.

Another invidious observation of Dr. Neale's, as applicable to the Montpellier spas is, "that in their *clumsy* attempts to render some of these waters more aperient, the *mizera* of the waters appear to have no fixed rule in adding the saline solution: but again I must observe, that this can hardly occur at the old wells, because the quantity of aperient salts contained in those waters, is in general quite adequate to produce the effect required upon the bowels."

In Dr. Neale ignorant that the saline solution, as he calls it (and which is put in italics, to insinuate that it may be composed of any purgative salt) is a solution of the salts produced by evaporating Cheltenham water itself? Has he the smallest shadow of proof for this insinuation? or, on the contrary, does he not know that concealment upon this subject, has never been attempted? or that every thing connected with these wells is, and always has been, open to public inspection and enquiry? These being undisputed facts, how can he justify himself for the unwarrantable part he has taken? or, how can he satisfactorily explain himself to those who are capable of forming a correct judgment on the subject?

Before I take leave of Dr. Neale's pamphlet, I ought to notice shortly what he has called the *joacular* part of it. In this, he directs his imaginary friend in Scotland (who is supposed to have a weak saline water upon his estate) in a method which he says

his southern neighbours possess, of "adding to the strength of their mineral waters, and thereby reaping a rich harvest from the credulity of their visitors." He then goes on to say, that a few tons of Glauber and Epsom salts must be provided, and mixed with the pure element, from some rapid torrent or deep well; and when salted to the taste (as Mm. Glasse would call it) get your composition recommended by some "complicated edition of a monthly, philosophical, or medical journal, by saying, 'We congratulate the public on the discovery of a rich mineral water, &c. &c.'"

This Dr. Neale calls jocularly. The sensible part of mankind, however, will consider it in a more serious point of view, and may very naturally ask, what reward the recommenders of so gross an imposition would be entitled to?

The jocularly of Dr. Neale's production, though levelled against the favored town of Cheltenham, will fall pointlessly to the ground; and, although among the conflicting opinions of men, there will always be found those who from ignorance, prejudice, or more unworthy motives, will take the wrong side of a question, still the good sense of the public will in the end prevail; and the excellence of Cheltenham water, as a remedy in many of the diseases which afflict suffering humanity, will be acknowledged and sought after when its traducers will be sunk and buried in oblivion.

The reflection of Dr. Neale upon the medical men, who have long practised at Cheltenham, would not be worthy of notice, were it not for the concluding sentence, which, at their expense, conveys a compliment to himself.

After expressing his surprise, that "none of the medical men who have resided here for years, have noticed and commented upon what he calls a fact," but which I trust has been satisfactorily proved to have been a misrepresentation, he states that, "such ungrateful tasks are generally left to any casual labourers in the vineyard, who like myself may choose to take them up from a pure love of truth."

Of the delicacy or the truth of this remark I must leave the world to form their own opinion.

I beg leave to disclaim any thing personal to Dr. Neale in what I have advanced, upon the attack he has made upon the Cheltenham waters. My motives have been to correct misrepresentation: how far I have been successful, the public must judge.

I will now, as I promised, give you a concise history of the wells and waters of Cheltenham;—the result of twenty-eight years experience, as a practitioner in this town.

From the first discovery of the saline spring, in 1718, to the period of his late Majesty's visit here, in 1788, there was but one well, which was about eight feet deep, and was the receptacle of a scanty spring of water, issuing out of the side of a slightly sloping bank, in a field a few hundred yards to the south of the town of Cheltenham.

His Majesty finding there was no water for culinary purposes at Bays Hill Lodge, the

manion of the late Earl Fauconberg, where he resided, commanded a well to be sunk for the convenience of the house, which is situated a few hundred yards to the westward of the original Spa. At the depth of seventy or eighty feet, a spring was discovered, which, on examination, was found to possess the same purgative properties as the original water; and it continued to be used as such by many of the frequenters of Cheltenham, for several years before the commencement of the Montpellier, or Mr. Thompson's Spas.

In process of time this well became less productive in water, and ultimately quite dry.

About this time, it was found by Mr. Thompson, on examining the soil in the neighbourhood of the old well, the property of which he had recently purchased, that at a depth of sixty feet or more, water of the same quality was to be met with, in consequence of which several wells were sunk.

It was also found, that although many of the wells produced abundance of water in the first instance, the quantity gradually diminished; and that some of them, as had been the case in the King's well, ultimately became dry.

This made it necessary to dig new wells almost every year. In the mean time, the proprietors of the Old Spa, in order to supply the deficiency in the original well, sunk new ones also with the same success; and within the last two years, a new establishment altogether has been formed, called the Sherborne Spa, in honor of the nobleman of that name, who is lord of the manor, which has waters of the same properties, and where the proprietors have built a magnificent temple, and at great expense have laid out walks and drives, highly ornamental to the town.

Thus there are three establishments, at all of which the saline water is drunk, and belonging to the whole there are nearly one hundred wells.

The greater number of these, however, are used to supply water for evaporation, to obtain the salts, for which of late years, there has been a vast demand from every part of the world.

The soil in the immediate neighbourhood of Cheltenham is a dark blue clay, filled with numerous marine productions, as shells, &c. and interspersed in some places with considerable masses of iron pyrites. By what revolution of our globe this formation has been produced, it is not the place here to enquire; but it commences where the calcareous structure which forms the Cotswold Hills ceases, and extends a distance into the vale of Gloucester, and to a depth, neither of which have as yet been ascertained. As this clay is of the same quality, the water which pervades it is impregnated with the same principles. The impregnation of Cheltenham water consists in purgative salts and iron. They have also other impurities, in common with all waters which pervade earthy matter; and although these are fit objects for chemical enquiry, they have little or nothing to do with their medicinal efficacy. The predominant salt is sulphate of soda, afterwards sulphate of magnesia, and muriate

of soda. The iron is held by the carbonic acid gas.

In these numerous wells there may be shades of difference as to their strength; but I much doubt whether to such an amount as to produce any sensible difference in their effects upon the human body; and this opinion has not been lightly taken up, but is the result of many years of observation and experience.

Neither does it appear to me in a practical point of view, that the trifling variation there may be in the proportions of these respective salts, is of any consequence; for men of experience know that a mixture of purgative medicines act better than any will do separately; and it may be from this law that the combination as it exists in the waters here, has made them so efficacious.

It has been asserted, that it is incompatible with the laws of chemical affinity, for muriate of soda and sulphate of magnesia to exist in the same solution. If this is the case, and a double decomposition were to take place, it would increase the predominance of sulphate of soda; and the muriate of magnesia which would thus be formed, is as mild and nearly as active as aperient as the sulphate of magnesia has been long known to be.

It may be remarked, however, that the laws of chemical affinity are varied by the quantity of menstruum in which salts are held; and indeed, these substances in a state of dryness hardly act upon each other at all. From this it may happen that in the analysis of mineral waters, combinations may be varied, or new ones formed, producing results not exactly corresponding with their relations, as existing originally in the water. This may in some measure account for the discordant results given by different chemists of most mineral waters.

These differences, however, are of less importance than a practical knowledge of their effects upon the human body in disease; and, fortunately for Cheltenham, this experience is too firmly established to be shaken by any illiberal or unfounded attacks, from whatever quarter they may proceed; or to be further confirmed by any attempts in their favor in my power to make.

I am, Sir,  
Your very obedient Servant,  
THOMAS NEWELL, M.D.  
And Surgeon Extraordinary to the King.

## ARTS AND SCIENCES.

*Philology.*—M. Frederic Adelung, counsellor of state to the Emperor of Russia, has lately published, in 153 pages, "A View of all known Languages, and their Dialects." In this View we find in all 987 Asiatic, 587 European, 276 African, and 1264 American languages and dialects, enumerated and classed; a total of 3064. This very remarkable publication is only the introduction to a Bibliotheca Glottica, on which this indefatigable philosopher has been long employed.

**MSS.**—Professor Cramer, at Kiel, discovered two years ago, in the library of the Convent of St. Gallen, a MS. of the eleventh century, which contains illustrations of Juvenal which are said to be of greater importance than any hitherto known. He has now published a specimen on occasion of the king's birth day, under the title of, *Specimen novæ editionis Scholasticæ Juvenalis*.

Baron Niebuhr, Prussian Ambassador to the Holy See, has again discovered and published several ancient MSS. hitherto unknown. They are chiefly fragments of Cicero's Orations pro M. Fonteio, and pro C. Rabirio; a fragment of the 9th book of Livy; two works of Seneca, &c. Baron Niebuhr has dedicated this edition to the Pope, by whose favour he was enabled to discover these literary treasures in the library of the Vatican.

**Italy, 10th June.**—In the prosecution of the excavations at Pompeii, several buildings have lately been laid open in the fine street leading to the temples of Isis and Hercules, and to the theatre. In one house, which is supposed to have belonged to a man of letters, some surgical instruments of excellent workmanship were found, and several paintings of fruit and animals, very well executed.

## LEARNED SOCIETIES.

### OXFORD.

June 10th, the following degrees were conferred:—

**MASTERS OF ARTS.**—T. Philipps, University College, Grand Compounder; B. S. Claxson, Worcester College; W. Perkins and Rev. J. Piccop, Lincoln College; G. Hammond, Fellow of Merton College; Rev. C. H. Martin, Exeter College; Rev. Alfred Tooke, St. Mary Hall; Rev. H. Baker Tristram, Christ Church; G. T. Austen Knight, St. John's College.

**BACHELORS OF ARTS.**—Mon. A. Hill Trevor, Noblesman of Christchurch; F. J. Pearce, Esq. Exeter College, Grand Compounder; G. F. Thomas, Worcester College; W. Whately, New College; H. W. Wilder and J. Parker, Oriel College; W. H. Desaze, University College; J. Aspinall and R. Fayle, St. Mary Hall; J. Forster, St. Edmund Hall; T. T. Churton and Archer Clive, Brasenose College; R. W. Jelf, H. L. Neave, and G. M. Coleridge, Christ Church; R. Alder Thorpe, Scholar of Corpus Christi College; J. T. Round, Scholar of Balliol College.

June 17th.—Yesterday the following degrees were conferred:—

The Rev. Mr. Franks, M. A. of Trinity College, Cambridge, was admitted a reader.

**DOCTOR IN DIVINITY.**—Rev. G. Sheppard, University College, Grand Compounder.

**BACHELORS IN DIVINITY.**—Rev. J. Lin-

gard, Brasenose College; Rev. J. Williams, Fellow of Jesus College.

**MASTERS OF ARTS.**—Rev. John Templer, and Rev. R. Greaves, Wadham College, Grand Compounders; Rev. H. B. Donville, Oriel College, Grand Compounder; W. Blackstone Lee, Fellow of New College; Henry Siamore, Wadham College; Rev. S. V. Seagrave, Magdalen Hall; F. De Chair, Oriel College; James Mure, Rev. H. Pearce, and Rev. E. Elms, Christ Church; Rev. P. Fillett, Scholar of Pembroke College; G. E. Outley, Rev. Rice Hughes, and Rev. James George, Jesus College; Rev. N. W. Hallward, Worcester College; Rev. J. Jeffries Coles, Balliol College.

**BACHELORS OF ARTS.**—Maurice Yescombe, Esq. Exeter College, Grand Compounder; J. Butt, Lincoln College; J. Wiggitt and T. Quarles, Exeter College; Hasler Capron, Brasenose College; Rev. J. Holson, Magdalen Hall; J. P. Carpenter, Christ Church.

June 1st. Yesterday the following degrees were conferred:—

**BACHELOR AND DOCTOR IN DIVINITY.**—Rev. George Richards, M. A. some time Fellow of Oriel College, and now one of the Vicars of Bampton, in the county of Oxford, grand compounder.

**DOCTOR IN CIVIL LAW.**—Wm. Birkett Allen, B. C. L. Fellow of St. John's College.

**MASTERS OF ARTS.**—F. Bruen, Esq. of Christ Church, grand compounder; Rev. J. Chambers, All Souls' College; Rev. E. Day Hulkes; G. Cobb; Rev. A. Benoni Evans, St. John's College; Rev. T. Clarke, Brasenose College; E. Quin, Magdalen Hall.

**BACHELORS OF ARTS.**—H. Clapton Keogh, Esq. Christ Church, grand compounder; J. Worsley; and W. Bury, Fellows of New College.

### CAMBRIDGE.

June 11th.—The Rev. F. R. Hall, Fellow of St. John's College, was admitted Bachelor in Divinity. J. Dashwood, Esq. of Trinity Hall, Bachelor in Civil Law.

T. A. Broadhead, Esq. of Christ College, and W. Lambie, Esq. of Caius College, were on Wednesday last admitted Bachelors in Physic; and Mr. J. J. Tucker, of St. John's College, Bachelor of arts.

## FINE ARTS.

### BRITISH INSTITUTION.

[Recollections suggested by the Exhibition of Portraits, continued.]

No. 121. *Portraits of Henry VIII. with Jane Seymour, their son Prince Edward, and the Princesses Mary and Margaret, sisters of the King.*—Painted by Holbein. — SOCIETY OF ANTIQUARIES.

We have copied this title from the "Descriptive Catalogue of Portraits," of the British Gallery; but if the persons represented be those therein named, this is a picture of strange anachronisms. First, Jane Seymour died, according to Anstey, on the fifth day after the birth of Prince Edward; and here we see her placed by the side of her son, grown old enough to be sent to a public

school. Secondly, his aunts Mary and Margaret, taking the data from the appearance of his age, must have been elderly ladies; Princess Margaret being forty-six and Princess Mary thirty-seven when their nephew Prince Edward was yet unborn. Surely then the title of this family piece is not derived from the learned body to whom his late Majesty \* presented the interesting picture.

Is it not more reasonable to presume that the two ladies standing before the throne, are the sisters of Prince Edward, Mary, the daughter of Catharine of Arragon, and Elizabeth, the daughter of Anne Boleyn, by which we have the children of the first three queens of Henry VIII., Jane Seymour being the third wife of this capriciously uxorious monarch. Mary was born seventeen, and Elizabeth five years, before their royal brother; which, allowing for his age as described by the painter, would make the youngest a woman grown. Hence the family piece might have been painted by order of the sovereign, when he happened to be in good humour with all the group. The other female next the throne perhaps was the then reigning queen. It is known that the king, according to his humor, was sometimes lavish of his favour to his children, and at other times menaced them with degradation. Mary he created Princess of Wales when only five days old, although she was but presumptive heiress. She afterwards, as well as her sister, held no higher title than the Lady Mary. It may not be generally known, that the title of 'Majesty' was not used to the king until a later period, it being first addressed to the contemporary Emperor of Germany.

It would be difficult to point to a more curious specimen of the graphic art in this extensive and valuable collection, than that under consideration; as it conveys not only a picture of the persons and correct costume of the age, but a faithful representation of the architecture and decoration used in the royal palaces, when the gothic style was giving way to the introduction of the Italian mode of building. And here we perceive the first approaches to a new taste, in the revival of that which existed long before the Gothic had birth.

Holbein was employed by King Henry as an architect and designer, for the embellishments of his palaces, as well as his painter; and made many alterations in the palace at Whitehall, of which this subject very likely exhibits one of its state apartments.†

The garden, as seen through the doors, affords some information to the curious, in the decoration of the plot, immediately joining the palace; and this, judging from the parterres, and particularly the trophies, which savour of Holbein's design, evince the care that was bestowed upon the pleasure garden; an art in which the English have long prided themselves, and for which they have latterly

\* This circumstance is not mentioned on the Catalogue; we respectfully recommend its insertion in the next edition.

† Though we have our doubts as to the matter, and think Malbasse full as likely as Holbein to have painted this picture.—Edo.

derived great reputation, all Europe acknowledging the superiority of English landscape gardening.

The sweet description of a garden attached to the palace at Windsor, from the pen of a royal youth confined in that ancient pile, will illustrate, this horticultural skill of our countrymen four hundred years ago.

"Now was there made, fast by the touris wall  
A garden faire; and in the corners set  
An Herber greene, with wandis long and small  
Railit about; and so with tree-is & set  
Was all the place, and hawthorn heggis knit,  
That lyf & was none, walkye there forbye,  
That might within scarce any wysp aspre.

So thick the boughis; and the levis grene  
Beschedat all the allies that there were,  
And middia every harbere might be seue  
The scharpe, grene, suete junipere,  
Growing so fast with branchis here and there,  
That, as it seemed to a lyf without,  
The boughis spred the harbere all about."

There is yet another trait in this picture, that cannot fail to interest the inquisitive in the habits and customs of the ancient royal household, which have furnished some of our favorite harbs with imagery for their delightful musings—namely, the introduction of the male and female fool.

Here we behold them, licensed as they were, rambolling about the palace garden, ready to amuse the first royal idler who should chuse to stroll where "boughis spread the harbere all about."

The name of this female Patch has escaped research: the male jester appears to be that merry witty wight, Will Somers, of whom we shall say something in the subjoined article.

No. 131. *Portrait of William Somers.—Painted by Holbein.*—HIS MAJESTY.

This "mirth moving" head has remained the veriest personification of the jester, superseding all the pen could describe. Its motto well might be, "The image of the jest I'll shew you here at large." The archness, the gibe, the quaintness, stamped on the countenance of merry Will, point unequivocally to the "Jest unseen, inscrutable, invisible, as a nose on a man's face, or a weathercock on a church steeple." Here the painter has exhibited, by his art, the superior power of description which the pencil holds over the pen, touching personal identity. Doubtless he had seen him thus, when brooding some new wagery, he tapped his knuckles against the lattice, and arrested some one who had a fellow taste for frolic, with, "I have a jest to execute that I cannot manage alone."

Likely enough Holbein was the man; for we have it on record that painters have

\* Prince James.

§ Trees. †† Living mar. ‡ Boughs.

¶ There is an engraving of this.—E.D.

Both Holbein and Mabuse were celebrated bonis vivants. Mabuse almost lived in the taverns, and Holbein was so attached to his bottle, that, in return for writing the name of Erasmus under the head of a shrivelled friar, in his private sketch-book, that great scholar reported by writing Holbein under the head of a drinking sot.

all along been wits and humourists. Besides, to indulge the hypothesis, was he not the friend and protégé of Sir Thomas More—the greatest wit that ever wore the chancellor's robe, and the boon companion of Erasmus? He who had ever ready "some excellent jests fire new from the mint." And further, to shew what a constellation of talent and fun played round the sun of Henry's court, we have only to mention another humourist, in the person of Jean de Mabuse, the other favorite painter of Henry VIII., who had nearly killed the Emperor Charles V. with laughter, whilst at a feast, with his waggeries.

Little is now known of the character of these eccentric retainers of the court; for although the appellation of fool is held synonymous with jester, yet it appears that folly was assumed by some as a cloak to cover mischievous pranks that would not have been tolerated but in the wearer of the party-coloured suit. Hence he was often made the satirical instrument of party spirit; and many an absurd courtier stood more in awe of the fool than of a minister or priest. He was sometimes set upon the froward, the oppressor, the hypocrite, and the bigot too; and has put to shame those whom no one else dared to reproach. Such licensed humourists were useful about a court, when kings were arbitrary, and ministers too obsequious; and when there was no press, to expose the misdeeds of men of power.

Will Somers doubtless was one of the superior order of fools, as his wit was begotten by a quick perception of current events. His freedom with the king, when the pope had lavished upon him so many fulsome compliments, and dubbed him for his polemics, "Fidei Defensor," is evidence of this. Henry was at table, with his courtiers, and elated by their flattery, when the sagacious jester familiarly laid his hand upon the shoulder of royalty, and said, "Let's You and I defend each other, my master Hal, and leave the Faith to take care of itself." This is not the only instance on record of a fool's opinion on matters of doctrine, in times of polemical controversies; for Archee, the fool of Bishop Laud, was made a partizan of those who opposed that wrong-headed prelate. His wit is chronicled. Laud was diminutive in person, and a zealot. Archee was desired to say grace, (fools were often used to prophane holy customs) "Great laud to the Lord," said the wag, "and little Laud to the devil."

But to return to King Henry's jester. He had formerly been in the service of a Mr. Farmer, of Eaton Newton, a gentleman for whom it may be presumed he felt a grateful affection. He had, like Sir Thomas More, refused to acknowledge the king's supremacy, and had moreover sent a small sun and a clean shirt to a poor sequestered monk; for which offences the arbitrary king seized his property and brought him to ruin. Will was one of the few who had the felicity to retain his sovereign's favour to the last. It is likely that his mirth beguiled the sad hours of the king, when disease occasionally confined

him to his chamber, long before his death. It was when drawing near his end, that the jester interposed in favour of his first patron, with, "My good King Henry will not forget my old master, and let his wife and children want bread." The monarch, roused to compassion by this artless address, immediately ordered a restoration of the property.

The custom of keeping fools is of great antiquity. They were retained by princes, popes, bishops, and nobles, in most parts of Europe. Theophilus, the Emperor of the East, ordered his court fool to be whipped, for telling that his daughter was playing with dolls.\*

A succeeding emperor, Michael, played off a prophane joke upon the Empress Theodora, by the agency of a fool. He pretended that the patriarch wished to bestow his blessing upon her. She attended to receive the holy boon, when the buffoon, attired in the sacred vestments of the patriarch, and attended by mock priests, addressed her with the utmost obscenity and boisterous ribaldry. Similar prophane pranks were common to all Christendom in those rude times.

## SKETCHES OF SOCIETY.

### THE HERMIT IN THE COUNTRY. No. 5.

LADY GRIZELDA M'TAB'S HALL.

"What will your ladyship have for dinner?" said Jessy, (her female fit totum), with a hungry look and a broad anxious eye. "Parrich," replied lady Grizelda, in broad Scotch; not that she could not talk as high English as any one, but that when she meant to be kind and condescending to her inferiors—to persuade the lower order, or to be confidential and without pretensions, she stooped to the vernacular of Auld Reekie. "Humph," quoth Jessy, whose interior echoed the word in a hollow tone; for Jessy, as well as her lady mistress, had had an egg and a glass of toast and water for dinner the day before.—Jessy's toast differing a little from that of her mistress, for lady Grizelda's was burned bread immersed in the limpid stream, whilst Jessy's was pure caldar water, and her toast was "The de'il tak the quality goings-on."

Now, it must be made known to the reader, that this day was the vigil of a grand ball to be given by her ladyship to all the beauty and fashion of Edinburgh, and all her numerous quality cousins and companions; not forgetting the law-legion which came in by dozens, like clauses in a deed or agreement, to swell the list and to increase the expense. Three hundred cards of invitation had been issued on this important occasion; and her house had literally been turned inside out, in order to prepare it for this grand let off, the report of which, lady Grizelda was aware, would spread far and near.

Three weeks had been occupied in making ornamental knick-knackeries for her suite of fanciful apartments, ornamental hangings,

\* The Emperor was averse to image-worship. The fool alluded to this: being deficient in proof, was whipped as a tell-tale and a liar.

transparencies, arches of evergreens, festoons, drawings, chalkings, &c. and three nieces were all this time employed in uniting the efforts of their taste to give effect to this fancy scene. No money was spared upon the occasion; although dealt out with economy, and made to go the further by the loan of the united plate of six cousins, and by her floors being chalked by a poor relation.

Lady Grizelda had much to accomplish by this ball and supper; for, first, it was long talked of, and must answer all expectations; secondly, she had the honor of her title and noble family to support,—albeit the former rested upon courtesy, and the latter was supported by government pension, yet there was nobility and antiquity enough in both, and neither must be disgraced. Six suits of livery were, therefore, pulled out of an old chest, aired and brushed up, and were to be made to fit five mercenary *fiancées*, in addition to her ladyship's old family footman, page and butler—being one and the same representative of servitude in the house.

The drilling of the liveried recruits was left to Andra; and the table turn-out was all rehearsed in models and ticketed cards, by way of dishes and supper ornaments, by the commander in chief (Lady Grizelda) and by her three female aides-de-camp. Above all, Andra was ordered to speak high English in announcing the nobility as they arrived; and his repeating lieutenant, a smart footboy out of place, was instructed to give audibility to each title of marquess, earl, lord, lady, Sir Alexander, the baron (a law lord), and even to the private gentlemen bearing the names of their estates, even should the estate be sold, because a name goes a great way; for instance, Dalnaglassing, Balmagash, Lavrock Hill, Stony Castle, Tinalbyers, Glenburnie, Invercairig or New Park!—why, the gentlemen would be nothing without them!

But it is high time to introduce our reader to lady Grizelda. Her ladyship stands about five feet ten and a half in her shoes, is as upright as a sergeant's pike, as thin as a hard run greyhound, and has so strong a profile, and so national width, that it resembles one side of a Lochabar battle-axe. If high cheek bones are marks of being high bred and born, her ladyship has the highest pretensions on that head, and—as to points about her, she is all points together. A supercilious look indicates the quality of old maid, who has either entirely overlooked our sex, (perhaps from retaliation) or cannot stoop to the ordinary race of beings. A fluxen wig surmounting her argent crest (once fire red) completes her picture.

The ball-night now arrived, and a fast preceded it, in order to make her three nieces the fitter for dancing, to keep her domestics active and keen, and herself cool and collected. The frugal egg and toast and water was the family fare. Indeed Andra had been so *egged* on this week, that he felt scarcely able to bear the yoke of servitude. The maids too had nothing but a shake down for their couch, all the furniture being displaced. A couple such balls would have proved fatal to her ladyship's domestics.

At eleven o'clock at night, a blaze of light

and an open door, proclaimed that her ladyship was at home; and by midnight, a battalion of chairmen showed to all the town that Lady Grizelda M. Tab received company.

The party was divided into three orders of beings; the professionals, the *moderées* and the *ultras* of fashion. The black corps of law and physic looked deadly to purse and constitution; they mustered very strong, and were made up partly of relatives, and partly of entertaining friends. The *moderées* were antiquated nobility and decent gentry of the old school, who dropped in at, or before eleven; and who came to take a hand at cards, or to see their children and grandchildren dance, and to shake hands with some threescore cousins, and connections with whom they were certain to meet. The *ultras* were the travelled nobility of the country, together with their shades and imitations, their seepphants and copies, who served as caricatures to these living pictures of *haut ton* and elegance. These arrived from midnight, until two in the morning, and came only to lounge, to waltz, and to cut up their acquaintance. The *ultras'* ladies heads were built up in such castles of braids, hair-bows, ornamental combs, brilliant crescents (no conjugal reflections, this ornament being one of the East and not of the North), feathers, flowers, &c. that the small women were extinguished under them, whilst the materialists were like elephants bearing castles.

When the magnificent suite of apartments was filled, the ladies with their tower headresses recalled to mind the Tower of Babel; for there was a variety of tongues, the broad Scotch of the antiquaries, the half and half of the *moderées*, the lisp, the insipid, the drawl, and the hyper-English of the *ultras* and their followers. The leading features, however, of the society were winning smiles, modest beauty, engaging deportment, and numerous families.

Nowhere was more agility displayed than in the youthful dancers. Sun-bright eyes, with complexion, which to look on was to love, contrasted by raven or dark Auburn hair, were frequently apparent in the mazes of the dance: such northern lights are attractive beyond expression. Next came the mild, the bluntd, full blue eye, with glossy light-brown hair, and that complexion of repose, whose quietude tells the heart that its best interests lie there, that there its affections may rest, nor seek for further happiness. Lastly, the November tints of declining Flora, blooming in neglect, like wall-flowers beyond the reach of Hymen's hand, stood, statue like, against the hangings of the apartment, glared the forced smile, pouted the faded lip, joined mentally in the dance, or accepted, with urbanity and gratitude, the hand of the elderly advocate, the juvenile complaisant clerk to the signet, or the returned hanger-on student.

Now turned to the groups of lookers-on, the knots of criticsers, and the files of connoisseurs. Quizzing-glasses are up; and looks fall upon ankles, ivory necks, and well turned shoulders. What an ordeal for the fair to pass through! Some dance with all

their hearts, and some with all their minds. The untravelled Caledonian maid is nature's child: she shines the Tersiphoire of the reel. The travelled, practised beauty, studies each attitude and glance, and conquers in the artful waltz. Returned emigrants strike in the quadrille; while the *moderates* do their best in the English country dance.

And now the supper is announced! What buzzing, what arming, what seeking of partners, and what looking out for table companions! How are the eyes at work! Hope, fear, delight, anxiety and doubt, all reign in this little moment.—The supper is of the best. It is well chosen and befitting the table of a person of quality. The wines are exquisite; but the Lady Grizelda is not obtrusive in pressing them on her male friends. An *ultra* remarks, that the champagne has the taste of *Reverez-y*; and the ill natured ones say, that the negus is *water-proof*. But barring these two remarks, every one goes away at day-light, delighted with the urbanity, the kindness, the welcome and the hospitality of their Lady Hostess, who has put herself to no inconsiderable expense to please her friends.—Nor was the fête without its effect; some made mischief, and some made matches, in consequence thereof.

"Gang to bed, bairns," cries her ladyship, to her household troops, giving them a glass of wine each. They retire with a sigh. A great load is off their minds, a very little one is on their stomachs.—Now do her ladyship and nieces collect the ends of wax tapers, gather together the fragments of the feast, and unite the remains of bottles in comely decanters for another day,—this will be a rare week for the calls of country cousins! And they will not fail to make kind enquiries after her ladyship's health. The carnival will be short, and Lent must succeed it.

Well, it was one happy night! one splendid banquet! The wish to please overcame, upon this occasion, every other passion; and, after all, what are Lady Grizelda's reflections after this costly treat? What the difference betwixt herself and the most expensive dame at the west end of the British metropolis? The former can reflect with satisfaction, on having made a return, to her numerous entertaining friends, can flatter herself with standing on the record of fashionable parties, without any injury to herself or to her neighbours. A highland visit, or a prolongation of abstinence, will soon make up the expenditure of the feast; whilst Lady Squander is ruining herself by her parties in quick time, and either falls a self-devoted victim, at the shrine of fashion, or visits the continent, until time or death wipes off her debts, and leaves her unpaid tradesmen literally "to pay the Piper," of her fancy ball.

## THE DRAMA.

### KING'S THEATRE.

On Saturday, after *Il Flauto Magico*, was performed a new Ballet, *Le Plumeau Rouge*; a performance probably produced with the mere object of varying the list of Ballets. It

## VARIETIES.

was a representation of a fashionable ball. Quadrilles, some of them extremely pretty, were exhibited, with some national dances. A reel, a Russ dance, and unfortunately for our national graces, an English hornpipe. The Ballet might admit of improvements; but we presume that this was simply intended as a substitute. The house was full.

DURAY LANE closed on Saturday till next month. Kean is to run through his principal parts before going to America. As we have nothing to observe upon the dropping of the curtain, we may give our readers a bit of amusement, by transcribing the printed form of letter with which rejected pieces are returned to their authors, from this theatre. As if it were not sufficiently mortifying to fail, the poor devils get an extra slap in the face by being assured, that while the writer begs to be spared the pain of pointing out their demerits, the doors of the theatre are open to "every kind of talent!"

*Theatre Royal, Drury Lane.*

Sir—I am desired to return the manuscript of —, which you submitted to the judgment of Mr. Elliston.

The reasons which have led to the determination of returning it you will spare me the necessity of writing; they are founded upon the best attention, and upon the strictest impartiality.

Mr. Elliston is flattered by the preference which you have shown to the establishment; and, while he expresses his hope that you will still be mindful of its interests, he has the honour to declare his determination to open the doors of this theatre to every kind of talent which it may be in his power to sanction and reward. I am, &c.

Acting Manager.

**THE HAYMARKET THEATRE.**—This theatre opened on Monday with an Address, the Green Man, and a new farce called *Oil and Vinegar*. The first, noticed the convenience of seeing and hearing which is enjoyed at this house; and announced, that the new theatre, to be built for next season, would be better, but not bigger. The second, exhibited Mr. Terry in his fine caustic peculiarity to great advantage, and introduced a Mr. Younger, from Dublin, in the unimportant part of Lord Rowcroft, Parley in Tokely's renowned Major Dimple, a Mr. Williams, from Bath, as Closséat, and a Miss Leigh, from Bristol, as Bertha;—characters which do not afford sufficient grounds for estimating the merits of their representatives. The third is barely amusing, though stated to be from the pen of that humourist, Mr. F. Hooker. The performances however were throughout of an entertaining cast; and with the prospect of a new, moderate-sized theatre, the public may continue for one year more to endeavour to relish them, in spite of the noise and confusion of lobbies, apparently contrived on purpose to offend decorum and preclude gratification from the stage; and at the risk of life from passages and outlets evidently constructed to favour the destruction of a considerable number of the audience in the event of alarm or accident.

Two rein-deer, one male and the other female, were in November last; conveyed from Lapland to a plain about two leagues from Ghent, were they live in a state of perfect freedom. They have endured the change of climate exceedingly well. The female has recently brought forth a female fawn, which is perfectly healthy, and there is every reason to expect that it may be successfully reared. This is the first instance of these animals having thriven and multiplied at so great a distance from their native country.

**Cathedral Abuses.**—A very marked and proper notice has been taken in Parliament of the indecent traffic by which our Cathedrals are turned into mere show, for the selfish gains of individuals connected with the chapters. The trees in the churchyard adjoining Westminster Abbey have, it seems, been cut down, for booths and benches to be hired out at the spectacle of the coronation. Indeed, the whole sacred depository of the ashes of the dead is as actively turning into show-rooms, as any ground ever was for a fair at Cuskerwell or Totterhill-fields. Surely, surely this is very imbecorous and unbecoming. What sentiment but disgust can be inspired, when the very graves are dishonoured for a paltry gain; and posts and stakes are struck through mouldering corpses, to sustain these profane edifices of unblended lucre. We trust that having been noticed in consequence of this indecent proceeding, the House of Commons will not stop; but apply a general remedy to the disgraceful practices which exist, as was truly stated, in St. Paul's and Westminster; as well as in all places of the same sacred description, where similar abuses prevail.

**FAIR PUN.**—A late member for Trinity College, Dublin, found himself seated one day at a large dinner, given by one of the senior fellows of that university, near a young man to whom he had not been introduced. They, however, soon entered into conversation; and the M. P. was quite delighted by the colloquial powers and great information of his neighbour. He took an early opportunity of asking his host the name of the young gentleman. "I thought you knew him," was the reply. "It is — the new Fellow." (It is to be remarked, that the Fellows of Trinity College, Dublin, vote for members of parliament, and are generally very influential in elections.) "Ah!" said the member, "is that the case?" "I really felt an attraction for him." "I do not doubt it," replied Dr. Kyle; "it must be an elective attraction."

At the Irish bar, Ninian Mahaffy, Esq. is as much above the middle size, as Mr. Collis is below it. (Mr. Mahaffy, in Curran's life time, was Deputy to Sir Jonah Barrington, Judge of the Admiralty in Ireland, and whenever he presided there, Curran used to say, that Court was very fitly called, the *high Court of Admiralty*.) When Lord Redensdale was Lord Chancellor in Ireland, Messrs.

Mahaffy and Collis happened to be retained in the same case a short time after his Lordship's elevation, and before he was acquainted personally with the Irish bar. Mr. Collis was opening the motion, when Lord R. observed; "Mr. Collis, when a barrister addresses the court, he must stand." "I am standing on the bench, my Lord," said Collis. "I beg a thousand pardons," replied his Lordship, somewhat confused; "sit down, Mr. Mahaffy." "I am sitting, my Lord," was the reply to the confounded Chancellor.

On this occasion, the following epigram, (attributed, as every pun in Ireland, good or bad is, to Lord Norbury, but really the production of a barrister then eminent, but now retired from the bar) was composed. Mahaffy and Collis, ill paired in a case, Representatives true of the rattling sise ace; To the heights of the law, though I hope you will rise,

You will never be Judges, I'm sure of *aside*.

The motto of the city of Cork arms is, "*Statio benefida carinis*," altered from the *malis* of Virgil; and most deservedly, with regard to the harbour of Cork. The city arms are of course commonly adopted for signs in houses of entertainment. But the ingenuity of a sign painter has, by a happy blunder, made the motto quite appropriate for an eating-house, over which his graphic pencil has displayed the arms. He has exhibited it, "*Statio benefida carnis*," (omitting the central *i*), which may be translated, An excellent place for meat.

The Bishop of Winchester has very speedily rendered serious the good humoured jest of his venerable brother of Durham, in our last Number. His lordship died at Chelsea, on Wednesday, in his 79th year, and 40th of his episcopacy.

## METEOROLOGICAL JOURNAL.

JULY, 1820.

Thursday, 6.—Thermometer from 36 to 60. Barometer from 30.30 to 30.31. Wind N. E.  $\frac{1}{2}$ .—Generally cloudy, with sunshine.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*The Second Book.* By Geoffrey Crayon. Second Vol. London, 1820. 8vo. pp. 419.

[The success which attended the republication in England of the first and original volume under this title, has induced the author thus early to reappear before the world; and we are not the less pleased with this, on account of feeling some self-satisfaction at having taken the lead in the periodical and critical press, to welcome his literary labours, and to show that American talent was as liberally estimated and as freely praised amongst us as British; and that the charge of national bigotry and prejudice was not so well founded as it was frequently made, by the majority of Mr. Irving's fellow citizens. The present volume, which is not inferior to its precursor, and is consequently a most agreeable performance, contains fifteen papers, five of them on the festivities of Christmas. Among others, we have been much pleased with *Little Britain*, as a picture of manners; and with the *Stage Coach*, as a natural sketch. The following, however, is of a length more practicable for transplantation into our page without being cut down, and we select it as a fair example of the clear and an entertaining as well as clever and sagacious view of John Bull, by a native of another country.]

### JOHN BULL.

There is no species of humour in which the English more excel, than that which consists in caricaturing and giving ludicrous appellations, or nick-names. In this way they have whimsically designated, not merely individuals, but nations; and in their fondness for pushing a joke, they have not spared even themselves. One would think, that in personifying itself, a nation would be apt to picture something grand, heroic, and imposing; but it is characteristic of the peculiar humour of the English, and of their love for what is blunt, comic, and familiar, that they have embodied their national oddities in the figure of a sturty, corpulent old fellow, with a three-curved hat, red waistcoat, leather breeches, and stout oaken cudgel. Thus they have taken a singular delight in exhibiting their most private foibles in a laughable point of view; and have been so successful in their delineations, that there is scarcely a being in actual existence more absolutely present to the public mind, than that eccentric personage, John Bull.

Perhaps the continual contemplation of the character thus drawn of them, has contributed to fix it upon the nation; and thus to give reality to what at first may have been painted in a great measure from the imagination. Men are apt to acquire peculiarities that are continually acribed to them. The common orders of English seem

wonderfully captivated with the *beast ideal* which they have furnished of John Bull, and endeavour to act up to the broad caricature that is perpetually before their eyes. Unluckily they sometimes make their boasted Bullism an apology for their prejudice or grossness; and this I have especially noticed among those truly home-bred and genuine sons of the soil, who have never migrated beyond the sound of Bow bells. If one of these should be a little uncouth in speech, and apt to utter impertinent truths, he confesses that he is a real John Bull, and always speaks his mind. If he now and then flies into an unreasonable burst of passion about trides, he observes, that John Bull is a choleric old blade, but that his passion is over in a moment, and he bears no malice. If he betrays a coarseness of taste, and an insensibility to foreign refinements, he thanks heaven for his ignorance—he is a plain John Bull, and has no relish for frillery and nicknacks. This very proneness to be gulled by strangers, and to pay extravagantly for absurdities, is excused under the plea of munificence—for John is always more generous than wise. Thus, under the name of John Bull, he will contrive to argue every fault into a merit, and will frankly convict himself of being the honestest fellow in existence.

However little, therefore, the character may have suited in the first instance, it has gradually adapted itself to the nation, or rather, they have adapted themselves to each other; and a stranger who wishes to study English peculiarities, may gather much valuable information from the innumerable portraits of John Bull, as exhibited in the windows of the caricature shops. Still, however, he is one of those fertile humourists, that are continually throwing out new traits, and presenting different aspects from different points of view; and, often as he has been described, I cannot resist the temptation to give a slight sketch of him, such as he has met my eye.

John Bull, to all appearance, is a plain downright, matter-of-fact fellow, with much less of poetry about him than rich prose. There is little of romance in his nature, but a vast deal of strong natural feeling. He excels in humour, more than in wit; is jolly, rather than gay; melancholy, rather than morose; can easily be moved to a sudden tear, or surprised into a broad laugh; but he loathes sentiment, and has no turn for light pleasantry. He is a bogan companion, if you allow him to have his humour, and to talk about himself; and he will stand by a friend in a quarrel, with life and purse, however soundly he may be cudgelled.

In this last respect, to tell the truth, he has a propensity to be somewhat too ready.

He is a busy-injured personage, who thinks not merely for himself and family, but for all the country round, and is most generously disposed to be every body's champion. He is continually volunteering his services to settle his neighbours' affairs, and takes it in great dudgeon if they engage in any matter of consequence without asking his advice; though he seldom engages in any friendly office of the kind without finishing by getting into a squabble with all parties, and then railing bitterly at their ingratitude. He luckily took lessons in his youth in the noble science of defence, and having accomplished himself in the use of his limbs and his weapons, and become a perfect master at boxing and cudgel play, he has had a troublesome life of it ever since. He cannot bear of a quarrel between the most distant of his neighbours, but he begins, frequently to humble with the head of his cudgel, and consider whether his interest or honour does not require that he should meddle in the broils. Indeed, he has extended his relations of pride and policy so completely over the whole country, that no rent can take place, without infringing some of his finely-spun rights and dignities. Convinced in his little domain, with these elements stretching forth in every direction, he is like some choleric, bottle-bellied old spider, who has woven his web over a whole chamber, so that a fly cannot buzz, nor a breeze blow, without startling his repose, and raising him to sally forth wrathfully from his den.

Though really a good-hearted, good tempered fellow at bottom, yet he is singularly fond of being in the midst of contention. It is one of his peculiarities, however, that he only relishes the beginning of an alloy; he always goes into a fight with alacrity, but comes out of it grumbling even when victorious, and though no one fights with more obstinacy to carry a contested point, yet, when the battle is over, and he comes to the reconciliation, he is soon taken up with the mere slaking of humors that he is apt to let his antagonist pocket all they have been quarrelling about. It is not, therefore, fighting that he ought so much to be on his guard against, as making friends. It is difficult to cudgel him out of a faulting; but put him in a good humour, and you may bargain him out of all the money in his pocket. He is like one of his own-ships, which will weather the roughest storm unjured, but roll its masts overboard in the succeeding calm.

He is a little fond of playing the Inigo Jones about, of pulling out a long pose; of being his unwearily about at boxing matches, horse races, and cock fights, and carrying a high head among the gentlemen of the flock;

but immediately after one of these fits of extravagance, he will be taken with violent qualms of economy; stop short at the most trivial expenditure; talk desperately of being ruined, and brought upon the parish; and in such moods, will not pay the smallest tradesman's bill, without violent altercation. He is, indeed, the most punctual and discontented paymaster in the world; drawing his coin out of his breeches' pocket with infinite reluctance; paying to the utter most farthing; but accompanying every guinea with a growl.

With all his talk of economy, however, he is a bountiful provider, and a hospitable housekeeper. His economy is of a whimsical kind, its chief object being to devise how he may afford to be extravagant; for he will begrudge himself a beef-steak and pint of port one day, that he may roast an ox whole, broach a hog-head of ale, and treat all his neighbours, on the next.

His domestic establishment is enormously expensive; not so much from any great outward parade, as from the great consumption of solid beef and pudding; the vast number of followers he feeds and clothes; and his singular disposition to pay largely for small services. He is a most kind and indulgent master, and, provided his servants humour his peculiarities, flatter his vanity a little now and then, and do not pecculate grossly on him before his face, they may manage him to perfection. Every thing that lives on him seems to thrive and grow fat. His house servants are well paid, and pinpered, and have little to do. His horses are sleek and lazy, and prance slowly before his state carriage; and his house dogs sleep quietly about the door, and will hardly bark at a house-breaker.

His family mansion is an old castellated manor-house, grey with age, and of a most venerable, though weather-beaten appearance. It has been built upon no regular plan, but is a vast accumulation of parts, erected in various tastes and ages. The centre bears evident traces of Saxon architecture, and is as solid as ponderous stone and old English oak can make it. Like all the relics of that style, it is full of obscure passages, intricate mazes, and dusky chambers; and though these have been partially lighted up in modern days, yet there are many places where you must still grope in the dark. Additions have been made to the original edifice from time to time, and great alterations have taken place; towers and battlements have been erected during wars and tumults; wings built in times of peace; and out-houses, lodges, and offices, run up according to the whim or convenience of different generations; until it has become one of the most spacious rambling tenements imaginable. An entire wing is taken up with the family chapel; a reverend pile that must once have been exceedingly sumptuous, and, indeed, in spite of having been altered and simplified at various periods, has still a look of solemn religious pomp. Its walls within are storied with the monuments of John's ancestors; and it is snugly fitted up with soft cushions and well-bed chairs, where such of his family as are inclined to church services, may doze con-

fortably in the discharge of their duties.

To keep up this chapel has cost John much money; but he is staunch in his religion, and piqued in his zeal, from the circumstance that many dissenting chapels have been erected in his vicinity, and several of his neighbours, with whom he has had quarrels, are strong papists.

To do the duties of the chapel, he maintains, at a large expense, a pious and portly family chaplain. He is a most learned and decorous personage, and a truly well-bred Christian, who always backs the old gentleman in his opinions, winks discreetly at his little peccadilloes, rebukes the children when refractory, and is of great use in exhorting the tenants to read their bibles, say their prayers, and, above all, to pay their rents punctually, and without grumbling.

The family apartments are in a very antiquated taste, somewhat heavy, and often inconvenient, but full of the solemn magnificence of former times; fitted up with rich, though faded tapestry, unwieldy furniture, and loads of massy gorgeous old plate. The vast fire places, ample kitchens, extensive cellars, and sumptuous banqueting hall,—all speak of the roaring hospitality of days of yore, of which the modern festivity at the manor house is but a shadow. There are, however, complete suites of rooms apparently deserted and time worn; and towers and turrets that are tottering to decay; so that in high winds there is danger of their tumbling about the ears of the household.

John has frequently been advised to have the old edifice thoroughly overhauled, and to have some of the useless parts pulled down, and the others strengthened with their materials; but the old gentleman always grows testy on this subject. He swears the house is an excellent house—that it is tight and weather proof, and not to be shaken by tempests—that it has stood for several hundred years, and, therefore, is not likely to tumble down now—that as to its being inconvenient, his family is accustomed to the inconveniences, and would not be comfortable without them—that as to its unwieldy size and irregular construction, these result from its being the growth of centuries, and being improved by the wisdom of every generation—that an old family, like his, requires a large house to dwell in; new, upstart families may live in modern cottages and snug boxes, but an old English family should inhabit an old English manor-house. If you point out any part of the building as superfluous, he insists that it is material to the strength or decoration of the rest, and the harmony of the whole; and swears that the parts are so built into each other, that if you pull down one, you run the risk of having the whole about your ears.

The secret of the matter is, that John has a great disposition to protect and patronize. He thinks it indispensable to the dignity of an ancient and honourable family, to be bounteous in its appointments, and to be eaten up by dependants; and so, partly from pride, and partly from kind-heartedness, he makes it a rule always to give shelter and maintenance to his supernumerated servants.

The consequence is, that, like many other venerable family establishments, his manor is incumbered by old retainers whom he cannot turn off, and old style which he cannot lay down. His mansion is like a great hospital of Invalids, and, with all its magnitude, is not a whit too large for its inhabitants. Not a nook or corner but is of use in housing some useless personage. Groups of veteran beef eaters, gouty pensioners, and retired heroes of the buttery and the larder, are seen hobnobbing about its walls, crawling over its lawns, dozing under its trees, or sunning themselves upon the benches at its door. Every office and out-house is garrisoned by these supernumeraries and their families; for they are amazingly prolific, and when they die off, are sure to leave John a legacy of hungry mouths to be provided for. A mucklock cannot be struck against the most mouldering, tumble-down tower, but out pops, from some cranny or loop hole, the grey pate of some supernumerated hanger-on, who has lived at John's expense all his life, and makes the most grievous outcry at their pulling down the roof from over the head of a worn out servant of the family. This is an appeal that John's honest heart never can withstand; so that a man, who has faithfully eaten his beef and pudding all his life, is sure to be rewarded with a pipe and tankard in his old days.

A great part of his park, also, is turned into paddocks, where his broken-down chargers are turned loose, to graze undisturbed for the remainder of their existence—a worthy example of grateful recollection, which, if some of his neighbours were to imitate, would not be to their discredit. Indeed, it is one of his great pleasures to point out these old steeds to his visitors, to dwell on their good qualities, extol their past services, and boast, with some little rancour, of the perilous adventures and hardy exploits, through which they have carried him.

He is given, however, to indulge his veneration for family usages, and family incumbrances, to a whimsical extent. His manor is infested by gangs of gypsies; yet he will not suffer them to be driven off, because they have infested the place time out of mind, and been regular poachers upon every generation of the family. He will scarcely permit a dry branch to be lopped from the great trees that surround the house, lest it should molest the rooks, that have bred there for centuries. Owls have taken possession of the dovecote; but they are hereditary owls, and must not be disturbed. Swallows have nearly choked up every chimney with their nests; martins build in every frieze and cornice; crows flutter about the towers, and perch on every weather cock; and old gray-headed rats may be seen in every quarter of the house, running in and out of their holes undauntedly, in broad daylight. In short, John has such a reverence for every thing that has been long in the family, that he will not hear even of abuses being reformed, because they are good old family abuses.

All these whims and habits have conspired woefully to drain the old gentleman's purse.

and as he prides himself on punctuality in money matters, and wishes to maintain his credit in the neighbourhood, they have caused him great perplexity in meeting his engagements. This too has been increased by the alterations and heart-burnings which are continually taking place in his family. His children have been brought up to different callings, and are of different ways of thinking; and as they have always been allowed to speak their minds freely, they do not fail to exercise the privilege most clamorously in the present posture of his affairs. Some stand up for the honour of the race, and are clear that the old establishment should be kept up in all its state, whatever may be the cost; others, who are more prudent and considerate, entreat the old gentleman to retrench his expenses, and to put his whole system of housekeeping on a more moderate footing. He has, indeed, at times seemed inclined to listen to their opinions, but their wholesome advice has been completely defeated by the ostentatious conduct of one of his sons. This is a noisy rattle-pated fellow, of rather low habits, who neglects his business to frequent ale-houses—is the orator of village clubs, and a complete oracle among the poorest of his father's tenants. No sooner does he hear any of his brothers mention reform or retrenchment, than up he jumps, takes the words out of their mouths, and roars out for an overturn. When his tongue is once going, nothing can stop it. He rants about the room; he hectors the old man about his spendthrift practices; ridicules his tastes and pursuits; insists that he shall turn the old servants out of doors; give the broken down horses to the bonals; send the fat chaplain packing, and take a field-preacher in his place—say, that the whole family mansion shall be levelled with the ground, and a plain one of brick and mortar built in its place. He rails at every social entertainment and family festivity, and skulks away growling to the ale-house whenever an equipage drives up to the door. Though constantly complaining of the emptiness of his purse, yet he scruples not to spend all his pocket-money in these tavern convocations, and even runs up scores for the liquor over which he preaches about his father's extravagance.

It may readily be imagined how little such thwarting agrees with the old cavalier's nery temperament. He has become so irritable, from repeated crossings, that the mere mention of retrenchment or reform is a signal for a brawl between him and the tavern oracle. As the latter is too sturdily and refractory for paternal discipline, having grown out of all fear of the cudgel, they have frequent scenes of wordy warfare, which at times run so high, that John is fain to call in the aid of his son Tom, an officer who has served abroad, but is at present living at home, on half pay. This last is sure to stand by the old gentleman, right or wrong; like nothing so much as a racking roystering life; and is ready, at a wink or nod, to out-sabre, and flourish it over the orator's head, if he dares to array himself against paternal authority.

These family discussions, as usual, have

got abroad, and are rare food for scandal in John's neighbourhood. People begin to look wise, and shake their heads, whenever his affairs are mentioned. They all "hope that matters are not so bad with him as represented; but when a man's own children begin to rail at his extravagance, things must be badly managed. They understand he is mortgaged over head and ears, and is continually dabbling with money lenders. He is certainly an open-handed old gentleman, but they fear he has lived too fast; indeed, they never knew any good come of this fondness for hunting, racing, revelling, and prize-fighting. In short, Mr. Bull's estate is a very fine one, and has been in the family a long while; but for all that, they have known many finer estates come to the hammer."

What is worst of all, is the effect which these pecuniary embarrassments and domestic feuds have had on the poor man himself. Instead of that jolly round corporation, and smug rosy face, which he used to present, he has of late become as shrivelled and shrunk as a frost-bitten apple. His scarlet gold-laced waistcoat, which belied out so bravely in those prosperous days when he sailed before the wind, now hangs loosely about him like a mainsail in a calm. His leather breeches are all in folds and wrinkles; and apparently have much ado to hold up the boots that yawn on both sides of his once sturdily legs.

Instead of strutting about, as formerly, with his three-cornered hat on one side; flourishing his cudgel, and bringing it down every moment with a hearty thump upon the ground; looking every one sturdily in the face, and trolling out a stave of a catch or a drinking song; he now goes about whistling thoughtfully to himself, with his head drooping down, his cudgel tucked under his arm, and his hands thrust to the bottom of his breeches pockets, which are evidently empty.

Such is the plight of honest John Bull at present; yet for all this the old fellow's spirit is as tall and as gallant as ever. If you drop the least expression of sympathy or concern he takes fire in an instant; swears that he is the richest and stoutest fellow in the country; talks of laying out large sums to adorn his house or to buy another estate; and, with a valiant swagger and grasping of his cudgel, longs exceedingly to have another bout at quarter-staff.

Though there may be something rather whimsical in all this, yet I confess I cannot look upon John's situation, without strong feelings of interest. With all his odd humours and obstinate prejudices, he is a sterling hearted old blade. He may not be so wonderfully fine a fellow as he thinks himself, but he is at least twice as good as his neighbours represent him. His virtues are all his own; all plain, homely and unaffected. His very faults smack of the richness of his good qualities. His extravagance savours of his generosity; his quarrelsome-ness of his courage; his credulity of his open faith; his vanity of his pride; and his bluntness of his sincerity. They are all the reds, lances of a rich and liberal character.

He is like his own oak; rough without, but sound and solid within; whose bark abounds with excrescences in proportion to the growth and grandeur of the timber; and whose branches make a fearful growling and murmuring in the least storm, from their very magnitude and luxuriance. There is something, too, in the appearance of his old family mansion that is extremely poetical and picturesque; and, as long as it can be rendered comfortably habitable, I should almost tremble to see it meddled with during the present conflict of tastes and opinions. Some of his advisers are no doubt good architects that might be of service; but many I fear are mere travellers, who when they had once got to work with their mallets on the venerable edifice, would never stop until they had brought it to the ground, and perhaps buried themselves among the ruins. All that I wish is, that John's present troubles may teach him more prudence in future. That he may cease to distress his mind about other people's affairs; that he may give up the fruitless attempt to promote the good of his neighbours, and the peace and happiness of the world, by dint of the cudgel; that he may remain quietly at home; gradually get his house into repair; cultivate his rich estate according to his fancy; husband his income—if he thinks proper; bring his unruly children into order—if he can; renew the jovial scenes of paternal prosperity; and long enjoy, on his paternal lands, a green, an honourable, and a merry old age.

*Aminta, a Tale of the Woods; from the Italian of Torquato Tasso. By Leigh Hunt. London, 1820. 12mo. pp. 145.*

THE *Aminta* of Tasso, in which it has been asserted by the most skilful and learned Italians, criticism could find no fault, is comparatively little known in this country; and, except as a model of language, it does not appear to us that its genius is calculated for our national taste. The gallantry and elegance of the Court of Ferrara, at the period of its production, have no corresponding feelings in British bosoms; and the effeminacy of the Italian character, excites ridicule, rather than sympathy, in the rougher natures of England. But even in Italy, (as with its copy, the Faithful Shepherd), the Pastor Fido of Guarnini is more read than the *Aminta*; and though we must confess to the truth of Tasso's remark, when asked by the author's friends, (after witnessing its performance,) what he thought of it? "if he had not seen my *Aminta*, he could not have done it:" it is, we think, demonstrable, that the novelty of this species of pastoral composition, and the extraordinary beauty of the style, were the chief recommendations of the elder Poet.

As neither of these qualities could be transferred to a translation, we do not consider Mr. Hunt's choice of subject to be a happy one. Indeed, he has not wasted much labour upon it: his version is a school-boy's task, and little superior to those renderings

of the Italian text, which we are accustomed to see in the books of operas, sold for the edification of the Bull family, when they visit the gallery or pit at the King's Theatre. Nor could the harmony, the felicitous expression, the niceties of the original, be given in English—for our language has no equivalents for what is most admirable in these respects. Mr. Hunt has, however, translated very faithfully; and, as a lesson book to learners of the Italian, his publication may be useful, though it has no chance of affording pleasure to the lovers of poetry.

Before extracting a few specimens, we may notice, that there is a dedication to Mr. Keats, in which the similarity between that bard and Tasso is insinuated; and a flippant preface, into which something of the Examiner newspaper hatred of courts is wrought with the customary modesty of our political-poetical-Thesites. In this essay we hear of things not very intelligible, such as "an additional grace of introduction" — an "unconspicred grace" — "to dullen," "the beardiness of nature," — and the "strong aboriginal taste of nature," &c.; but neither these, nor some indifferent wood-cuts, need detain us from Amyntas.

The fine prologue by *AMONG* in *Acito Pastoralis*, is very fairly translated, and the first scene of the first act, so celebrated in the original, is still more closely and literally rendered.

But the following, from the 2d scene, is in our opinion, the best portion of Mr. Hunt's version:—

*Amyntas.* While yet a boy, scarce tall enough to gather

The lowest hanging fruit, I became intimate  
With the most lovely and beloved girl,  
That ever gave to the winds her locks of gold.

\* We seldom see this newspaper, but were exceedingly amused with a recent Number which accidentally fell into our hands, and in which, with a most tyrannical profusion of abuse, the Editor called Wellington, Castlereagh, Brougham, and Denman, "persons guilty of diplomatic cant and hypocrisy!" Wilberforce "a pious member—a canting and convenient tool of the stronger party;" A. Mr. Malet Charter, of Taunton, and A. Chichester, Esq. M. P. (who, it seems, had the honour to preside at a Pitt Club anniversary), "Insolent, vain, prejudiced, shallow, and pretending persons!" Dickinson and Lethbridge, the county members, "Imbeciles!" Mr. Brougham, "guilty of gross insincerity—the effect of a legal and party education!" Mr. Canning, "superficial, gaw-gaw of oratory, Jobber, &c.!" Sheriff Rothwell, "a tory, hostile to the reform of extravagance and abuses in the city!" The house of Commons, "insidious, despicable, and unjust!" &c. &c. and all this profuse impartiality of reviling, in one little sheet! surely this charitable writer must do outrage to his kinder nature, so Peter-Pastoral and Cosmopolitish, when he utters such measureless abuse of others less pure and perfect than himself. It is the same tender-hearted person, who elsewhere wished that Buonaparte were released, and the battle of Waterloo fought over again, just to prove who was the greatest general—slay a hundred thousand human beings, to satisfy the doubts of Mr. Examiner, as to the question of superiority between two commanders!

Then know'st the daughter of Cydippe and  
Moutano, that has such a store of herbs,  
Sylvia, the forest's honour, the soul's fire?  
Of her I speak. Alas! I lived one time,  
So fastened to her side, that never turtle  
Was closer to his mate, nor ever will be.  
Our homes were close together, closer still  
Our hearts; our age conformable, our thoughts  
Still more conformed. With her I treaded nets  
For birds and fish; with her followed the stag,  
And the fleet hind; our joy and our success  
Were common: but in making prey of animals  
I fell, I know not how, myself a prey.  
There grew by little and little in my heart,  
I know not from what root,  
But just as the grass grows that sows itself,  
An unknown something, which continually  
Made me feel anxious to be with her; and then  
I drank strange sweetness from her eyes, which  
left

A taste, I know not how, of bitterness.  
Often I sighed, nor knew the reason why;  
And thus before I knew what loving was,  
Was I a lover. Well enough I knew  
At last; and I will tell thee how; pray mark me,  
*Thyrs.* I mark thee well.

*Amyntas.* One day, Sylvia and Phillis  
Were sitting underneath a shady beech,  
I with them: when a little ingenious bee,  
Gathering his honey in those flowery fields,  
Laid on the cheeks of Phillis, cheeks as red  
As the red rose; and bit, and bit again  
With so much eagerness, that it appeared  
The likeness did beguile him. Phillis, at this,  
Imputation of the smart, sent up a cry:  
"Hush! Hush!" said my sweet Sylvia, "do  
not grieve;

I have a few words of enchantment, Phillis,  
Will ease thee of this little suffering.  
The sage Artesia told them me, and had  
That little ivory horn of mine in payment,  
Fretted with gold." So saying, she applied  
To the hurt cheek, the lips of her divine  
And most delicious mouth, and with sweet  
humming

Murmured some verses that I knew not of.  
Oh admirable effect! a little while,  
And all the pain was gone; either by virtue  
Of those enchanted words, or as I thought,  
By virtue of those lips of dew,  
That heal what'er they turn them to.  
I, who till then had never had a wish  
Beyond the sunny sweetness of her eyes,  
Or her dear dulcet words, more dulcet far  
Than the soft murmur of a humming stream  
Croaking its way among the pebble-stones,  
Or summer airs that babble in the leaves,  
Felt a new wish more in me to apply  
This mouth of mine to hers; and so becoming  
Crafty and plotting, (an unusual art  
With me, but it was love's intelligence)  
I did bethink me of a gentle stratagem  
To work out my new wit. I made pretence.  
As if the bee had bitten my under lip;  
And fell to lamentations of such sort,  
That the sweet medicine which I dared not ask  
With word of mouth, I asked for with my looks.

The simple Sylvia then;  
Compassioning my pain,  
Offered to give her help  
To that pretended wound;  
And oh! the real and the mortal wound,  
Which pierced into my being,  
When her lips came on mine,  
Never did her from flower  
Suck sugar so divine.  
Was as the honey that I gathered then  
From those twin roses fresh.  
I could have bathed in them my burning kisses,

But fear and shame withheld  
That too audacious fire,  
And made them gently hang.  
But while into my bosom's core, the sweetness,  
Mixed with a secret poison, did go down,  
It pierced me so with pleasure, that still feigning  
The pain of the bee's weapon, I contrived  
That more than once the enchantment was re-  
peated.

From that moment forth, desire  
And irrepressible pain so grew within me,  
That not being able to contain it more,  
I was compelled to speak;—

The chorus at the end of the first act  
conveys the spirit of the author, but is in-  
comparably different in versification.

O lovely age of gold!  
Not that the rivers rolled  
With milk, or that the woods dropped honey  
dew;  
Not that the ready ground  
Produced without a wound,  
Or the mild serpent had no tooth that slew;  
Not that a cloudless blue  
For ever was in sight.

Or that the heaven which burns,  
And now is cold by turns,  
Looked out in glad and everlasting light;  
No, nor that ev'n the insolent ships from far  
Brought war to no new lands, nor riches wore  
than war;

But solely that that rain  
And breath-lacerated pain,  
That idol of mistakes, that worshipped cheat,  
That Honour,—since so called  
By vulgar minds appalled,  
Played not the tyrant with our nature yet.  
It had not come to fret  
The sweet and happy fold  
Of gentle human-kind;  
Nor did its hard law bind  
Souls nursed in freedom; but that law of gold,  
That glad and golden law, all free, all fitted,  
Which Nature's own hand wrote,—What  
pleases, is permitted.

Then among streams and flowers  
The little winged Powers  
Went singing carols without torch or bow:  
The nymphs and shepherds sat  
Mingling with innocent chat  
Sports and whispers; and with whispers low  
Kisses that would not go.  
The maiden, budding o'er,  
Kept not her bloom unwey,  
Which now a veil must hide,  
Nor the crisp apples which her bosom bore:  
And oftentimes, in river or in lake,  
The lover and his love their merry bath would  
take.

Go; let us love: the daylight dies, is born;  
But unto us the light  
Dies once for all; and sleep brings on eternal  
night.

The famous speech of the Satyr—  
*Picciola è l'ape, e fa col picciol morso  
Pur gravi, e pur moleste le ferite;*  
is thus translated:—

Small is the bee, and yet with a small sting  
Makes grave and troublesome wounds. But  
what is smaller  
Than love, who lurks in the minutest things,  
And strays in the minutest? now beneath  
The shadow of an eye-brow; now among  
Threads of fine hair; and now in the small curls,  
Which a sweet smile forms in a lovely cheek.

And yet what great and mortal wounds are his,  
And past all remedy! Alas! all wound  
And bleeding havoc is he in my nature;  
And millions of sharp arrows does he keep stored  
In Sylvia's eyes. Oh cruel love! Oh Sylvia,  
More hard and without sense, than are the woods,  
How rightly dost thou bear that sylvan name!  
What foresight his love gave thee! The woods  
Hide with their whoe leaves, fions, and bears,  
And snakes; and thou in thy fair bosom hidest  
Hate, and disdain, and hard impiety;  
Things wilder far than lions, bears, and snakes;  
For those are tameable, but to tame thee  
Defies the power of present and of prayer.

Alas! when I would give thee flowers new-  
blown,  
Thou drawest thyself back; perhaps because  
Thou hast more lovely flowers in thy own looks,  
Ah me! when I present thee sweet young apples,  
Thou puttest them away; perhaps because  
Thou hast more sweet young apples in thy  
bosom.

Alas! when I would please thee with sweet honey,  
Thou treatest it as nought; perhaps because  
Thou hast a sweeter honey in thy lips.  
If my poor means can give thee nothing better,  
I give thee of my own self. And why, unjust one,  
Scorn and abhor the gift? I am not one  
To be despised, if truly 't'other day  
I saw myself reflected in the sea,  
When the winds hushed, and there was not a  
wave.

This ruddy sanguine visage, these broad shoulders,  
This hairy breast, and these my shaggy thighs,  
Are marks of strength and manhood. If thou  
dost not

Believe them, try them. What dost thou expect  
Of those young dainty ones, whose girlish cheeks  
Are scarcely tinged with down, and who dispose  
Their pretty locks in order,—girls indeed  
In strength as well as look? Will any of them  
Follow thee through the woods, and up the  
mountains,

And combat for thy sake with bears and boars?  
I am no brute thing; no,—nor dost thou scorn  
me

Because I am thus shaped, but simply and solely  
Because I am thus poor. Oh, that the woods  
Should take this vile example from the town.  
This is indeed the age of gold; for gold  
Is conqueror of all, and gold is king.

Oh thou, whoever thou wert, that first didst show  
The way to make love real, be thou accurst.  
Curs'd may thine ashes be, and cold thy bones;  
And never may'st thou find shepherd or nymph  
To say to them in passing "Peace be with ye!"  
But may the sharp rains wash them, and the  
winds

Blow on their bareness; and the herd's foul foot  
Trample them, and the stranger. Thou didst  
first

Put shame upon the nobleness of love;  
And thine was the vile hand that first did put  
bitterness in his cup. A venge! love!

A love that waits on gold! It is the greatest,  
And most abominable, and filthiest monster,  
That ever land or sea shuddered at bearing.  
But why in vain lament me? Every creature  
Has the helping arms which nature gave it:  
The stag betakes himself to flight, the lion  
tamps with his mighty paws, the foaming boar  
urms with his tusks; and loveliness and grace  
re women's weapons and her potency.  
Nature made me then fitted for deeds  
of violence and rapine, why not!

Will you do violence for my ends? I will do so:  
I will go force from that ungrateful one  
What she desires my love. A goatherd, who

Has watched her ways, tells me that she is used  
To bathe her in a fountain; and has shewn me  
The very spot. There will I plant me close  
Among the shrubs and bushes, and so wait  
Until she come; then seize my opportunity,  
And run upon her. What can she oppose,  
The tender thing, either by force or flight,  
To one so swift and powerful? She may use  
Her sighs and tears, and all that is of force  
In beauty to move pity. I will twist  
This hind of mine in her thick locks; nor stir  
One step till I have drank my draught of ven-  
geance.

These will suffice to show where the  
translator has been most successful. In less  
fortunate passages, we have such puerilities  
and blunders as these:—

The time will come  
When wilt thou grieve thou didst not mind my  
words;

Then wilt thou shun the fountains, for mere dread  
Of seeing thyself grown wrinkled and featureless  
[a heroic line!]

Denying pity  
To one [to] whom nought else could have de-  
nies it.

Thy hopes reward  
Will he what thou hast seen in that bare beauty.  
Her luckless relics, should she be not whole?  
[i. e. broken to pieces by a fall.]

Content! content! since thou wilt do it not,  
Or cannot.  
Nay, thy suspicion will turn out as groundless,  
As it has done just now. Every one takes  
All possible care of his own life, believe me.

This prosing is the sense of the line,  
Ch'ognuno a suo poter salva la vita:

And in a subsequent scene we find  
Consolati, meschina:  
Unhappy me, take comfort!

To non merto pietate  
Che non la seppi usare:  
I do deserve no pity,  
For I was used to none.  
Non per pietà di me, ma per pietate  
Di chi degno ne fue,  
Che m'ajutà a cercare  
L'infelice sue membra, e a seppellirle.

And thou, O Daphne, lock  
Thy tears up in thy heart, love,  
If they are agent for me.  
And yet for pity too,  
Not of myself, but one  
That did deserve it all.  
I pray thee let us go, oh! let us go,  
And gather up his limbs and bury them.

This is sad silly trifling; and we fear Mr.  
Hunt's *Amintas* will never be so celebrated  
as Tasso's *Aminta*.

*Classical Excursion from Rome to Ar-  
pino.* By Charles Kelsall. Geneva.  
1820. 8vo. pp. 254.

Mr. Kelsall is one of the most singular  
writers, as well as odd in his fashion of  
printing and publishing, that we are ac-  
quainted with. What he wants in form, he  
makes up by amusing eccentricity; and if we  
do not always find him thinking correctly,  
we at least often find him thinking, which is

more than nine tenths of our modern au-  
thors do.

The present volume, whether we refer to  
the subject, or its treatment, may well be  
called *Classical*; and as for its second title,  
*Excursion*, it also merits that name *par  
excellence*, for its extraordinary excursiveness.  
The prominent feature is an enthusi-  
astic admiration of Cicero, in which we most  
cordially agree with Mr. Kelsall; and it is  
diversified with so many odd capricious, with  
stories of Italian robbers, remarks on modern  
manners, episodes, and jokes, that where we  
do not admire we laugh, and where we with-  
hold assent, we feel it impossible to be very  
angry with the assertor of dogmas, some of  
them not very strictly consistent with ortho-  
doxy and received opinions. *Ex. Gr.* At p.  
14, he leaves us in doubt whether he be more  
a Pagan, a Mahometan, or a Christian; for he  
tells us—

"The religion of ancient Greece and  
Rome was far superior in this respect to the  
Catholic; for the ancients, by deifying the  
attributes of the Deity, and the different  
modifications of his power displayed here  
on earth, referred in fact all adoration to  
him. But whatever may be the sentiments  
of the upper ranks of the Catholics, the  
middling and lower classes, when they pro-  
strate themselves before the shrines of *Sant'  
Antonio* of Padua, or *Santa Rosa di Viter-  
bo*, think more of those individuals who have  
sprung from the *Camera del Papagallo*,  
than of the fountain of power, goodness,  
and truth. Go to Constantinople.—You  
will see there, it is true, a people inattentive  
to good government, and to the development  
and melioration of mind; but you will not  
see the Mufti waving his wand, and absolv-  
ing people from their sins, like the priests in  
St. Peter's. The principal Mufti canonizes  
no saint, and orders no bones or toes to be  
kissed. Mahomet, however defective may  
be his doctrines in other respects, sends his  
followers to the temple of the Deity, and  
bids them prostrate themselves there, with-  
out asserting that he is any more than a pro-  
phet, or interpreter of God's word, a title  
which he can hardly be refused, if we con-  
sider the extraordinary effect which his *Koran*  
has occasioned. We can only estimate reli-  
gions from the more or less good of which  
they are productive to man, contemplated in  
his individual and social relations. Friend-  
ship of a devoted kind is not uncommon in  
Turkey; in Rome it is certainly rare. The  
testimonies of numerous travellers concur in  
stating that a low shop-keeper in Turkey  
scorns to ask even of a Christian, a greater  
sum than he would of a Turk. Most of the  
Roman shop-keepers turn foreigners to the  
best account they can. The Turk will some-  
times rob by open force; but he scorns pil-  
fering, as common at Rome as in London  
and Paris, and easily extorted by a kiss of  
the brazen feet of St. Peter, a wave of the  
magic wand from the confessional boxes, or  
a bow to the waxen virgins, surrounded by  
their flower-pots. The Turk having per-  
formed his ablutions, kneels to the Most  
High, and only suffers himself to be acquit-  
ted by the testimony of his own conscience,

The Turk never turns his temples into charnel-houses, like the Roman. Whether noble or mechanic, he enters his mosque with sentiments of devotion and awe\*. The Roman on the contrary, often laughs at several of those ceremonies, which his conscience will uphold him for neglecting."

Nor do we quarrel seriously with the specimens of affectation in style, that occasionally cross us:—"a Babylonish dialect" is becoming quite common with our travellers; and all that Mr. K. needs to have said of his lucubrations is, that they are not out of the fashion. And he has the general excuse of necessarily quoting much, and consequently being thrown as it were upon a patch-work of languages. The general character of the volume however will appear sufficiently from the following examples, which show the author to be imbued with classic literature, of refined understanding, and of very considerable originality of talent. The opinion of so competent a connoisseur upon Canova and Thorvaldsen is worth quoting.

"The modern Alcamenes (he says) has however found a puissant rival in the Dane Thorvaldsen, who in reliefs, is confessedly the first artist living: witness his *Giorno, Notte, and Triumph of Alexander*. Neither would it be easy to find among Canova's productions, statues superior to his *Dancing Girl, his Mercury, and Adonis*. But *Venus receiving the apple, and Cupid contemplating his dart*, both from the chisel of this distinguished Dane, are *opera omnibus fortasse hodiernæ artis anteceden- da*. He will, I suspect, be found to possess more nerve and invention than Canova, and to be but little his inferior in grace. It must however be understood, that though the Grecian spirit has been happily caught by these great artists, we cannot yet discover in their works that high creative *ideal*, which we recognize in the Apollo, the Meleager, and the Laocoon."

In an early stage of the excursion from Rome, Mr. K. visited the reputed remains of the Horatian Villa. His reflections here afford a fair example of his manner.

"Of all the Latin poets, Horace is certainly the most original; and the best proof of this is the impossibility of imitating him with success. The harmonious majesty of Virgil, the sonorous pomp of Lucan, the philosophical dignity of Lucretius, the spleen and energy of Juvenal, the elegiac tenderness of Tibullus and Propertius, and the anorous fire of Ovid, have been sometimes caught by good scholars. But the style of the argute Venissian, especially in his satires and epistles, like the *grata proferitas* of his Glycera, has hitherto bid defiance to the most refined student. His *curiosa felicitas* escapes both Pope and Boileau; though it must be confessed that we are indebted to the last for a more perfect Art of Poetry."

"Quitting the Horatian villa, we regained the *rin Valeria*, and following the course

of the Anio to our right, proceeded by the *rin Sublacensis* to Subiaco, a place known in ancient geography, under the title of the *Sinibrincine ponds*; and distant from Vicovaro about twenty miles. We presently crossed the Rio Freato, which was transported to Rome on a course of arches sixty-one miles in length, under the title of *Aqua Marcia*. It corresponds with the description of it given by Frontinus: *prædestinatum stagnino colore præteritidis*, being of an emerald green; and water, when very pure, seems of that colour. It is thus that the Spaniards have their *Rio verde* in a celebrated romance. About a mile further to the left, are also the sources of the *Aqua Claudia*, which according to Plinius, travelled to the capital on a range of arches not less than forty-six miles in length. We left Aosta to our right, the ancient *Augusta*, built on a precipitous and insulated rock, in the midst of the valley. Five miles beyond is Subiaco, which Nero made conspicuous with his villa. *Sublaqueum, under the lakes*, or as we might translate it, *under the halter*, seems an appropriate residence for such a tyrant. Tacitus tells us that at a banquet given here by that abortion, the tables were struck and upset by a thunder-bolt; we should however remember that the Roman historians, and especially Tacitus, are fond of giving effect to great occurrences by the intervention of the thunder of Jove: *Discumbentis Neronis apud Sinibrincina stagna, cum Sublaqueum nomca est, ictus domusque dijecta erat*. A monk of the Altieri family has lately unearthed several apartments of the Neronian villa. The modern town is better built than Tivoli, and a lofty and spacious feudal castle commands it of the lower ages. Hither St. Benedict retired, the founder of one of the most hospitable and sensible of the monastic orders; and a cave is shewn near the town, where the saint offered up his orisons. Subiaco is interesting as having been the first place in Italy, where printing-presses were established; and according to Tiraboschi, the works of Lactantius, and the *De Oratore* of Cicero, were the first productions of the first Italian press, established in a monastery at Subiaco. Rock crystal is found in the neighbouring cliffs.

"We had now entered the narrow defiles of the Apennines, and the *nidus* of the Italian Aborigines, who like the *autochthones* of Greece, despised the neighbouring tribes, who owed their origin to colonies. Whence they came is matter of dispute. Cato tells us in a fragment, *primo Italian tenuisse quosdam qui Aborigines appellabantur*; and Justin says that they were the first cultivators of Italy. They were believed by some to have come from Achaia. Festus speaking of them says: *fuit gens antiquissima Italiae*. Their savage habits and life are alluded to by Virgil in the following line:

*Genuæ viridum truncis et duro robore nato*;

and by Sallust: *gens hominum agreste, sine legibus, sine imperio, liberum autem solutum*. Janus and Saturnus were two of their chiefs, who imparted to them the rules

of civilization; and like the heroes of Greece, were subsequently deified:

*—gens indocile ac dispersum montibus altis Composuit, legeque dedit,*

says Virgil speaking of Saturnus. Dionysius of Halicarnassus is so confused in his account of these Aborigines, or as some have called them *Aberrigines*, that he leaves us as much in the dark as before. The two insurmountable difficulties among the Italian antiquaries, are the origin of this race, and that of the Tuscans. It is amusing to trace the contradictory statements of the learned respecting the last. Their descent perplexed the ancients, as well as moderns. Herodotus tells us that they came from Lydia; Varro, and Aristides quoted by Strabo, will have it that they were Pelasgians; Bochart, that they came from Canaan, or Phœnicia; Buonarroti, from Egypt; while Pelloutier, Freret, and others maintain that they were of Celtic origin. It is probable that the Aborigines and the Tuscans were indigenous in the strict sense of the word; placed in Italy by the immediate act of the Deity, like Adam in Mesopotamia.

"But circumstances had occurred, which threw a chill over the enjoyment, which we should have otherwise felt, in witnessing the actual condition of this uncouth tribe. There was one *Dicæaria*, an aboriginal compound of bigotry, activity, and cruelty; the Caesar Borgia of the Apennines. At the head of a troop of banditti as fearless as himself, he had spread terror to the gates of Rome, and had insulted, perhaps intimidated the authorities, by demanding a considerable ransom for an individual of note, whose person he had secured. The papal troops had been despatched in quest of him, and a few days before we left Rome, they had found his wife and family at the village of *Saint Prassede*, whom by a summary legal process, they had murdered in cold blood. *Dicæaria* in consequence, was wandering in the heart of the Apennines, rabid as a wounded lion, and breathing slaughter and revenge. Informed however at Subiaco, by the magistrate, and papal military officer, that he had not been heard of, or seen in that vicinity, we crossed the Anio, now reduced to a streamlet, and we saw the mountain beyond, *unde Anio nascitur*."

Thus between pleasing learned gossip, and a somewhat odd jumble of incident and remark, we proceed onward to Arpino.

"On approaching the village of Anticoli, which I do not find occupying the site of any ancient town, we saw a multitude of peasants and herdsmen assembled on a sort of rule terrace, to witness a horse-race. Their appearance was uncouth and picturesque in the extreme. They were clad chiefly in sheep-skins, and wore red caps. The better class were armed. They reminded me of the Nogai Tartars in the south of Russia. These modern *Aborigines*, with black dishevelled hair, and olive complexions, who rent the air with barbarous yells as we passed, corresponded with the description of their ancestors, transmitted to us by Virgil:

\* [The same argument is very applicable just now to our Protestant cathedrals.]

*Horrida præcipue cui genus, æneque multa  
Venatæ senecæ duri. Epicaque gleba;  
Armati terram cærent, ut imperque reventas  
Conciscere jactat prædæ, et civeque rapto.*

"Not desirous of entering our paltries at the Antioch races, we journeyed to Alatri, (*Alatrium*), a town that figures in the comedy of the Captives of Plautus. We arrived there at dusk, after having passed through a country wooded by nature, like the noblest parks of England. Alatri is one of the five Saturnian cities; there are four others which claim their origin from that unknown hero styled Saturnus. They all begin with the first letter of the alphabet, and are as follows: *Alatri, Anagni, Ardea, and Arpinum*. There is something inexpressibly striking to the mind, on entering a city like Alatri, the origin of which is lost in the impenetrable mist of ages. There are no cities in England, of which we have any authentic records, earlier than Julius Cæsar; there are not many in France; we can trace the origin of them all, at least as soon as they began to assume any commercial importance. The same will apply to the Spanish cities, with the exception perhaps of Tartessus, the origin of which is involved in obscurity. There is no city in Sicily, of which we have not authentic data; tradition respecting the Greek colonies is also pretty satisfactory; but enter any one of the five Saturnian, or the twelve Etrurian cities; ask about what period were laid the colossal substructions, remains of which are in all more or less visible. The person whom you interrogate, be he a Cluverius, is mute. You might as well hope to obtain satisfactory information respecting the oldest ruins in India, Persia, or Egypt; which have always perplexed, and will perplex antiquaries. All that we can conclude is, that Alatri is a city of the Italian Aborigines, founded at some remote and unknown period, probably by Saturnus, who after imparting some few ideas of civilization among his followers, was venerated by them, and subsequently, with Janus, (whose temples were common in the Apennines,) crept into Rome as the tutelary deities of the republic. It would be well if a new Janus or Saturnus could reappear in the Apennines, to propagate fresh ideas of social order; for here are an unreasonable number of the priesthood, and the same *exorbitant superstition* as in the capital."

(To be concluded in our next.)

*The Protocol; or Selections from the Contents of a Red Box, &c.* Edited by Leigh Cliffe, Esq. London, 1820. 12mo. pp. 140.

One of the trumpery publications which are got up in times of ferment, without any recommendation to notice, except their serving as the sinks for all the stale filth and garbage which happen to be floating about at the period, is considered as a recommendation. Without wit, without humour, without even that poignancy of abuse which often obtains readers, the Protocol is indeed a miserable morbid accumulation of trash;

and Leigh Cliffe, Esquire (if such Squire there be), ten times a duller coxcomb at scurrility than his namesake Leigh.

*The First Day in Heaven. A Fragment.* London, 1820. 12mo. pp. 100.

This slight volume is, we understand, the production of one of the heads of an Irish Institution; and, as an ethical essay, founded on an enlarged view of natural philosophy, is highly deserving of approbation. But we must say, it has disappointed us—not from its imperfections, but from its being so complete a misnomer. We anticipated much from the title, which opened a glorious field, both for truth and imagination. *The First Day in Heaven*, however, is but one day added to earth. Its sentiments, principles, intelligence, are all such as we highly approve: it elevates the mind, and applies nobly to the human understanding; it contains many fine reflections, and some original thoughts—but it is not what it purports to be; and we dislike being dashed from Heaven, even to so perfect an earth.

OXLEY'S NEW SOUTH WALES.

[Concluded.]

The following is all we can glean of natural history from Mr. Oxley's imposing quarto. In the Lachlan—

"One man in less than an hour caught eighteen large fish, one of which was a curiosity from its immense size, and the beauty of its colours. In shape and general form it most resembled a cod, but was speckled over with brown, blue, and yellow spots, like a leopard's skin: its gills and belly a clear white, the tail and fins a dark brown. It weighed entire seventy pounds, and without the entrails sixty-six pounds: it is somewhat singular that in none of these fish is any thing found in the stomach, except occasionally a shrimp or two."

"A new species of fish was caught, having four snappers above and four under the mouth; the hind part of it resembled an eel; it had one dorsal fin, and four other fins, with a white belly; it measured twenty-one inches and a half, and weighed about two pounds three quarters."

"Several flocks of a new description of pigeon were seen for the first time: two were shot, and were beautiful and curious. Their heads were crowned with a black plume, their wings streaked with black, the short feathers of a golden colour edged with white; the back of their necks a white flesh colour, their breasts fawn-coloured, and their eyes red. A new species of cockatoo or parrot, being between both, was also seen, with red necks and breasts, and grey backs."

"The animals differing from those in the neighbourhood of Bathurst are but few: the principal is a new species of red kangaroo; a smaller species of the same, having a head delicately formed, called by us the rabbit-kangaroo. Two other birds besides the pigeon and cockatoo before-mentioned may be noticed: we suppose them to be both birds of night, being only heard at that time; neither of them was seen: one was remarkable for exactly imitating the call of the

natives, the other the short sharp bark of the native dog, inso much that our dogs were constantly deceived by the noise."

"An inmate of an alarming description took up his lodging in our tent during the last night, probably washed out of its hole by the rain: a large diamond snake was discovered coiled up among the four bags, four or five feet from the doctor's bed."

"We killed this day one of the largest kangaroos we had seen in any part of New South Wales, being from one hundred and fifty to one hundred and eighty pounds weight. These animals live in flocks like sheep; and I do not exaggerate, when I say that some hundreds were seen in the vicinity of this hill; it was consequently named Kangaroo Hill."

Respecting the country we extract two or three of the most descriptive passages. In the first journey—

"June 21.—Fine mild weather: at eight o'clock set forward on our journey. The further we proceeded northwesterly, the more convinced I am that, for all the practical purposes of civilized man, the interior of this country westward of a certain meridian is uninhabitable, deprived as it is of wood, water, and grass. With respect to water, it is quite impossible that any can be retained on such a soil as the country is composed of, and no water courses, for the same reason, can be formed; for, like a sponge, it absorbs all the rain that falls, which, judging from every appearance, cannot be much. The wandering native with his little family may find a precarious subsistence in the ruins with which the country abounds; but even he, with all the local knowledge which such a life must give him, is obliged to dig with immense labour little wells at the bottom of the hills, to procure and preserve a necessary of life which is evidently not to be obtained by any other method."

"Nothing can afford a stronger contrast than the two rivers, Lachlan and Macquarie; different in their habit, their appearance, and the sources from which they derive their waters, but above all differing in the country bordering on them; the one constantly receiving great accession of water from four streams, and as liberally rendering fertile a great extent of country; whilst the other, from its source to its termination, is constantly diffusing and extenuating the waters it originally receives over low and barren deserts, creating only wet flats and uninhabitable morasses, and during its protracted and sinuous course is never indebted to a single tributary stream. The contrast indeed presents a most remarkable phenomenon in the natural history of the country, and will furnish matter in other parts of this Journal, for such conclusions as my observations have enabled me to form."

"August 22.—Among the other agreeable consequences that have resulted from discovering the river in this second Vale of Tempe, may be enumerated, as not the least, the abundance of fish and emus with which we have been supplied; swans, and ducks, were also within our reach, but we had no shot. Very large muscles were found grow-

ing among the reeds along some of the reaches; a few exceeded six inches in length, and three and a half in breadth. Traces of cattle were found in various places as low as Howe's Brook, which are now doubtless straying through the country."

Into the Macquarie fall the rivers Castle-reagh, Field, Sydney, &c. and there are some fine waterfalls. Its termination is thus mentioned:—

"The river itself continued, as usual, from fifteen to twenty-five feet deep, the waters which were overflowing the plains being carried thither by a multitude of little streams, which had their origin in the present increased height of the waters above their usual level. The river continued undivided, and presented too important a body of water to allow me to believe that these marshes and low grounds had any material effect in diffusing and absorbing it: its ultimate termination, therefore, must be more consonant to its magnitude. These reflections on the present undivided state of the river would of themselves have caused me to pause before I hastily quitted a pursuit from the issue of which so much had naturally been expected. For all practical purposes, the nature of the country precluded me from indulging the hope, that even if the river should terminate in an inland sea, it could be of the smallest use to the colony."

"After going about twenty miles, we lost the land and trees: the channel of the river, which lay through reeds, and was from one to three feet deep, ran northerly. This continued for three or four miles farther, when although there had been no previous change in the breadth, depth, and rapidity of the stream for several miles, and I was sanguine in my expectations of soon entering the long sought for Australian sea, it all at once ended our further pursuit by spreading on every point from north-west to north-east, among the ocean of reeds which surrounded us, still running with the same rapidity as before. There was no channel what-ever among those reeds, and the depth varied from three to five feet. This astonishing change (for I cannot call it the termination of the river), of course left me no alternative but to endeavour to return to some spot, on which we could effect a landing before dark. I estimated that during this day we had gone about twenty-four miles, on nearly the same point of bearing as yesterday. To assert positively that we were on the margin of the lake or sea into which this great body of water is discharged, might reasonably be deemed a conclusion which has nothing but conjecture for its basis; but if an opinion may be permitted to be hazardous from actual appearances, mine is decidedly in favour of our being in the immediate vicinity of an inland sea, or lake, most probably a shoal one, and gradually filling up by immense depositions from the higher lands, left by the waters which flow into it. It is most singular, that the high-lands on this continent seem to be confined to the sea coast, or not to extend to any great distance from it."

The following anecdote is curious.

"A singular instance of affection in one of the brute creation was this day witnessed. About a week ago we killed a native dog, and threw his body on a small bush: in returning past the same spot to-day, we found the body removed three or four yards from the bush, and the female in a dying state lying close beside it; she had apparently been there from the day the dog was killed, being so weakened and emaciated as to be unable to move on our approach. It was deemed mercy to despatch her."

We now take leave of this work, which will be found to supply little more intelligence than we have extracted; except so much as may be summed up in few words. Lime and coal were occasionally found; and also, once, a saponaceous clay like fuller's earth. The party suffered much from thirst, though it is stated that rain fell abundantly; and one of the men was spared by a native, to obtain his axe, but recovered. Surveyors' jobs are usually very expensive; and Mr. Oxley's, with the super-addition of the bookseller's weighty pressure, renders this a work of excessive cost, when considered with reference to its intrinsic worth, or to the value of the information it furnishes to the general stock.

#### HUBER ON ANTS.

[Dr. Johnson's Translation, continued.]

The fourth chapter of this interesting history treats of the relation between (relations among) Ants; on which branch of their economy the following extract will be sufficient.

"The guard or sentry of the ant-hill will furnish us with the first proof of their social relations. We could, without doubt, irritate ants on the surface of the nest, without alarming those in the interior, if they acted isolately, and had no means of communicating their mutual impressions. Those who are occupied at the bottom of their nest, removed from the scene of danger, ignorant of what menaces their companions, could not arrive to their assistance; but it appears, that they are quickly and well informed of what is passing on the exterior. When we attack those without, the most part engage in their defence with a considerable degree of courage: there are always some, who immediately steal off and produce alarm throughout their city; the news is communicated from quarter to quarter, and the labourers come forward in a crowd, with every mark of uneasiness and anger. What, however, is highly worthy our remark is that the ants, to whose charge the young are confided, and who inhabit the upper stories, where the temperature is highest, warned also of the impending danger, always governed by that extreme solicitude for their charge, which we have so often admired, hasten to convey them to the deepest part of their habitation, and thus deposit them in a place of safety."

"To study in detail the manner in which this alarm spreads over the ant-hill, we must extend our observations to the individuals of the largest species: the Herculean Ants, who inhabit hollow trees and who quit them only in the spring, to accompany the

males and females, have very much assisted me in this object.

"The labourers are from five to six lines in length; the winged individuals are also proportionably large: they may be frequently seen running about the trunk of an oak, at the entrance of their labyrinth. When I disturbed those ants that were at the greatest distance from their companions, by either observing them too closely, or blowing upon them lightly, I saw them run towards the other ants, give them gentle blows with their heads against the corset, communicating to them, in this way, their fear or anger, passing rapidly from one to the other in a semicircular direction, and striking several times successively against those who did not put themselves in instant motion. These, warned of the common danger, set off immediately, describing in their turn different curves, and stopping to strike with their heads all those they met on their passage. In one moment the signal was general, all the labourers ran over the surface of the tree with great agitation, those within receiving notice of the danger, and probably by the same means, came out in a crowd and joined this tumult. The same signal which produced upon the workers this effect, caused a different impression upon the males and females; as soon as one of the labourers had informed them of their danger, they sought an asylum, and re-entered precipitately the trunk of the tree—not one thought of quitting its temporary shelter, until a worker approached and gave them the signal for flight. The solicitude of the labourers in their favour, is manifested in the activity they display, in giving them advice or intimating to them the order for their departure; they resemble then the above signals, as if conscious of their understanding their intent less readily than the companions of their labours: the latter understand them, if I may use the expression, at half a word."

The author then details several extraordinary circumstantial proofs that these insects possess some kind of language, in which to make themselves understood by their companions.

The fifth chapter treats of the wars of ants, and is almost as fine a satire on the biped pismire man, as Gulliver's Lilliputian animals.

"Of all the enemies of the ant, those most dreaded are the ants themselves; the smallest not the least, since several fasten at once upon the feet of the largest, drag them on the ground, embarrass their movements, and thus prevent their escape. One would be astonished at the fury of these insects in their combats; it would be more easy to tear away their limbs and cut them in pieces, than compel them to quit their hold. It is nothing uncommon to see the head of an ant suspended to the legs or antennae of some worker, who bears about, in every place, this pledge of his victory. We also observe, not unfrequently, the ants dragging after them the entire body of some enemy they had killed some time before,

fastened to their feet in such a way as not to allow of their disengaging themselves.

"Supposing the ants to be of equal size, those furnished with a sting have an advantage over those who employ only for their defence their venom and their teeth. The whole of those ants whose peduncle has no scale, but one or two knots, are provided with a sting; the Red Ants, which are said to sting more sharply than the rest, possess both these sorts of arms. In general the ants furnished with a sting are, in our country, some of the smallest. I know but one species of middle size; but it is very rare and only inhabits the Alps.

"The wars entered into by ants of different size bear no resemblance to those in which ants engage who come to combat with an equal force. When the large attack the small, they appear to do it by surprise, most likely to prevent the latter from fastening upon their legs; they seize them in the upper part of the body and strangle them immediately between their pincers. But when the small ants have time to guard against an attack, they intimate to their companions the danger with which they are threatened, when the latter arrive in crowds to their assistance. I have witnessed a battle between the Herculean and the Sanguine Ants; the Herculean Ants quitted the trunk of the tree in which they had established their abode, and arrived to the very gates of the dwelling of the Sanguine Ants; the latter, only half the size of their adversaries, had the advantage in point of number; they, however, acted on the defensive. The earth, strewn with the dead bodies of their compatriots, bore witness they had suffered the greatest carnage; they, therefore, took the prudent part of fixing their habitation elsewhere, and with great activity transported to a distance of fifty feet from the spot, their companions, and the several objects that interested them. Small detachments of the workers were posted at little distances from the nest, apparently placed there to cover the march of the recruits and to preserve the city itself from any sudden attack. They struck against each other when they met, and had always their mandibles separated in the attitude of defiance. As soon as the Herculean Ants approached their camp, the centinels in front assailed them with fury; they fought at first in single combat. The Sanguine Ant threw himself upon the Herculean Ant, fastened upon its head, turned its abdomen against the chest of its adversary or against the lower part of its mouth, and inundated it with venom. It sometimes quitted its antagonist with great quickness; more frequently, however, the Herculean Ant held between its feet its audacious enemy. The two champions then rolled themselves in the dust and struggled violently. The advantage was at first in favour of the largest ant; but its adversary was soon assisted by those of its own party, who collected around the Herculean Ant and inflicted several deep wounds with their teeth. The Herculean Ant yielded to numbers; it either perished

the victim of its temerity, or was conducted a prisoner to the enemy's camp.

"Such are the combats between ants of different size; but if we wish to behold regular armies, war in all its form, we must visit those forests in which the Fallow Ants establish their dominion over every insect in their territory. We shall there see populous and rival cities, regular roads passing from the ant-hill as so many rays from a centre, and frequently by an immense number of combatants, wars between hordes of the same species, for they are naturally enemies and jealous of the territory which borders their own capital. It is in these forests I have witnessed the inhabitants of two large ant-hills engaged in spirited combat. I cannot pretend to say what occasioned discord between these republics. They were composed of ants of the same species, alike in their extent and population; and were situated about a hundred paces distance from each other. Two empires could not possess a greater number of combatants.

"Let us figure to ourselves this prodigious crowd of insects covering the ground lying between these two ant-hills, and occupying a space of two feet in breadth. Both armies met at half-way from their respective habitations, and there the battle commenced. Thousands of ants took their station upon the highest ground, and fought in pairs, keeping firm hold of their antagonists by their mandibles: a considerable number were engaged in the attack and leading away prisoners. The latter made several ineffectual efforts to escape, as if aware that, upon their arrival at the camp, they would experience a cruel death. The scene of warfare occupied a space of about three feet square; a penetrating odour exhaled from all sides; numbers of dead ants were seen covered with

box, nearly a month, about an equal number of Red and Yellow Ants. It would seem that a general feeling of compassion for their unfortunate imprisonment had given birth to a suspension of hostilities, and that rankling animosity had been exchanged for good will and social order. During this period I seldom witnessed any affray on the exterior of the nest, and on breaking it up, the interior gave me no room to suppose it had been the scene of much contention; but scarcely were they liberated, scarcely did they feel the fresh breeze passing over them, than their animosity re-kindled, and the field of their liberty became the theatre of sanguinary combat. For a few moments each party seemed engaged in discovering a place of retreat, and it was only on returning to the ruins of their original position, to bring off the rest of their companions, that they encountered and waged war upon each other. What was as singular as unexpected, they fought in pairs, in no instance *en masse*; indeed, it only twice happened, although the ground was strewn with combatants, that a third came to the aid of its companion, and even then, as if conscious of the unequal contest, one immediately retired. It was inconceivable with what desperate fury, and with what determined obstinacy they fastened upon each other. With their mandibles alone they often succeeded in effecting a complete separation of the body of their antagonist, of which the ground exhibited many proofs when I revisited it.—T.

venom. Those ants composing groups and chains, took hold of each other's legs and pincers, and dragged their antagonists on the ground. These groups formed successively. The fight usually commenced between two ants, who seized each other by the mandibles, and raised themselves upon their hind-legs, to allow of their bringing their abdomen forward, and spurring the venom upon their adversary. They were frequently so closely wedged together that they fell upon their sides, and fought a long time in that situation, in the dust; they shortly after raised themselves, when each began dragging its adversary; but when their force was equal, the wrestlers remained immovable, and fixed each other to the ground, until a third came to decide the contest. It more commonly happened that both ants received assistance at the same time, when the whole four, keeping firm hold of a foot or antenna, made ineffectual attempts to gain the battle. Some ants joined the latter, and these were, in their turn, seized by new arrivals. It was in this way they formed chains of six, eight, or ten ants, all firmly locked together; the equilibrium was only broken when several warriors, from the same republic, advanced at the same time, who compelled those that were enchained to let go their hold, when the single combats again took place. On the approach of night each party returned gradually to the city, which served it for an asylum. The ants, which were either killed or led away in captivity, not being replaced by others, the number of combatants diminished, until their force was exhausted.

"The ants returned to the field of battle before dawn. The groups again formed; the carnage recommenced with greater fury than on the preceding evening, and the scene of combat occupied a space of six feet in length, by two in breadth. Success was for a long time doubtful; about mid-day the contending armies had removed to the distance of a dozen feet from one of their cities, whence I conclude some ground had been gained. The ants fought so desperately, that nothing could withdraw them from their enterprise; they did not even perceive my presence, and although I remained close to the army, none of them climbed upon my legs; they seemed absorbed in one object, that of finding an enemy to contend with."

[To be continued.]

## ORIGINAL CORRESPONDENCE.

### INSANITY.

\* DR. ESQUIROL, ON MADHOUSES IN FRANCE.

From all these lamentable arrangements it results, that the insane are very badly off, in all respects, as the following details prove:—

"1st. Their apartments are by no means disposed in a manner properly adapted to their use: almost every where, except in the Salpêtrière and the Bicêtre, the buildings occupied by the insane are the most retired, the oldest, the dampest, and consequently the most unwholesome; the buildings lately

\* Concluded from the L. G. of 17th June, p. 391.

erected in the *Dépôts de Mendicité*, or elsewhere, are very ill contrived; in some, for example, the court-yard which separates the building from the wall that surrounds it, is not a fable in breadth.

"2d. The habitations, the cells, dungeons, cages, &c. are dreadful; without air, without light, damp, confined, paved like the streets, often lower than the surface of the ground, and sometimes in the vaults (*Souterrains*); these apartments have generally no opening but the door, and a little square hole opposite to it; sometimes there is no opening but the door. The air does not circulate in them, and when you enter, you are suffocated with the infectious odour which they exhale. There are cells which resemble cages; others are of wood, exposed to all the inclemencies of the weather. In my work upon these madhouses, I intend to give a description of these habitations; they seem all to have been constructed to degrade man, and deprive him of the first elements necessary to the preservation of life.

"3d. Often there are no beds; thus wretches tormented by the want of sleep, have sometimes only the paved floor to rest their limbs; and instead of a mattress, pillow, and quilt, nothing but straw.

"4th. Almost every where the poor lunatics, and sometimes even those who pay for their board, are either naked or covered with rags; to them are given the tattered garments of the poor, of the infirm, and the prisoners, who live in the same establishment with them. They are good enough, it is said, for lunatics. Sometimes they are destitute of straw, or it is not changed as often as it ought to be. I have seen an unhappy lunatic quite naked, and without straw, lying upon the paved floor: expressing my astonishment at such neglect, the keeper answered, that he was allowed only a truss of straw once a fortnight, for each individual. I observed to this barbarian, that the dog which guarded the gate of the lunatics had a more wholesome lodging, and that he had fresh straw in abundance: this remark procured me a smile of contempt—and I was in one of the greatest cities in France.

"5th. The regimen, the food, far from being suitable to the nature of these maladies, are injurious to them; when any thing is given them besides black bread, it is of a kind which is not proper for them. They generally get dry and ill-drest vegetables and cheese. It is a treat for the lunatics of Tours, when the nun, who superintends them, can procure once a week the intestines of the animals which have served to make the soup and broth for the poor of the hospital. In the *quartier de force*, in the prisons, the lunatics have only bread and water, when the keepers please to give it them. How is it distributed? generally once a day. In a town they give to the lunatics, as to the prisoners, once in two days, a loaf weighing three pounds, with a pot of water. What a regimen for patients who are dried up by internal heat, devoured by thirst, and tormented by costiveness!

"6th. They have not room in any house

to take the exercise which is so necessary to them. Sometimes there is only one court-yard for all the lunatics of the same sex, and the raving mad are always shut up: or chains are hung to the walls which surround the court, and these victims of inhumanity are fastened to them, in order to make them take the air, as their keepers say, quietly.

"7th. The lunatics are not waited upon at all, or very indifferently; they have hardly any where servants to attend them, and when they have, their number is insufficient; sometimes they are given up to harsh, barbarous, or ignorant keepers. This neglect is the more deplorable, as these unfortunate people have not sense enough to demand the care which humanity every where gives to the sick. Are they attended? what attendance is it, great God! What can be required of a keeper who has thirty, fifty, even sixty individuals under his care? What sentiments of benevolence can these rule men have, who see in the insane only mischievous, dangerous, and hurtful beings? They are acquainted with no means to guide, to restrain, to calm them, but abuse, menaces, terror, blows, and chains.

"8th. Chains are used every where; first, because the buildings are ill arranged; secondly, because the servants are not sufficiently numerous; thirdly, because no other means are known; fourthly, because the use of the strait waistcoat is more expensive. I have sent strait waistcoats as patterns to several towns; out of economy they are not used. It is certain that chains cost less to keep them in repair; it was for this reason Dr. Monro said they were preferable for the poor.\* The improper use of chains is revolting. They use iron collars, iron girdles, manacles for the hands and feet. In one of the greatest cities, which I should be afraid to name, the raving mad are fastened to an iron collar, fixed to a chain a foot and a half long, which is screwed to the middle of the floor, and I was assured that this was the

\* Insinuation as to motives and principles of action is always more dangerous than an open attack: the one is the weapon of assassination, and to be dreaded as such; the other brings us at once into contact with our enemy, which leads to decisive explanation; an event invariably courted by the candid, the manly, and the well-disposed. Dr. Monro does not appear to us to recommend handcuffs for the use of the poor, on any other principle than that of their inability to afford a more humane mode of coercion by living force. We therefore may be induced to extract from his evidence on this point, in order that the statement of Esquirol may be contrasted with the opinions of Dr. Monro; and the document will be otherwise useful, by presenting a comparative view of the advantages of the two modes of coercion, by handcuffs and the strait waistcoat. Next to the horrors described by Esquirol, in his delineation of dens, cages, and prisons, for the reception of the insane, are the miseries that must follow the constant application of the strait waistcoat, particularly in summer, to our fellow-creatures. Direct handcuffs of their association with crime, and let them be modified, and they assuredly become a much more humane mode of restraint than the strait waistcoat.—Ed.

surest means to calm the paroxysms of rage. At Toulouse, in an apartment which is next to the roof, containing about twenty beds, they have suspended to the walls, and over each bed, a chain, which is fastened to a girdle of iron; the lunatics, when they get into their beds, shake these chains, by which they are to be loaded during the night. *In some houses leather straps are distributed to the attendants. The bunch of keys is an instrument of correction.* Good regulations would abolish the use of chains every where, as it has long been in the establishment of Paris. These establishments give to the civilized world the example of two thousand lunatics, of every age, sex, condition, and character, directed, governed, and attended, without blows or chains.

"9th. The physicians have in vain demonstrated in all the cities; but being destitute, of what is most necessary for beneficial attendance, they are discouraged, and do not visit the lunatics, but in cases of very serious illness: they are very rarely made patients with a view of curing them of their madness. There are some houses where the servants prescribe shower-baths, solitary confinement, &c. At Toulouse, from time immemorial, the physicians of the *Hôtel Dieu* visited every month the poor of the general hospital; they never went to the *quartier de force*, where the manics were chained.

"10th. The directors, deceived by fatal prejudices, hardly ever inspect them: many think they have well performed their duty when they have had some provisions distributed among them, and when they have put those wretches whom they suppose incurable, out of a condition to injure society.

"Their fate cannot then be ameliorated as long as they remain in the hospitals, *dépôts de mendicité*, or in the prisons."

Dr. Esquirol examines in what manner it would be the most proper to dispose of the insane; and comes to the conclusion, that it would be advisable to found a sufficient number of large establishments, which he prefers to small ones, because, as he observes, it would be more easy to divide the patients into classes, each of which requires a different mode of treatment; whereas, in a small establishment, there would be almost as many subdivisions as patients. The expense of small establishments would be much greater in proportion, and it would hardly be possible to find a sufficient number of professional men acquainted with this disease in all its various forms. These great establishments would likewise afford much better opportunities for the study of this deplorable malady.\*

\* Here Esquirol is at variance with himself, by forgetting the principles he had previously laid down. We contend, on the basis of experience, that no institution for the relief of the insane should be erected on a large scale. What we mean is this; that a great mass of mental disease, with their varied and necessary attendants, should never be assembled under the same roof. In the treatment of mental derangement, where numbers are aggregated, there ought to be, richly to be distinct medical chiefs, with an adequate number of medical and surgical assistants;

Dr. Esquirol says that the plan of a lunatic asylum, must not be left to an architect;

and there should also be distinct buildings for the professional labours of such chiefs; and thus would emulation be promoted among the superiors, which would extend to the subordinates of all characters, and from which the utmost benefit to the insane in a professional and a humane point of view, might be with certainty calculated on. We are of opinion, that if in place of Bethlehem, there had been erected four hospitals of smaller dimensions, and skillfully subdivided, for the reception of the insane, and those founded in various convenient spots around the metropolis, the utmost benefit by the comparison of results to the cause of humanity, and the interests of the public in a pecuniary way, would have been the consequence. Such arrangements, although more expensive in their origin, and in their management, would yet, by their effects, have proved by far the most economical, by increasing the number cured, and by establishing their comfort on a more unerring basis, during this interesting and painful exhibition of human infirmity. Let us suppose two physicians, equal in point of experience and talent, of equal diligence and humanity, engaged in the treatment of insanity, and that the one has a succession of cases which he visits daily, and that they are never allowed to exceed a dozen, or half that number; while the other has the charge of 50, 100, 150, or 300 patients, whom he visits once or twice the most successful practitioner? The former would be able to devote a minute attention to the characters of the dozen placed under his care, to their diet, to their dress, to their exercise; and the capacities of their mind would also engage his attention, and of course lead to means proper for its employment. The conduct and moral habits of attendants, would be here anxiously examined; in short, with such restricted duties, it would be incumbent on the physician so circumstanced, to see that every measure, however minute or humble, that contributed to their recovery, should be carried into effect. This physician would be possessed of the power of applying general principles, under the guidance of a minute attention to particulars; while the latter would be compelled to act almost solely through general principles, without particular attention to individual cases; and which individual attention is as necessary to ensure success in the treatment of this and every other disease, as the study of individual character is essential to success in the pleasing science of portrait painting, which, when delicately managed, not only delineates the features, but unfolds the soul. Let us suppose a physician employed twelve hours out of the twenty-four in prescribing for this disease, and that he devotes ten minutes to this disease, and on an average, will be little enough; it becomes evident that he can only get over six in an hour, and consequently only seventy-two, in twelve hours, on the supposition of his continuing twelve hours in constant action, which is an effort to be continued, beyond the faculties of the mind, above the powers of the body. In the treatment of insanity, that kind of economy which shall place too many patients under the care of one physician is as unfriendly to their recovery as the want of capital in the cultivation of the soil, must be hostile to vegetable reproduction. There is an extent of bodily labour, to which human nature is inadequate; and this principle will apply with increased force to the mind; and it therefore becomes Governors of

fect; and, \* instructed by ten years experience in his own establishment, as well as by his reading, his travels, and his researches, he gives the result of his reflections, in the plan which he judges the best adapted to the purpose."

## ARTS AND SCIENCES.

**Meteorology.**—The Marquis de la Place has relinquished the hypothesis of the lunar origin of meteoric stones; indeed it never was tenable. A friend of ours, who witnessed the fall of an aerolite in a brook, within 200 yards of him, during a dreadful storm, damned out the water and dug for it a few days after. He was unsuccessful in his first excavation; but in his second attempt found the thunderbolt at about one foot and a half from the surface. Being rather of curious than of scientific habits, he lost this fine opportunity for experiment; but he describes the stone as spherical, and about four inches in diameter. It was exceedingly heavy, and seemed to be a dark fusion of iron and nickel. Broken with a hammer, there was discovered in the centre a cavity, three-fourths of an inch in diameter, and filled with a black powder strongly compressed. The smell was highly sulphurous. It is evident that such a production as this belonged to the chemistry of the air, and electricity.

**Pyrologious Acid.**—Curing Provisions.—The property of preserving meat and other animal substances from putrefaction by this acid, the product of distillation from wood, was originally stated in the Literary Gazette, about twelve months ago. A Mr. W. Ramsay has since tried a series of experiments with the view to further investigating the subject, and rendering the acid useful in domestic and naval economy. These fully confirm the utility of the discovery for the curing of provisions. Herrings immersed for three hours in distilled Pyrologious acid of the specific gravity of 1.012, were considerably softened, but remained in perfect preservation for half a year; the only disagreeable quality attached to them being an empyreumatic smell and taste. Merely dipping the fish in a pickle of this strength appears to be sufficient for their cure, and they are then free from empyreuma. Haddocks slightly sprinkled with salt, and afterwards dipped in the acid, were finely preserved: if allowed to remain too long in the latter, the muscular fibre became decomposed, and the smell and

Hospitals to see that no task is imposed that can offer an apology for neglecting it. Physicians of such hospitals, where, we contend, daily attendance is necessary for the welfare of their inhabitants, should be liberally paid, and their attention more pointedly directed to the duties of such institutions: this would prove economy combined with humanity; and until this be done, neither the insane, nor the diseased in any form, will derive the fullest benefit from the powers of medicine.

\* This opinion is most correct. Great mischief must ever arise from allowing the erection of a building of this nature, under the exclusive judgment of an architect; and of these evils, Bethlehem affords some striking examples.—*Ed.*

taste were unpleasant, as in the herring first mentioned. Herrings, with salt and acid slightly combined, were equal to the finest red herrings, and shining and fresh in their colour as when taken from the sea.

Beef dipped in the acid (sp. gr. 1.012) for one minute, in July, 1819, was on the 4th March, 1820, as free from taint as on the day when the experiment was made. Beef dipped in pure vinegar (sp. gr. 1.000) at the same time, was free from taint on the 18th November, and being broiled, had a pleasant sub-acid taste. It is thus evident that vinegar also possesses, to a certain degree, a similar anti-septic quality with pyrologious acid. (See *Ed. Ph. Jour. V.*)

These experiments corroborate our opinion, that this pyrologious acid may become eminently useful in the preservation of animal substances; and we again recommend it to our chemical friends for observation.

**Philology.**—Mr. Jacks, librarian to the Royal Library at Bamberg, has discovered there a manuscript of the Roman history of Eutropius, which was probably brought from Rome by the Emperor Henry, the founder of the Bishopric of Bamberg. The MS. is more complete than any of the best editions hitherto published of this author, and very likely to correct a number of false readings. Professor Goeller, of Cologne, had previously discovered in the Royal Library a MS. of Livy.

**Antiquities.**—Mr. F. C. Gau, of Cologne, who is well known as a learned architect and antiquarian, has just arrived at Rome, on his return from a long and perilous journey through parts of Asia and Africa. He is preparing to publish in that city the result of his researches, which will form a very valuable work, highly interesting to historians and archaeologists. Baron Niebuhr, Prussian ambassador at Rome, in a letter to a friend, says, "Mr. Gau, who is returned from his tour to Palestine, Egypt, and Nubia, to the second Cataract, has brought with him a treasure of the most remarkable remains of antiquity, which had hitherto been either not designed at all, or in a very imperfect manner. This is an ample compensation for the fatigues and dangers of his journey. He is the first German who has accomplished this enterprise; and the honour of Germany, as well as that of the ingenious artist, is interested in the speedy publication of the fruits of his undertaking."

Among other drawings, Mr. Gau has the views of twenty temples, never before designed. He has brought with him many curiosities, one of which is the mummy of a cat.

**Red Snow.**—The fungi, now generally held to be the cause of the redness, in the specimens of arctic and Swiss snows, have been found by Mr. T. Bauer to vegetate when placed in fresh snow. They also vegetate in water; but there the produce is green instead of red.

## LEARNED SOCIETIES.

OXFORD, JULY 8.

Mr. H. A. Woodgate and Mr. W. E.

Marsh, Scholars of St. John's College, were admitted Fellows of that Society.

Yesterday the following degrees were conferred:—

MASTER OF ARTS.—Rev. W. Williams, All Souls' College.

BACHELORS OF ARTS.—J. Wallis, Exeter College; Joseph Harling, and H. Ayling, Magdalen Hall.

CAMBRIDGE, July 7.

The Rev. C. J. Blomfield, of Trinity College, was on Saturday created D.D. by royal mandate. On Monday Henry W. Hyde, of Esm. col. was admitted B. C. L.; and J. Spurgin, of Caius coll. Bachelor in Physic. Yesterday, the Rev. W. Palgrave Manclerke, of Jesus college, was admitted M. A.; and M. Prendergast, of Pembroke Hall, B. C. L. S. Pope, Esq. B. A. of Esm. coll. was last week elected a Fellow of that society. C. Smith, Esq. B. A. of St. Peter's coll. was on Saturday last elected a foundation Fellow of that society. On Tuesday last (being Commencement Day) the following Doctors and Masters of Arts were created:—

DOCTOR IN DIVINITY.—The Rev. J. Inman, the Rev. T. Causton, the Rev. R. Roberts, of St. John's college; the Rev. Holt Oke, of C. C. coll.

DOCTOR IN CIVIL LAW.—G. Matcham, of St. John's college.

DOCTORS IN PHYSIC.—F. Thackeray, Esq. of Emmanuel coll.; J. Walker, Esq. and J. Warburton, Esq. of Caius college.

MASTERS OF ARTS.—G. Elwes Corrie; J. A. Bateman, Catherine Hall; Beaupre P. Bell; Owen Davys; T. Wilkinson; T. B. Proctor; D. B. Wells; G. J. Wyatt, Christ coll.; R. Dawes, Downing coll.; R. Whitcombe; J. Cooper; J. Guthrie; C. Townley; W. Hildyard; D. Hopkins; R. Butler; G. P. Buxton; J. Dainty; T. Polhill; E. J. Gambier; G. T. Andrews; R. B. Brocklebank; T. G. Hickman; E. Rice; H. J. Rose; E. Harden; D. Nantes; T. Starr; T. H. Hope; C. J. Heathcote; J. Brand; A. B. Wrightson, Trin coll.; Temple Chevalier; H. Blunt; Onley Harvey; T. Jee; J. T. Wharton; R. Gibson; H. Sim, Pembr. Hall; C. R. Francis; E. Rust; T. T. Pattinson; T. Methwold, Caius coll.; J. Hatchard; W. C. Keudall; E. Vale; T. Steele, Magdalen coll. (*in corp. Dublin*); R. Waterfield; Mark Cantis; H. J. Oakes; W. H. W. Gery; R. Chester; J. Carnegie; J. Rawes; J. Burroughes, Emmanuel coll.; H. H. Hughes; E. C. Kemp; J. F. Roberts; N. Fiott; J. T. Austin; E. Ramsden; G. R. Rudd; R. K. Holder; J. James; J. H. Dent; L. B. Foster; L. Ripley; T. R. Brown; R. S. Hurst; G. Jenyns; A. Utterston; S. Martin; A. E. Douce; S. Titlow; E. Smirk; P. W. Yorke; E. Penryn; T. Schreiber; J. T. Waddington; O. Grimston; H. Fardell; H. Luxmore; T. Margetta; J. Denne; E. Oldfield, St. John's coll.; N. Every; H. Kirby; T. T. Upwood; C. Paroissien; W. F. Protheroe, Clare Hall; S. Breerton; W. Davidson; R. Gell; R. Davis; J. Bartlett; H. Barham; A. Burn; G. L. Yate, Queen's coll.; N. Cotton; D. Williams, Jesus coll.; W. Bond, Corpus Christi coll.; R. Clifton; E. T. Whinfield,

St. Peter's coll.; N. J. Temple; E. Wade, Sydney Sussex coll.; G. B. Green; G. F. Nicholas, King's coll.

## ORIGINAL POETRY.

[By Correspondents.]

### STANZAS,

Written near la Croix de la Fleigere, in the Vale of Chamouni.\*

#### 1.

'Tis night, and silence with unmoving wings  
Breeds o'er the sleeping waters;—not a sound  
Breaks its most breathless hush;—the sweet  
moon flings

Her pallid lustre on the hills around,  
Turning the snows and ices that have crowned—  
Since chaos reigned—each vast and scorching  
height,

To beryl, pearl, and silver; whilst, profound,  
In the still waveless lake reflected bright,  
And girt with arrowy rays, rests her full orb of  
light.

#### 2.

Th' eternal mountains momentarily are peering  
Thro' the blue clouds that mantle them;—on  
high,

Their glittering crests majestically rearing,  
More like to children of the infinite sky  
Than of the dead earth;—triumphantly,  
Princes of the whirlwind—monarch of the scene—  
Highest where all are mighty;—from the eyes  
Of mortal man half hidden by the screen  
Of mist that coats his base, from Arve's dark,  
deep ravine,—

#### 3.

Stands the magnificent Monthblanc!—his brow,  
Scarred by ten thousand centuries' most sublime,  
Even as tho' risen from the world below  
After the progress of decay;—by climate,  
Storm—blight—fire—earthquake, injured not—

like time,  
Stern chronicle of centuries gone by,  
Doomed by an awful fiat still to climb,  
Swell and increase with years incessantly †  
'Then yield at length to thee most dread eternity!

#### 4.

Hark! there are sounds of tumult and commo-  
tion  
Hurting in murmurs on the distant air,  
Like the wild music of a wind-lashed ocean:  
They rage—they gather flow—yon valley fair  
Still sleeps in moonbright loveliness,—but there,  
Methinks, a form of horror I behold,  
With giant stride descending!—tis Despair  
Liding the rushing avalanche; now rolled  
From its tall cliff—by whom? what mortal  
may unfold!

#### 5.

Perchance a gale from ferid Italy  
Disturbed the air-hung thunder; or the tone  
Breathed from some hunter's horn;—or it may be,  
The echoes of the mountain cataract, thrown  
Amid its voiceful snows, have thus called down  
The overwhelming ruin on the vale:  
Howbeit a mystery to man unknowns,

\* La Croix de la Fleigere is an elevated point on the mountain of that name, and commands the finest possible view of Monthblanc, and of the Mer de Glace, with the exception perhaps of Mount Breven, which is much more elevated.

† The glaciers, according to Saussure, augment continually.

'Twas but some heaven-sent power that did pre-  
vail,

For an inscrutable end its slumbers to assail.  
6.

Madly it bursts along—even as a river  
That gathers strength in its most fierce career;  
The black and lofty pines a moment quiver  
Before its breath,—but as it draws more near,  
Crash—and are seen no more Fleet-footed fear,  
Pale as that whiterobed minister of wrath,  
In silent wilderment her face doth rear,  
But having gazed upon its blight and scathe,  
Flies, with the swift Chamois, from its death-  
dooming path!

A. A. W.

### BALLADES: A POEM.

#### 1.

How glorious is this morning! the bright sun  
Has just o'er-topped the dewdral mountain  
side,

And it is beautiful to look upon  
The pile of cloud his orient beams have dyed  
In fringes rich and deep-indigo, which run  
Far as the eye can reach; while from the tide  
Fragrant and cooling, ocean breezes come,  
Murmuring in concert with the wave's hoarse  
hum.

#### 2.

Hum! that's a good beginning for my song.  
As good as 'Heppa or as Whistcraft;  
I trust that I have taken quite as true  
And deep potations—quite as full a draught  
Of Hippocrate's waters, where so long  
Poets and bards of every clime have quaffed;  
Where still in crowds the tribes Panassian join—

As Frere or Byron, Corwall or Will. Wastle.

#### 3.

The four great masters of the rima's ottava,  
Whom I regard with very great respect;  
I hope you'll not imagine that I have a  
Conceit, an undervaluing, a neglect  
Of their superior aims, if I should crave a  
Like share of rhyming tact with those select  
Princes of this Italian kind of strain—  
But bards, and even rhymesters, will be vain.

#### 4.

I wrote the first verse on this fine calm day,  
Standing and musing on this lovely shore,  
Where, 'gainst the coast of a romantic bay,  
Th' Atlantic waves dash in perpetual roar;  
Close by my side the little village lay,  
Nestling near rocks whence eagles love to soar;  
To give its name in verse will be a job—  
(But here I go to try)—Balladehob.

#### 5.

I to this place some days ago came down,  
Partly to lounge, partly to 'scape a duel,  
A practice which I don't admire, I own,  
As being somewhat dangerous and cruel;  
What though the swaggers I have left in town  
May hint I have not in my heart the fuel  
Which Valour kindles,—they may say their  
best—

'Tis better than a ball thro' back or breast.

#### 6.

Here I am wandering by the sweet sea-side,  
Looking upon old Ocean's varying face;  
Or cleaving with stout arm the glassy tide;  
Or leaving the mountains joining in the chace;  
Or toiling, wearied with the lengthened ride,  
Plunged in some longer's gay soft embrace,  
At six o' clock, at ten I go to bed,  
Having first penned some verses to friend Ned.

7.  
And now, as on the freshening grass I lay,  
Just as oblivious as a dandy lord,  
Forgetful of the duel, or the fray,  
The opprobrious name, the pistol, or the sword,  
Finding that I had versified away,  
Not thinking I composed a single word,  
Says I, I'll send my verses light and airy,  
To the Gazette surmamed the Literary.

8.  
I like that journal well. But then perchance,  
Lines without title, meaning, or connection,  
May not delight the editorial glance  
Of him, whose name there is no need to mention;  
True: but they can as high a claim advance  
On meaning's score, as some of more pretension.  
Then for a name—Pshaw! give it for a name,  
Hallidiebob\*—the place from whence it came.

## PARODY.

'Tis the last glass of Claret,  
Left sparkling alone,  
All its rosy companions  
Are *clan'd out* and gone.  
No wine of her kindred,  
No Red Port is nigh,  
To reflect back her blushes,  
And gladden my eye.  
I'll not leave thee, thou lone one,  
This desert to crown:  
As the bowls are all empty,  
Thou too shalt float down.  
Thus kindly I drink up  
Each drop of pure red,  
And fling the bright goblet  
Clean over my head.

So soon may dame Fortune  
Fling me o'er her head,  
When I quit brimming glasses,  
And bundle to bed.  
When Champagne is exhausted,  
And Burgundy's gone,  
Who would leave even Claret,  
To perish alone.

*Concluding lines of "Waterloo"—the poem which obtained the Chancellor's Medal at the Cambridge Commencement 1820. By George Erving Scott, Trin. Hall.*

To distant skies that hurricane has rolled.  
But oh! the wreck it left! Could tongue unfold  
The matchless horrors of those cumbered plains,  
'T would chill the current in a warrior's veins.  
And yet, that field of anguish, brief as keen,  
Was but the centre of the one wide scene  
Of human misery. Oh! who shall say  
How many wounded spirits, far away,  
Are left to groan thro' long, chill bitter years,  
Beneath the woe that nothing earthly cheers?  
Shall Glory be the widowed bride's relief?  
She feels it but a mockery of grief.  
Shall Glory dry the childless mother's tears?  
Harsh grate the notes of Fame upon her ears!  
Thine are no Spartan matrons, favoured late!  
Gentle as fair! The sunshine of their smile,  
Where the proud victor loves to bask, is set.  
With sorrow's dew the loveliest cheeks are wet.  
Throughout the land is gone a mourning voice;

\* A village on the southern coast of the county of Cork, most romantically situated. The surrounding country is very beautiful, and abounding in mineral productions. Several mines are worked there by Colonel Hall.

And broken are the hearts that should rejoice.  
Dimly as yet the Crown of Victory shines;  
Where eypress with the blood-stained laurel  
twines.  
But there shall Time the brightest verdure  
breathe,  
And pluck the gloomy foliage from her wreath.  
Then proudly shall Posterity retrace,  
First in the deathless honors of their race,  
That giant fight, which crushed Napoleon's  
power,  
And saved the world. Far distant is the hour,  
Unheard of, yet, the deed our woe must do,  
That shall eclipse thy glory, Waterloo!  
Cambridge Chron.

## Verse from "Alis and Alexia."

En lui toute fleur de jeunesse  
Apparaisoit;  
Mais longue barbe, air de tristesse,  
Le ternissoit.  
Si de jeunesse on doit attendre  
Beau coloris,  
Paleur, qui marque une ame tendre,  
A bien son prix.

## ATTEMPTED.

In him each flower of manly grace,  
Each youthful charm appeared;  
Though tarnished by a sorrowing face,  
And by a length of beard.  
If we expect that youth impart  
Colours of lovely hue,  
Falseness, that marks the feeling heart,  
Has its attractions too.

## THE DRAMA.

## ENGLISH OPERA HOUSE.

*Woman's Will, a Riddle*—A three-act opera, under this title, from the pen of Mr. E. T. Swift, was produced, on Thursday, at the ancient Lyceum. With the blemish of being a full hour too long, it is otherwise a pleasing and amusing drama. Not looking for perfect plot or nature in such pieces, we freely grant the author the liberty he has taken, of founding his play on an utter improbability, and carrying it on by means of circumstances, to find reasons for which would puzzle better guessers than his hero. A certain duchess of Mantua, or Mantua duchess, is at the head of this musical world; (mea Mantua Cremona fecit, quoth Mr. Davy, the composer) and she takes it into her head to order the head of one Cæsario to be cut off, unless he solves the riddle of—what is a Woman's Will? He disliking this proposed Cæsarean operation, runs away, and the princess, old Mantua's daughter, being in love with him, runs after him. Withheld for some cause or other, from telling him the solution of the question, she assumes various disguises, and tries to hint him up to it. She tells him that idleness, money, &c. are the responses; but he declines risking his caput on these answers. At length she assumes the aspect of an ugly old woman; and discloses the real secret, on condition that Cæsario will do whatever she asks. He of course beats the sphynx mother, and is about to marry his dear princess, when the ugly old lady claims his hand in wedlock. Honour rules him, and after some

theatrical distress, she drops her mask, and their union crowns the whole.

Harley has a very whimsical character of gastronomic humour; a number of the jests and allusions in which to the noble science of eating, produce much laughter. There is also a very fair Polonius, of a minor court, a tolerable politician. These, with Miss Krly (the Princess), conspire sufficiently against the mind of the audience, to ensure a favourable reception for the opera; which, being shortened, will, we think, be long relished. The comic songs are very far from being dull, as the generality of modern comic songs are; and the music is pretty, and the acting good.

*Miss Macculey's Entertainments.* This lady closed the series of entertainments which she has been giving at the Argyle Rooms, on Wednesday, and seemed to have acquired strength from success, as she recently evinced greater powers than even her friends gave her credit for. Some of her recitations were powerfully affecting; and in a few instances she gave startling proofs of her skill to command the higher emotions. Unprepared for so vigorous an effort, the company were inclined to smile at the surprise which had overtaken them; but it must be confessed that such electrical strokes are evidence of a very singular combination of judgement and energy. Dress, action, and other concomitants, heightened this treat, for such it was; and we, so sceptical heretofore, are bound to say, that Miss M. displayed abilities of a very superior order.

## VARIETIES.

*Inside Observations.*—An ancient philosopher wished for a window to the human breast: the following is the nearest approach to actual acquaintance with the inward structure that we know of.—Dr. Leuwen, of Paris, has invented a machine for investigating diseases in the organs of the chest. It is a cylinder about a foot long, and 14 inch in diameter, pierced lengthwise by a hole three-eighths of an inch wide, and widened at one end in the form of a funnel the whole diameter of the cylinder. It acts partly as a prolongation of the external ear, partly by magnifying the sounds within the chest; and is well calculated to improve the knowledge of several important and obscure disorders.

Baron de Feltz died a few days ago at Brussels. He was a member of the States-General, and President of the Brussels Academy of Sciences and Belles-Lettres.

*Double Musical Performance.*—Mr. James Watson, a blind musician of Dundee, in Scotland, has contrived a method of playing upon the violin and violoncello at the same time. He plays on the former in the common way; and on the latter by means of his feet. His right foot goes into a sort of shoe at the end of the bow, and his right thigh being supported by a spring attached to his chair, the fatigue of his motion is not too great. The left foot acts upon a set of levers, by which he shortens the strings with

facility. He can play with ease many hours together.

*Method of Preserving Vessels.*—An American ship now at Cowes, built with spruce and white oak, sixteen years ago, has all her original timbers and planks in the most perfect state of preservation and soundness, owing to her having been, while on the stocks, filled up between the timbers with salt; and whenever she has been opened for examination filled up again. (*Daily Papers.*)

A whole length portrait of the Duke of Berri, by Girard, is the great object of attraction just now, at the Museum in the Tuileries. It is reported to be a fine work and excellent likeness.

*From a French Journal.*—The works which were this year produced, to compete for the prizes of copper-plate engraving, were exhibited for some days, in one of the galleries of the Academy at the Institute.

The candidates were seven in number. Each drew a full length figure from nature, and afterwards engraved it on a smaller scale. With but one or two exceptions, the exhibition was very indifferent. The model, it is true, might have been more happily chosen; but perhaps the selection did not depend on the students. It must, however, be confessed, that they proved themselves, on the whole, but careless drawers and feeble engravers.

The Academy of the Fine Arts of the French Institute, has adjudged the grand prize for copper-plate engraving, to *M. Leriche*, of Paris, a young man who has not yet attained his twentieth year.

The second grand prize has been granted to *M. Gélée* of Paris, aged twenty-four; and the inferior second grand prize to *M. Delaistre*, of Paris, aged twenty.

On the 12th of last May, the wife of François Dallé, a labourer residing at Châtillon-Vendelais, (Department of Ille et Vilaine), was delivered of a daughter without either arms or thighs. The child was living and in good health on the 28th of June. Its legs are only 3 inches long: its feet, which are very much deformed, have only three toes, the nails of which are sharply pointed. The child's body is naturally formed, and its countenance is agreeable.

*M. Panekouke*, a bookseller of Paris, is about to reprint, by subscription, and at a moderate price, that magnificent work, entitled *Description of Egypt*, which, owing to the vast expence at which it was originally published, has hitherto been inaccessible to the generality of the amateurs of art.

(*From a Correspondent.*)

The following is extracted from the Sixtieth Number of the Spectator.

"There is another new relation of the anagrams and the arithmeticks which is commonly called a chronogram. This kind of wit appears very often on many modern medals, especially those of Germany, when they represent in the inscription, the year in which they were coined. Thus we see on a medal of Gustavus Adolphus, the following words:—*CHRISTVS DNX ERGO TRIVM- PHVS.*" If you take the pains to pick the

figures out of the several words, and range them in their proper order, you will find they amount to MDCXXVII, or 1627, the year in which the medal was stamped; for, as some of the letters distinguished themselves from the rest and overtop their fellows, they are to be considered in a double capacity, both as letters and figures. Your laborious German wits will turn over a whole dictionary for one of these ingenious devices. A man would think they were searching after an apt classical term; but instead of that, they are looking for a word that has an L, an M, or a D, in it. When therefore we meet with any of these inscriptions, we are not so much to look in them for the thought, as for the year of our Lord."

Chronograms are, however, of an earlier date than Addison appears to imagine; some being found of the latter days of Greece, in the Greek language; the letters, according to their value in Grecian notation, making up some required number. Nor are they confined to inscriptions: they often make their appearance in the shape of Latin verses. There is a remarkable adaptation of a line in Ovid, to the fate of Don Carlos, murdered, or put death, call it which you will, for an alleged conspiracy against his father Philip, but really for heresy. It was observed that the line—

"*PHILVS ANTE DIEM PATRIS INQVIRIT IN ANNO.*"

in the first book of the *Metamorphoses*, contained the numerals of 1558, the year in which he died, and the crime for which he was punished. I believe these "difficult nuggets" are now given up. I however send you four, on the battles of Salamanca, Victoria, Thoulouse, and Waterloo.

1812.—*DEPVLA SPANEA EST HOSTIA \*SALAMANCA CAVORE.*

1813.—*DVCTORES GALLOS CERNIT VICTORIA MERNOS.*

1814.—*MOX ANGLIS CESSIT PERTRIST CADER TOLOSA.*

1815.—*DISSIPAT AC GALLI CAPIAS EN! MAGNVS HIBERNVS.*

## LITERARY NOTICES.

*Contrats du Journal des Savans* for Jun. 1820.

Art. I. Choiseul Gouffier, Voyage Pittoresque de la Grèce, Vol. ii, No. 2.—Reviewed by M. Letronne.

II. Jourdain, Recherches critiques sur l'Age et l'Origine des Traductions Latines d'Aristote.—M. A. Renaussat.

III. Biot, Considerations sur la Nature et les Causes de l'Aurore Boreale.—Original.

IV. Remusat, Recherches sur les Langues Tartares.—M. Silvestre de Sacy.

V. Dralet, Traité sur les Forêts d'Arbres résineux, &c. de la France.—M. Tessier.

VI. Essai d'un Glossaire Occitanien.—M. Raynouard.

VII. Labus, Autel Antique decouvert à Haimbourg.—M. Quatremere de Quincy.

\* More strictly I believe *Salamanca*: but some licence must be given to a chronogrammatist.

Mr. Belzoni, feeling it his duty to place before the public of England an account of his late discoveries in Egypt, Nubia, &c. has the pleasure to announce that his Narrative of the various operations in these Countries, is now publishing at Mr. Murray's, Albemarle Street, Piccadilly, in one volume, 4to. It contains Three Journeys in Upper Egypt and Nubia, one on the coast of the Red Sea, and one to the Oasis of Ammon. The work is accompanied by a volume of 34 plates in folio, containing drawings of the various newly discovered Places, Figures, and Hieroglyphics, taken from the originals found in the Tombs of the Kings, lately discovered in Thebes, with an exact imitation of Egyptian Costume, colours, &c. with other view in Nubia: the interior and exterior of the grand Temple of Ibsambul, near the second cataract of the Nile, and other views of that country, and in Upper and Lower Egypt: the interior and exterior of the newly explored Pyramid: plans and topographic maps, &c.

## METEOROLOGICAL JOURNAL.

JULY, 1820.

Thursday, 13.—Thermometer from 51 to 66. Barometer from 30, 00 to 30, 02.

Wind N. E. and E. N. E.—Generally cloudy.

Friday, 14.—Thermometer from 49 to 63.

Barometer, from 30, 03 to 30, 06.

Wind N. E. 0.—Generally cloudy, and clear.

Saturday, 15.—Thermometer from 55 to 65.

Barometer from 30, 11 to 30, 14.

Wind N. E. ½, and S. W. 6.—A thick haze spread over all the morning, and generally cleared till the evening, when it became clear. A few drops of rain about noon.

Sunday, 16.—Thermometer from 46 to 73.

Barometer from 30, 13 to 30, 06.

Wind E. b. S. E. ½.—Morning clear; heavy thunder and rain between 10 and 11, with some flashes of lightning; and heavy rain again about 1 P. M.

Rain fallen, .05 of an inch.

Monday, 17.—Thermometer from 55 to 72.

Barometer from 29, 85 to 29, 6.

Wind S. b. E. ½ and S. W. 1.—Generally cloudy, with frequent rain, and claps of thunder in the forenoon; afternoon and evening generally clear.

Rain fallen, .45 of an inch.

Tuesday, 18.—Thermometer from 47 to 67.

Barometer from 29, 61 to 29, 22.

Wind S. b. E. ½ and S. b. W. ½.—Generally raining. A little sunshine at three; about thunder in the morning. In the evening it became clear.

Rain fallen, .635 of an inch.

Wednesday, 19.—Thermometer from 46 to 69.

Barometer from 29, 62 to 29, 3.

Wind S. W. ½, N. E. and E. ½.—Clouds generally passing, with showers of rain. A little thunder at times in the afternoon.

Rain fallen, .525 of an inch.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

The Ode "To Liberty" makes too free with both rhyme and grammar for the Literary Gazette.

A pressure of matter obliges us to postpone the answer to Ph. Barberi, Mr. Cray's new Poem, Ducrest's defence of the Perseus, &c. &c.

Having Mr. Cray's Sketch of Society, want our own Hermit in the Country, Number 11. till next week.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

*British Gallery, Pall Mall.*

**THIS GALLERY**, with an Exhibition of PORTRAITS of distinguished Persons in the History and Literature of the United Kingdom, daily, from 10 in the Morning until 6 in the Evening.

(By order) JOHN YOUNG, Keeper.

Admission 1s.—Catalogue 1s.—Historical Dictionary 2s.

**THE Exhibition of MONSIEUR JERRI-CALUT'S GREAT PICTURE**, (from the Louvre) 24 feet by 18, representing the surviving Crew of the Medusa French Frigate, after remaining Thirteen days on a Raft without Provision, at the moment they discover the vessel that saves them, is now open to the Public, at the Egyptian Hall, Piccadilly. Admission 1s.

*Foreign Engravings, &c.*

**THE Admirers of the Fine Arts** are respectfully informed, that a Catalogue of choice FOREIGN ENGRAVING, Etchings, Lithographic Productions, Wood Cuts, Books of Prints, collected last year on the Continent, and published this day, (gratis) by Hooley and Sons, Broad Street, Exchange; and at 28, Holroyd Street, Oxford Street. Where may also be had, for 1800.

**BIBLIOTHECA RARA et CURIOSA**, or a Catalogue of a highly curious and interesting Collection of Books lately formed on the Continent, &c. 1s. 6d.

*To the Admirers and Patrons of the Fine Arts.*  
Price 2s.

**A CATALOGUE OF ENGRAVED COPPER PLATES** by the most celebrated Artists, after the finest Pictures and Drawings of the Italian, Flemish, German, French, English, and other Schools, alphabetically arranged by the names of the Painters. Also an Index of the Subjects. The whole preceded by an account of various Works, Sets of Prints, Galleries, &c., forming part of the Stock of Hurst, Robinson, and Co. (late Baylis's) Print Merchants, Booksellers, and Publishers, 26, Chancery.

London, June 24.

*Fine Arts.*

By Hooley and Sons, 4, Broad Street, Exchange, beautifully printed on fine paper, medium 4to. price 1l. and Imperial 4to. 30s.

**A SERIES of Twenty-six Outlines to GOETHE'S celebrated Tragedy of FAUST**, engraved from the original by HENRY MONSIEU, with a Descriptive Text or Analysis of the Tragedy.

\* These Inimitable Outlines having attracted the general admiration of artists and amateurs, it was found necessary to add an explanatory text; and the publishers flatter themselves they here, in so doing, rendered them doubly interesting. To be had also of Rodwell and Martin, Bond Street.

### BOOKS PUBLISHED THIS DAY.

1. 12mo. price 9s. boards.

**ESSAYS AND SKETCHES OF LIFE AND CHARACTER**, by a Gentleman who has left his Lodgings. Contents.—An English and French Prude and Vanity. English and French Tyranny. Men of Letters. Irregularity. A new Edition, in 2 vols. with 16 additional Sermons, 8vo. 1l. 4s. boards. The additional Sermons are printed separately, for the accommodation of the purchasers of the new edition.

**SERMONS ON THE NATURE, OFFICES, and CHARACTER of JESUS CHRIST**, By the Rev. T. BOWDLIER, A. M. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"The spirit of a Christian teacher pervades the volume, and gives it an interest which the most ingenious illustrations, or the most eloquent periods without that spirit, would fail to impart."—*British Critic*, March, 1819.

*Early Education.*

In 8vo. price 10s. 6d. boards.  
**EARLY EDUCATION**; or, The Management of Children considered, with a view to their future character. By Miss APPLETON, author of "Private Education," &c. &c. Printed for G. and W. B. Whittaker, 13, Ave-Maria-lane.

*Quincy's Lexicon Medicum.*

In an e large volume, 8vo. 4th Edition, price 18s. boards.  
**A NEW MEDICAL DICTIONARY**; combining an Explanation of the Terms in Anatomy, Physiology, Practice of Physic, Materia Medica, Chemistry, Pharmacy, Surgery, Midwifery, and the various branches of Natural Philosophy connected with Medicine. Selected, arranged, and compiled from the best authors. By ROBERT HOOPER, M. D. F. R. S. Esq. Doctor of the University of Oxford, Member of the Royal College of Physicians of London, Physician to the St. Mary-lebone Infirmary, &c. &c. Printed for Longman, Hurst, Rees, Orme, and Brown, 47, Strand; and by the same Author, Cathart, Cat and Dancer; Bland, Cradock; Bland, Cradock; Joy; Higley and Non; Baynes and Son; Cox and Son; T. and G. Underwood; G. and W. B. Whittaker; Ogilvie, Duncan and Co.; G. Mackie; Simpkin and Marshall; J. Anderson; Burgess and Hill, London; and Sterling and Shute; A. Black; and Fairbairn and Anderson, Edinburgh.

In one large vol. price 1l. 1s. boards.

**THE ENTHUSIASM of the METHODISTS and PAPISTS considered**, By BISHOP I. A. VINGTON. With Notes, Introduction, and Appendix. By the Rev. R. POLWHELL, Truro. Contents of the Introduction.—Separation of Dissenters from the Church. Character of Dissenters of former times. Methodism present Day. Heated Effects of Methodism on Society. Mischief of Secularism. The Puritans, their successful hostilities against the Church Government. Sectarians of the present day, their rancorous abuse of Bishops. Modern Methodists—their obtrusiveness—their promptness in attacking our discourses on public occasions. Their general topic of abuse, that we do not preach the Gospel. Pretences to inspiration. Official importance. Singing, praying, exhorting, preaching, style and manner, and doctrine. Methodism preacher, his familiarity with his flock. Co-operation of Churchmen with Secularists, the Evangelical Clergy. Extremepreaching of the Evangelical Clergy. Mrs. H. More. The Flagdon Controversy. Mr. Wilberforce. Clergy authors giving way to Methodists, who convert us by Charitable Institutions. Puritans attempting the Universities, present Society. Female Agency. Indifference and false candour in Churchmen. Qualification in Methodists. Clerical conduct with respect to Dissenters in general. Division of large parishes, building Churches. Canons and Rubric, to be observed by the clergy, and confirmed by a new statute. Education of the Clergy. Celebrating, seeds of Sectarianism sown there. Intercourse between Dissenters and Parochial Clergy, Church Catechism. Mr. Boothby. Conduct in our Families, &c. &c. &c. Sold by G. and W. B. Whittaker, Ave-Maria-lane; Rivington and Co.; Sherwood and Co.; Simpkin and Co.; R. Priestley; and all other Booksellers.

*Henry Canwell's New Poems, price 8s. 6d. in 8vo.*  
**MANCINI COLONNA**, an Italian Tale, in Three Parts; with Dramatic Scenes, and other Poems. By HENRY CANWELL. London: Printed for Longman, Hurst, Rees, Orme, and Brown. Of whom may be had, by the same Author, WINTER NIGHTS, in 2 vols. post 8vo. 18s. 6d.

"There is much strenuous writing in this fine story, much lofty expression and imposing imagery; but the author seems to be always most genuine when he is most gentle."

"We suppose this volume will be very popular, for its beauties are too obvious to be overlooked or remain undiscovered by the multitude of readers."—*Baldwin and Co.'s London Misc. July.*

Printed for John Warren, Old Bond Street; and C. and J. Office, New Street, Bond Street; of whom may be had, by the same Author, Dramatic Scenes, and other Poems, second edition, 7s. 1; and A Stillborn Story, with Diego de Montilla, and Poems, second edition, 7s.

*The Coinage.*

**ANNALS OF THE COINAGE OF BRITAIN** and its Dependencies, from the earliest period of authentic History to the present Time. By the Rev. ROBERT RUDING, B. D. Vicar of Madding, in Surrey, F. R. S. A. and B. M. O. S. of New Castle-upon-Tyne. In five large Volumes, octavo, and one quarto volume; containing a Series of Coins, extending through a period of 1600 Years, including the late Issues of Sovereigns and Crown Pieces, price 6l. 6s. boards.

\* The Additional Plates and supplemental Matter, not contained in the 8vo. edition, are printed separately for the subscribers to that edition, price 12s. small, or 18s. on large paper.

Printed for Lackington, Hughes, Harding, Navar, and Jones, Tinbury Square. Where may be had, SIMON'S ESSAY ON IRISH COINS, and of the CURRENCY of FOREIGN MONIES in IRELAND, 4to. price 18s. in boards.

In 3 vols. 12mo. price 18s. boards.

**TALES OF IMAGINATION**. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same Author, Cathart, Cat and Dancer; Bland, Cradock; Bland, Cradock; Joy; Higley and Non; Baynes and Son; Cox and Son; T. and G. Underwood; G. and W. B. Whittaker; Ogilvie, Duncan and Co.; G. Mackie; Simpkin and Marshall; J. Anderson; Burgess and Hill, London; and Sterling and Shute; A. Black; and Fairbairn and Anderson, Edinburgh.

The BACHELOR and MARRIED MAN, a Novel, second edition, in 3 vols. 12mo. 16s. 6d. boards.

HESITATION, a Novel, 8 vols. 12mo. 18s. boards.

THE PHYSIOGNOMIST, a Novel, in 3 vols. 12mo. 16s. 6d.

Price 3s. in boards, a new and elegant pocket edition, with above 100 beautiful embellishments, of

**FABLES**, by JOHN GAY. London: Printed by C. J. Broom; and W. B. Whittaker; and Rodwell and Martin. Where may be had also, an elegant edition of the above, in 1 vol. foolscap, price 9s. in boards. A similar edition of Esop's Fables, price 10s. in boards. The same in a pocket size, price 3s. 6d. in boards; and a superior edition of Robinson Crusoe, 2 vols. with 60 beautiful wood cuts, price 12s. in boards.

*Early Education.*

Dedicated, by permission, to Her Royal Highness the Duchess of Kent, in price 10s. 6d. in boards.

**EARLY EDUCATION**; or, The Management of Children considered, with a view to their future Character. By Miss APPLETON, author of "Private Education," &c. &c. Printed for G. and W. B. Whittaker, 13, Ave-Maria-lane. Also, by the same Author,

THE POOR GIRLS HELP to a Knowledge of the first principles of the Christian Religion; and to the Sacrament of the Lord's Supper. Second Edition, price 2s. 6d. boards.

*Curtis on Scordians.*

The second edition, considerably enlarged and improved, price 7s. 6d. 6d.

**A TREATISE ON THE PHYSIOLOGY and DISEASES of the EAR**; containing a comparative View of its Structure and Functions, and of its various Diseases, with new modes of Treatment. By J. H. CURTIS, Esq. Aurist to his Majesty, and to their Royal Highnesses the Duke and Duchess of Gloucester; Surgeon to the Royal Dispensary for Diseases of the Ear; Lecturer on the Anatomy, Physiology, and Pathology of the Ear; Fellow of the Medical Society of London, &c. Printed and sold by Anderson and Chute, West Smithfield; Fearman, 120, New Bond Street; Black, Edinburgh; and Hodges and McArthur, Dublin.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom; but to those who may desire its immediate translation, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 184.

SATURDAY, JULY 29, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Tabella Cibaria. The Bill of Fare; a Latin Poem, implicitly translated and fully explained in copious and interesting Notes, relating to the Pleasures of Gastronomy, and the mysterious Art of Cookery.* London, 1820, 4to. pp. 104.

This is one of the happiest jets d'esprit which we have lately met with; and we hail the writer as the opposite to Varro's homo Cibarius,—vulgarily, a scamp. Had we christened the volume, however, we should have called it *Tabella Cibariorum*; though no doubt so sturdy a student as our author can justify his own titular reading. The latin verses are ludicrous enough; but the notes are the rich part of the treat. They are playful, facetious, and witty: full of drollery, and evolving many as genuine hits of humour as any book we know of, not excepting that tome of fortunate destiny, the *Miseries of Human Life*.

The Bill of Fare offers, as usual, a feast; and it is with cordial contentment we add, that, as is unusual, there is no disappointment: none of its articles have been spoilt in the cooking. He who has dressed it for the public taste is not one of those whom, according to the proverb, "the devil sends;" but a real good fellow, who furnishes an entertainment worthy of any epicure, and yet substantial and pleasant for common, as it is piquant and relishing for learned palates. We got to the last morsel uncloyed;

As if increase of appetite did grow  
With what it fed on.

A couple of passages will exemplify the poem, which consists of only 220 lines. After a few preliminary dishes, notice is taken of

*Habula tam sequitur simplex, sine condimento;*  
*Si cunctis placet, ne cruciatis, adest.*  
*Non quicunque die, certis sed iusta diebus,*  
*In veribus sudent Tergora olea duri.*  
*Que fuit ab: gallus, Gallinam falcit arca;*  
*Sic quondam vates vir mulierque fuit.*  
*Qui sumpendo clauxit Gallus Tergoria Acta,*  
*Hic vitare ardeat, dente vorante, nequit.*  
*Hic circumspexit Nympha producat; Ille,*  
*Cepula quem cepit, super superbit Auri.*  
*Rumice cum viridi jacet hic Ptilinus, atlando*  
*Obscenos dentes qui remittere dabit.*  
VOL. IV.

The course of fish among others includes Pike.

At notus lacum terror, stagnique vorago,  
*Lacius ad superas gestiet ire domos;*  
*Coctus ubi in vino, cum cepis, apioque virent,*  
*Cum pipere et michi dissiliente salis,*  
*Alia suffultus nappi, similisque misanti,*  
*Oscitant dentes, ore rigente, mos.*  
*Concoro iater lucos, fonsaque paludes,*  
*Olim prædator Lacius ille fuit:*  
*Insidians teneris, seri sub nocte, puellis,*  
*Et Nymphæ jectans promissus dolos:*  
*Indignata diis non perituli horrida monstri*  
*Crimes—At ultores invocat ille Deos.*  
*Jupiter in placem mutavit, et occidit unus;*  
*At remanet prædæ, qui fuit ante, furor.*

But without going through the list of dishes, which we think unequalled except by the admirable description of a dinner party in the Counter Prison, attributed to *L'Estrange*; \* we must hasten to the end—

At satis est, nec nostra cupit te Musæ morari;  
Præditiis—sumptus solve tuos—et abi.

Of the hundred messes of which the *Tabella* is composed, several require and receive delectable illustration in the appended notes. From these we shall copy some of the table-talk, which seasons the entertainment.

It may be supposed that in a work like this, the *Apicii* are named. In the note upon these renowned Romans, we have a disquisition on the—

"Material difference between a *gormand* and a *glutton*. The first seeks for peculiar delicacy and distinct flavour in the various dishes presented to the judgment and enjoyment of his discerning palate; while the other lays aside nearly all that relates to the rational pleasure of creating or stimulating an appetite by the excellent quality of the rates, and looks merely to quantity. This has his stomach in view, and tries how heavily it may be laden without endangering his health. The *gormand* never loses sight of the excellent organs of taste, so admirably disposed by Providence in the crimson chamber where sits the discriminating judge, the human tongue. The *glutton* is anathematized in the scripture with those brute, *quæ deus venter est*. The other appears guilty of no other sin than of too great and too minute an attention to refinement in commensal sensuality.

"We find besides a curious shade between the French appellations *gormand* and *glutton*. In the idiom of that nation, so famous for indulging in the worship of *Comus*, the

\* See Poem in Nichol's collection; "The Counter Scuffle," one of the most humorous of a merry age, when England, tired of politics and revolutionary madness, gave itself up without reserve, to holiday, sport, and dissolute pleasure.

word *gormand* means, as we stated above, a man who, by having accidentally been able to study the different tastes of eatables, does accordingly select the best food, and the most pleasing to his palate. His character is that of a practifloer, and answers to the appellation of an *epicure* in the full sense of the word, as we use it in English. The *gormand* on the other hand considers the theoretical part of Gastronomy; he speculates more than he practises; and eminently prides himself in discerning the nicest degrees and most evanescent shades of goodness and perfection in the different subjects proposed to him. In fact, the word *gormand* has long been used to designate a man who, by sipping a few drops out of the silver cup of the vintner, can instantly tell from what country the wine comes, and its age. This denomination has lately acquired a greater latitude of signification, and not improperly, since it expresses what the two other words could not mean.

"From the foregoing observations we must conclude that the *glutton* practises without any regard to theory; and we call him *Gastrophile*. The *gormand* mixes theory with practice, and may be denominated *Gastronomer*. The *gormand* is merely theoretical, cares little about practising, and deserves the higher appellation of *Gastrolater*.

"We need not inform the classical reader that the Greek word *γαστήρ*, *gaster*, means the stomach, and all that relates to it, in a more extensive and somewhat figurative sense. The words *νύμφη*, *nympha*, *ἄρκτος*, *placat*, and *λόγος*, *logos*, added to it, classify the practical, physical, and theoretical varieties."

Our author seems to unite in himself all the excellent qualities of the three classes. He descends with the skill of practical experience, and displays both taste and refinement in his lucubrations: on soup, for example. The *caulis cum carne*—broth and cabbage, is another sort.

"The red cabbage stewed in real broth is accounted, upon the continent, a specific cure against pulmonary complaints, and what is called here consumption. Pistachios and calves lights are added to it. For this purpose red cabbage is especially cultivated in French kitchen-gardens. This reminds us of an anecdote which passed current at the time we heard it:—A young clergyman, rector of a country parish, was called upon to preach a sermon upon a grand solemnity, at which the bishop of the diocese, who was a cardinal, appeared in the Roman purple, surrounded by his clergy in their white surplices. The preacher performed his task to the approbation of every one. After the ceremony, his eminence, meeting him, seemed to wonder at his not having been abashed when in the presence of a cardinal

in the full blaze of his red paraphernalia. The simple and honest clergyman replied:

"Your eminence will cease to wonder, when you know that I learnt my discourse by heart in my garden, and used to practice declamation before a plot of *white* cabbages, in the centre of which stood a *red* one."—A preference was the reward of this answer."

*Fat hens* have always been a luxury.

"The Romans were so desperately fond of fattened hens (poules, Fr.) that the good consul Cains Fannius, fearful lest the breed should materially suffer from this voracious practice, caused a law to pass the senate in order to prevent any fatal consequence. Gastronomy frowned at the *senatus-consultum*; but capons, properly educated, being substituted in the coop for their emancipated sisters, hunger smiled, anger subsided, and all was right again. The Syrians of old used to worship hens on account of their fecundity, and the exquisite taste of their eggs, which, at Athens and Rome were carried, with pompous show, in the great festivals of Ceres. (Livy.)

"It has been remarked with a sort of superstitious wonder, that some hens have received from nature the masculine talent of crowing; and, in general, such an anomaly is punished with death in the farm house or cottage where this preposterous uttering is heard. And indeed there is a French proverb which says:

Poule qui chante, prêtre qui danse,  
Femme qui parle latin,  
N'arrivent jamais à belle fin.

"A crowing hen, a dancing priest, a woman who speaks Latin, never come to a good end.

"The abstinence practised by the hen during incubation, is much above what Christians and Mahometans can boast concerning their Lent and Ramadan; and Mendoza pretends to have seen a hen, who, for ninety days, never opened her beak to take food.

"The digestive powers of the hen have been most horribly tried by Spallanzani, who ought to have been put under the *lex talionis*. He ascertained that this poor creature could not indeed digest a musket ball, larded all round with needles and lancets, but had strength enough to blunt the edges of these destructive instruments. This leaves far behind all that has been said of the ostrich; but have we not heard lately of several clasp-knives found in a fair way of digestion in the stomach of a madman?"

Of another sort of poultry the following is a part of the notice.

"Large droves of geese were anciently led from Picardy to Italy, waddling over the Alps, and constantly stooping, according to their prudent custom, under the lofty triumphal arches under which they happen to pass in their way. Yet geese are not so stupid as they are generally supposed to be. The famous chymist, Lemery, saw a goose turning the spit on which a turkey was roasting; unconscious, we hope, that some friend would soon accept the office for her. 'Alas! we are all *turnspits* in this world,' adds the Gastrographer who relates the fact, 'and,

when we *roast* a friend, let us be aware that many stand ready to return the compliment."

"The name of this bird in Greek is *xw*, pronounced *cane*, from which, by a misappellation, the mallard and duck are called *caneard*, and *cane* in French. Were they the originals, and the goose but a magnified copy?"

The staff of life supports the subjoined digression.

"*Panis, apio, charit, amicti. Panis.* 'Pain.' Bread is of a very ancient origin; the Hebrew called it *lehem*, the Greek *artos*; and it appears that the Gauls and Celts gave it the name of *bar*. The Greeks, having been taught the art of cultivating wheat and of making bread, were generally assailed on the confines of their dominions by those people, who used to call *bar*, *bar*—bread, bread; hence the Greek *barbaros*, *Baragars*. The word *barley* attaches itself to this hypothesis, since *barley-bread* was known at the same time with or even before wheaten bread. Some authors of respectability pretend that wheat originated in Egypt, and that the Phœcen colony brought it to Mar-silles. The Saracens used it before the crusades, but it was that inferior species named buckwheat, which is still called in French, *sarrasin*. There was a particular sort of bread made to be eaten with oysters; and such rolls as we butter for breakfast were invented by the Parthians, and called consequently *panis Parthicus*. (Pliny.)"

Turkeys are thus mentioned.

"*Meleagrides.* 'Dindons.' Turkeys. Naturalists are at variance upon the origin of this bird. Some pretend that it was not known before the discovery of America, and that the first which appeared on a table in France was eaten at the nuptials of Charles IX. in 1570. Henry VIII. had some of them brought to England in 1525, and they are supposed to be indigenous to Canada and the adjacent countries, where they are found sometimes weighing upwards of fifty pounds. *Credat Judæus Apella*. However, we must allow that the Norfolk breed does not fall considerably short of that weight. On the other hand, it is said that Meleager, a king of Macedonia, brought them from India into Greece, at a very early period; and that, out of gratitude for such an acquisition, the Athenian Gastronomers called the bird Meleagris. Mythology contends that they were so named from the Cælonian hero whose name mentioned, after whose death his woe-begone sisters were transformed into these birds of mournful appearance. But there is still a doubt whether the *Meleagris* of Aristotle, of Clynus, of Calixenus, of Ptolemy, and other authors of ancient times, was not the bird now known under the name of Guinea-hen. Ovid certainly says, B. viii. of the Metamorphoses, that Meleager's sisters were turned into birds, but mentions nothing else, except that, having acquired horny beaks and extensive wings, they were sent abroad to find their way through the vacant air. The idea that the Jesuits brought them into notice is erroneous. They were known in Europe long before the institution

of Loyola's order. Why the French should call them '*alouettes de savetier*,' cobblers' larks, cannot easily be accounted for. This bird is so stupid, or timorous, that if you balance a bit of straw on his head, or draw a line with chalk on the ground from his beak, he fancies himself so loaded or so bound, that he will remain in the same position till hunger forces him to move. We made the experiment."

Whiting also supplies an amusing note.

"*Frigiter Alburnus.* 'Merlan frit.' Fried whiting. This fish undergoes also the operation of boiling; but, frying being the most common way of dressing this delicate and salubrious gift of the Nereids, the author contented himself with taking notice of it. In France they are often broiled after having been lavishly powdered with flour; a circumstance which gave rise to the ludicrous appellation of '*Merlan*' for a hair-dresser. The Latin *alburnus*, from *albus*, 'white,' corresponds with the English name. The French '*Merlan*' exceeds the extension of our ken in etymology, unless the fish is so called by antiphrasis, from *merle* a black bird, as *lucus a non lucendo*. If this be the case, the joke originated with the Romans, who called a mead or black bird, *merula*, and by the same name designated this white fish."

The odd application of the above appellation to a hair dresser in France, reminds us of similar nick-names in England, which we hear daily used, without thinking of their origin—for instance, the reproach of *Jarvis* for a *Hackney-Coachman*, now so common, but which fifty years ago, was synonymous with murderer, Jarvis being the name of a coachman, who was executed for the murder of his Fare somewhere (we believe) about Cleeve.

The length to which we have carried these selections, show how much we relish the *Tabella Citharia*; but we must still add two or three brief and curious remarks, taken from the notes, on spits, onions, parley, and eggs. And first of Verubus, the spit—

"Spits were used very anciently in all parts of the world, and perhaps before the plain practice of hanging the meat to a string before the fire. Ere the iron-age had taught men the use of metals, these roasting instruments were made of wood; and, as we find in Virgil, the slender branches of the hazel-tree were particularly chosen. *Geo. II. 396.*

—*Stabit sacra hircus ad aram  
Pinguiculus in verubus torribus cæcis  
lurais.*

The altar let the guilty goat approach,  
And roast his fat limbs on the hazel brooch.

"Why the hazel twig should have been preferred to others for making roasting broaches or spits, is not easily accounted for. There is, however, an old custom on the continent which, though rather superstitious, seems to have originated in the circumstance of using hazel sticks for the same purpose. On the eve of Epiphany, called here Twelfth-Night, a few larks are spitted upon a fresh-cut twig of hazel, and placed before a good fire; after a few minutes ex-

peetation, the whole begins to turn without help, and as if by a spontaneous motion. The staring company, in amazement and rapture, cry miracle! and remain persuaded that this cannot be done but by supernatural agency or magic. The fact is, that the sap contained in the veins of the twig (which are probably set in a spiral fine round the centre) being successively attracted by the fire, causes a sort of rotation.—Will any other wood do the same? This is a question which we cannot take upon ourselves to answer. The superstitious notion consists in supposing that this event will not happen but on a certain festival-day, and to that notion we are far from yielding any sort of belief."

Our readers may remember that the hazel is also famous as a divining rod. It is a remarkable coincidence, that a twig of this wood should be employed for the discovery of subterraneous water. Held in a certain position while walking over the ground, it is asserted to bend and snap when brought over the spot where water may be found by digging. If we remember rightly, the *Quarterly Review* gave an interesting account of some experiments of this sort. Perhaps the art of discovering mines, which it is said some gifted mortals possess or profess, may be connected with the hazel, if they do not deserve the hunch.

Of onions the author *inter alia* says—

"Onions are supposed to have been originally brought from Egypt, where they must have possessed a most bewitching taste since the Israelites would have returned to bondage for the sake of enjoying them again. Alexander the Great sent them to Greece, and from thence they became common on the whole continent. It is remarkable that the particles emanating from this bulbous root are so volatile and so keen, that they instantly corrode the external surface of the eyes, and draw tears; and it is more curious still, that if, when peeling an onion, the cook wishes to be spared this lachrymatory affection, a small piece of bread placed at the end of the operating knife, will absorb the effluvia and prevent the disagreeable effect."

We should like to try if it be true as stated, that "If after having bruised some sprigs of parsley in your hands, you attempt to rinse your glasses, they will generally snap and suddenly break."

We all know the intimate connection between parsley and hemlock; and most people have heard of the famous (and in that country very prudent!) Venetian glasses, which cracked and burst on poison being put into them, if a vegetable poison, hemlock to wit: here we have the same phenomenon!

We are sorry we have not room for the note on eggs *à oeo*. "The most extraordinary manner of cooking eggs is, as it stands recorded, to turn them round in a sling till they appear slightly-boiled."

"The surest mode of trying an egg is to apply the tip of the tongue to the blunt end; if it feels warm, and the acute end cold, it is a proof that no fermentation has yet taken place."

"When we consider that the very small quantity of elemental air concealed under the blunt end of the egg, being dilated by the heat of incubation, forces the whole of the contents into organization, motion, and life; we cannot help 'musing,' in awful silence, 'the praise' of God in the works of nature."

With this serious reflection we close this merry book, which he who does not like must, in the writer's phrase, be "in a state of downright dotage and complete doodle-dom." We confess to being quite captivated with it, and pray that the author may for ever enjoy the dainties of the table he has so well described, and never suffer any of the evils consequent on bad provisions or bad cookery.

*Sketch of a System of the Philosophy of the Human Mind. Part First, comprehending the Physiology of the Human Mind.* By Thomas Brown, M. D. Professor of Moral Philosophy in the University of Edinburgh. 1820, 8vo. pp. 295.

There are circumstances of melancholy interest connected with this volume: it is only a fragment of a work which the ill health of the author prevented him from finishing; and it was published about the time of his lamented death, in the beginning of April.

Dr. Brown, at an early period of his life, became distinguished as a metaphysician. When he was only eighteen years of age, he published his "Observations on Darwin's Zoonomia," a work which would have done credit to the most eminent and matured abilities. His increasing reputation was afterwards fully established by his "Inquiry into the Relation of Cause and Effect;" in which the principal errors of Mr. Hume's philosophy are investigated and most satisfactorily exposed. A third edition of this admirable work, greatly enlarged, was given to the public about two years since. In 1810, upon the retirement of Professor Stewart from the Chair of Moral Philosophy, in the University of Edinburgh, Dr. Brown was chosen, as if by general acclamation, to fill that important situation, which had become invested with so much additional honour from the highly distinguished character and abilities of its last occupant. The volume before us consists of outlines of the scheme of philosophy which he delivered in his lectures, and was intended for the use of the students of his class. According to his view of the subject, the philosophy of mind is capable of being regarded under four distinct heads; as a physiological, an ethical, a political, and a theological science. This unfinished work contains nearly the whole of the physiological part.

With the utmost respect for the labours of those who have preceded him, and admiration of their talents, Dr. Brown has yet in no instance been swayed by their mere authority, but has derived his system from his own investigation of the mind itself, ad-

vancing step by step to his conclusions; through an analysis of the phenomena equally strict and beautiful. He observes in the preface: "Whatever other imperfections may be found in the opinions of which the following abstract exhibits a feeble sketch, it will not I hope be imputed to them, that they are the opinions of one who has accustomed himself to think after my particular school. There is no department of science in which this sort of error seems to have been so prevalent as in the philosophy of mind; not certainly, as has been sometimes supposed, because inquiry in that department must relate to phenomena that are too simple to admit of any great difference of opinion with respect to them, but from the influence of a few primary and diffusive errors, which have passed in ready transmission from enquirer to enquirer, and have vitiated accordingly in the same manner, or nearly in the same manner, all the investigations of which they have formed a part."

In seeking for some principle on which to ground an arrangement of the mental phenomena, the author rejects the old classification, which refers them to the understanding and the will, on account of its want of precision and of comprehensiveness. He rejects also, as equally imperfect, the method which arranges the phenomena under the intellectual powers of the mind, and the active powers of the mind; and, having resolved to consider them without regard to any former arrangement, he observes:—"The various feelings of the mind are nothing more than the mind itself, existing in a certain state. They may all then be designated *states of the mind*, if we consider the feelings simply as feelings;—or *affections of mind*, if we consider the feelings in relation to the prior circumstances that have induced them." These states or affections of mind are then distinguished by him as *external* and *internal*, according as they "arise in consequence of the operation of external things, or in consequence of mere previous feelings of the mind itself." "The former of these classes," he remarks, "admits of very easy subdivision, according to the bodily organs. The latter may be divided into two orders, *intellectual states of the mind*, and *emotions*."

In treating of *sensation* he rejects, as metaphysical, and founded on imperfect analysis of the complex phenomena, "the distinction which is very commonly made of external causes, which act *directly*, as in smell, taste, and touch, and of others which act *through a medium*, as in hearing and vision." "The real object, or real external cause of hearing, for example, is the vibratory air, or rather elastic substance itself, which is said to be only the medium of that sense." We learn to refer the sensation to the external object which emits the sound, "as its indirect and remote cause; but it is a reference which the sense of hearing never could have enabled us to make: it is the result, as we shall afterwards find, of another principle, which connects the affections of other senses; as it extends the same connecting influence, indeed, to every other class of feelings of which the mind is

susceptible." The principle here alluded to is beautifully explained in the chapter concerning smell and taste, with which we will conclude our extracts.

"In the variety of feelings that arise after affections of the olfactory nerves, there is nothing to be discovered that might of itself be indicative of the existence of things without. If the sense of smell were our only sense, we might have the pleasures of mere fragrance, repeated in varied and endless succession; and we might ascribe these changes of feeling to a cause of some sort; but that the cause was of the kind which we now term corporeal, we could as little discover, as if we had been formed without any sensitive organ whatever. We might give, indeed, as now, if the use of language were possible in such a case, the name *rose* to the unknown cause of one of these delightful feelings; but the name would be as little significant of *matter*, in our present sense of that word, as the word spirit or angel. To know the cause as *matter* would be to know it as an extended resisting mass; and for informing us of the figure and of the hardness or the softness of the beautiful circular crimson flower, with its convex stem and green flexible foliage, the sensation of fragrance seems to be as little fit as any other feeling of mere pleasure or pain of which the mind is susceptible."

"The same remark may be applied to our primary sensations of mere taste, abstracted from every tactual sensation that may accompany them. If we had no other medium than this sense, for acquiring a knowledge of nature, the things which we now term sweet and bitter would be unknown to us; and the feelings which we now ascribe to them as their effect, would have been mere pleasures or pains, that began we knew not how or when, and ceased when we were as little capable of inferring the time or the manner of their fading away."

"It is very different, in the circumstances of that richer complexity of senses with which nature has endowed us. By frequent co-existence with the sensations afforded by other organs, that have previously informed us of the existence of matter, our sensations of mere smell and taste seem of themselves, ultimately to inform us of the things without. A particular sensation of fragrance has arisen, as often as we have seen or handled a particular flower; it recalls, therefore, the sensations that have previously co-existed with it, and we no longer smell only; we smell a rose. In taste, in like manner, by the influence of similar co-existence of sensations, we have no longer a mere pleasurable feeling; we taste a plum, a pear, a peach. The suggestion of things external is as quick in these cases as in any other cases of association; but the knowledge of these corporeal masses, is still a suggestion of memory only, not a part of the primary sensations either of smell or of taste."

In considering the sensations commonly ascribed to touch, the author is led to take a view of the sceptical argument of the non-existence of matter, and to examine the system of Dr. Berkeley, when it is made to

appear that, in ascribing to mind qualities which can belong only to matter, that philosopher is as much of a materialist as a spiritualist. Dr. Reid's theory of perception is also subjected to a strict analysis, and is shewn to lead to conclusions of a sceptical nature, which the author most wished to avoid.

It would occupy too large a portion of our columns if we were to attempt to give a complete view of the system of Metaphysics contained in this volume. It is written with that clearness and precision of language which is best suited to the subject. Nothing is left vague and undefined, and at every step as we advance, we feel ourselves to be upon firm and solid ground. The abrupt termination of the work forcibly recalls that regret and sorrow with which the premature death of a man who, besides his great talents and public usefulness, was in every other respect so excellent, must ever be contemplated. Dr. Brown died at the age of forty-two, when he may be supposed to have just matured his investigation of those philosophical subjects to which his mind was chiefly directed, and which he was perhaps better qualified to illustrate and explain than any individual who has ever yet appeared. He is known to the public also as the author of the "*Paradise of Coquettes*," and of several other poetical works of high merit, though we certainly prefer that racy and original production to any other that we have seen from his pen.

We recommend his philosophy to the student, his verse to the general reader.

*Sketches descriptive of Italy in 1810 and 1817, with a brief account of Travels in various parts of France and Switzerland.* London, 1820. 12mo. 4 vols.

This is a very lively and entertaining work, by a young blue-stocking, who rattles through all sorts of subjects in the same way; whipping up classics, antiquities, arts, sciences, the perils of travel, poetry, female dress, ethics, housewifery, physics, &c. &c. into a kind of syllabus agreeable to the palate, and having, in verity, some nutriment in it, though apparently so slight and trifling. It is very true, that there is not one of her topics which has not engaged (as the preface states) abler pens; but as we have been told that knowledge resembles the changes which apothecaries make in their coloured bottles, pouring from one into another, and mingling the reds, blues, and yellows, *secundum artem*, so with travelling in Italy, if we look for nothing beyond a change of tinting in the vials, it is at least pleasant to have the hues bright and the mixtures gay. Therefore it is that we agree with our fair companion on the present *voyage* very well. She is

intelligent and interesting,—has read a good deal, and writes with all the air of having read much more;—attacks in print with all the flippancy which we (of the coarser sex) feel so potently in conversation, when the artillery of tongue, eyes, and other charms are unreservedly employed by woman-kind (as our worthy friend Jonathan (Old-buck calls the enslavers); and, in short, seems so well satisfied with her errantry, and is so socially communicative, that he must be a churl and cynic, at once harsh and inhuman, who could refuse to yield himself prisoner, to be led over Italy in these new chains. We shall exhibit a few of the links as pattern of the whole; merely premising that the 1st volume takes you from England to Rome, the 2d detains you there with a laughable composition of active research reviving a multitude of well known accounts, and of decisive blundering upon every imaginable doubtful point upon which an opinion can be hazarded, and which are here settled *ex cathedra* without hesitation; the 3d takes an excursion to Naples and back; and the 4th visits Florence, Venice, Milan, and Switzerland, on the way to Dover. To begin with the beginning, our first extract is at Fontainebleau: here the travellers were shown the apartment and table where Buonaparte signed his abdication; which, says our tourist—

"Recalled a circumstance related by a friend of ours who visited Fontainebleau soon after that event, and there purchased a pen which these people assured him was the identical one used by the emperor on that memorable occasion: on his return to London, however, he met with three other gentlemen, who each produced its counterpart! We were not shewn any of these relics, so I suppose all the quills in the country were by this time exhausted."

At Nice, our country-woman visited several religious houses, and must have perplexed the innocent friars by her vivacity. She tells us—

"On a subsequent day, we walked to another Capuchin convent, San Bartolomeo, an ugly monastery, in a secluded valley about three miles from Nice."

"The brotherhood here were very courteous, and shewed us their church, sacristy, and garden; but my sister and I, escaping from their guidance, and running wild about the convent, stumbled by chance on a small room in which these sanctified friars had got half a dozen young women shut up, who, they pretended, were embroidering ornaments for the altars. Their knotted scarves, their sandals, their shaved heads, and venerable beards, looked doubly ridiculous—nay, worse than ridiculous,—after this discovery."

There is some want of charity in this; but we will not dispute a lady's knowledge on such subjects. The following story of a picture, in which the French robbers were mystified at Modena, is only hearsay.

"At the time the pictures were taken away, a curious instance occurred of French knowledge of the arts. There was a very fine Crucifixion, the single figure of our Saviour on the cross, by Guido, and an excellent copy from it, hung within a short distance of each other. The French officer, commissioner, or whatever was his title, intrusted to select those pictures which were considered worthy to be presented to Parisian admirers, after much puzzling, fixed at length on the copy, which was accordingly carried off and hung in the Louvre, where it passed for an undoubted original, to the great delight of the Modenese, who, besides keeping the picture itself, enjoyed the pleasure of knowing their oppressors to be thus notably deceived."

From the remarks on Rome we shall select but one passage, which has more of novelty than any other that we meet with, and with its addenda, is perfectly illustrative of the fair author. Near the Porta Pinciana,

"A very curious object may be observed. An uneven block of discoloured white marble rises above the ground to the right of the Gate, and appears to be partly enclosed in the wall. The following inscription is perfectly legible on that part which protrudes beyond the building.

DATE OBOLVM BELLSARIO.

"We were taken to this place by two English friends—excellent classic scholars—who had made the discovery of this stone themselves, and were, like us, much puzzled to account for it. It is not likely to be an imposture, for of what benefit could such an imposture be to any one? and as the mendicancy of the blind old general is always believed to have befallen him in Asia, if it ever befel him at all, the idea that the inscription is genuine only involves the matter in deeper obscurity. This stone is unknown, or at least untalked of, at Rome.

"Continuing our route along the outside of the walls, a mean-looking gate appears opening into a vineyard. It is the entrance to Raphael's villa, and to every one who can, with a share of Correggio's exultation, exclaim, 'Aneh! son pittore!' the spot will be replete with interest.

"There are two houses in the city which were once inhabited by Raphael. But, as it is often very difficult—nay, frequently quite impossible—to gain information on subjects which one would imagine every body would be acquainted with, it cost us no small trouble to ascertain these mansions. The first stands in a mean inconsiderable street in the *Campo Marzo*, and is marked by a portrait

\* Via Coronari, No. 124. The vain inquiries we made in the different houses and shops in this street, reminded me of the answer of the landlady of the inn at Hantington, whom, while horses were putting to our carriage, on a hurried journey made some years ago, I had asked to shew me the house Cowper had once

of Raphael, painted by Carlo Maratti; but the inscription beneath it is now totally illegible, and the picture itself so faded, that it is very difficult to distinguish it from those of the Madonnas before which the only lamps that illumine the streets of Rome are suspended. A larger and more elegant mansion, built on his own designs, in the *Borgo San Spirito*, was afterwards inhabited by him; but no actual memento remains at either of these houses of their former distinguished possessor; and to the Pincian villa we must resort for the only existing traces of his Roman residence.

"This small habitation has a garden and vineyard in front, and is backed by the lofty pine woods that crown the ridge of the Pincian Hill. The principal apartments are completely empty, but their walls and ceilings remain in the state in which they were left by Raphael. Two of the rooms are painted with landscapes in compartments and figures in chiaro scuro; the work equally of his scholars and himself. The third, which was his bed-room, is covered both on the ceiling and walls with arabesque designs, executed entirely by his own hand, and with great care. Here his beloved Fornarina appears in four different medallions; boys and Cupids are balancing each other on long poles; nymphs are bringing offerings of fruits and flowers in vases; a crowd of people are shooting at a target; and a great variety of subjects are represented in small separate pictures or scattered figures. In this incongruous melange, it is not improbable that he may have sometimes sketched his first designs of greater works."

When at Naples our lady-bird flew to all the sights; but as none of them are new, we shall content ourselves with picking out such notices of the royal family, as acquire a degree of interest at this moment from the revolution in that quarter.

"About the middle of the Carnival, a grand masked ball took place at the royal palace of Naples.

"It was the first fête which had been given since the restoration of Ferdinand the Fourth to the kingdom of the Two Sicilies:—and so much was said and thought about it, that it was like

'O'Rourke's noble fare  
Which ne'er was forgot,  
By those who were there—  
And those who were not.'

"All strangers were dying to obtain tickets. But as those only who had been presented at their own courts were invited, and as many most respectable travellers, especially English,—had not gone through that ceremony, there were numbers of disappointments. Indeed, from one cause or

another, this ball excited a monstrous commotion both among foreigners and natives.

"In the forenoon of the day, the Principe di L—, a Sicilian nobleman of our acquaintance, came to us in great distress, to know if my sister or I could lend a Bird of Paradise Plume to a friend of his, who had been chosen by Prince Leopold, along with four other favourites, to attend him all the evening,—and who were all to be attired alike. Four of these plumes had been procured; but, alas! Naples did not produce a fifth! In all countries, courtiers worship the rising sun. Those only who know something of courts, can imagine the eagerness with which this chase of the paradise plume was conducted all over the city on this day, and into how much importance these feathers rose in Neapolitan estimation. I laughed at myself for the interest I took in the business; and it certainly did not arise from any admiration for Leopold himself, who is a fat, heavy-looking young man, with white hair and eye-brows, and the thick lip of the Austrian family, from which he is maternally descended.

"Though generally known by the name of Prince Leopold, his proper title is Prince of Salerno. He is believed to be his father's favourite; and I heard it often confidently affirmed, that Ferdinand intended the Duke of Calabria to inherit only Sicily, where he was then resident as Viceroy, and that Prince Leopold was to be King of Naples. An absolute monarch may do much—when alive; but an absolute monarch,—when dead—is quite another sort of personage: and I should doubt the power of Ferdinand to seat his favourite on the throne, more especially as the Duke of Calabria is said to have a strong party in his favour in Naples itself, where Prince Leopold is much less popular than his father. On this occasion, indeed, the old monarch, weak and silly as he is, appeared to me the greatest advantage of the two; for his manners were kind, frank and affable, while his son sauntered about the whole evening as if half asleep, leaning on the shoulder of one of his plumed favourites, and scarcely deigning to notice any one else in the room.

"The King is a good-humoured respectable looking old gentleman. He was dressed in a plain black domino and hat; and seemed to enjoy the amusement from his very heart. *La Moglie* also wore black, with a profusion of diamonds. Though the wife of the reigning sovereign, this lady is not allowed either the title or state of Queen; for she was the subject, before she became the wife, of the King. She was created Duchess of Santa Florida; but is more commonly called *La Moglie*. She is young and rather handsome.

"The Duchess of Genoa, the daughter of Ferdinand, and her husband, brother to the King of Sardinia, were also present at this ball. He is very uninteresting, and she very plain in appearance; but though apparently far from young, she is so immoderately fond of dancing as to tire out the most youthful and indefatigable courtiers."

It does not seem unlikely if these premises

be correct, that the Duke of Calabria may have been at the bottom of the late change". But we proceed to other rather miscellaneous extracts. At Pompeii, of which an Englishman has said most happily that it has been *voted for the benefit of antiquaries*, they have uncovered a temple of Isis, the walls of which are stuccoed.

"Upon this stucco the names of several travellers, the greater number English, were written, beneath which some wit had inscribed this pithy couplet:

"He who writes here in hopes of fame,  
Discloses both his folly and his name."

At Rome our countrywoman gives the following account of an interview with his Holiness.

"The etiquette of the Papal court forbids ladies even to enter the Vatican Palace. The Pope, therefore, holds his female levees at a summer-house in the garden, and always on a Sunday—on the principle, I imagine, of—the better day the better deed."

"Thither we accordingly repaired, about five in the afternoon, by appointment with the Duchessa di F—, who acts as lady in waiting to his Holiness. She was not arrived, nor was the Pope: but we found two Italian ladies—part of the suite of the Duchessa of Genoa—seated by the fire in the anteroom; for this summer-house consisted of two good-sized apartments, both comfortably carpeted, and with blazing fires, and might, more justly, perhaps, have been called a winter-house. The Pope himself came soon afterwards and passed into the inner room. The levee began immediately without waiting for the Duchessa. The two Italian ladies were first taken in, as they had arrived first; and on their return, which was very speedy,—for they seemed perfectly satisfied with receiving a benediction, and kissing the embroidered cross on the Pope's shoe, or, in other words, kissing the Pope's toe,—we were ushered in by one of the priests in attendance on his Holiness' person.

"The Pope was sitting on our entrance, but rose up to receive us. Protestants are not expected to kneel, or kiss the shoe, but they generally make a lower reverence than ordinary, and kiss the hand which he extends to raise them, and to give them his benediction. At least we did so, nor do I feel the least shame in confessing it; for 'the blessing of an old man can never do us harm'; still less of the mild and amiable Pius the Seventh.

"Being all three seated, we began to converse. His manners are gentle, according with the serene character of his countenance, his age and infirmity, and the sufferings which have bent his faded form nearly to the earth. He spoke with cheerfulness on common topics; laughed, took snuff, and cut jokes about the weather—which was then

"Since writing this we observe that he has been appointed Vicar General—a fact which adds to the probability of our surmise. Ed.

† The speech of Benedict the Fourteenth, if I mistake not, to Horace Walpole, on his hesitating to prostrate himself,—“Kneel down, my son; the blessing of an old man will never do you harm.”

very wet and cold; and said it was not so when he was a ragazzo: then there was summer in April, but now it was good for nothing but to sit over the fire. But, by far, the most interesting part of our long conversation regarded the invasion and occupation of Italy by the French. Upon these subjects he spoke with energy; some portion of bitterness mingling itself with the usual mildness of his manner. And surely, when we remember the injuries and indignities which, for a long series of years, the French and their ruler heaped on his devoted country, and spared not to himself—

‘One human tear may drop and be forgiven!’

"To us his manners were extremely kind and flattering. He seemed pleased with our visit, and expressed a strong wish that we should repeat it. He complimented us, particularly my sister, on her excellent knowledge of Italian, assuring us it had given him additional pleasure that we had been able to converse with him in his native tongue, as he had a great dislike to French, which he was nevertheless frequently obliged to speak, from many of the persons introduced to him being ignorant of Italian. He accompanied us to the door when we took leave, bade us a kind farewell, and gave us his blessing."

"On looking back, I find I have not described the dress his Holiness appeared in himself. Indeed, I am rather at a loss how to do it; and fear I can give no better account, than that he had a very small skull-cap clapped upon the shorn part of his head, half a dozen white cambric petticoats one over another, all edged with a particular kind of lace, a pair of scarlet silk shoes, with a cross embroidered in gold on one, and nothing at all on the other, and a scarlet mantle."

There is hereabouts a pretty account of the profession of two nuns, and an entertaining chapter on the blunders of travellers at Rome, in which the Transfiguration is called, by an English lady, Raphael's *Transmigration*; another asks what the Roman Forum was; a third, being told of the Centaurs in the Gallery of the Capitol, exclaims, "Bless me, they are like horses!" a fourth mistakes the bust of Cicero for the bust of a *Chichereon*; and a fifth classes Cincinnatus and Tarquin among the Emperors. A learned Theban notes down that the city of Pæstum was so called from a pest that raged there, and is likened to him who derived *Itinerant* from *Itin-errant*, a gypsy who went about mending tin pans.

We shall take leave of these Sketches without further observation, having before us a much more original view of nearly all the same places and circumstances, to which we shall apply ourselves with greater regularity. We have said that the present is an amusing performance; which is its highest character. The fair writer seems to have travelled pen in hand, and noted down everything she saw or heard of. These notes having been swollen by *Library-travelling*, and references at home, the result is an *Olla Podrida* of matters, one half of which, at least, might with perfect propriety

have been left unpublished. But the chief blemish is the eggyrious self-sufficiency with which judgement is given on every question, betraying the most superficial information and the most unreflecting dogmatism. It would be disagreeable to point out the innumerable absurdities which have been the consequence of this female accomplishment; and we are more ready to repeat, that the author displays much *saleté* and smartness in her lucubrations.

*Early Education; or the Management of Children considered, with a view to their future Character.* By Miss Appleton, Author of *Private Education*, &c. London, 1820. 8vo, pp. 352.

This is a book which offers no food for extract; but we should be ill discharging the duty which every writer of the class to which we belong, owes to society, were we not to take an early opportunity of saying how highly we estimate its merits. Old and young will read it to advantage: and to parents and teachers its contents are invaluable. Perhaps we could have wished greater compression; but the sound principles of Miss Appleton are not weakened by being spread out; and we most conscientiously and earnestly commend her volume to the consideration of the public. We are convinced that even the best intentioned and best informed, to whom the education of the rising race is an object, will reap many a useful hint, and find many an excellent precept, among its every way sterling views of that most important subject.

On such a topic as this, there is no praise like *home* praise; and we will say for ourselves, that we feel deeply indebted to the author for those labours which are directed to the benefit of every family circle, and the improvement of every Britain's fireside.

*Classical Excursion from Rome to Arpino.* By Charles Kelsall. (Continued.)

Arpino (Arpinum) which Clarendon asserts to have been a thousand years older than Rome, has produced some very interesting inscriptions relating to Cicero and Marius. It has a Teatro and Collegio Giuliano, and Marco Tulio is not an uncommon prenominal among its inhabitants. We read indeed, (says Mr. Kelsall), "of one Marco Tulio Cicero, a distinguished officer of Arpino, who with the sword cut *toga armis* on his lips, cut off the head of the governor of the castle of St. Angelo, at the sacking of Rome by Charles V. with one stroke of his sabre. The *insigne* of the city consist only of the imposing initials M. T. C. the inhabitants wisely preferring *letters* to *arms*." The witticism with which the author's quotation closes, is indicative of the author's disposition to pun and jest when opportunity offers. We have a good many instances, some of them not of the highest class. For example, mentioning one of the ancient inscriptions,

TINGERE LICKAT.

....MATREDIUS.

....ATREDIUS.

We are told it "shows that the Roman municipal manufacturers took out licences, like the English ale-house keepers. It will be remembered that our Blackstone was son of a dier. It would appear that the *diers* are destined to furnish the great expounders of law, and consequently to be *deathless*." The following is another, and newer if not better. "The road was enlivened by a party of Arpino ladies, escorted by their cavaliers. I know not whether Tullia in her airings with her father and mother, rode like them astride. The custom, which ought to be honoured 'rather in the breach, than the observance,' is not uncommon with the better classes of the Roman ladies; several of whom I have often met about Frascati, and the Tuscan groves, equipped in this manner."

We, though rather out of order, quote one more passage, in which joke and intelligence seem to preserve equal forces.

"About a mile from the Arpine villa, there, is a paper manufactory, where we found to our surprise, a native of Berkshire, who acted as the superintendent. He presented us with a roll of his *Arpine chartie*, not inscribed indeed with the *Pro Archid.*, but the *Pro Regibus Alexandrino et Deiotorio*, but blank as Arpino itself would prove, without the remembrance of its genius. The picture that he gave of the state of the country was deplorable; for scarcely a day had elapsed the preceding year, without a robbery, which was generally accompanied by assassination. The attacks were most frequent between Isola and Sora. This is explained by considering the situation of Arpino and its environs; which being on the confines of the two states, makes its neighbourhood a convenient asylum for ruffians, who, as they may be pursued in one or other territory, abscond in the skirts of either.

These circumstances suggested a *Divinitio* on the most advisable way of returning to Rome, and escaping the *tasks* of that *cerra* of the Apennines, *Dicecra*. Sometimes we thought of passing by the *Reatine Tempe*. Further delay was dangerous; and it was high time to withdraw *De Finibus Arpinatium*; the *Topica* of which were so doubtful and unclear; for since *Dicecra*, like his great prototype, set the *De Legibus* at defiance, and consequently the *De Officiis*, an attack in the woods was by no means a *Paradoxon*. The fatigue and heat too made it necessary to take measures *De agritudine tenenda*; which if postponed might have terminated in the *De morte contemplanda*."

But to return to Arpino itself.—

"The main street, which is very narrow, leads to a *Piazza*, where workmen were actively employed in building a new town-hall, with niches destined to receive statues of Marius and Cicero. Here there is a fountain, flanked by two towers, with an eagle springing from the centre. The towers are symbols of Marius and Cicero; and the eagle is emblematic of the power of Rome.

"The wretchedness of the inn (if inn it could be called,) was in some measure compensated by the ludicrous appearance of some strolling players, who were preparing to give their exhibition in the *Teatro Tulliano*. The apartment was the counterpart of Ilgarth's well-known print. The host, who appeared fit to be major-domo to *Dicecra*, strangling a half-starved fowl in the ill-way:—his sister, a Tullia in her features, a Mariotnes in her mind, stirring with her black and greasy hands an immense sallad; who though barbarous, appeared good, and except when engaged with the kitchen utensils, Tanaquil herself could not have been busier with the distaff; a quack-doctor, a meagre and grotesque figure, rehearsing his part; a hero, and a pretty girl who was to be rescued by his prowess, at least furnished us with a subject for merriment, which we had no right to expect in so remote a town in the Apennines. We followed this Thespian band to the theatre, where they sustained their parts with spirit, and their action and rehearsal was not spoiled by those artificial gestures and screams usually seen and heard in the greater theatres of Italy. The orchestra, composed only of five violins, serenaded the spectators, when the drop-scene was let down, which displayed ill-painted busts of Marius and Cicero. The applause was loud and frequent."

"The actual population of Arpino is between ten and eleven thousand souls. I gave birth to *Giuseppe di Cesare*, better known by the title of *il cavalier d'Arpino*; whose froscos at Rome and Naples, betraying a genius rather florid than powerful, rank him perhaps among artists of the second class in Italy."

"There has existed for many years, a phil-harmonic society at Arpino, which has sent to various parts of Europe several distinguished performers, both vocal and instrumental; among them, one Signora Sperduti, *prima cantatrice assoluta* at the opera in London, and who died there about the middle of the last century.

Before dawn, swarming with fleas, we quitted with no small satisfaction our pestiferous inn; and ascending almost immediately a very steep rock, reached in about half an hour, *Arpino eccehio*, which occupies the site of the ancient town. On entering the gateway, we were greeted with the following inscription, of no remote date:

ARPINUM. A. SATURNO. CONDITUM.  
VOLSCORUM. CIVITATUM.  
ROMANORUM. MUNICIPIUM.  
MARC. TULLII. CICERONIS.  
ELOGENTIAE. PRINCIPIS.  
ET CAIL. MARI. SEPTIES. CONSULIS. PATRIAM.  
INORDERE. VIATOR.  
HINC. AD. INFERNUM. TRIUMPHALIS.  
AQUILA. EGRESSA.  
URBI. TOTUM. ORDIN. SUBEGIT.  
EJUS. DIGNITATEM. AGNOSCAS.  
ET. SORPES. ESTO.

*Ejus dignitatem agnoscimus; and the Cicero*, a title which has singular force here, shewed us hard by, an ancient cistern, foundations of old walls, and three subterraneous

arches, called by the inhabitants, *i muri di Cicer*, (*quasi muri Cicronia*.) thought by Clavelli, to be the ruins of the paternal mansion of the Ciceros; which Quintus, brother of the orator, inherited; while the villa below, near the confluence of the Fibrenus and Liris, devolved on Marcus, after the death of their father.

Continuous is a Cyclopien arch, older, I have little doubt, than the oldest stones of *Latium antiquissimum*. This arch is interesting, as presenting a perfect point, and proving that that characteristic of what is called the Gothic style, is even antecedent to the Roman, or circular arch. It consists only of eleven colossal stones laid on each other without cement. The accomplished Signora Dioniigi, in her *Viaggi nel Lazio*, has given an elegant engraving of this arch, which she calls *la porta acuminata d'Arpino*, as well as of the Cyclopien ruins still seen in Alatri, Atina, and the other Saturnian cities. Several towers of the ancient walls are still standing, originally of Roman work, but probably added to in the middle ages. They are evidently of a much later date than the above-mentioned arch. We were shown here too the vestiges of a street, perhaps the *via Græca*, noticed by the orator in one of his letters to Quintus: *ibam fortè viâ Græcâ, cum tua litera mihi reddita esset*. This street, which is covered with irregular flags, like the *via Appia*, is now called *la via Cicero*. Tracks of the old wheels are here visible, as at Pompeii."

Of the two isles formed by the *F. della Poeta* (*Fibrenus*) before it flows into the *Garigliano* (*Liris*), Mr. Kells thinks the lower one is the *Amalthæa* of Cicero, though both were designated by him "blessed isles." "And (says Mr. K.) no wonder; for nothing can be imagined finer than the surrounding landscape. The deep azure of the sky unvaried by a single cloud; Sora on a rock, at the foot of the precipitous Apennines; both banks of the *Garigliano* covered with vineyards; the *frigor aquarum* alluded to by Atticus in the *De Legibus*; the coolness, rapidity, and ultramarine hue of the Fibrenus; the noise of its two cataracts; the rich turquoise colour of the Liris; the minor Apennines round Arpino, crowned with umbrageous oaks to their very summits, presented scenery hardly elsewhere to be equalled, certainly not to be surpassed even in Italy."

Escaping from the robber *Dicecra*, the author returned to Rome after a circuit of about one hundred and eighty miles.

The second part of the volume is a defence of and eulogy upon Cicero; and there is added a notice of his brother Quintus, and others of his family. We do not find any thing more for extract in these pages; nor shall we prolong this review with quotations from a curious account of Capri, and the ruins of the twelve villas of Tiberius. The author concludes with a scheme for erecting (by subscription in all countries) a monument to the great Roman orator at Arpino; and takes infinite pains to explain the plan and design of the building. Into this speculation, however, we need not enter,

for the rest, thirty thousand pounds, is yet to be raised, and we shall wait till that is pretty far advanced, before we occupy our columns with Mr. Kelsall's.

We have merely to add, that the Excursion is adorned with several engravings; the most remarkable of which is a profile (as is stated) of Cicero, from a sitting statue at La Ruftina, recently found in the ruins of Tusculum.

*Friendship, a Tale.* By Miss Samlham. London, 1820. 12mo. pp. 306.

This is a very pleasing little volume, which we suggest to our younger readers, as at once agreeable and instructive. It contrasts the benefit of moral superintendence and good education, with the evils that flow from inattention to early culture, and the sound direction of the tender mind. Our only objection to the tale, as a lesson to youth, is, that it draws too many foolish and unamiable pictures of age; forgetting that example speaks more powerfully than precept. It must be confessed, however, that the author does justice to her characters, and shows that none but the wise and virtuous are the respected and happy. The style is good, the incidents well chosen, and the narrative, in some parts, truly affecting. The story is interesting enough to engage attention, and thus dispose the reader to receive its purer impressions.

#### HUBER ON ANTS.

[Dr. Johnson's Translation, continued.]

Such as we described in our last are the wars of psimures. They have, no doubt, their heroes; and probably their barbs, though we presume that historians are unknown to them. It is very curious, that insects should carry on hostilities in so regular a way; but the more fighting principle is so common to all animated nature, that their exploits in this way are not, altogether considered, so wonderful as the following:—

"With slight movements of their fore-feet they pat the lateral parts of the head of the other ants. After these first gestures, which resembled caresses, they were observed to raise themselves upon their hind-legs by pairs, struggle together, seize each other by a mandible, foot, or antenna, and then immediately relax their hold to re-commence the attack. They fastened on the thorax or abdomen, embraced and overthrew each other, then raised themselves by turns, taking their revenge without producing any mischief. They did not spurt forth their venom, as in their combats, nor retain their adversary with that obstinacy which we observe in their serious quarrels. They presently abandoned the ants they had seized, and endeavoured to lay hold of others. I saw some who were so eager in these exercises, that they pursued successively several workers, and struggled with them a few moments, the combat only terminating, when the least animated, having overthrown his antagonist, succeeded in escaping and hiding in one of the galleries."

Are we not tempted to exclaim with admiration, how wonderful are the ways of providence! Such contentions throw man back upon himself; and the lesson, rightly read, ought to moderate (in rational beings) much of that turmoil and trouble, in which Britain is at this hour involved.

The 6th chapter treats of the relation of ants with the pucerons and gall insects; and especially of the language of which the antennae seem to be the organ. On the latter subject we shall make only one extract.

"Imagining (says the author) that I have not presumed too much upon the justness of my conclusions, I have been under the necessity of admitting, that ants possess the means of communicating their different impressions, and I think this faculty consists, in their striking with their head the corset of their companions, and in the contact of their mandibles; but these are the common signs of which they make use. The antennae, the organs of touch, and, perhaps, of some other sense which is unknown to us, are the principal instruments connected with the language of ants: their situation in the fore part of the head, their flexibility, their construction, which presents a series of articulations, endowed with extreme sensibility; their close connection with instinct, added to the observations I made, whilst speaking of the conduct of these insects, in reference to the females, males, and labourers, induce me to believe that the antennae perform the most important office among ants. We have seen insects frequently use them on the field of battle, to intimate approaching danger, and to ascertain their own party when mingled with the enemy; they are also employed, in the interior of the ant-hill, to warn their companions of the presence of the sun, so favourable to the development of the larvae; in their excursions and emigrating, to indicate their route; in their recruitings, to determine the time of their departure, &c. Let us still see of what further service they are to these insects. As ants do not possess the art of constructing magazines, and filling them with provisions, they cannot, like bees, draw their supply from the cells; they are, therefore, obliged to quit their habitation, those who remain at home, expect their food from the labourers, who are gone abroad to procure it; the latter bring back small insects, or the bodies of such as they have dismembered. When they fall in with ripe fruit, or animals of tender flesh, as worms, lizards, &c. and are not able to convey them to the ant-hill, they feed upon their juices, and on their return to their habitation, their stomachs being filled with the liquid provision, they disgorge it in the mouths of their companions, which is effected in this manner:—the ant, who experiences hunger, begins striking with both its antennae, with an extremely rapid movement, the antennae of the ant from whom it waits its supply; it then draws closer, with its mouth open, and its tongue extended, to receive the fluid, which is observed to pass from the mouth of one to that of the other: during this operation, the ant who is receiving aliment, does not cease caressing its kind

friend, by continuing to move its antennae with great quickness; it also plays upon the lateral parts of the head of its benefactor, with its fore-feet, which are furnished with very thick brushes, and which, from the delicacy and rapidity of their movement, yield in no respect to the antennae. The ant, who returns from foraging in the fields, is well acquainted with the mode of informing its companions of the necessity under which it lies, of discharging a part of the fluid with which it is provided, and by the aid of its antennae, appears to invite them to come and take their portion; but it does not, in this case, make use of the fore-feet. This language is well understood by these insects; even the larvae, who know how to demand their nourishment, (by raising their head, as we have before remarked,) erect themselves, and present their mouths, as soon as they perceive the ant striking with its antennae the upper part of their body."

The intimacy of ants with pucerons, is a remarkable example of animal economy.

"We know that a great number of vegetables furnish provision to the *Pucerons*, or *Aphides*. These insects fix themselves upon the leaves, or small branches, and insinuate their trunk or sucker between the fibres of the bark, where they find the most substantial nourishment. A portion of this aliment, shortly after being taken, is expelled, under the form of small limpid drops, either by the natural passage, or by two horus, that we commonly observe on the posterior part of the body. This fluid constitutes the principal support of the ants. We have already noticed, that they wait the moment when the pucerons eject this precious manna, upon which they (the ants) immediately seize; but this is the least of their talents, for they know how to obtain it at any time they wish."

With the gall insects the mode is equally curious. Mr. H. says—

"I was very much astonished when I saw, for the first time, an ant approach a gall insect, and perform with its antennae, on its lower extremity, the same manoeuvres, which it executed in respect to the pucerons. After having a few moments caressed this insect, I saw proceed from its back, a large drop of fluid, which the ant immediately lapped up. I observed the same occurrence, with reference to other gall insects on the same tree, during several seasons. They were stationed in great number upon an enlarged part of the trunk. The ants came there constantly to receive their provisions, which was fully confirmed by my observing these insects upon an orange tree, where I saw the ants obtain from them their food in the same manner. We can only compare the movements of ants upon this occasion, to the play of the fingers in a shake upon the piano-forte."

"The kermes, like the pucerons, eject this fluid to a distance when the ants are not present to receive it; this, however, but rarely happens. The gall insects of the vine, the peach, and the mulberry-tree, never failed presenting me with the same spectacle; which gave me some general ideas respecting

the relation which exists between the instincts of these insects and that of ants. That the pucerons and the gall insects experience pleasure when caressed in this way by the ants; that it is an advantage to them to be carried off by their secretaries; or that there really exists between each, some kind of language, is still one of those questions upon which we cannot well decide: but we shall not the less admire the manner in which ants procure their subsistence. This fluid is to them an inexhaustible treasure. It will be enough, to be convinced of this truth, to station one's self near an oak covered with these insects, where we shall, soon after, observe thousands of ants ascending and descending the trunk. All those ascending have small bellies, and walk nimbly; those, on the contrary, descending, have their abdomens swollen, transparent, full of the fluid obtained from these insects, and do not move but with difficulty."

The ants store their nests with pucerons. "There are ants that scarcely ever quit their abode; we neither observe them moving towards trees or their fruit: they do not even go in chase of other insects; they are, notwithstanding, extremely common in our meadows and orchards. I allude to the Yellow Ants, called by the common people Red Ants, and which would merit the surname of *souventaine*. They are two lines in length, their body is of a pale yellow colour, slightly transparent, and covered with hair."

"I knew where all the other ants sought and obtained their nourishment; but I could not ascertain what these did to exist, and what aliment they could furnish themselves with, without quitting their habitation; when, one day, having turned up the earth of which their nest was composed, to discover if they had any provision, I found it to contain the pucerons. I saw them at the roots of the grass which surrounded the ant-hill. They were assembled in considerable numbers, and were of different species: the most common, were of a flesh colour, and of a round form; others were white, and had the body more flattened; but they were of the same genus. There were also some that were green and violet coloured, others with black and green rays; the latter stood higher upon their legs, and were much longer. Some were removed to a great depth, attached to the deeper part of the roots; others were wandering about in the midst of the ants, either in the upper, or under-ground chambers. The ants appeared to seize the favourable moment for taking their food; they acted in the ordinary manner, and always with the same success. This clearly explained, why the ants of this species did not quit their abode, since they had, without leaving it, all that was necessary for their support."

(To be concluded in our next.)

*The Angel of the World, Sebastian, &c.*  
By the Rev. G. Croley.

Last week we gave some extracts from the poem with which the volume commences. We shall probably indulge our readers by giving a slight

specimen of the second poem, which is of a more varied construction, of a more romantic style, of about twice the length, and touches on subjects more within our sensibility, than the temptations of those beings,

"That in the colours of the rainbow live,  
And play i' the plighted clouds."

Sebastian, a man of birth, a soldier, and a lover, follows a mysterious beauty through a round of adventures. At Granada, he is led by one of these to the Alhambra, the famous palace of the last race of the Moorish kings, and to this hour the loveliest relique of the splendours of Saracen architecture.

We give the sketch of the palace, reserving our general criticism till the publication of the volume, which will be, we presume, early next week.

Sebastian has ascended the mountain on which the palace stands,—has been captivated by a melody whose singer is unseen; and, at length, is determined to discover the minstrel.

He looked around, but all was solitude,  
No shadow wandered by the evening vine.  
A moment, in bewildered thought he stood,  
Saw the wind shake the Alhambra's ready pole,  
Fondered no more, but rushed within the wall.

Palace of beauty! where the Moorish lord,  
King of the bow, the bridle, and the sword,  
Sat like a Genie in the diamond's blaze.  
Oh! to have seen thee in the ancient days!  
—When at thy morning gates the coursers stood,  
The "Thousand," milk white Yemen's fiery blood,

In pearl and ruby harness'd for the king,  
And thro' thy portals poured the gorgeous blood  
Of Jewell'd Sheikh and Emir, hastening  
Before the sky her dawning purple show'd,  
Their turbans at the Caliph's feet to fling.

Lovely thy morn—thine evening lovelier still,  
When at the waking of the first blue star  
Thou trembled on the Atalaya hill.  
The splendours of the trumpet's voice arose,  
Brilliant, and bold, and yet no sound of war;  
It summoned all thy beauty from repose;  
The shaded slumber of the burning noon.  
Then in the slant sun all thy fountains shone,  
Shooting the sparkling column from the vase  
Of crystal cool, and falling in a haze  
Of rainbow hues on floors of porphyry;  
And the rich bordering beds of every bloom,  
That breathe to African or Indian sky,  
Carnations, tuberose, thick anemone,  
Pure lily that its virgin head low waved  
Beneath the fountain drops, yet still would come.

Like hearts by love and destiny enslaved,  
That see and shrink, and yet will seek their doom.

Then was the harping of the minstrels heard,  
In the deep arbour, or the regal hall,  
Hushing the tumult of the festival.  
When the pale bard his kindling eyeball rear'd,  
And told of Eastern glories, silken hosts,  
Towered elephants, and chiefs in topaz armed;  
Or of the mirrials from the cloudy coasts  
Of the far Western Sea, the sons of blood,  
The iron men of tournament and feud

That round the bulwarks of their fathers' swarm'd,  
Doom'd by the Moslem scepter to fall,  
Till the red cross was buried from Salem's wall.

Where are thy pomps, Alhambra, earthly sun,  
That had no rivalry—no second? Gone.  
Thy glory down the arch of time has rolled.  
Like the great day-star to the ocean dim,  
The billows of the ages o'er thee swim,  
Gloomy and fathomless: thy tale is told!  
Where is thy horn of battle, that but blows,  
Brought every spear of Africa from the wall,  
Brought every charger barbed from the stall,  
Till all its tribes sat mounted on the shore,  
Waiting the waving of thy torch to pour  
The living deluge on the fields of Spain.  
Queen of Earth's loveliness, there was a stain  
Upon thy brow, the stain of guilt and gore;  
Thy course was bright, bold, treacherous—and  
'tis o'er.

The spear and adiem are from thee gone;  
Silence is now sole monarch on thy throne.

He passed the Court of Fountains, where the rill

Strives thro' its sculptur'd bed to trickle still.  
No living sound was there,—he lean'd beside  
The fountain where the *Abencerrage* died,  
And struck in listless anger from his brim  
The weeds that gather'd o'er it thick and dim.  
His murmurings told his ear: a sudden shade  
Twinn'd swiftly thro' the distant colonnade;  
He sprang, and follow'd, but his foot was maz'd  
In the deep labyrinth of halls, embarr'd  
With fretted gold and purples, and all eyes  
Of plant or metal, and inscriptions ran  
Crowding the cupola, and floor, and frieze,  
With spell and scripture, tale and talisman.

## ORIGINAL CORRESPONDENCE.

We have a letter signed *J. Ph. Barberi*, who contends that the word "*salvo*," to which we objected in Piosolo's or Toscolo's *Ricciarda*, is correct. He asserts that "*Salvo* formerly was, and is now, as it ever will be, the participle of the verb *Salvare*, *saved* from *Salvato*," and quotes two passages from the *Polinice* and *Antigone* of Alfieri, to prove it, as well as the dictum of the Academy della Crusca at Florence. We care little to guess who the writer is; but as there does not exist in the *Italian* language any word beginning with *rai*, we guess that in the signature—*Stat nominis umbra*. He it so; we are not afraid, in this case, to face *Mr. Phoscolos Barberi* himself; and will undertake to prove him guilty of an error, not uncommon amongst the unguarded authors of Italy; while by quoting Alfieri in the same words, he rather discovers an accomplice in grammatical crime, than offers a successful defence.

As our argument is particularly intended for our English readers, we will start with a comparison between the Italian and English words, in a question in which they have exactly the same meaning; and, if ill managed, are subject to the same blunders in both languages.

The adjective *salvo*, corresponds to *safe*; and the participle *salvato*, to *saved*. *Salvo*, as part of the verb *salvare* (to save) can only be the first person in the singular num-

ber, of the present tense of the indicative mood: *Io salvo, I save.*

The line in Ricciarda says—

"Scemtra allor d'aver mi amato e salvo.

Literally—

"She will then pay dear for having loved and SAFE me (instead of saved me). Avere (to have) auxiliary verb of the active verbs, must govern a participle; and we dare defy Mr. Ph. B. to prove that *salvo* is a participle.

It is the same when *salvo* is governed by *essere* (to be) the auxiliary verb of the passive verbs. In the simple tenses, for instance, *Io son salvo*, it means, I am safe; but in the compound tenses, if one would say, *Io sono stato salvo*, it would be:—I have been safe, instead of saved.

Mr. Ph. B. asserts, that in the dictionary of Della Crusca, it is said, that *salvo* is used for *salvato*. There is no such an acknowledgment there. If there were, the example would be given, and Mr. Ph. B. would not have omitted in his letter to produce it. Under the adjective *salvo*, two examples are to be found there; but as they are not governed by an auxiliary verb, they are not in the least applicable to our question. The first example is from Boccaccio: *Io non mi terrò mai salvo:—I shall never consider myself SAFE, not SAVED.* The second is taken from Giovanni Villani: *Se ne uccirono salvo le persone.—The inhabitants evacuated (the town) SAFE, in safety, not saved.*

Mr. Ph. B. unable to find an unquestionable authority to sanction his error, brings forth triumphantly two examples from Alfieri. He must know very well what an outcry was raised against the language of Alfieri, in Italy, when his first tragedies were published. The Italians have at last thanked him for his just and bold expressions, with which he has enriched the Italian language; but in our case it is not a question of a new diction, but of an error of grammar, which cannot be sanctioned nor screened under the wings of Alfieri's authority. The first example is taken from his *Eteocle e Polinice*. *Salvo alieno tu sei:—At least you are SAFE.* The second comes directly into our case, as *salvo* is governed by the auxiliary *avere* (to have). In Antigone he says:—*Tutto ad un tempo salvo ho colui:—at once I have so SAFE (NOT SAVED) every thing.* In this case Alfieri is only his companion in the same mistake.

When Mr. Ph. B. asserts so positively, that *salvo* is syncope for *salvato*, he makes us smile. There is no syncope participle in all the Italian language; and we defy Mr. Ph. to produce an example of authority. Properly speaking, there is no syncope in the Italian language, but a *troncamento* (a cutting-off), of a vowel, chiefly at the end of a word. If any of our English scholars, totally unacquainted with the Italian language, open an Italian book, he may see a great number of words ending with a consonant; and it being true that all the Italian words end with a vowel, except a few monosyllables, he may judge if such *troncamento* may be properly called a *syncope*.

Buonmattei, in his grammar, fills up ten 4to. pages with his treatise of the *Troncamento*;

and we defy Mr. Ph. B. to quote from it a rule to support his pretended syncope.

Finally, we declare again that we admire Mr. Foscolo's Ricciarda, and its classical language, except the *salvo* for *salvato*; which, by the by, is repeated three or four times in the piece. If Mr. Ph. B. is not satisfied with our answer, we are disposed to hear what more he has to say. We beg him only to keep his temper, as we do in England in literary quarrels; we will take no further notice of him if he accuse us of ignorance, instead of defending his error, by giving good examples from unquestionable authors, and consistent with grammatical rules.

#### DEBRET'S PEERAGE.

12th July, 1820.

SIR.—(Observing in one of your late numbers, various errata pointed out in Debrett's account of the Peerage of Ireland, and feeling the same sort of interest in the Scots Peerage that your correspondent appears to do in the Irish, I am induced to submit to you the following list, which I found in the course of a few minutes, and in turning over merely a few pages. They are taken from the tenth edition, published in 1816. I have since compared them with the corresponding passages in the "thirteenth edition, considerably improved," printed in 1820; and shall add the result in each case.

In the article, "Marquis of Tweeddale," we find it recorded, that George, seventh marquis, was married in 1785, and yet his fourth son, William, died in 1778. In 1820, this young nobleman is brought to life, and promoted to the rank of captain in the Rifle Brigade!

"Earl of Eglington." In the account of this distinguished family, Archibald lord Montgomery, is stated to have married lady Mary Montgomery, daughter of Archibald, eleventh earl of Eglington, and sister of Jane, countess of Crawford. Now every one who knows any thing of the peerage of Scotland, could have informed the editor, that lady Montgomery had only one sister, lady Susan, who died unmarried; and that the late countess of Crawford was sister to lord Montgomery's mother. This error is copied verbatim into the "considerably improved" edition of 1820.

"Earl of Cassillis." Archibald lord Kennedy, born 1804, married 1814—date of his birth left out in the new edition (really 1794).

"Earl of Haddington." We find it recorded, that this nobleman married in 1799, and that his son, lord Binning, followed his example in 1802; the real date of lord Haddington's marriage was 1779; but the blunder is faithfully copied into the new edition.

"Barl of Dysart." In the account of this noble family, a remarkable circumstance is stated, viz. that Frances, daughter of Lionel, third earl, died in 1707—the year before her father was born! Copied faithfully into the new edition.

"Earl of Northesk." George, fourth earl, married in 1748; his eldest son was born in 1749, and his fourth in 1733.—Repeated in the new edition.

The above, Mr. Editor, I give, merely as a specimen of what is to be found in almost every page nor is the new edition free from errors than the preceding ones. In one case I find the real heir to an earldom, a gentleman married, and having a numerous family, altogether omitted, and the reversion of the title bestowed on his uncle; while in another page, I find a nobleman's brothers and sisters stated to be his children. I really feel it a duty to expose this extreme carelessness, most inexcusable certainly in a work of this kind, which is sale valuable in proportion to its accuracy; and I am satisfied that your giving publicity to this statement will have the effect of reducing the fourteenth edition more accurate.

I am, Sir,

Your very obedient Servant,  
J. M.

#### To the Editor of the Literary Gazette.

SIR.—You must remember the animated scene in Ivanhoe, between Cedric and Athelstane, while prisoners in the castle of Front de Boeuf. Cedric tells the story of Harold's answer to the emissary of Tori and Hardrada; and begins it thus—"Yes," said Cedric, half speaking to himself, and half addressing himself to Athelstane, "it was in this very hall that my father feasted with Torquil Wolfanger, when he entertained the rascal and unfortunate Harold, then advancing against the Norwegians, who had united themselves to the rebel Tori. It was in this hall that Harold returned the magnanimous answer," &c. vol. 2, p. 110, 111. A little farther on, he observes, that his "father was not the worst defender of the Saxon crown," p. 114. Now I think it will be allowed, that a man who was invited to feast in company with a king, and was able to fight in defence of the crown, was at least twenty years of age; and as these events happened in 1066, Cedric's father must have been born, at latest, in 1046. The date of Ivanhoe (being that of the return of Richard I.) is 1194; and Cedric being about sixty at that time, his birth must be placed in 1134, eighty-eight years after the birth of his father—rather an advanced age to have so vigorous a son as the lord of Rotherwood. But still harder he mentions that he has often heard his father kindle while telling this story, (p. 111) which certainly could not be often told to a mere boy. We must therefore admit, that the old gentleman must have been some what over a hundred years of age, when he was kindling at the recital of the tale of Harold. This certainly is possible, but not very probable; particularly as such patriarchal extensions of life were little to be expected in such boisterous times as those immediately succeeding the conquest. Had it been Cedric's grandfather, it would be more within the limits of credibility.

Ivanhoe is so delightful a romance, that we are willing to look over any little blemish of this kind; and he who spies them must be content to subscribe himself

July 6, 1820.

A SMALL CRITIC.

## ARTS AND SCIENCES.

A Paris journal contains the following details respecting the scientific expedition undertaken by M. Freycinet, commander of the *Uranie* sloop of war.

In March, 1819, the *Uranie* cast anchor in the harbour of Amatic at Gaum, one of the Marian islands: after remaining there fifteen days, she proceeded to the Sandwich Islands, and from thence to Port Jackson, where, it appears, she arrived in December 1819. After leaving Gaum, the course of the *Uranie*, though toilsome and difficult, was fertile in important and curious results. Some valuable observations on magnetism were made at Waigion and at Diely, the chief Portuguese establishment in the Isle of Timor. At Waigion, an island on the equator, observations were made on the pendulum, which are likely to be useful in the measurement of the earth. Numerous geographical errors have been rectified by the operations performed on board the *Uranie*; a great number of plans and charts have been drawn up, and it is expected that the vessel will bring back to France a valuable collection of drawings and objects of natural history.

A Russian frigate, on a voyage of discovery, was at Port Jackson at the same time with the Frenchman.

## LEARNED SOCIETIES.

## OXFORD, JULY 15.

On Saturday, the 8th inst. the last day of Act Term, the following Degrees were conferred:—

MASTER OF ARTS.—Rev. S. Hurt Langston, Fellow of Wadham College.  
BACHELOR OF ARTS.—John Irving, Worcester College.

The whole number of Degrees in Act Term was—D.D. Five; D.C.L. One; D. Med. One; B. D. Five; B. C. L. Two; B. Med. Two; M. A. Sixty-one; B. A. Seventy-nine; Matriculations, eighty-two.—Regents of the Act.—Doctors, Twenty-two; Masters, One Hundred and sixty-three.

## FINE ARTS.

## SIR J. LEICESTER

Has added to his Gallery, Mr. Vincent's fine view of London, from Waterloo Bridge. This picture has attracted much notice, and is certainly one of the ablest compositions of a very rising artist. The choice of subject is well calculated for grandeur and effect; and in treating it, we think the artist has been happy in getting rid of those frittling touches which have broken some of his productions, and giving the whole a great and broad simplicity. The colouring of the shipping is extremely rich and harmonious; the massing of the bridge admirable; and the distant dome of St. Pauls, in a masterly tone.

As a whole, the picture merited the patronage it has met with; and we record it to the honour of its painter and possessor.

## ORIGINAL POETRY.

## GIPSIES.

Underneath the greenwood tree,  
There we dwell right merrily,  
Larking to the grassy lane,  
Here this hour—then gone again.  
You may see where we have been,  
By the burned spot on the green;  
By the oak's branch drooping low,  
Withered in our faggot's glow;  
By the grass and hedge-row cropped,  
Where our axes have been grazing;  
By some old torn rag we dropped,  
When our crazy tents were raising;—  
You may see where we have been,  
Where we are—that is not seen.  
Where we are—it is no place  
For a lazy foot to trace;  
O'er brath and over field,  
He must scramble who would find us;  
In the copse-wood close concealed,  
With a running brook behind us.  
Here we list no village clocks;  
Liveller sound the farm-yard cocks,  
Crowing, crowing round about,  
As if to point their roostings out;  
And many a cock shall cease to crow,  
Or ere we from the copse-wood go.

On the stream the trout are leaping;  
Midway there the pike is sleeping,  
Motionless, self-poised he lies,  
Stir but the water—on he flies,  
E'en as an arrow thro' the skies:  
We could tie the noose to snare him,  
But by day we wisely spare him;  
Nets shall scour the stream at night,  
Till the cold moon's trusty light  
Scores of fish will not surprise her,  
Writing with their glittering scales;  
She'll look on, none else the wiser,  
Give us light, and tell no tales;  
And next day the sporting squire  
Of his own trout shall be the buyer.  
Till the farmer catch us out,  
Frolicing his rich barn about;—  
Till the squire suspect the fish;  
Till the keeper find his hare,  
Struggling in our nightly snares;  
Till the girls have ceased to wish,  
Headless what young lad shall be  
Theirs in glad intimacy;  
Till the boors no longer hold  
Awkwardly their rough hands out,  
All to have their fortunes told  
By the cross lines thereabout;—  
Till these warings, all or some,  
Raise us (not by beat of drum)  
On our careless march to roam;  
The copse shall be our lasty home.  
JANATO SECONDO.

## LOVER'S PARTIMES.

Careless of all the world, save one sweet care,  
And in each other lost, they dreamt away  
The hours, before they wed loving to stray  
By grove or fountain, where the noontide heat  
Came not; and often upon starry nights  
Would pause and read the blue unclouded sky,  
Full of bright wonders, Lyria said then,  
And listening to her lover's accents low,  
Or with each word sportively quarrelling,  
The which he answered not, but tenderly  
Prest sweet conviction on her willing lip,  
Or smiled reproach, and made her err again.  
Sometimes from out its bed of leaves he plucked

The hiding violet, or from a bank  
Sun-touched, and wet with passing showers, he tore

The primrose, or the valley's virgin blooms,  
Lilies, (of all the children of the spring  
The palest,) or in curious braids entwined  
White curling hyacinths amidst her hair:  
And often kneeling, with upgazing eyes,  
He offered to his love fair coronets  
Of myrtle, or of crown flowers budding new,  
Or wild-primrose blossoms stripped of all their thorns.

Thus passed the pleasant hours. 'When you are mine'—

G—then would say, 'Twill never be,'  
Laughing the lady spoke; while he, secure,  
Pressing her heaving side against his heart,  
Fetioned or deplored, or smiling glanced  
Upon her cheek beauty and tremulous,  
And saw the crimson dimpled of her lips  
Part and display its wealth: rich gems were there.

Whiter than pearl or Indian ivory;  
And (as 'twere, by perfumes, such as come  
Towards Cyprus, o'er the breeze-swept sea by night,  
When the rose is flowering in Arabia.

M.

## [By Correspondents.]

Lines addressed to Dr. Rees, on the Publication of the last Part of his Cyclopædia.

'Tis sweet, to mark a stately column rise,  
And watch its progress till it gain the skies  
'Tis sweet, to view a highly cultivated soil,  
With golden harvests crown the labourer's toil  
And sweet, his cares, his pains, his wanderings o'er,

To view the sailor reach the wish'd-for shore,  
Such thoughts, such feelings animate my soul,  
To see thy work attain its destined goal.  
I hailed the morning of thy bright career,  
But smiling hope was clouded, by the fear  
Lest some disastrous ill should cross its way,  
And its proud march to fame and honour stay.  
My fear was vain: before my eyes at last,  
Thy latest volume spreads its treasures vast.  
That work is worthy of a Nation's care,  
Which stands confessed to shine without compare.

Here, genius, taste, and learning, all combine,  
And round thy brow their blended laurels twine.  
Britannia's Muse with conscious pride surveys  
A British work, and wakes the note of praise;  
Reviews the stores with which thy page is fraught,

From all the mines of varied knowledge brought;  
Recounts the sons of Science, who conspired  
To make thy work esteemed, acclaimed, admired;

But mostly lauds, and chiefly gives to fame,  
Those matchless plates inscribed with Lowry's name;

Lowry, whose powerful genius could impart,  
New charms to science, and new grace to art,  
And with unrivalled talent proudly teach,  
How near perfection's height the works of man  
might reach.

July 26, 1820.

H.

## TRANSLATION OF HOMER'S SECOND HYMN TO VENUS.

The beautiful golden crowned Oen I sing,  
Venus, of Cyprus' Isle the deity  
Whom the soft Zephyr on his gentle wing  
Did, o'er the surge of the resounding sea,  
Raised on the foam, to its high turret bring,  
Where the gold-vested hours delightedly

Received her, and bedecked in gorgeous sheen  
The lovely person of their sea-born queen.

On her immortal head a crown they placed,  
Resplendent, formed of gold; her well-placed  
ears

Rich flowing rings of precious metals grace;  
Her shapely neck a golden circlet bears;  
Which o'er her breast winds its descending trace;  
Each of the attendant Hours such circlet  
wears,

When bent to seek the mansion of her sire,  
Or with the gods to join the cheerful choir.

The Hours then led the Goddess thus arrayed  
Among the lords of heaven; love seized on all;  
Each clasped her to his breast, with transport  
swayed,

And softly wooed her to his regal hall,  
To share it as his bride; so did the maid,  
Crowned with the violet wreath, their souls  
enthrall.

Hail, dark eyed Goddess of the dulcet tongue,  
Grant victory to my lay, and guide my song!

#### On a certain Lecturer on Poetry.

Both kinds of style our lecturer is engrossing;  
Verse is his matter, and his manner prosing.

### SKETCHES OF SOCIETY.

#### THE HERMIT IN THE COUNTRY.—VI. FASHION.

"Poor Sir Marmaduke!" exclaimed Lady Racket, talking of Sir Marmaduke Modish; "I have known that *man* (laying an emphasis on the word)—I have known that man these twenty years (her ladyship forgot a dozen), and he is as young in intellect and experience as he was the first day of our acquaintance, though time has been annually furrowing his cheek until it looks intersected with lines like a map of Europe. He cannot be very far short of seventy; yet he affects the goldiness of a boy, flirts and flutters like a cockcomb of one and twenty, and wishes to pass for not more than fifty. Can any thing be more ridiculous than to see him tripping it after Lady Lucy Lackmind and philandering with girls of sixteen?"

"Or," added another, "playing four hours together with his poodle dog, or reading novels all the morning in bed; then salving four perfumed like a milliner, and giving lectures upon the last fashions; or sitting four hours at his toilet, and inventing something *à la fin nouveau* in the way of a cravat-tie, or some such important matter. The very town is tired of his face, and his tradespeople, such as his taylor and hoot maker, although they make little fortunes by him, cannot help being disgusted at his tryings on and alterations, and, 'how do I look in that?' and all the rest of the trouble he gives. By the by, how old may this unpernannant infant be?"

"For my part," said Lord Latimer, I candidly own to sixty-three, and I will swear that the Baronet was come to man's estate when I was a boy at College." (Here the peer cast the balance of years in his own favour a little more than stubborn truth could have borne him out in.) "What is to me the most ridiculous," continued he, "is the variety of characters and costumes in which I have seen him; Proteus or the Cameleon

are nothing to Sir Marmaduke's metamorphoses; and there is nothing which he is so afraid of, as appearing old fashioned. Little is he aware that his seamstress and his valet-de-chambre, not forgetting his stay-maker, make a laughing stock of him."

"Well may we say that pride feels no pain," added Lady Latimer, "for the poor gentleman (with a tone of mingled pity and contempt) puts himself to the rack daily in order to pass for being still young. Such strangling with starch and cravat stiffeners; such pressing his wrinkles upwards! such spraying of his odoriferous peruke! such lacing and girdling in! such padding and plumping of his poor meagre person! such pinching and crippling of feet! and after all he's enough to frighten the crows!"

"A charge de revanche," exclaimed Lady Racket, "for the crows and the worms frighten him most amazingly, altho' he must come to one of the party at last." Here a general laugh testified the esteem and good opinion of the company.

"Pray," said I to Lord Latimer, "is not Sir Marmaduke a very old friend of your family?" "A very old acquaintance," replied he, "for it is impossible for such a man to be a friend. The creature has no quality but that which a patent gave him; no one good qualification but that of dress; no conversation but the court calendar, or a list of amish tradesmen; nothing to recommend him beyond a gross of rings, seals, brooches, and gold snuff-boxes. But when I think of the extremes of ultra fashion in which I have seen him indulge for so many years, they really make me laugh. He has in the last sixty years, acted the French Count, the Newmarket jockey, the rakish *negligé*, the tricked out *mercilleux*, the cosack, the insipid and the exquisite. At one period his poor paper noddle was lost in the capes of a great coat, and in the folds of a dozen under waistcoats; at another he has had his neck like a goose's in length and appearance. One year his chain disappeared in a feather-bed neckcloth; another year you might see the whole of it grinning through a horse-collar, surmounting a coat in which the remainder of his person was served up. At one period of his *valuable existence*, he was caricatured for a hat like a parasol; at another he was laughed at in the print shops with a thing on his head, the epitome of a hat, whose brim was about the breadth of the ghost of our silver coin, the signixes without value or impression. Half a century ago his coat would have taken in a whole family, and had the air of a Greenwich pensioner's uniform; now his dress fork scarcely takes in half of his spare person, altho' his taylor's bill takes in the extent of his purse pretty well. Five and twenty years ago, he could scarcely walk in his leathern *culottes*, and looked like a monkey in a spencer; five years ago he was lost in his cosack pantaloons, and looked like a bear in a kersute pelisse; a few months since, I thought that a strayed poney was running after me, when the Baronet came up with me clattering his iron-shod donkey heels, and ringing his gold spurs; and to-

ther day I mistook him for an aged lady, in a furred pelisse and stiff stays."

"No reflections on old ladies, if you please," interrupted Mrs. Marchmont; "age is honorable." "Not age like the Baronet's; but you must observe, that when an old man looks like an old woman dressed up à la moderne, neither his age nor sex are respectable, or any recommendation." But here he comes! poor old frump! Now for his leer and drawl, which formerly was a lip and a volubility of rapid delivery, for he changes his manners as often as his habits. Now for false teeth, spring wig, adorn, paint, washes, dyed whiskers, cosmetics, and artificials of all kinds and complexions. Now for *Painable folie*, trifling small talk, playing with his boots or facking a hand whip; for fligetting and head tossing, affected inattention to others, and studied attention to self, with divers other conceits and fantasies so becoming in one of his appearance and time of life. But let us play upon him fairly; and persuade him that he looks as well as ever. Nothing delights him so much."

"Your most obedient, Sir Marmaduke: upon my life you must have been to the bath of beauty, or to the renovating mill, for you look younger and fresher every day. Why I do not see the slightest alteration in you for these thirty years, and I think that it is quite as much as that since we were first acquainted." (Sir Marmaduke.) "Not quite so long, hang it; no no! long enough, some twenty; it is a monstrous time; but then, if a fellow takes care of himself, he may last a little longer than a common man; climate and dissipation hurt some people; but to be sure I have been a little *Auriclé*—a bit of a *roué*, (an unnatural smile,) but I'm grown wiser; they say that I wear pretty well, ('pretty well worn,' whispered a giddy girl to the peer;) but I am now labouring under a sad cold caught at the ball; this shoe, and one must see the fine women to their carriages; a tax no doubt! but one pays it with pleasure."—A smile of disdain at upon every face.

After this the company played off the old gentleman unmercifully. I felt quite uncomfortable at this exposure of age and imbecility, and took the first favourable opportunity of escaping from this severe circle. I could not help reflecting on what had passed, as I took my morning stroll, and mingling pity very strongly with the disgust which such a character as Sir Marmaduke must inspire.

When we consider a large part of a century passed upon earth, in which the intellectual being has exhibited no alteration or improvement but that of the cut of a sleeve or the capacity of a coat, the number or tightness of waistcoats, or the last pattern of a pair of pantaloons, we naturally ask of what utility the qualities of the mind have been to such a man? What benefit has he derived from a being so eminently above the brute creation, whose change of coat is effected with not half the trouble and none of the expence of that of the biped, whose worthless existence reduces him below the

minor class of animals. It is piteous indeed, when we see the noblest work of the creation, man, grow grey in folly and in nothingness, when we contemplate this effigy of immortality as vain as the gaudy peacock, as tricky and frivolous as the detestable monkey, as empty as the jackdaw, and as artificial as the jay in the fable, despoiled of his borrowed plumage. Age, unaccompanied by wisdom, and unattended by virtue, is a deplorable spectacle. To see fashion's spectre still haunt the giddy circles, and hover in the cold shades of oblivion and content, is a sorry sight indeed; for what can give value to added years, and illumine the fading flame of life, unless it be the reflection of experience, the immortal influence of science and virtue, the regard which we ought to have for the good which a man has done in such a lapse of time, the regret that his useful career is so near its close, the attention which age claims from youth in return for instruction, edification, and example. But alas! poor Sir Marmaduke has none of these; he has long survived respect. He is a blank in the book of humanity, and has probably never afforded even one moral lesson, until he accidentally came for a few minutes under the notice of

THE HERMIT IN THE COUNTRY.

#### REMARKABLE CONVERSION OF A CATHOLIC TO THE PROTESTANT RELIGION.

The history of this conversion was translated into German by a Dr. Hebenstreit, from the Spanish manuscript of the gentleman in question, and bears the following title—"History of my blessed Conversion to the Evangelic Church, by Manuel Mendoza y Rios." The author was born in Spanish South America, in the city of Caracas, the capital of the province of Venezuela, where his parents possessed extensive plantations. Mendoza, who was brought up in all the superstitions of the Catholic religion, had occasion, when he was nearly eighteen years of age, to make a voyage on commercial business to the island of St. Eustatius, where he became acquainted with a young Englishman, named John Sanderson: a connection which afterwards ripened into the most cordial friendship. An idea of the fetters in which the Roman Catholic clergy hold the minds of the young may be formed, when we learn that Mendoza, going one day with his English friend into a Protestant church, his conscience so reproached him for this great sin, as he took it to be, that he resolved to confess or atone for it by penance, on his return to Caracas. The remarks made by Sanderson, partly in jest, partly in earnest, upon a papal bull, prohibiting the eating of meat on fast days, excited in his mind the first feelings of doubt, and led him to a serious examination of the Roman Catholic creed. The Englishman had, indeed, an easy game: for he who purchases the bull in question for fifteen dollars, or, if he is poor, for three groats, obtains, among other advantages, the right of uttering the most dreadful curses without any detriment to his salvation: and, if he only once keeps fast extra, he gains fifteen times fifteen indulgences; and, if he pays for two such bulls, he

enjoys all these advantages two fold. The bull for the dead is equally ridiculous: it is a passport for purgatory, which cost about eightpence, or the double. He who takes a dozen, and writes a dozen different names on them, releases a dozen souls from purgatory. Another bull, which costs two pistres and a half, renders him who purchases it the legal proprietor of all that he has stolen: he may purchase 50 such bulls in a year; but if he has stolen above 50 times, and so wants more bulls, the Commissary General knows how to meet this exigency.

When Manuel, whose faith in the Catholic religion was already much shaken, returned home, a dreadful event increased his dislike to the highest degree of abhorrence. The son of the attorney-general, and nephew to the chief delegate of the Inquisition, fell in love with his sister, was refused, and vowed to be revenged on her. In the night succeeding All Saints Day, between twelve and one o'clock, the fatal signal of the St. Hermandad, (three heavy, long-sounding strokes, with three weaker and shorter ones between), sounded at their house-door, which they were accordingly obliged to open immediately. Manuel hastened to his father, who was sitting near the bed of his mother, who had fainted, while the sister was gagged and dragged away. She died from the breaking of a blood vessel, in the subterranean dungeons of the Inquisition. On receiving the news of her fate, the mother fell back upon her pillow, and immediately expired. The father followed her to the grave on the fifth day. The murderer was carried off by the yellow fever.

After these fatal events, Manuel sold all his property, and rejoined his English friend, with whom he went to Jamaica. There he read and studied the best English works in philosophy and history, and also the History of the Church, by Hencke (a German author), and derived great advantage from the instructions of the Rev. Mr. Brownley, "chief clergyman at Kingston." He also received instructions from a very worthy Danish clergyman, Mr. Svaning; and being thus fully prepared, joined, in 1797, the Protestant church. In the island of St. Thomas, he married a very amiable Danish lady, of the name of Ernestine. I made, says he, a formal proposal (after having carefully observed her character for nearly half a year), at a splendid fete, which was given on her birth day. We were standing at a window, looking towards the sea, before which some fire works were going to be exhibited. I spoke as I felt, calmly, but with fervour. She took the rose, which she wore in her bosom, kissed it, gave it me, and said smiling in tears, "This is my answer."

This marriage was extremely happy, but they remained a long time without children. The physician ascribed this to the climate of St. Thomas. Manuel went with Ernestine to England, and took a pretty house at the finely situated village of Hampstead, near London. The health of Ernestine derived great advantage from the fine air of this place, and still more from the use of sea bathing, in the Isle of Wight. They passed

the winter in the county of Cornwall, at the little town of Marazion, which enjoys the purest and mildest air in the whole kingdom, and where the orange, the lemon, the myrtle, &c. remain through the winter in the open air, if care is only taken to cover them during the night. There, for the first time, Manuel read the whole Bible through, and convinced himself that there is no exalted idea, no moral principle, no means of human improvement, which is not to be found in this book of books. In the course of the next ten years, his wife bore him three sons and two daughters.

So long ago as 1809 he foretold the independence of all Spanish America. But he goes further, and prophesies as follows:—"The Creoles will be forced, for the good of the whole, as well as for their own, formally to separate from Rome, and thus to form a schism, which is besides required by Republicanism itself. The Protestant religion will be then easily spread through all South America, from the British islands and North America, by means of the active commercial intercourse, in which we may certainly depend on the co-operation of the Bible Societies, and the influence of emigration from other countries into those provinces." In order to contribute his share, he wrote an "Essay on the True Religion of Jesus Christ."

As his wife's health and his own did not seem to be so good as it had been, he judged that a change of air might be beneficial; and left England in 1815, for the south of Switzerland, where he purchased an estate, on which he now resides contented and happy with his amiable family.

#### THE DRAMA.

HAYMARKET THEATRE.—In gratification of what may be supposed to be the puriest taste of these refined times, the managers of the little theatre have brought forward a female Macbeth, in Madame Vestris; thus improving upon the general morality of the Beggar's Opera. As a burlesque, this metamorphosis is ineffective; and as an improvement, it utterly quenches the spirit of the scene. The careless ruffian robber, daring, manly, dissipated, and profligate in his licentious amours, to be personated by a pretty petite female, is as complete a negation of character as can be conceived; and any thing more different from Gay's highwayman, than his petticoat petty-larceny representative, is unimaginable. Madame Vestris, as Madame Vestris, however, is as rakish as she can be; and if her acting be tame, at least her songs are sweet. Miss R. Corri appeared as Polly, to advantage, and imparted as much (and no more) Italian grace and science to her airs, as made them agreeable: her deficiency is in sentiment. Mrs. C. Kemble's Lucy is of the genuine old school, rich in colouring and effect. Terry, in Peachum, is respectable, though the part is not suited to him; Russel sings Flic's song in an inimitable Newgate style;—the rest of the cast is only so-so, but taken altogether, the audiences seem to have approved of the exertions of

the managers. We should have noticed, last week, that the *Incognito*, *razz*, was also well played at this theatre. C. Kemble's admirable Mirabel, Jones' Duretete, Terry's Old Mirabel, are all excellent of their kind, and form in union a high dramatic treat. Mrs. Gibbs, and Liston, augment the list of this strong summer company, and increase the attractions of the house.

## VARIETIES.

An extraordinary phenomenon was lately observed at Augsburg. At day-break two luminous bodies appeared on each side of the sun. The sun itself was surrounded by a brilliant circle not entirely closed. In the evening, from 58 minutes after six to within 17 minutes of seven, the ground was covered with transparent dew; and after sunset a thick fog arose.

*Italy, June 28th.*—The new gallery which the Pope has added to the capitol, in the *Conservatori Palace*, is just finished. It is to contain busts and other monuments to the memory of Italians who have distinguished themselves in the arts and sciences. The gallery has been open for public inspection since the 22d instant: It is divided according to classes and ages. In the principal room there is a bust of the Pope, by Canova, beneath which is a Latin inscription. The same room also contains a bust of Raphael, which has been removed from the Rotunda.

It is calculated that there are at present in France 2,849 curates, 22,244 temporary curates, 5,301 vicars, 1,462 regular priests, and 873 almoners of colleges and hospitals. The number of priests regularly officiating, including those who do not receive pay from the treasury, amounts to 36,185. 1361 French priests died in the year 1819; and in the same year there were 1401 ordinations. There are 106 female congregations, possessing altogether 1721 establishments, which contain 11,752 sisters. It is estimated that these charitable women administer relief to nearly 69,000 sick persons, and gratuitously instruct 63,000 poor children.

*Damps.*—Among the remedies for damps, one person recommends a sheet of lead a little above the surface of the ground, between the layers of brick in house-building; and another, whalebone between the soles of our shoes. Both, it seems, are specifics against the ascent of damps to our dwellings or persons.

The subscriptions in France, for a monument to the Duke of Berri, amount to nearly 4000l.

*Mr. Wilson*, who has been elected Professor of Moral Philosophy, in the University of Edinburgh, is the author of the *Isle of Palms*, City of the Plague, and other beautiful poems. According to report, he is also one of the most able and constant contributors to Blackwood's Magazine, whence we hope his new Moral pursuits will not necessarily remove him, as we have been often delighted with the articles said to be from his pen.

*Belgian Carnival.*—It is not perhaps generally known, that a grand jubilee, similar to the Carnival of Venice, is celebrated every fifty years at Brussels. The present is the jubilee year: the festivities commenced on the 16th instant, and would not terminate till the 30th. According to tradition, this custom originated in an event which took place in the year 1370. A Jew who had committed the crime of sacrilege, was marked out for popular vengeance by a miracle, the details of which may be found in the *Histoire des Hosties miraculeuses*, by Father Griffet, a Jesuit, a work which has been this year reprinted at Brussels, on the occasion of the Jubilee.

It is somewhat singular, however, to observe a catholic miracle, celebrated by a ceremony entirely pagan and which might have served in ancient Rome for the festival of Apollo or Venus. The Naïades and Syrens figure in the processions, and Love is carried on a swan. The lovers of natural history may also be gratified by the display of a complete menagerie; for lions, tigers, eagles, crocodiles, &c., sustain prominent characters in this whimsical jubilee.

A labouring man, lately cutting down a tree in the village of St. Flavie, about a league and a half from Meaux, found within its trunk a dozen layers of wood, in the form of spawles, with handles, as naturally formed as though they had been produced by the hand of the manufacturer. They have been sent to the professors of natural history at the Jardin du Roi.

A young lady, only ten years of age, named *Louise Ruse*, lately made her appearance at the Brussels Theatre, in the character of *Attilie*. She acquitted herself with extraordinary effect; and even in the scenes with Talma, she was not eclipsed by the powers of that great tragedian. It is said that Talma discovered the precocious talent of this young *debutante*, at Antwerp; and that he proposes taking her under his tuition.

*Jeanne d'Arc.*—The works which have been undertaken at Domremy, for repairing the house of Jeanne d'Arc, erecting a monument to her memory, and establishing a school for the instruction of female children, are proceeding with great activity. In front of the house in which the heroine was born, a neat and simple edifice has been raised. An avenue separates the building into two grand compartments, one of which is set aside for the school, and the other for the governess's apartments. The avenue leads to a court-yard, and on the left is the old door of the house of the maid of Orleans, with its curious has reliefs. Fragments of wood, stone, and other relics of the age of Jeanne d'Arc, are deposited in the principal chamber of the house. Fronting the new edifice is a square, in the centre of which a statue is to be raised to her honour.

The celebrated dog which used to perform in the melo-drama of the *Chien de Montargis*, died lately in Paris. A lithographic likeness is already published of this admired performer, who could never be prevailed on to sit for his portrait, during his life time.

*Baffin's Bay Expedition.*—The newspapers have inserted a doubtful notice of Lieutenant Parry's voyage. The latest accounts of the Hecla and Griper left them, last year, near Lancaster's Sound, and it is wished to infer that they have made good a passage through that inlet. This is however mere conjecture; and though we do not feel great apprehension respecting our gallant countrymen, the hope of whose ultimate safety we ardently cherish, it is a discouraging matter, that no tidings of them have arrived about this time.

The celebrated Chevalier Camuccini has been appointed painter to the court of the King of Sicily.

## METEOROLOGICAL JOURNAL.

JULY, 1820.

Thursday, 20.—Thermometer from 45 to 76.

Barometer from 29, 61 to 29, 72.  
Wind S. W. and W. 1, 4.—Morning clear; heavy clouds passing during the afternoon, with several claps of thunder about 6 o'clock, but no rain.

Rain fallen, 1/25 of an inch.  
Friday, 21.—Thermometer from 45 to 72.

Barometer, from 29, 61 to 29, 69.  
Wind S. W. 3, and W. 3.—Morning clear; clear at times in the afternoon, and cloudy again in the evening. A shower of rain about half past 2 P.M.

Saturday, 22.—Thermometer from 46 to 63.  
Barometer from 29, 62 to 29, 67.

Wind W. 2 and 3.—Morning clear; the day generally cloudy.

Rain fallen, 0/25 of an inch.  
Sunday, 23.—Thermometer from 52 to 65.

Barometer from 29, 63 to 29, 71.  
Wind W. 1, and N. W. 3.—Cloudy.

Monday, 24.—Thermometer from 51 to 71.  
Barometer from 29, 65 to 29, 71.

Wind W. 2 and S. W. 3.—Generally cloudy, with squalls at times in the afternoon.

Tuesday, 25.—Thermometer from 56 to 67.  
Barometer from 29, 64 to 29, 72.

Wind W. 1, and S. W. 2.—Clouds generally passing, with almost continual sunbust.

Wednesday, 26.—Thermometer from 48 to 62.  
Barometer from 29, 68 to 29, 72.

Wind W. 1, 4, and S. W. 3.—Generally clear.

Edinburgh, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

*B. R.* had better consult *Nordine's Ancient and Modern Rome*. If these do not give him information he is seeking, we will insert his Query.

\* We have often had to complain of the pilfer we undergo from our contemporaries of the newspaper world in town, and we are pained even more shamelessly in the country.

We have no objection whatever that our articles should be made use of; but we think it only fair that the source from which they are derived should be acknowledged. To take our example out of mine, the *York Southern Reporter* of the 1st, is long before us, and we perceive in it no less than six articles from our 179th Number, without the slightest hint of their being borrowed. And in the next proceeding, we find another article from the same Number, given as an original composition of its own. The 179th Number has thus been pillaged to the amount of eight of our columns by this one print, without acknowledgment. Is this fair? it is hard to say.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

#### British Gallery, Pall Mall.

**THIS GALLERY**, with an Exhibition of **PORTRAITS** of distinguished Persons in the History and Literature of the United Kingdom, is open daily, from 10 in the Morning until 6 in the Evening.

(By order) **JOHN YOUNG**, Keeper.

Admission 1s.—Catalogue 1s.—Historical Note 2s.

**THE Exhibition of MONSIEUR JERRECAULT'S GREAT PICTURE**, (from the Louvre) set forth by 18, representing the surviving Crew of the Medusa French Frigate, after remaining Thirteen days on a Raft without Provision, at the moment they discover the vessel that saves them, is now open to the Public, at the Egyptian Hall, Piccadilly. Admission 1s.

#### PUBLIC LIBRARY, CONDUIT STREET.

By the arrangements recently adopted at this Library, a class has been established which secures to Subscribers the immediate perusal of every New Work desired, as well as the right of having purchased for them any Work of general interest which may not already have been added to the Library; advantages which have long been a desideratum in such Establishments, and which must render the accommodations at this Library superior to those of any Private Collection, however large, and at a far less expense. From this Establishment books are forwarded to Subscribers in every part of England or the Continent. The New Catalogue just published, contains, besides the more valuable standard Works, every Modern Publication of general interest in the English, French, and Italian Languages. The Printed Terms to be had of the Librarian.

#### Dr. Ross' Cyclopaedia.

**AS THE CONCLUDING PORTION** of this Voluminous Work is now published, F. WESTLEY respectfully solicits them to favour him with the lending of their Copies, either from themselves or through their respective booksellers, at their earliest convenience, that he may have time to collate and examine them thoroughly, (in order to obtain the deficient and defective Plates and Sheets), for which he has made extensive preparations. F. W. from his long familiarity with this extensive publication, trusts he will be able to give general satisfaction; and begs to refer to the recommendation of him, as a Binder, within the cover of Part II. Vol. 3d. Specimens of Binding, and a Statement of Prices, may be seen at his Workshop, Fleet Street, Doctor's Commons, or at his House, No. 10, Stationers' Court, Ludgate Street, where Letters of enquiry will have prompt attention.

For Gentlemen in London will be immediately waited upon at their request.  
London, July, 1826.

#### BOOKS PUBLISHED THIS DAY.

##### Sur Joseph Banks.

**THE NEW MONTHLY MAGAZINE** for August 1, (being the second number of a new Volume), will be embellished with a fine Portrait, accompanied by a copious Memoir of Sir Joseph Banks, and will contain, among other interesting articles in Arts, Sciences, Politics, Matters and Amusements—1. An Ode, by an Amateur, N. C. 2. Living Northey. Mr. Martin. Advice to Julia; a Fable in Rhyme. The Vision of Las Casas. Journey to the Highlands. Remarks on the Writings of Charles Lamb. The Fairy, a Selection from the Remains of Peter Corcoran. Literary Memoirs of Augustus Von Kotzebue. Letters from Resident at Oahu. Journey into the interior of New South Wales. A Tale of Yavaco. On the Poetry of the Japanese. Japan, &c. &c.

Indiscreetly printed, in 3 vols. 8vo. with a Map of the Route, price 12. 12s. 6d. boards.

**A JOURNAL OF TWO SUCCESSIVE TOURS** upon the CONTINENT, performed in the years 1816, 1817, and 1818; containing an Account of the principal Places in the South of France, of the great roads over the Alps, and of the chief Cities and most interesting parts of Italy, accompanied with occasional Remarks, Historical and Critical. By JAMES WILSON, Esq. Printed for T. Cadell and W. Davies, 72nd; and W. Blackwood, Edinburgh.

Carefully revised and corrected, in 12 vols. 8vo. with a Portrait of the Author, and new Maps illustrative of the Work, price 42. 4s. in boards, a new edition, of

**THE HISTORY OF THE DECLINE AND FALL OF THE ROMAN EMPIRE.** BY EDWARD GIBBON, Esq. London: Printed for T. Cadell and W. Davies; F. C. and J. Rivington; J. Cuthell; J. Nunn; Longman, Hurst, Rees, Orme, and Brown; John Richardson; J. M. Richardson; Jeffrey and Son; J. and A. Arch; J. and W. Clarke; Black and Co.; S. Bogue; W. Stewart; Hatchard and Son; W. Goring; J. Mann; R. Scholey; Baldwin, Cradock, and Joy; J. Asperger; T. Hamilton; J. Bohn; J. Kiers; R. Saunders; G. Greenhalgh; Ogley and Co.; G. and W. R. Whitaker; Taylor and Hessey; Simpkin and Marshall; Rodwell and Martin; Whitmore and Fenn; C. Taylor; Isaac Nicholson; W. Mason; W. Wood; Lloyd and Son; and G. Mackie; J. Parker, at Oxford; and Fairbairn and Anderson, Edinburgh.

In 5 vols. 8vo. with a Portrait of the Author, price 12. 12s. boards.

**THE WORKS OF HUGH BLAIR, D. D.** F. R. S. Ed. Professor of Rhetoric and Belles Lettres in the University of Edinburgh. To which is prefixed, a short Account of the Life and Character of the Author. By JAMES FINLAYSON, D. D. Printed for T. Cadell and W. Davies; F. C. and J. Rivington; Longman, Hurst, Rees, Orme, and Brown; Scattered all Letterman; J. Clarke and Co.; J. and A. Arch; R. Scholey; Baldwin, Cradock, and Joy; J. Asperger; T. Hamilton; R. Saunders; Lloyd and Son; and G. and W. R. Whitaker; and A. Constable and Co.; Mann and Miller; and Fairbairn and Anderson, Edinburgh; and G. Clarke, Aberdeen. Of whom may also be had, printed separately from the above,

**SERMONS.** By Hugh Blair, in 2 vols. 8vo. price 12. 1s. in boards; or in 5 vols. royal 8vo. price 12. 1s. in boards; or in 5 pocket vols. price 12. 6d. in boards.

**LECTURES ON RHETORIC AND BELLES LETTRES.** In 2 vols. 8vo. price 12s. in boards; or in 4 vols. royal 16mo. price 18s. in boards.

In 4to. price 12. 1s. bds. Part 4, of  
**BIBLIOTHECA BRITANNICA**; or, a General Index to the Literature of Great Britain and Ireland, Ancient and Modern, with such Foreign Works as have been translated into English, or printed in the British Dominions; including also a copious selection from the Writings of the most celebrated Authors of all Ages and Nations. By ROBERT WATT, M. D. Published by Longman, Hurst, Rees, Orme, and Brown, London; Archibald Constable and Co. Edinburgh; A. and J. M. Duncan, Glasgow. It is estimated that the whole Work will extend to 11 or 12 Parts.

#### Bruck's Sophocles.

In three vols. 8vo. price 12. 12s. 6d. boards,  
**SOPHOCLES OPERA quae supersunt Omnino**, cum Annotationibus Integræ R. P. BRUNCKII et G. G. Schaeferi. Accedunt Glosse ex Suida et Aristoteli excerptæ. Appendix loci subjectionis Aristophanæ C. A. Excursus. Printed for G. and W. B. Whitaker, 13, Ave-Maria-Lane, London; and J. Parker, 15, Ave-Maria-Lane, Cambridge. Of whom the following Plays may be had separately,  
Sophocles Œdipus Tyrannus, price 3s. 6d. sewed.  
- - - Œdipus Colonus, 3s. 6d.  
- - - Antigone, 3s. 6d.  
- - - Trachiniae, 3s. 6d.  
- - - Ajax Loricatus, 3s. 6d.  
- - - Electra, 3s. 6d.  
- - - Philoctetes, 3s. 6d.

In 12mo. price 4s. 6d. bound,  
**THE GREEK PRIMER; OR, A PRAXIS** on various Terminations and Formations of Nouns and Verbs, Regular and Irregular, including Rules for the Gender of Nouns, Conjugation of Verbs, &c. with copious Lists of Examples. Greek and English. By D. B. HICKIE. Printed for G. and W. B. Whitaker, 13, Ave-Maria-Lane.

In 8vo. with four Maps, price 12s. boards,  
**A DISSERTATION ON THE PASSAGE OF A HERNALD OVER THE ALPS.** By a Member of the University of Oxford. Printed for G. and W. B. Whitaker, Ave-Maria-Lane, London; and J. Parker, Oxford.

In three vols. 12mo. price 12. 4s. bds.

**THE MONASTERY; A ROMANCE.** By the AUTHOR OF WAVERLEY, &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London; Constable and Co. and John Balmantyne, bookseller to the King, Edinburgh. Of whom may be had, by the same author,

**ROB ROY** a Novel, 3 vols. 12mo. 12. 4s.  
**THE ANTIQUARY; A Novel**, 3 vols. 12. 4s.  
**GUY RANERING; A Novel**, 3 vols. 12. 4s.  
**WAVERLEY; A Novel**, 3 vols. 12. 4s.  
**THE ABBOT**, a new Work, by the same author, will be published in the Month of Aug. at.

On Monday, the 31st instant, will be published, in one vol. 8vo. with 6 Engravings.

**THREE MONTHS PASSED IN THE MOUNTAINS EAST OF ROME**, during the year 1819. By MARIA GRAHAM, author of a Journal of a Residence in India, &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and A. Constable and Co. Edinburgh.

The 3d Edition, 12mo. price 7s. boards.

**REMARKS ON THE ART OF MAKING WINE**, with Suggestions for the Application of its Principles to the Improvement of Domestic Wines. By JOHN MACCULLOCH, M. D. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

12mo. price 3s. boards,  
**AMERICA: an Epistle**, in Verse, with other Poems.

Verba putantur in Utiquam dare nobis

London: Printed for Longman, Hurst, Rees, Orme, and Brown; and G. Cruikshank, Liverpool.

Vol. 6. In 8vo. with coloured Plates, price 12s. boards,  
**MEDICAL TRANSACTIONS**, published by the College of Physicians in London. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, Vols. 1. to 6. of the above Work, price 2l. 8s. boards.

**PHARMACOPOEIA COMLEGII REGALI MEDICORUM LONDINENSIS**, 1819, in 8vo. 7s. bds.  
**DR. POWELL'S TRANSLATION OF THE PHARMACOPOEIA**, in 8vo. 12s. boards.

In one volume, 8vo. price 12s. boards, Milton's celebrated Work, entitled

**THE DOCTRINE AND DISCIPLINE OF DOCTOR.** With a Preface, referring to Events of a deep and powerful Interest at the present Crisis; together with Notes, explanatory and illustrative; with a Review of the Controversy between Milton and his Opponents. By an Eminent Civilian. London: Printed for Sherwood, Nelly, and Jones, Paternoster Row. In two vols. foolscap, price 18s. 6d. boards, the fourth Edit.

**A FATHER'S GIFT TO HIS CHILDREN:** consisting of Original Essays, Tales, Fables, Reflections, &c. by WILLIAM MAYOR, LL. D. Rector of Stoneyfield, Oxon; Vicar of Hurley, Berks; Chaplain to the Earl of Morda, &c. Printed for G. and W. B. Whitaker, 13, Ave-Maria-Lane.

In 12mo. price 4s. bound,

**A SELECTION OF GREEK SENTENCES**, with an Index and Lexicon, in Greek and English. Intended as an Initial Book in learning the Greek Language. By the Rev. G. N. WRIGHT, A. M. author of the "Radiments of the Greek Language." Printed for G. and W. B. Whitaker, 13, Ave-Maria-Lane.

In 12mo. price 8s. bound,

**AN ABRIDGMENT OF THE HISTORY OF IRELAND**, from the Earliest Accounts to the Present Time; on the Plan of Dr. Goldsmith's History of England, for the Use of Schools and Private Education; with Exercises at the end of each Chapter, and Recapitulations at the end of each Book; and a Chronological Table. Second edition. Printed for G. and W. B. Whitaker, Ave-Maria-Lane.

12mo. price 2d. 6d. bound,

**RUDIMENTS OF THE GREEK LANGUAGE**, in Greek and English. Upon the basis of Wetanhal. By the Rev. G. N. WRIGHT, A. M. Second edition, carefully revised and corrected. Printed for G. and W. B. Whitaker, 13, Ave-Maria-Lane.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 185.

SATURDAY, AUGUST 5, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### ABYSSINIA.

The second volume of the Transactions of the Literary Society of Bombay has just made its appearance; and among several articles of Asiatic curiosity, contains an interesting account of African Abyssinia, addressed to Sir Evan Nepean, by Nathaniel Pearce, an English Seaman, after he had resided there nine years. Pearce was left at his own request in 1805, the period of Lord Valentia's visit to Massowa, and is mentioned by Mr. Salt in 1814, as an active and intelligent person. He persuaded another Englishman, of the name of Coffin, also to settle in Abyssinia; and so late as May 1818, he was at Chalicut, the then capital; and, owing to the jealousy of the Ras or Prince, not at liberty to leave the country. He understood several of the dialects, and had accompanied the natives in their wars and expeditions, as well as enjoyed the fullest opportunities of observing their customs. His narrative is peculiarly valuable, though the style is as rough as his original character in life, and some of his facts are almost too much in the plain-spoken manner of a sailor, for even Philosophical Transactions! We shall avoid the Galley-fire parts, and present our readers with an abridgement of the "Small but true account of the Ways and Manners of the Abyssinians."

There is, however, a preface, from which we must make two extracts. In a letter from Pearce to Mr. Forbes, at Moka, of June 24th 1815, he says—

"The Ras is now ten times more miserably than ever he was, and every thing he sees he craves for; he is greatly afraid of dying, and frets himself very much. He is upwards of eighty years of age, but as nimble as a boy. A curious circumstance has happened since I wrote to you last, of which I give you some small account. You will, perhaps, think of the Abyssinian priests. Goga, governor or king of Igne Garter, turned Christian, and the king of Shoar gave him his daughter; but the Gasmartie Libban being at variance with Goga, would not allow the king of Shoar's daughter to pass through his country. There being no other road, they planned a scheme to get her through

unknown to Libban, which was;—they sent her disguised with the priests and poor that travel about the country from Woldubber to Sarlibeller, &c. After Libban heard that Goga had received his wife from Shoar, he was greatly enraged with the different chiefs of his country; but being informed of the manner the King of Shoar had sent his daughter, he held his peace, being determined to be revenged on the Christian priests. Although he was very ill, he beat the drum in the different markets in his country, giving notice to all priests and poor travelling people that he was going to give an offering of a thousand bullocks and as many cloths, as a *fellat* or forgiveness for his father Coulassey, and appointed the day they were all to assemble. This news being spread, the poor sort of priests of Gogau, Daunt, Walder, Bagardre, &c. all assembled together on the day appointed. As soon as Libban heard that they were all assembled as he had given orders, he picked out twelve of the greater sort that came from Igne and Shoar as a reserve. He then ordered his home, which were about ten thousand, to gallop in upon the priests and beggars and destroy every soul; which order being immediately obeyed, every soul soon fell. Not less than eleven hundred were killed in the course of four or five hours. The twelve he had picked out he ordered to be rolled up in cloths waxed all over; and as they lay on the ground, set fire to them at both ends. Libban died ten days after, and his son has got his country."

In 1817, the Ras having died, Abyssinia became a prey to conflicting factions, and pretenders to his succession. Rapine and desolation prevailed, except in the cities and holy places, which are never plundered by the Abyssinians. The towns and cities of Gondar, Addore, Axume, Sararar, Lalri-better, Antarto, &c., as well as the holy places Woldubber, Tombain, Giddam, &c. therefore afforded safety to those who took refuge in them. But the rest of the country was in a diabolical state, and Pearce "describes a battle which was fought between Subbergardis, who he says is the bravest man in Abyssinia, and a chief named Wolder Ralphel.—"Wolder Ralphel marched two days to meet him (Subbergardis), but he was defeated and his army cut to pieces: for about fourteen miles there were so many killed in the retreat, that scarcely two hundred yards throughout the whole distance was clear of a dead body." After noticing the scene of tumult and disorder which ensued on the victorious army entering Chalicut, he tells us that some of the troops approached his house, "cutting down the cane doors, and entering like a pack of tired hounds;" many of them having suspended

from their arms those barbarous and indecent trophies\* to which he alludes in the body of his paper. 'Nineteen hundred and seventy of these trophies,' he says, 'were thrown down before the conqueror Subbergardis. Pearce, Coffin, and the inmates of the house were saved by the interposition of some Christian soldiers with whom he had been acquainted; but fifty-six of their neighbours were killed before their faces. Soon afterwards another hard battle was fought; and Subbergardis, through some treacherous chiefs, was defeated and taken prisoner; Gabri Michel gave him over to Wolder Ralphel, who sent him in chains to the mountain Arranger."

In his principal communication Pearce paints the Abyssinians as infamous liars, from the highest to the lowest. Their whole lives are divided between feasts and fasts. Their priests are more numerous than in Italy, and more insatiable than in any nation; and both Christians and Mussulmans (the general mass of the population) are more depraved than the Pagan tribes. Of these positions indeed our extracts will afford abundant proof.

Of the falsehood of the Abyssinians we have the following singular illustration in the case of king Itsa Takely Gorges, son of the king Youmis.

"When any one of his subjects may have rebelled or disobeyed his orders, so that he is afraid to remain in his country, he will run either to the Garter, or some other tribe not subject to the king, where he will remain until his friends or acquaintances petition for pardon; for which they take a present of gold, cattle, &c., which they deliver to the king; and after he has received it they in general fall with their faces to the ground, begging pardon for their friend, whom the king promises to forgive. After returning thanks they go home, and in a few days after they go to the king with another present, begging for him to swear that he will not break the promise he has made, as the offender is afraid otherwise to come before him. It being a common thing to swear upon such occasions, the king readily agrees to it, and a priest is sent for on purpose, who brings a cross, on which he swears the king to forgive the offender, and to allow him to come before him as at other times. The petitioners after hearing the oath return many thanks, and return home; appointing a day when they will bring the offender. After they are gone, the king, Takely Gorges, will say to the heads of his household,—"Servants, you see the oath I have taken; I scrape it clean away from my tongue that

\* Unlike the savages of America, these African savages take their scalps not from the head, but from quite a different part of the human frame.—Ed.

made it: he then puts his tongue out of his mouth and scrapes the oath off with his teeth, and spitting, says, "When the rebel comes, you will do your duty as I shall order you."

"On the day appointed the offender is brought before him by the friends who had obtained the pardon: he carries a large stone on his neck as is customary, and bows with his face to the ground: but at the first sight of the offender, Takely Giorges orders the captain of the household servants to put him in chains, pull his eyes out, and cut his tongue out, or kill him as he thinks proper; which is immediately obeyed. At the same time the poor sorrowful petitioners will say, 'Your majesty has perhaps forgot the oath you made before us!'—to which he will reply 'No, I have not; but after you were gone, it came strongly into my mind that the crimes he had committed were unpardonable; and before ever I had eaten or drunk, I scraped the oath off my tongue that made it, before all the people of my household.' Those oaths of Isa Takely Giorges at last made all his subjects rebel against him, and obliged him to fly to Waldnibber, and quit his throne."

The account of the *Christian* church and its clergy, too strongly justifies the reproaches thrown out against the priests:

"All the Abyssinians (says our authority) have a father confessor; and I myself am obliged to have, or pretend to have, one of those holy fathers, or else it would not be allowed that I were a Christian; and perhaps create many enemies that would disturb my dwelling. It is a very unprofitable thing to fall out with those priests, as every thing is in their hands; the whole country of Abyssinia is over-run with them; the very smallest church, that is not larger than a small sheep-pen, (that would not hold more than fifty sheep,) built with mud and stone, and thatched over with canes and dry grass, has from fifteen to twenty of those impostors, who devour all the fruits of the poor labouring country people. The larger sort of churches have from fifty to one hundred: Axum, Larabeller, &c. have some thousands. Waldnibber is the most famous for them, where the wretches pretend, that being holy men they ride upon lions which God has provided for them, as horses! The whole of the Abyssinians are foolish enough to believe these Waldnibber priests; who often come from the Desert to the towns, where they tell millions of lies, not only for the sake of gain, but to make the poor ignorant inhabitants believe that they serve God in the holy desert of Waldnibber, where he visits them, and gives them the power of living many days without food, and the power to forgive the sins of the wicked. The inhabitants of both the towns and country look upon those impostors as saints, and kiss their hands and feet when they meet them."

They pretend to cure the sick by means of charms, and administer the holy sacrament in this way. The persons who take 'approach in succession; "he who is first to be served comes near to the two priests who stand before the altar in the middle of the church, and who are dressed in their holy clothes;

the one holds a large cross in his right hand and a book in his left; the other holds a large bowl or dish with a spoon: he who comes near first, bows to the ground, and then arises and kisses the cross and puts it three times to his forehead and mouth, while the priest who holds it reads the book; he then opens his mouth, and the other priest puts a spoonful in twice; he then bows and runs out of the church holding his hand to his mouth, and will neither spit nor speak until sun-set. They so go on in turns until they are all served; and there is no respect to persons, as any one may come and no one asks him who he is or where he comes from. The sacrament is a mixture of dried grapes and wheat flour, pounded and mixed with water to the consistence of paste."

Females who swear to lead a life of celibacy are allowed to turn priests. The Virgin Mary appears to be more worshipped than the Almighty; and two saints called Abbargarver and Owner-takely-hi-ma-nute, are strictly venerated. Polygamy is permitted to any extent; and wives are turned away with as much facility as they are taken. When the parties are of equal rank, the marriage is performed before witnesses: in other instances the bride is purchased almost like a slave, by a present of the value of a few dollars.

"If any man (says Pearce) wishes to marry a girl he may take a liking to, he gives a *druke* and a *firgy*. The *druke* is a large cloth of that name, purchased from four to five dollars; the *firgy* is a small common cloth, which goes at a dollar; this is to make her a shirt, and the *druke* a dress over it. Those cloths are given into the hands of the father or mother, who deliver up their child as if purchased like a slave; nor, should the man who marries her be sixty or seventy years of age, and the child only eight, is any thing thought of the unequeness of the match. I have known several to be given to men of that age, that have been born since I have been in the country, which is not yet ten years. Some girls have children at thirteen and fourteen years of age." All the girls in Abyssinia are married as soon as possible.

Generally speaking, the inhabitants of Abyssinia are of many tribes and religions; and they are also of all colours excepting white; though there are a few very near white in the Ammerer and Tegri, and other Christian provinces. There are some very black, some fair, and some of a copper hue. "Although they are Christians (we quote our seaman's own characteristic words) they are in some ways like Jews, and some ways like savages. For why they are like Jews, they keep holy the Saturday as well as the Sunday, both equal alike; they also keep the three days fast of Nineveh, which they call the fast of Annernoi, or Jonah the prophet; and have a holiday yearly for Abraham and Sarah. And for why they are like savages, they eat the flesh of an animal before it is dead; although they do not drink the blood like the Garler, they eat the flesh while the blood is still warm in the veins; and although they detest any one who drinks blood like the

Garler, or makes use of it in any way, they do not consider their eating it in the veins with the flesh to be any sin; but they say that those who drink blood, or make any kind of food with it, can never be forgiven by God."

This, by the by, and what follows, confirms Bruce's much disputed account of their eating the flesh of animals yet alive.

"The priests of their separate parishes have a great feast at the end of every fest; they all meet in the forenoon, after taking and administering the body and blood of Christ to those who come to the church for that purpose: they afterwards go to the house of the head priest, where they sit down according to their rank in the church: they then kill one or two cows, according to their number, close to the door, and before the animal has done kicking, and the blood still running from its throat, the skin is nearly off on one side, and the prime flesh cut off and with all haste held before the elders or heads of the church, who cut about 2 or 3 lbs. each; and who sit with such greediness, that those who did not know them would think they were starved; but they at all times prefer the raw meat to any cooked victuals. After they have finished their *brinds*, as they call it, they take a little of the fattest parts of the cow just warmed on the fire, to settle their stomachs, and then one or two large horns full of *ewwir*, or beer, which is very strong, and made of several sorts of corn. They then have the table brought in and covered with bread and cooked victuals, where those that are not satisfied with the raw meat, eat until they are of the cooked."

"Afterwards the lower class of priests and deacons are called in, and the raw meat or *brinds* is laid upon the bread, of which they cut and eat with as much eagerness (although it is as cold as clay) as their betters did when it was quite hot. After they are satisfied, the third class are called in, and so on in turns, until they devour all the bread and victuals: more like a pack of hounds than people of any description. When all is cleared away, the greater and middling rank begin to drink *maize* until they begin to sing psalms or hymns, and at last get so intoxicated that they at times quarrel and entirely lose their senses."

Their funerals are a grand burlesque on the great portion of more civilized nations, who hire mourners and mourning coaches, and on individuals (of whom not one of our readers requires examples to be pointed out who, busied too much in the world to be troubled with those who slip out of it, very soon forget the dead, and the lesson of their dying, to pit, with assiduity worthy of an eternal punishment, those means which may place them for an hour in the perhaps evanescent state of the clod they seem to mourn. The Abyssinians, our honest seaman tells us, "have great crying and wailing for the dead for many days, and appoint a particular day for a general cry, which ends their crying. Afterwards on this day all relations and acquaintances far and near assemble together upon a plain spot of ground, as near the house of the deceased as possible, where a cradle is

vars, without any fixed purpose, or having only for their object common defence. The Amazon Ants present us manners and habits totally different,—republics peculiarly constituted and organised,—character dissimilar,—wars regularly instituted,—in a word, a separate history; and of which no author has yet given any account.

"On the 17th June, 1804, whilst walking in the environs of Geneva, between four and five in the evening, I observed close at my feet, traversing the road, a legion of Rufescent Ants.

"They moved in a body with considerable rapidity, and occupied a space of from eight to ten inches in length, by three or four in breadth. In a few minutes they quitted the road, passed a thick hedge, and entered a pasture ground, where I followed them. They would along the grass without straggling, and their column remained unbroken, notwithstanding the obstacles they had to surmount; at length they approached a nest, inhabited by dark Ash-coloured Ants, the dome of which rose above the grass, at a distance of twenty feet from the hedge. Some of its inhabitants were guarding the entrance; but, on the discovery of an approaching army, darted forth upon the advanced guard. The alarm spread at the same moment in the interior, and their companions came forth in numbers from their underground residence. The Rufescent Ants, the bulk of whose army lay only at the distance of two paces, quickened their march to arrive at the foot of the ant-hill; the whole battalion, in an instant, fell upon and overthrew the Ash-coloured Ants, who, after a short, but obstinate conflict, retired to the bottom of their nest. The Rufescent Ants now ascended the hillock, collected in crowds on the summit, and took possession of the principal avenues, leaving some of their companions to work an opening in the side of the ant-hill with their teeth. Success crowned their enterprise, and by the newly made breach the remainder of the army entered. Their sojourn was, however, of short duration, for in three or four minutes they returned by the same apertures which gave them entrance, each bearing off in its mouth a larva or a pupa; they retraced the route by which they had arrived, and proceeded one after another, without order or regularity.\* The whole army might be readily distinguished in the grass, by the contrast afforded by the Rufescent Ants, and

the white eggs and pupæ they had captured. They repossessed the hedge and the road, in the place they had previously crossed it, and then directed their course through a field of ripened corn, where I experienced the regret of not being able to follow them.

"I now retraced my steps towards the scene of the recent assault, and there found a small number of ash-coloured labourers, perched upon the stalks of plants, holding in their mouths the few larvae they had rescued from pillage; these they shortly carried back to their former station.

"I returned the following morning at the same hour, by the route I had observed the Amazon army take, in the hope of acquiring some knowledge of the phenomenon of which I had been a witness, when I discovered the habitation of one of these martial horles.

"I observed on the right of the road a large ant-hill, covered with ants of that species. They formed into column, set forth in a body, and fell upon one of the habitations of the ash-coloured ants, in which, experiencing little or no opposition, they entered. One party immediately returned, bearing in their pincers the purloined larvæ; another party, less fortunate, quitted the scene of attack, without reaping any advantage from their expedition:—the former took the road to their own citadel; the latter marched in a body upon a second ant-hill, tenanted by the same species as the first, where they made ample booty. The whole army, now forming two divisions, hastened to the spot from which it had taken its departure. I reached the garrison a little before them; but what was my surprise to observe all around, a great number of that identical species they had gone forth to attack. I raised up a portion of the building. I still saw more; this induced me to regard it as one of the habitations that had already been pillaged by the Amazons, when my suspicions were removed by the arrival of the Amazon legion at the entrance, charged with the trophies of victory. Its return excited no alarm among the Negro Ants, who, whilst the Legionaries were descending with their booty, so far from offering opposition, were even seen to approach these warriors, caress them with their antennæ, offer them nourishment, as is the custom with those of their own species, take up some of the larvae, and carry them into the nest. The Amazons remained within the rest of the day: the Negro Ants kept their station some time without, but retired before night.

"No enigma ever raised my curiosity so high as this singular discovery; and I had the satisfaction of finding near my own residence several ant hills of the same kind, not a little astonished at being the first to notice their existence.

"Conscious of the great advantage of having them so near me, I determined to devote the whole of my time to them. As I was extremely impatient to ascertain the nature of the connexion between these different species, I opened one of their dwellings, and there observed a great number of Rufescent mingled with Ash-coloured

Ants, which gave me some general idea upon this head. The latter were busily engaged in re-establishing the several avenues, hollowing out galleries, and carrying below the exposed larvae and pupæ. The Amazons, on the contrary, passed over the larvae, &c. with indifference, not once deigning to lift them, or take any part in the labours going forward; they wandered for some time over the surface, and then retired to the bottom of their citadel.

"But at five in the evening, the scene undergoes a complete and almost immediate change. The Amazons leave their retreat, become restless, and assemble on the outside. They are all in motion; none, however, move but in a curved line, and in such a way, as quickly to return to the outer wall of their garrison; their number increases each moment, they describe greater circles, a signal is communicated, they pass from one to the other, striking as they proceed with their antennæ and forehead the breast of their companions; these, in their turn, approach those advancing, and communicate the same signal; it is that of departure; the result satisfactorily proves it. We see those receiving the intimation, put themselves at the moment in march, and join the rest of the troop. The column becomes organised, advances in a straight line, passes over the turf, and removes to a considerable distance. Not a single Amazon is any longer to be seen near the garrison. The advanced guard sometimes halts until the rear guard comes up, and then diverges to the right and left without advancing; the army forms anew, and again moves forward with rapidity. There is no commander-in-chief, every ant is in turn first, each seeking to be foremost; some, however, move in a different direction, pass from the front to the rear, then retrace their steps and follow the general movement. There are always small numbers constantly returning to the rear, and it is probably in this way the movement of the whole army is governed.

"At a little more than thirty feet from their own residence, they stop and explore the ground with their antennæ, much in the same way as dogs when searching for game. They soon find a subterranean Negro ant-hill, to the bottom of which its inhabitants have retired. The Legionary Ants, unopposed, penetrate an open gallery; the whole army enter, seize upon the pupæ, and return through the several apertures, immediately taking the road to their garrison. It is now no longer an army disposed in column, it is an undisciplined horde. The Amazons run after each other with rapidity, and the last comers from the stormed city are followed by some few of its inhabitants, who endeavour to wrest from them their prize; an effort in which it but rarely happens they are successful.

"I return to the garrison to be once more a witness of the reception given to the plunderers by the Ash-coloured Ants, with whom they dwell. I observe a considerable number of pupæ heaped up before the door; each Amazon on its arrival deposits its burthen, and then returns to the invaded ant-hill;—

\* The tactics of these marauders vary with the enemy they have to contend with; in this instance, conscious of carrying off their booty, without further opposition from the Ash-coloured Ants, the army no longer keeps in rank, but separates into straggling parties, each hastening by a different route, to deposit their spoil in the common treasury; but, when these intrepid adventurers attack a nest of mining ants, and return successful, they are then obliged, from the known spirit and courage of the latter, to keep close order, and march in a body to the very gates of their citadel; as it not unfrequently happens, they are followed and harassed the whole way by the mining ants, who leave no exertion untried to recover their treasure.—T.

their auxiliaries suspend their labours in masonry, and come forward to the pupæ, which they carry one by one into the interior. The Negroes are also frequently seen to untie the Amazons, after having amicably touched them with their antennæ, when the latter yield to them, without opposition, the pupæ they have perished.

"Let us still follow this army of plunderers on their return a second time, to the attack of the nearly ruined ant-hill. Its inhabitants, however, have had time to recover themselves, and to station a strong guard at each of the entrances. The Legionaries, who are in small numbers at first, take flight as soon as they perceive the Negroes in a state of defence; they return to the main body of the army, and advance and retreat several times successively, until they are in sufficient force; they then throw themselves en masse upon one of the galleries, driving away and putting in confusion its inhabitants. The whole army now enter the subterranean city, and seize upon the larvæ, which they carry off in great numbers, and in great haste. They never take any of the parent ants prisoners, their sole object being the possession of their offspring. Upon their return to the garrison, the most friendly reception is still given to the Amazons, who— their associates having arranged the produce of their first harvest—either deposit their load at the entrance, or consign it to those in attendance, who hasten to place it in the interior.

"Could one for a moment suppose, that these intrepid warriors would return a third time to the pillage? This time, however, they had to undertake a siege in regular form, for the individuals, from whom they had twice successively taken larvæ and pupæ, had lost no time in throwing up trenches, barricading the several entrances, and reinforcing the guard of the interior, as if fully aware of this third attack from their adversaries. They had, moreover, brought together all the little pieces of wood and earth within reach, with which they had blocked up the passage to their habitation, in which they were posted in force. The Legionaries at first hesitated to approach, but rambled about or returned to the rear, until sufficiently reinforced; they then, upon a given signal, rushed forward en masse with great impetuosity, and began removing with their teeth and feet, the many obstacles that opposed their progress. Having succeeded, they entered the ant-hill by hundreds, notwithstanding the resistance of its inhabitants, and carried off their prize to the garrison. But this time, in lieu of remitting to their associates their plunder, they carried it into the under-ground chambers themselves, where they remained the rest of the day."

Of such invasions the author was afterwards a daily witness. He says—

"I was once present when the whole army appeared to be deceived in its route. It commenced its march after the ordinary manner; in place, however, of following a straight line, it described a curve, and reached a distance of about fifty paces, halting several times. After diverging on all sides,

without discovering any of the usual objects of attack, they fell again into column, and returned by the same road to their garrison, reaping no advantage from their expedition. The decision they took of returning would furnish ample matter for reflection. I shall not now, however, enlarge upon this subject, but limit myself to the question, how can this fact be explained on the supposition of a blind instinct? But here is a fact still more extraordinary. Upon their return our Amazons met with no flattering reception from the Negroes in the mixed ant-hill, who individually assailed, buffeted, and dragged them to the outside of the nest, where they even obliged them to act on the defensive: this hostile disposition, however, continued only a few moments, when the Amazons were allowed to re-enter their citadel. Are we to conclude that the Negro Ants were surprised at seeing them arrive without their accustomed booty, or did the larvæ, &c. serve in their eyes as passports for those with whose fate their own was so intimately linked? The Legionaries never take animal food."

At another time the Amazons attacked a Mining Ant hill.—

"As soon as the Legionaries began entering the subterranean city, the miners rushed out in crowds, and whilst some fell upon the invaders with great spirit, others passed through the scene of contest, solely occupied in bearing off to a place of safety their larvæ and pupæ. The surface of the nest was for some time the theatre of war. The Legionaries were often despoiled of the pupæ they had seized by the Miners, who darted upon them with amazing spirit, fighting body to body, and disputing the ground with an exasperation I had never before witnessed. The Amazon army was, notwithstanding successful, and recommenced its march in good order, laden with pupæ and larvæ: instead, however, of proceeding in file, it now maintained close rank, forming a compact mass, a precaution the more necessary, as the courageous insects upon whom they had made this attack, hastened in pursuit, and even harassed them, to within ten paces of their citadel.

"During these combats the pillaged ant-hill presented, in miniature, the spectacle of a besieged city; hundreds of its inhabitants were observed to quit it, carrying here and there the pupæ, larvæ, and young females they were anxious to preserve from the fury of their enemies. The major part mounted the neighbouring plants, bearing the young between their teeth; others deposited them under the thick bushes. When the danger was entirely gone by, they brought them back into the city, and barricaded the gates, near which they posted themselves in great number to guard the entrance. All was calm, however, in the mixed ant-hill; the Amazons had entered quietly their abode, and had been received by the auxiliary ants as the real proprietors."

After making such copious extracts, we need hardly repeat our praise of this curious and interesting history. It is a fine and interesting little book, both for youth and age.

## ORIGINAL CORRESPONDENCE.

### CLASSIC LITERATURE.

We are sure our classical readers will be delighted with the pathetic conclusion of Cicero's oration, pro C. Rabirio, published by Baron Niebuhr.\*

"Neque a volis jam bene vivendi, sed honeste moriendi facultatem petit: neque iam, ut domo sua frueretur, nam ne patrio sepulchro privetur, laborat. Nihil aliud jam vult, atque obsecrat, nisi ut ne se legitime fuisse, et domestica morte privetur, et cum, qui pro patria nullum unquam mortis periculum fugit, in patria mori patiamini."

### DEBBETT'S PEEPAGE.

To the Editor of the Literary Gazette.

Sir.—Having given insertion to the two articles of P. P. and J. M. and thus afforded the writers, or rather the *Writer*, an opportunity of assailing the Peepage in its fiscal errors, I am induced to hope you will give insertion to my reply; which, as it is composed with more temper, cannot be less creditable to the columns of a Journal building its hopes for reputation on candour and consequent impartiality. I have said writer, because, if similarity of style can ever lead to identity, it is very evident in the present instance; and I may reasonably conclude, that the next attack will be on the *Peepage* of England! thus perfecting the *Triumvirate* in us.

To attempt perfection in a work crowded by so many difficulties, impediments continually obtruding, changes continually defying, would be idle; so would any defence. I seek more than in support of my claim to diligence, and unwearied and incessant attention: on these points I may claim to justify myself. It was by these efforts my *Peepage* has obtained unrivalled patronage and support: I owe all that gratitude can urge, and future diligence secure.

But, it is not by diligence alone that the *Peepage* can arrive at accuracy; it must be assisted by occasional corrections from able, and other correspondents. Sir William Dugdale, Garter King of Arms, the learned author of the admirable *History of Warwickshire*, the *History of St. Paul's*, and other works of the first order of merit—works, the splendid monument of his learning and talent;—he felt the almost insuperable difficulties of a *Peepage*; and, hopeless of accuracy, confessed his deficiency. Where a Dugdale failed, I could hardly hope for complete success. My efforts were in approach to accuracy; and, I may confidently and without vanity assert, that I have done more than any of my predecessors. Your correspondent P. P. says, "I do not think I overstep the bounds of calculation, when I assert, that it contains at least as many errors as there are articles." I shall not stop to enquire into the quantum of your correspondent's modesty, of his accuracy in calculation.

\* This passage is an example of the newly discovered parts, mentioned in the *Literary Gazette*, a few Numbers ago.

trate myself with my face to the earth! Here's your money: it was all that could be got together in the town." Then the chief took the money, and ordered us to change our station. Having arrived at a convenient place, we stopped, and he asked if there were any letters; being answered that there were two, he gave them to me to read; and learning from them that the sum sent was five hundred crowns, he counted them, and finding the number exact, said all was well, praised the punctuality of the peasant, and gave him some silver as a reward for his trouble: his companion also received a small present.

"The robbers, who no longer cared to keep the prisoners belonging to San Gregorio, from whom they could not hope to get anything, released them all at this spot. I, therefore, with the peasant of Castel Madama, remained the only prisoner; and we began to march across the mountains, perhaps only for the sake of changing place. I asked, why they did not set me at liberty as well as the others, as they had already received so considerable a sum on my account. The chief answered, that he meant to await the return of the messenger sent to Castel Madama. I continued to press him to let me go before night, which was now drawing on apace, saying, that perhaps it had not been possible to procure any more money at Castel Madama; and that if I remained out all night on the hill in the cold air, it would have been better to have killed me at once. Then the chief stopped me, and bade me take good care how I said such things, for that to then killing a man was a matter of perfect indifference. The same thing was also said to me by another outlaw, who gave me his arm during our rocky journey."

"We do not copy the details of their night marching, and rough mode of feeding on sheep which they killed, and resting on the ground. The messenger not returning speedily from Castel Madama, the chief ordered his prisoner to write another letter, in which his friends were told that if 800 crowns were not sent on the following day, he would be put to death or carried to the woods of Fajola.

"I consequently (says he) wrote a second letter, and gave it to the countryman to carry, telling him also, by word of mouth, that if they found no purchasers at Castel Madama for my effects, to desire they might be sent to Tivoli, and sold for whatever they would fetch. The chief of the brigands also begged to have a few shirts sent. One of the brigands proposed, I don't know why, to cut off one of my ears, and send it with the letter to Castel Madama. It was well for me that the chief did not approve of the civil proposal, so it was not done. He, however, wanted the countryman to set out that moment; but he, with his usual coolness, said, that it was not possible to go down that steep mountain during the night, on which the chief told him he might remain in the sheep-cote all night, and set out at day-light:—"But, take notice," said he, "if you do not return at the

twentieth hour to-morrow to the sheep-cote, with the eight hundred crowns, you may go about your business, but we shall throw Cherubini into some pit." The peasant tried to persuade them that, perhaps, it might not be possible to collect so much money in a small town, at so short a notice, and begged to have a little more time; but the chief answered, that they had no time to waste, and that, if he had not returned next day, by the twentieth hour, they would kill Cherubini."

The poor doctor was almost dead with fear, but became somewhat reassured on one of the brigands telling him, that though the sum might fall short of the demand, he should be set at liberty. After another moment, the narrative continues.

"When we again reached the thicket, and found a fit place, we all lay down to sleep. I had the skins to rest on as before, and the chief wrapped my legs in his own great-coat; and he and the second chief lay on each side of me. Two centinels were placed to keep watch, and to prevent the shepherd with the provisions from making his escape. I know not how long we rested before one of the centinels came, and gave notice of day-break. "Come again, when it is lighter," said the chief; and all was again quiet. I turned my face so as not to see the brigands, and dozed a little, till I was roused by the cry of some wild bird. I am not superstitious; but I had often heard that the shriek of the owl foreboded evil; and, in the state of spirits in which I was, every thing had more than its usual effect on me. I started, and said, "What bird was that?" They answered, "A hawk." "Thank God," I replied, and lay down again. Among my other sufferings, I cannot forget the stinging and humming of the gnats, which fastened on my face and throat; but, after the death of poor Marasca, I dared not even raise my hand to drive them away, lest it should be taken for a sign of impatience. A little after this we all arose, and walked on for about an hour." Another halt and rest ensued. "While the others slept, one of them began to read in a little book, which I understood to be the romance of the Cavalier Meschino. After about an hour, they all arose, and filed off, one by one, to a higher station, leaving a single centinel to guard me and the shepherd. In another hour the youngest of the robbers came to relieve the guard, who then went and joined the others. When I saw this, and perceived that they were engaged in a kind of council of war, I feared that they had taken some new resolution about my life, and that the new centinel was come to put their cruel designs in execution: but he very soon said to me, "Be cheerful, for to-night you will be at home; which gave me some comfort."

Thus the day passed. At its close, a ransom of 600 crowns and a few shirts were brought, and Cherubini was relieved from his anxiety and sufferings, and reached home in safety from the clutches of these "thieves of mercy." But "the body of poor Bartolomeo Marasca was found at the gate of San Gregorio, with twenty wounds inflicted

with knives. The brigands, emboldened by success, seemed determined to press closer round the hill-towns. None of the principal inhabitants ventured without the walls, and even the work-people were robbed of their ornaments and their little savings."

In consequence of this, our countryfolks moved to Tivoli (where consternation prevailed as much as at Poli), and thence to Rome. We may just notice, that one of the most ferocious of the band had the "collar of the Madonna delle Carmine round his neck, and said, 'Suffer patiently, for the love of God;' and that the second chief took the subjoined view of their political situation.

He said, "that government would never succeed in putting them down by force; that they are not a fortress to batter down with cannon, but rather birds, which fly round the tops of the sharpest rocks, without having any fixed home; that, if, by any misfortune, seven perished, they were sure of ten recruits to replace their loss; for criminals, who would be glad to take refuge among them, were never wanting; that the number of their present company amounted to a hundred and thirty individuals; and that they had an idea of undertaking some daring exploit, perhaps of threatening Rome itself. He ended by saying, that the only way to put an end to their depredations would be to give them a general pardon, without reservation or limitation, that they might all return to their houses, without fear of treachery; but, otherwise, they would not trust to nor treat with any one; and added, that this was the reason for which they had not concluded any thing with the prelate sent to Frodonico to treat with them. As it was, their company was determined to trust nothing but a pardon from the Pope's own lips; and he repeated this same sentiment to me several times during the second day I was obliged to pass with him and his fellows."

#### AIKIN'S BRITISH POETS.\*

We are certainly not going to enter upon a detailed analysis of, or an elaborate critique on, the multifarious contents of this volume. The former our limits will not allow; and the latter would be little short of a piece of impertinence. Yet, on various accounts, we wish to introduce to our readers a collection of poems, which we think is not only highly creditable to its compiler, but has been, in our view, long a desideratum in this publishing era.

It is by no means our purpose to attract attention to this volume by invasions comments on the numberless tomes, of all sizes and prices, which, under the titles of "Specimens," "Beauties," "Selections," "Elegiac Extracts," &c. have rendered much of its contents familiar to the great body of lovers of English poetry. Many of these display great taste and judgment; and the more unpretending among them have plac-

\* Select Works of the British Poets. With Biographical and Critical Prefaces, by Dr. Aikin. London, 1820. 8vo. pp. 807. Double color 2

ed within the reach of ordinary readers, in one form or other, most of the poems here collected: but we certainly know of no single volume of poetry containing so much of what is valuable, with so little of what is worthless; so compendious, and yet so comprehensive. We would not hazard the assertion, that all the poetry worthy of preservation, from Ben Jonson to Dr. Beattie, is to be found in these pages: the title of the volume implies selection; but we think the selection has been, on the whole, most judiciously made; and, if we now and then feel disposed to find fault with the absence of some favourite, the impossibility of including *all*, is in itself an apology.

The only volume directly challenging comparison with the one before us, perhaps, is the "Elegant Extracts;" and the plan of the two works is so totally unlike, that we think no comparison can be fairly instituted. The latter is, confessedly, a compilation of extracts; the former, whether it insert John Gilpin, or The Task; Lycidas, or the Paradise Lost, gives what it does select, whole and complete. The arrangement of the two works, also, differs very essentially. In the *Elegant Extracts*, an attempt is made at classification, under the different heads of Sacred and Moral, Didactic, Descriptive, Pathetic, Humorous, &c. Now to us, such subdivisions seem often to be as ideal lines of demarcation as can well be conceived; and, with respect to much of our most beautiful poetry, any precise adjustment of it appears manifestly hopeless. Take, for instance, even the minor poems of Burns, where the ludicrous and the pathetic, the simple and the sublime, are so interwoven, as frequently to render specific classification impossible.—The truth, we believe, is, that the spirit, the essence of poetry, is "one and indivisible;" it may occasionally exhibit itself in modes and manifestations, such as may admit of "head-lines," and "clauses;" but, on the whole, it is much too erratic and unmanageable in its operations to allow of its results being indexed and catalogued off, in distinct divisions, like the contents of a museum.

Dr. Aikin's plan, of giving the principal poems of our most popular authors in chronological succession, is, in our opinion, a more obvious and simple arrangement: and his short biographical and critical notices, not only form a suitable introduction to the most celebrated works of each, but, as far as the limits he has allowed himself permit, are marked by sound taste, and nice discernment. Before we dismiss our more immediate notice of his volume, and proceed to another discussion, the especial cause of our wishing to make it known, we must add (in justice to the printers of the work) that the skill and elegance displayed in the typographical department are highly creditable. It is altogether a portable and readable book, even to readers of no great muscular strength, or powerful optics; and this is something to say of more than 800 pages, each of which contains letter-press enough to fill seven fashionable pages.

But now for a word or two explanatory of our principal reason for wishing this volume

to excite the notice, and obtain the favour of the public. We wish it then, if we must confess the honest truth, because we suspect that some of the authors contained in it, are, like the good old fathers of the church, occasionally complimented, though often but coldly, with the tribute of praise, by many who scarcely ever look into their works. Let us not, however, be misunderstood: we are not inferring that Pope, Goldsmith, Akenside, Armstrong, &c. are in danger of being forgotten as poets; but we think there are circumstances connected with, and operating imperceptibly upon, the poetical taste of the day, not calculated to benefit their fame. In the first place, our living poets are "in themselves an host." Not a month, and indeed scarcely a week, passes without some new poem from Byron, or Wordsworth, or Southey, or Moore, being either published, or else announced as in forwardness for publication; and even the brief intervals between the appearances of these illustrious poets, and others equal, or little inferior to them, are filled up with a succession of subordinate efforts to win, or to increase popularity, from countless aspirants for fame. Now it is utterly impossible for even idle people to spend their whole lives in reading poetry; and, if they did, they could hardly get through all the volumes of verse, in constant succession, and apparently interminable preparation: this being the case, and bearing in mind that all the efforts of living poets, and booksellers wishing to live by them, are thrown into the scale of our contemporaries, we do think it a debt of justice, no less than of gratitude, to departed genius, to afford it an opportunity of pleading its own cause: nor can this be done in any way so well as by the selection of its best productions, and the republication of them in a form, and at a price, which may render them generally accessible. We consider this to be an incumbent duty, especially as respects some of the authors, whose better composition Dr. Aikin has here given us. It has of late been a fashion to exaggerate the beauties of our earlier poets, and to depreciate those of a more recent era. We will not assert that there is no just ground of preference; we concede the fact, that poetry has gained much in spirit, pathos, and originality, by a freer recurrence to those thoughts and feelings which are indeed its native element; but—we still think it may be as well for both the writers and readers of poetry, to keep on decent and respectful terms with Dryden, Pope, Swift, and Prior. The gentleman who pulled off his hat to the statue of Jupiter, and hoped he would not forget him if he came again into fashion, might carry his pleasantry somewhat too far; but, for our own parts, such, and so great is the fluctuation of taste, that though we have no expectation of seeing the school of Pope, for example, rise again on the ruins of that of Byron, or Wordsworth, we have little doubt of the comparative merits of all three being appreciated more to his advantage, hereafter, than now.

*The Nature and Genius of the German Language displayed, in a more extended Review of its grammatical Forms than is to be found in any Grammar extant; and elucidated by Quotations from the best Writers.* By D. Boileau. London, 1820, 8vo. pp. 424.

This title-page so fully expounds the nature of M. Boileau's work, that we have little to say, but that it keeps the word of promise. The philosophy of the German tongue is treated in a clear and agreeable manner, and the extracts are selected with judgment in regard to practical utility and illustration, and with taste in respect to variety and relief.

The subject of German particles, one which especially required elucidation in an English treatise, is comprehensively and ably handled; and we may say that upon the whole we have rarely met with a more satisfactory elementary book. The author shows himself to be intimately acquainted with the niceties, as he is conversant with the energies, of this powerful language. To the German scholar, therefore, his work is extremely valuable; and in general, it will be found that English and Latin also receive apt and curious illustration from their connexion with several of the topics handled by M. Boileau. The German construction assimilates very nearly with the latter: and yet we see how closely Shakespeare can be rendered by the pen of Schlegel;—even an unlettered native of Britain, who never before saw German in print, may make out the sense imperfectly.

Jetzt bin ich allein.  
O weich ein Shurck! und niedrer Sklav bist ich!

Now I am alone.  
O, what a rogue and peasant slave am I!

Und alles das um nichts!  
Um Hekuba!  
Was ist ihm Hekuba, was ist er ihr  
Dass er um sie sich weinen.

This needs no translation. But we have said enough to recommend this publication to the attention it merits.

HUBER ON ANTS.

[Dr. Johnson's Translation, concluded.]

During the intense cold of winter the ant become torpid; and it is a striking proof of the Providence, which directs all things on earth, that the puerons (concerning which our last contained the details) become torpid at precisely the same temperature, and recover from this state at the same time, so as always to be ready to supply the nourishment required from them.

The last paper which we need devote to this entertaining volume, which affords charming and useful reading for all ages, shall be confined to the Amazon Ant; a nation whose history Huber first unfolded to the world. Chapter vii sets out—

"We have hitherto treated only of labouring ants, of societies composed of three sorts of individuals, of operations equally divided among the labourers, and of transient

placed covered with silk, and two large pillows on each side of the cradle: something in the representation of a corpse covered with a cloth is placed in the middle of the cradle. If a very great person, or relation to the king, they in general make his effigy, which they place upon a mule, with a saddle, bridle and saddle-cloth ornamented with gold and silver; all his household servants run round the cradle, some before and some behind the mule, according to their stations when he was alive, crying, yowling, and firing their matchlocks, and tearing the skin off their temples and forehead, until the blood runs down their neck. In the front of the cradle the carpets of the deceased are spread, and covered with the riches of his house, gold and silver, ornamented dresses, silver-mounted swords, bottles, glasses, &c. to show the public what a wealthy person he or she was. All who come to cry sit down in front in two parties, the men on the right and the women on the left: their heads are all shaved, and their temples and foreheads torn in such a manner as would frighten any one who was not acquainted with them. The relations then stand up one by one, in their turns, with a servant on each side of them to keep them from falling—as they pretend to be so weak with sorrow—and begin, while all the others are silent and listening to him or her, to praise the beauty and riches of the deceased, and what acts he had done when alive; that when on horseback he was like St. George, and on foot like the angel Michael, and a great deal of other nonsense: after ending their speech in a very sorrowful tone, they all at once make a loud bellow and tear their temples. After the cry is over, they all go into a large house like a barn, where they eat and drink until they turn their sorrow into merriment and quarrelling.

"The Abyssinians have so many children and relations on account of their having so many women, that it is sometimes hard to tell which has most right to the property left; so in order to make the king or chief who has to settle the affair, favourable on their side, they tear their face all over, and sometimes one of them chains a servant on each side of himself, hand to hand, to make people believe that he wanted to stab himself through despair, at the same time he has some of the chief's household servants bribed: so when the whole of the relations come before the chief on the day appointed, he who has chained himself will stand among the rest without saying a word for himself, and pretend to be quite melancholy, while the others are disputing. Those who are bribed, find an opportunity of pointing out to their master the melancholy aspect of the one in chains, and tell him at the same time that they were certainly present at the time that he would have stabbed himself if he had not been hindered by some people who knew of his grief, and, to prevent him from killing himself, had chained a man to each of his arms: the chief, upon hearing the story, in general takes pity and gives him the greater share, although he is perhaps the most distant relation among them. I know many great men in Abyssinia to have from forty

to fifty children, and all by different mothers, and in general most of them from different provinces; so they oftentimes do not know which son or daughter was born first, as they keep no time; nor does even the king or priest of Abyssinia know his own age."

(To be concluded in our next.)

### *Three Months passed in the Mountains East of Rome, during the year 1819.*

By Maria Graham, Author of a Journal of a Residence in India. London, 1820. 8vo. pp. 305.

The most novel and interesting part of this book relates to the Italian Banditti, whose arrival and exploits in the vicinity of Poli, where the author and her friends resided, are particularly described. The rest of the volume is a pleasing enough account of the country; but in this the writer falls into the very error which her preface reprehends, namely that of repeating what former travellers have told the public respecting Italy. We are really tired of the oft told tales of the same places, the same antiquities, the same pictures, and the same churches. Our readers, participating in this feeling, will the more readily pardon us for getting among the robbers at once; and thus we introduce them.

"The banditti or forsciti of Italy are what the forest outlaws of England were in the days of Robin Hood. They are not of the poorest or vilest of the inhabitants. They generally possess a little field and a house, whither they retire at certain seasons, and only take the field when the hopes of plunder allure them, or the fear of a stronger arm drives them to the woods and rocks. They live under various chiefs, who, while their reign lasts, are absolute; but as they are freely chosen, they are freely deposed, or sometimes murdered, if they offend their subjects. To be admitted into the ranks of the regular banditti, a severe apprenticeship to all kinds of hardship is required. The address and energy displayed by these men, under a better government, might conduce to the happiest effects. But here the fire burns not to warm, but to destroy."

Among these amiable gentry, though not into their hands, it was the lot of our country-folks to be thrown, when to avoid the heat of Rome, they went to the mountainous district of Poli, in the Autumn of last year. Mrs. Graham relates the adventures of the German Painter, whose own story was translated into the Literary Gazette, about 12 months ago, and then proceeds to other events of even a more tragical character. The ruffians were among the companions of *De Cesaris*, the *Diccesaris* of Mr. Kell-sall, (see our Numbers 183, 184), who was shot near Termiccia, soon after the period to which that gentleman alludes. This Brigand was famous in his day.

"He (says Mrs. Graham) carried paper,

pens, and ink, in a case in his shoulder-belt; and, besides the Madonna, he had a crystal hung to his neck, with which "he took the light out of men's eyes," and thus easily overcame them. It was curious to find this humble copy of *Rogero's* enchanted mirror among the mountain shepherds; but, like all uncivilized people, they believe in enchantments, and most of them regarded *De Cesaris* as no mean wizard. In fact, he and many of his companions were men of some education and natural understanding. While their grosser fellows were gambling and dancing, they amused themselves with books; on this occasion, one of them read aloud from some old romance in rhyme, the others sitting round and laughing, or attending seriously, as the nature of the subject was grave or gay; thus the night passed."

Just before the banditti came to the neighbourhood of Poli, there appeared there a gang of gypsies, evidently in connection with them, and their *avant-couriers*. Immediately after the alarm was given that a party of the robbers occupied the mountains. Their first achievement was to seize two lads whom they quickly released, and though only thirteen in number, the whole country was soon in a state of confusion and terror. Troops, police, and armed citizens scoured the land in vain expeditions; the robbers helped themselves to provisions, and did not decamp till they had levied contributions as the ransom of prisoners taken.

"They talked prettily freely with their prisoners about themselves and their habits of life, which they maintained arose from necessity rather than choice. They showed them the heart and picture of the Madonna, which each had suspended from his neck, saying, 'We know that we are likely to die a violent death, but in our hour of need we have these,' touching their muskets, to struggle for our lives with, and this,' kissing the image of the Virgin, 'to make our death easy.' This mixture of ferocity and superstition is one of the most terrific features in the character of the banditti of Italy. Nor is it confined to them only: when a man who has led a bad life begins to feel remorse of conscience, and to despair of pardon hereafter, the vulgar belief that a death on the scaffold, where the priest attends to whisper absolution into the ear of the culprit, as the axe descends, is a sure road to Heaven, has been known to induce the poor wretch to commit some heinous crime, that he may gain that happiness, by a violent and disgraceful death, which he fears he has forfeited by a sinful life. If it were possible, might it not be politic to deprive murderers, at least of absolution at the point of death?"

Did it not occur to the writer that our own sectaries carry their faith-doctrines to just as great a length, and that the most common ending of our capital criminals "is in the full assurance of being among the elect?" But to return to the foreign banditti. A surgeon named Cherabini, of Castel-Madama (near Tivoli) was their principal captive, and he gives a very curious account of their savage life. The man who carried up his ransom, "was an old grey

headed peasant, and was taken early on the same day with the surgeon. His spirit and good humour pleased the robbers, and, as it afterwards appeared, was of service to the poor son of Esculapius. They chose this old man to convey his letter, begging ransom might be sent; and, as he left them, he said, 'Figli miei, (my sons), be good to this man, for he is a good man, and deserves it.' They promised they would, and said, 'Since you call us sons, you shall be tata' (daddy); and afterwards, when he returned from his first message, and found them eating some fresh mutton, which, on account of his want of teeth, he could not chew, they said, 'Wait a little, and we will have something for tata also;' upon which the chief sliced some liver and kidney, and, spitting it on a ramrod, roasted it for him.

"A goatherd, who had once been kept forcibly with a party of banditti, told us, that one of their chiefs had formerly been an acquaintance of his. This man had accidentally committed homicide, and, afraid of the consequences, had fled to Conca, in the kingdom of Naples, from the states of the church. There, being without a passport, he was taken up and imprisoned; but, by the grace of the Virgin, and of Saint John Baptist, he had escaped to the woods: there, after wandering a month, and being almost starved, he met the banditti, who invited him to join them. To this he, nothing loth, consented, when, to try his manhood, they gave him a piece of flesh roasted to eat, telling him it was part of a Christian's heart. 'It might have been two hearts,' said the ruffian; 'but I would have eaten it.' He had to perform a novitiate of two years, hewing wood, drawing water, and performing other menial offices; but, a year ago, he figured as the chief of a party among them.

"The last is a pretty fair specimen of the stories told and believed of the origin of most of the principal outlaws. Every day, while we remained at Tivoli, brought some new particulars concerning their marches. It was ascertained, that the whole number amounted to about one hundred and forty, divided into companies, not exceeding twenty in each, for the sake of more easy subsistence. The head quarters appeared to be at Rio Freddo, and in the woods of Subiaco. Their spies, and those who bought provisions for them, were lavishly paid, and the instances of any information being given against them were very rare. On one occasion, however, they had seized a ploughman belonging to Rio Freddo, and, after beating him, they had sent him to his house to fetch a few dollars, as the price of his future security while at work. On his way, he met the hunters belonging to Subiaco, and gave them notice of the situation of the robbers. They desired him to fetch his money, and go to the appointed place with it, and if he found them still there, to leave a mark at a particular tree. Meantime they took measures for surrounding the lair, and having done so, waited patiently till the poor man had paid his money and made the mark agreed on; and this they were more careful to do, as, had the brigands suspected he had

given information, they would certainly have put him to death. As soon as he was safe, the hunters drew close round the enemy, who were seven in number, and fired: two were killed on the spot, and the five others, of whom one was found dead of his wounds near the place next day, left their fire-arms, and concealed themselves in the thick-arts of Arcinuzzo, between Rio Freddo and Subiaco."

As for the Surgeon himself, he tells, that on the morning of the 17th of August, "the factor of the Cavaliere Settimio Bischi, named Bartolomeo Marasca, a person well known to me, came to my house, with a letter from his master, desiring me to come to Tivoli, my assistance as a surgeon being necessary, both to Signor Gregorio Celestini and to the nun sister, Chiara Eletta Morelli. On this account, I hurried over my visits to my patients at Castel Madama, and set off on horseback, accompanied by the factor, who was armed with a gun, towards Tivoli."

On their road they were surrounded and captured by the banditti, who ordered them to march towards San Gregorio. It seems the poor son of Galen was mistaken for a greater man, the Vice Prince of Castel Madama, who had passed the same road only a few hours before him. But better small fish than none, says the proverb. The brigands plundered the apothecary as if he had been a Prince. He says "one took my watch, another my case of lancets. At the beginning of our march we met, at short distances, four youths belonging to San Gregorio, and one elderly man, all of whom were obliged to share my fate; shortly after, we met another man, and an old woman, whose ear-rings were taken, and they were then permitted to continue their journey."

They were led to the top of the hills, and the account proceeds.

"The factor Marasca then talked a good deal to the brigands; showed himself well acquainted with their numbers, and said other things, which my wretched state of mind prevented me from attending to very distinctly; but seeing him apparently so intimate with the robbers, a suspicion crossed me, that I was betrayed by him.

"The chief brigand then turned to me, and throwing down my lancet-case by me, said that he had reflected on my condition, and that he would think about my ransom. Then I with tears explained to him my poverty, and my narrow means, and told him how, to gain a little money, I was on my road to Tivoli to attend a sick stranger. Then he ordered me to write to that same stranger, and desire him to send two thousand dollars, or I should be a dead man, and to warn him against sending out an armed force. He brought pen, ink, and paper; and I was obliged to write what he bade me, with all the earnestness that the presence of thirteen assassins, and the fear of death, could inspire. While I was writing, he sent two of his men to take a man, who was plowing, a little lower down: he belonged to San Gregorio; but one of the messengers having seen one of Castel Madama in the

flat below, he went down for him, and they were both brought up to us. As soon as they came, I begged the man of Castel Madama to carry my letter to Tivoli for Signor Celestini; and, in order to enforce it, I sent my case of surgical instruments, with which he was well acquainted, as a token."

An alarm caused them to move, and the narrative goes on.—"After a long and painful march, finding himself in a safe place, he halted, and there awaited the return of the messenger; but as he still delayed, the chief came to me, and said, that perhaps it might happen to me as it did to a certain inhabitant of Veletri, who had been taken by this very party, who entered his house in disguise, and carried him off to the woods, and because his ransom was long in coming, they killed him, and when the money came, the messenger found him dead. I was alarmed beyond measure at this story, and regarded it as a forerunner of my own speedy death.

"However, I entreated them with tears to have a little patience, and the messenger would surely return with the money. Meantime, to satisfy the chief as well as his companions, I told them I might have written another letter to Castel Madama, with orders to sell whatever I possessed, and to send up the money immediately. Thank God, this pleased them, and instantly they caused me to write another letter to Castel Madama, and one of the prisoners from San Gregorio was sent with it. After he was gone, I saw the factor Marasca walking about carelessly among the brigands, looking at their arms, and making angry gestures; but he did not speak. Shortly after he came and sat down by me; it was then that the chief, having a large stick in his hand, came up to him, and without saying a single word, gave him a blow on the back of the head just where it joins the neck. It did not kill him, so he arose and cried, 'I have a wife and children; for God's sake spare my life,' and thus saying he defended himself as well as he could with his hands. Other brigands closed round him: a struggle ensued, and they rolled together down a steep precipice. I closed my eyes, my head dropped on my breast, I heard a cry or two, but I seemed to have lost all sensation. In a very short time the brigands returned, and I saw the chief thrust his dagger, still stained with blood, into its sheath; then turning to me, he announced the death of the factor in these very words: 'Do not fear: we have killed the factor because he was a shirker: such as you are not shirker; then, he was of no use among us. He looked at our arms, and seemed disposed to murmur; and if the force had come up, he might have been dangerous.' And thus they got rid of Marasca."

The messengers at length return. "As soon as they were recognized, they were ordered to lie down with their faces to the ground, and asked if they came alone. But the man of Castel Madama answered, 'It would be a fine thing, indeed, if I, who am almost dead with fatigue, after climbing these mountains, with the weight of 500 scudi about me, should be obliged to pro-

these words, that for the moment I forgot the scene of the *Opera Comique*, the insolence of the door-keepers, and all the difficulties I had encountered ere I could gain access to Dupré, and once more heartily embraced him. He appeared astonished: "My dear friend," said he, with affected dignity, "I am exceedingly glad to see you; I hope you are happy and in good circumstances. For my own part, I am pursuing a brilliant and rapid course; the eyes of all Paris are fixed on me. But alas! the favours of the court, the ear of the minister, honours, titles, rewards, all do not constitute happiness. You know I am not ambitious; I was born to cultivate the arts and philosophy. I detest the busy world, and am resolved one day to retire to the country." "To Courville, perhaps," said I.—"Oh, I don't know," rejoined Dupré, somewhat confused, with tastes like mine, may not a man be happy any where?" The clock struck.—"I am very sorry my dear friend, but you see, my moments are counted with such scrupulous exactness!—Come and dine with me on Sunday, in the Rue de Bourgogne—no refusals—I insist on it—I will then introduce you to Madame de Courville and my daughter—You shall see how I live—in a style of modesty and simplicity.—Adieu!"

On the appointed day, full of curiosity, I proceeded to the Rue de Bourgogne. I was ushered into a spacious apartment, furnished in the richest style. Pictures, bronzes, mirrors, and chandeliers of glittering crystal explained to me in a moment the philosophic tastes of the Baron. About twenty guests, magnificently dressed, had already arrived, and two ladies were conversing together near one of the windows. Dupré advanced to receive me:—"Come, my old friend, we are just going to dinner. Gentlemen, permit me to introduce to you my countryman, the companion of my studies; you know how sacred are the bonds of college friendship; one cannot grudge to make a little sacrifice for it." Stunned by this compliment, I muttered something which nobody could understand, and retired to a distant part of the room. More company arrived: Dupré introduced them to the ladies, and thus I learned that one was the lady of the house and the other her daughter. Dinner was announced. The banquet was splendid; but I had lost all appetite. I sat at an obscure corner of the table, between a half-pay colonel and a clerk of finance. From the latter I learnt the real situation of the Baron de Courville. "Your friend," said he, has advanced in the world by rapid strides; but he treads on slippery ground, for he depends on the favour of a minister, and I sadly fear that in spite of all his adroitness, our poor Baron will fall at last. He is a slave to ambition; he aims at being a counsellor of state and a member of the Chamber of Deputies."

The dinner was lingering and tedious. No gaiety, no general conversation. Dupré's attention was wholly engrossed by the gentleman who sat on his right, and who I understood was one of the most distinguished members of the Chamber. Madame, on the other hand, conversed only with an

ex-minister of state, who sat next her. As for the young lady, she seemed dull and tired of the company. After the desert, we withdrew to the *salon* to take coffee; but here again politics formed the only subject of discussion. Dupré found it no easy task to endeavour to conciliate opposite opinions, and above all to avoid compromising himself. The Baron proposed cards; but disputes ran so high that no one was inclined to play. The ladies withdrew to the piano; but it was in vain, music could not be heard amidst the tempest. For my own part, I was not then in the humour either for music or politics, and I would willingly have made my escape, but that I was anxious to ask one question of Dupré. It was difficult to seize a favourable opportunity of addressing him; for since my arrival Dupré had not deigned even to honour me with a glance. After waiting a full hour, an opportunity occurred. "Baron," said I, coolly, "will you do me the honour to inform me where I may find our old friend Dumont?" "Dumont!" replied he with an air of embarrassment, "I really don't know, I have not seen him this age." "Is he not in Paris?" "Oh, yes—he is in Paris—and I rather think he is employed in our office." "In your office, Baron! and you have not seen your old friend this age?" "I cannot see every body you know; I am overwhelmed with business: besides, Dumont is such an original—so full of romantic notions. But you will find him somewhere in the office, if you wish to see him."

Full of rage and confusion, I made one effort to depart, but turned again:—"Since Dumont is employed in your office, Baron, perhaps you can inform me what situation he holds?"—"He is a secondary clerk, as well as I can recollect."

Next morning I called on Dumont at his office. No insolent porter refused to admit me, or to enquire whether an audience had been granted me. The first person I met at the top of the staircase was Dumont himself. He immediately recognized me; and, from the hearty expressions of joy with which he ran to embrace me, I felt convinced that I had now met with a sincere friend.

I related to him my adventure with Dupré. He smiled, for he had himself experienced similar treatment. "Truly," said he, "our unhappy friend is to be pitied; Fortune uses him like a spoiled child, and I fear she has some sad reverse in store for him; he is now on the highest point of the wheel; but one step more, and he will share the fate of all who have preceded him. I have never lost sight of Dupré in his brilliant course; and I am sure that the faults with which he is reproached, the repulsive manner, and the cold formality, by which he makes so many enemies, are to be attributed solely to the vertigo occasioned by his unlooked for elevation."

My first visit to Dupré had taught me the impropriety of intruding on the valuable time of men in office, and I was about to depart. "No, no," said Dumont, "we will spend the day together. You shall come and dine with me; I will introduce you to

my wife and children, and I hope you will like us all well enough to come often again. But I must go and inform the head of our department of this happy circumstance, and ask leave for the remainder of the day; I will return to you in a moment."

This language of the heart—these expressions of cordial friendship, delighted me, and I recollected with shame all the trouble I had taken to gain an insulting interview with the haughty Baron de Courville. I waited a whole hour, and Dumont had not yet made his appearance. I began to be alarmed.—At length he returned in great haste, and apparently agitated.—"Oh, poor Dupré!" he exclaimed.—"What has happened?" said I. "There is a report of the resignation, and probably the disgrace, of the minister: his Excellency has not appeared at the council these three days."—"Alas! what will become of you?"—"Of me? oh, I shall still be a secondary clerk, as before: such is the advantage of a humble post. Nobody will dream of turning me out, until I am unfit for service. But poor Dupré! how will he avert the storm that is gathering over his head?"

We set out, and directed our course towards the Champs-Élysées. Our friend's misfortune was long the subject of conversation. I proposed leaving Dumont until the hour of dinner, in order to call once more on Dupré.

I arrived; all was in disorder at the Baron de Courville's; the servants were engaged in packing up the splendid furniture and ornaments which had so dazzled me on the preceding day. I found Dupré in his closet, surrounded by a dozen creditors. He was pale and dejected. "Dupré," said I, "if I were in distress your purse would be mine . . . ." "No, my friend, I do not stand in need of this last lesson; my wife's diamonds have paid for all. Adieu! forgive me.—Go to Dumont, and tell him to forgive me also. Pity me—and, if you should ever be elevated by fortune, think of poor Dupré." With these words he abruptly left the room.

Full of melancholy reflections, I proceeded to the residence of Dumont. Three apartments, neatly furnished, in which the only ornaments were a few drawings, a barometer, and the bust of the king; sufficed to accommodate Dumont, his wife, two children, and a servant. "I have another room," said he, "which I call my *Louvre*; we will visit that after dinner."

Larocheoucault would not have said there never was a happy marriage, had he seen the family of Dumont. I scarcely ever saw a woman more affable, or of manners more graceful and prepossessing, than Madame Dumont. She was the mother of two beautiful boys, to whose education all her care was devoted.

The dinner was cheerful. I was the only guest; Dumont did the honours of the banquet in the most hospitable style. We drank to the better fortune of Dupré, and the eternal preservation of all the secondary clerks in the kingdom.

After dinner I requested my friend to introduce me to the mysterious apartment he

had mentioned. He opened the door; it was a library, containing upwards of a thousand select volumes,—the works of Homer, Virgil, Molière, Corneille, Racine, Voltaire, Montaigne, and Jean-Jacques—all the great geniuses of past ages, to whose society Dumont was indebted for his happy philosophy. I was somewhat surprised to find that he possessed a strong passion for literature, which the ill success of his early studies by no means promised. "For this taste," replied he, "and the information I have been able to acquire, I am indebted wholly to the post I occupy. Being engaged all day in business of a nature purely mechanical, I feel the necessity of exercising my mind by way of recreation. The imagination of Jean-Jacques was most fertile, when he had copied music for a whole morning; and thus, (pardon the vanity of the comparison) after having mechanically guided my pen for six or seven hours, I feel that I am fit for study, and I experience a kind of inspiration on leaving my desk. I do not mix much in society; and you may well suppose that a poor devil like me never dines with the ministers; but I sit down to table with Molière, between La Fontaine and Chapelain, or I drink with Horace the Sabine wine, with which Meænas was wont to regale himself. Sometimes I myself take a poetic flight. I have already written two tragedies."

I applauded Dumont's literary enthusiasm, and requested that he would favour me with a sight of his productions. "Come tomorrow," said he, "and I will show them to you; but, in the meanwhile, tell Dupré, if ever you should happen to converse with him on the advantages of my place, how I bring up my family, and make myself happy with an income of 3,600 francs per annum. Tell him that I practise economy, and that I have always something in store to relieve the distresses of a friend."

Since I sketched these portraits, I have learnt that Dupré has again appeared on the political horizon; but I doubt whether any thing could render the happiness of Dumont more complete; and I am certain that, in all great cities, men are to be found whose destinies resemble those of my two place-men.

B. L.

## VARIETIES.

On the 21st of April, two of the Monks of Saint Bernard rescued from death a poor Italian soldier, who fell from the top of a steep rock, as he was returning to his family from Siberia. He was much bruised, and had passed a whole night among the snow. What a contrast is here offered between the mad ambition which led him to Siberia, and the fine humanity that saved him on his return.

*Anecdote.*—The celebrated German bard, Gleim, once got a painter to paint his own portrait and that of his friend, the poet Jacobi. Happening to dine about this time with the Dean of —, a nobleman in the company, who was the friend of both, said to Gleim, "I hear you and Jacobi have had your

portraits painted: I suppose at full length?" "No," replied Gleim, "that is only for knights, that we may see their *spurs*: we have no occasion for this; for with us the head is the chief thing."

*Novelty in Resurrectionary Sacrilege.*—At Frankenthal, near Manheim, a piece of ground has just been granted to the Jews, for a burial ground. According to their religious customs, they immediately consecrated it by the sacrifice and inhumation of the finest cock which they were able to procure. The savory appearance of the victim having tempted a dozen poor Hebrews; they assembled in the night, profaned the asylum of the dead, dug up the cock, and put him upon the spit. This singular theft was not discovered till some days afterwards, to the great scandal of the whole synagogue.

## ESTIMATE OF THE PROVISIONS CONSUMED IN PARIS DURING LAST YEAR.

805,499 hectolitres of wine; 43,849 of brandy; 15,919 of cider and perry; 71,896 of beer; 20,756 of vinegar.

70,819 oxen; 3,561 cows; 2,918 milk cows; 67,719 calves; 329,070 sheep; 64,822 hogs; 291,727 cheeses; sea-fish amounting to the value of 3,165,520 fr.; oysters, 821,618 fr.; fresh water fish, 502,780 fr.; poultry, 7,161,402 fr.; butter, 7,105,533 fr.; eggs, 3,676,502 fr.

*Forage.*—7,822,640 bottles of hay; 11,054,371 of straw; 923,022 hectolitres of oats.—*French Journal.*

The French sloop of war the *Uranie*, which was sent on a voyage of discovery, under the command of Captain Freycinet, has been wrecked upon some rocks on her passage from New-Holland. Fortunately all the crew got ashore in the port of Serkley, and the instruments and manuscripts belonging to this expedition have been saved.

*Precocity.*—The rage for juvenile prodigies seems to have revived. Besides Made-moiselle Bergami, on whom the *Times* pronounced such a flattering encomium, and described as having attained so many accomplishments at seven years of age;—besides the young *Rosina* of Brussels, whom we lately noticed;—a phenomenon of another kind has appeared on the horizon of Milan. This prodigy is a young lady, ten years of age, who is known by the name of *Iphigenia*, and whose extraordinary memory excites universal astonishment. The Iphigenia of Greece never inspired so much interest as this Iphigenia of Milan. She is thoroughly acquainted with ancient history, and answers the questions put to her with intelligence and accuracy. Her father has a list of thirty thousand questions, all of which the little living dictionary answers with the utmost readiness. It is to be hoped that the father may not prove another Agamemnon, and sacrifice his child to the desire of compressing the materials of a folio into an octavo.

## LITERARY NOTICES.

## ITALIAN LITERATURE.

The first number of the 17th volume of

the *Bibliotheca Italiana* contains a complete view of all that has been done throughout Italy, in 1819, for the sciences and fine arts, for agriculture, and manufactures. The following is the general view of the book trade, and of the periodical publications in Italy, in 1819. In Lombardy alone there were printed—

*Value in Italian Lire.*

Large works in all branches of science	2,730,613
Religious books and missals	560,220
Almanacks, school books, &c.	470,225
Music	439,280
Copperplates	500,000
State and Government papers	450,000

Total, 5,200,363

The printer Silvestri, in Milan, printed alone in 1819 no less than 46 volumes, exclusive of almanacks, pamphlets, &c.; Ricciardi, in Milan, engraved no less than 145 musical works; whereas Girard, in Naples, published only 25, and Lorenzi, in Florence, only 31. He has now extended his dealings in musical publications even to Odessa. This great consumption of paper, and the buying up of rags in Italy by the English, caused the price of paper to rise 35 to 40 per cent. Naples received, in 1819, in addition to its *Enciclopedia* and the *Bibliotheca*, the *Annali d'Agricoltura Italiana*, edited by M. Gallardo. At Rome, the *Giornale Enciclopedico*, which expired without regret in 1819, after six months existence, was succeeded by *Memorie Enciclopediche Sulle Antichità e Belle Arti*, by M. Guntani; and the *Giornale Arcadico*, subsisted through the year with credit. At Bologna, the *Opuscoli Scientifici*, and the *Opuscoli Letterari di Bologna*, were very well received; but of the *Giornale della nuova Medicina Italiana*, only three numbers have yet appeared. In Tuscany, the learned journals have been very successful for some years past. The *Giornale del Genio* hardly supports itself, and the *Saggiatore* chose a subject which is out of fashion. A journal in the manner of the *Spectator* would certainly be good. Addison and Steele wrote it. At Genoa, the "Correspondence Astronomique, Geographique, Hydrographique et Statistique," by Baron Zach, appears regularly, and without interruption. The *Annali di Viaggi* of M. Bertolotto, which were advertised, have not yet appeared, but are to commence in February. Turin has not had any periodical journal since its *Caleidoscopio* broke. At Nizza (di mare), an *Orfeo Italiano* was announced; but it showed itself to the world in one paper only, and vanished. At Venice are published regularly once a fortnight the *Nuovi Commentari di Medicina e Chirurgia* of Mess. Valer, Brera, Cos. Ruggeri, and Flor. Caldani. At Padua the *Giornale dell'Italiana Letteratura* still exists, thanks to the editor, Count da Rio; but it is almost eleven months in arrear, for the two last numbers are for January and February, 1819. It is the senior of the present Italian Journals. At Pavia, the *Giornale di Finis*

• 33 Lire, 1 Pound Sterling.

expedition, which, under the command of the son of Mohammed-Ali, the Pashaw of Egypt, is to expel the Mamelucks from Nubia. He then proposes to travel from Dongolah to the Red Sea, by a course which no other traveller has taken.—*French Journal.*

## FINE ARTS.

## THE QUEEN ENTERING JERUSALEM.

We have seen a very curious picture assigned to this country by a mercantile house at Genoa, and representing the Entrance of the Queen into Jerusalem. This singular painting (so extremely interesting at this moment, and, considering the important circumstances with which her Majesty's situation connects itself, so historically remarkable), is the production of a distinguished foreign artist, the Sig. Carloni, of Milan. It is a fine specimen of Italian arts; but its principal attraction is undoubtedly the subject. Carloni was, we understand, employed by the Queen to paint this striking event in her life, and was engaged upon it for no less than four months, during all which time he resided in her palace, and had numberless sittings for all the particular portraits. We knew not through what accident it has happened, that the picture has found its way into strange hands; whether the funds to pay for it were not convenient, or whether the hurry of political calls prevented the Queen from rewarding the artist according to his deserts? Certain it is, that for composition and effect we have hardly ever beheld a performance, on the same scale, superior to it. The scene is highly picturesque. Moving down one of the precipitous hills in the vicinity of the Holy City, is seen a cavalcade of Syrians and Turks, and a scarlet litter, in which are some of the Queen's female attendants. In the foreground the principal group of about a dozen persons appear, having descended from the height, and wound round an abrupt precipice on the left. Stothard's Canterbury Pilgrims will furnish a good idea of this party: in front, at some distance, and near one of the gates of Jerusalem (which is disposed in amphitheatre form on the right) rides the Janizary, who has the firman and charge of the travellers.—Foremost of these is the Queen, in a Turkish dress, and riding upon an ass; according to the fashion of that country, astride on the saddle. Her loose trowsers are just visible under the red robe, and her appearance is lusty and healthful. Leaning on the high pommel of her saddle, she is turning towards the celebrated Bergami, who is mounted on a noble white charger close behind her. Bergami's portrait is that of a very good-looking man; florid for an Italian, and with more of a German countenance. His eyes are light and pleasing; his nose well shaped; and his cheeks, lip, and chin, covered with hair approaching to auburn in its colour. He wears a blue riding dress, and has three orders hanging on his breast. On the left of Bergami is another chevalier, adorned with an order of merit, and, we presume from a likeness between them, brother to the favourite. Immediately behind are two other

horsemen of the suite, and between them the Countess Oldi, also on horseback, and dressed something like the Queen. In the rear of these are other followers, and nearer the front a black boy and a white boy; the latter is handsomely dressed and mounted on an ass. He is about eight years old, and a son, it is said, of Bergami, the Black being his menial slave! Behind these again is the much-talked of Billy Austin, on a black charger; well disposed for variety in the group, and looking pale and sickly. Several attendants bring up the reserve.

Such is this extraordinary painting. The likenesses can hardly be otherwise than excellent, for they possess much character, and are very carefully finished. The execution is that of capital miniatures; and the whole affords a perfect notion of the scene and its actors.

Describing such a work to gratify the curiosity of our readers, we should deem it intrusive to say any thing of the nature of its subject and obvious allusions. In a few days, probably, either by its being purchased from the merchant to whom it has been consigned, for some gallery or exhibition, the public may have an opportunity of seeing it; till then, as far as language can convey it, we have the satisfaction of furnishing an accurate description of Queen Caroline's riding into Jerusalem upon an ass.

## ORIGINAL POETRY.

THE BACHELOR'S BOAST,  
TOGETHER WITH ITS REPUTATION.  
*Attempted after the manner of our elder Poets.*

I live a calm untroubled life,  
Nor slave to Love, nor Folly's minion;  
I woo no mistress, wed no wife,  
In act disbacked, or opinion.  
My friends, my books, my fields, and all  
The melodies of woodland mountains,  
The thrush's song, the cuckoo's call,  
The distant hum of falls and fountains;  
O'er setting suns the blush that burns,  
The glories of the moonlight heavens—  
On these my bosom's fondness turns;  
I ask but these, and these are given.  
Unbroken as life's rocky shore,  
Like some light-bearing wave I wander,  
Rejoice amid the tempest's roar,  
Or bask in calms, now here now yonder.  
Of womankind I take no heed;  
In truth I neither hate nor love them;  
My joys were grotelling joys indeed,  
That would not soar a flight above them.

## THE ANSWER.

Thy freedom's boast is false and vain;  
Some land thou art not worth invading;  
Disdain'd thyself, thou feign'st disdain,  
Thy lonely spleen for joy parading.  
List what the voice of Nature says,  
By which thy fancy's ear is taken;  
Mute are thy throats' quivering lays,  
Till love, sweet love, his song doth waken.  
Like thee, thy cuckoo builds no nest,  
Nor soft domestic joys are near him;  
He lives thy life of cold unrest,  
And gender birds despire or fear him.  
Thy falls, no husk'd in summer eve,  
Thro' winter days descend bellow;

The flocks their dangerous margins leave,  
Nor find thy fretful age a fellow.

In setting suns and moon-beams fair,  
There dwells a bliss, by thee unshared,  
Which only those who love can share;  
On these such moments are but wasted.  
Nor is thy wave, so light and free,  
Condemn'd, as thou, to lonely sadness;  
With it full many waves there be,  
To hide the storm, or dance in gladness.  
And when it sinks, its waters have  
Transmitted through some kindred billow;  
But thy cold blood shall never leave  
One rill beyond thy dying pillow.  
IGNOTUS SECONDO.

*A West Indian Anecdote, versified.*

A West Indian dandy (not Bond Street alone  
Can claim the dear exquisite thing as its own)  
Stood fix'd by the glass, while the new suit dis-

plays  
All its charms of stiff collars, short waists, and  
tight stays.—[cried—  
"Don't I look very well?" (here the mirror was  
"Massa look like a lion," a Negro replied.  
"Where have you seen a lion?"—"Oh! me  
see it each day—  
Ah! there's its long ears—it is coming this way."  
One moment the beau turn'd away from the  
glass,  
Look'd back—and beheld his resemblance an Ass.

## [My Correspondents.]

## CANZONET.

(From the Italian of Filica.)

Behold! the sun of Ganges beams,  
Which set on Tagus yesterday;  
The lurid air with glory streams,  
Exulting in his cheering rays.  
The darkest wishes of the soul,  
Freed from their sin by God's controul,  
Grow pure: His grace surpassing far  
The transient brilliance of an earthly star.  
The sun, kind source of varied hue,  
On every flower its tint bestows;  
The violet, with its rich deep blue,  
The lily pale, and blushing rose:  
Thus holy thoughts, that feel no life,  
And sleep 'midst worldly sordid strife,  
Blend'd and illum'd from above,  
Awake to moral light and heavenly love.  
The foliage of the morning hour,  
Hest of the sun, would fade away;  
Light in itself, and light its flower—  
A mirror that reflects the day.  
Thus, if the traveller's eye on glade,  
On mountain, or on rock, be staid,  
Deem it not wedded to the clod;  
It rests—and only rests—on Nature's God.  
Of God the sun reminds the praise,  
The present God his beams declare,  
The winds their whispering anthem raise,  
And ocean owns that God is there.  
The trees in Duty rejoice;  
And that sweet bird, whose hymning voice,  
In all her wanderings through the grove,  
Would seem to say to God—"I love—I love."  
Where Jews the cross, or slopes the mound,  
At every step looms a pagan rise;  
Each plant—each stone—shall chaunt a sound,  
In one harmonious sacrifice.  
Now tears prevail—now grief retires—  
To pardon then the soul aspires—  
Pardon from HIM, whose mercies flow  
To cancel every sin, and solace every woe.  
July 31, 1820.

## ON THE DEATH OF MISS ANNA MARIA L—F,

*In consequence of a Copy of Soliel.*

Thou art gone—with thy blush of youth undecayed;

With thy heart in its purity—Sweet maid:  
Thou art gone; to slumber that long deep sleep,  
Many shall envy, and some shall weep.

That eye's dark splendour is shaded in night,  
And pale that cheek where the rose shed its light;

From that soft lip is the crimson fled,  
And the smile that wandered there vanished.

It was not thus when I saw thee last,  
(And since—) but few short hours are past—  
Then, like the rose, wert thou in thy bloom,  
Breathing of beauty and perfume.

Yes—like the rose, fragile as fair,  
With'd' thy sweetness the sun's fierce glare  
And bent thee to earth, no more to arise,  
Till thine angel whispers thee to the skies.

Never hath in the grave been laid,  
Than thine a lovelier form, sweet maid;  
Never hath quitted its earthly shrine,  
A spirit more beautiful than thine.

*Paris, July.*

[SARILL]

## ON THE RECENT CONTROVERSY AT CHELTENHAM.

*"Who shall decide when Doctors disagree?"*

Truth lies in a well, old philosophers tell;  
Young philosophers say 'tis not true:  
As a word to the wise, Doctor Neale says it lies  
In the old well, but not in the new.

J. R.

## TO CAROLINE'S MINIATURE.

Oh, smile upon me—but one smile—  
To soothe my strain'd and aching sight—  
I gaze upon thee, to beguile

The tedious hours, from morn till night.

And starting from my feverish rest,  
Aroused by tantalizing dreams,  
I press the treasure to my breast,  
Impatient for the morning-beams.

Then as they come, I gaze again  
Upon the magic ivory's charms  
With rapture—my delight how vain!—  
I fold a shadow in my arms.

Oh, move those eyes—yet not away  
From one, whom now they seem to see;  
And part those lips—but not to say  
Thou lov'st at another more than me.

Turn, turn that graceful neck—but keep  
Thy look bent on me ev'n as now;  
And let those clustering tresses sweep  
The fair expansion of thy brow.

Oh, let that beauteous bosom heave  
A sigh—I'll dare to hope for me:  
Do ought to make me but believe  
Thou livest, whilst I gaze on thee.

For ah! although so fair and true  
This effort of the painter's art,  
It mocks as much as glads my view,  
And racks not satisfies my heart.

And yet I would not part from thee,  
Thou dear delusion, to obtain  
That selfish cold serenity  
Some men relinquish all to gain.

J. P.

## SKETCHES OF SOCIETY.

## THE TWO PLACEMEN.

*(From the French.)*

On my arrival in Paris, after visiting the Palais Royal, the Tuileries, the Luxembourg, the theatres and museums, I determined, if possible, to seek out my two old friends, Dumont and Dupré, who, on quitting college, went to push their fortune in the French capital. Dumont, as well as I could remember, was not, in his youth, a prodigy of perspicacity; not that he ever evinced any repugnance for study, but his natural dullness of apprehension constantly counteracted the effects of his diligence. But all loved him—all admired his simple and amiable character. The other students readily assisted him in his studies; and his tutors, who could not be angry with him, closed their eyes to his faults; so that in return for his amiable qualities, poor Dumont was the most ignorant scholar in the kingdom: he had read Livy before he could construe Cornelius Nepos. Dupré, on the contrary, was the eagle of our classes; ardent, lively, impetuous, and prodigiously shrewd. Lessons which engrossed the whole attention of his companions, were not sufficient to gratify his impatient curiosity; he studied the living languages and the liberal arts; he wrote verses on all occasions; he turned his attention to theology, politics, and finance. He also possessed an excellent heart, was a generous friend, and a pleasant companion.

I had made many inquiries in Paris for Dumont and Dupré; nobody could give me any information respecting my old friends, and I almost despaired of ever seeing them again, when one evening, as I was seated in the gallery of the Theatre Feydeau, I heard a great noise in a box behind me. The audience, according to custom, turned with eager curiosity; two ladies splendidly attired, entered the box, accompanied by a gentleman in a court-dress: I looked at him through my glass, and to my astonishment discovered Dupré. To rise from my seat, to rush through the lobby, and to knock at the box-door, was but the business of a moment. The door was opened by an old woman. "Do you belong to his Excellency's party, Sir?"—"His Excellency's party! What do you mean? I belong to my friend Dupré's party."—"There is no Monsieur Dupré here, Sir."—"You are mistaken, he is in this box with two ladies; open the door, I say."—"No sir, it is the Baron de Courville who is in his Excellency's box, and I have been expressly ordered to admit only the friends of the minister." On hearing the name of Courville, I recollected that Dupré's father had been an attorney in the little village of Courville, where he possessed a small property; and I immediately concluded that one of those evil geni who hover over great cities, had turned Dupré's brain. "Where does Baron de Courville reside?" said I to the woman. "I cannot inform you Sir," she replied, but you may rely on finding him at the office of —, where he holds a high post."

Highly gratified to reflect that Dupré's

distinguished talents were so well rewarded, I resumed my seat in the gallery, where I could distinctly hear all that was said in the neighbouring box. Dupré spoke but little, and seemed very attentive to the performance. At length I heard one of the ladies remark, in a sort of half whisper:—"Baron, there is a gentleman looking very steadily at this evening," observed Dupré with indifference; "suppose we go and finish the evening at his excellency's."—"With all my heart," exclaimed the ladies; and they withdrew, making as much noise as when they entered.

At nine o'clock on the following morning I attended at the office of the —: "Are you mail," said the door-keeper, "to expect to see the Baron de Courville at this early hour? Don't you know the rules? The clerks arrive at nine o'clock, the under-secretary at ten, the heads of departments at eleven or twelve, never sooner, Sir; and there are certain days, Saturday for instance, on which it excites a high notion of a gentleman's importance not to appear in the office at all."

At twelve o'clock precisely I was in the antichamber of Dupré's office. "Where are you going, Sir?" said one of the door-keepers.—"To the Baron de Courville."—"Has the Baron granted you an audience?"—"I am his intimate friend, announce me."—"I cannot, Sir. You must come on Friday, between the hours of two and four, if you wish to see him; Friday is the only day on which he receives the public." I was resolved not to yield to this hiring. I elevated my voice, that I might not have the air of a petitioner. A dozen door-keepers, messengers, andgend'armes immediately surrounded me, and the old friend of Baron de Courville was mercilessly thrust out of the door.

But on such occasions, true friendship contends against every obstacle. On Friday, just as the clock struck two, I entered an elegant apartment adjoining the cabinet of Dupré; about forty persons were anxiously awaiting their turn to be admitted. But time slipped away, and the audiences succeeded each other very slowly. It was near four o'clock, and only seven or eight persons had yet been admitted into the sanctuary. Alarmed by the approach of the fatal hour, and determined to see Dupré that very day, or never more to enter the office, I came to the desperate resolution of forcing the door. At that precise moment it opened: Dupré had doubtless received a personage of somewhat more consideration than the rest, and he attended him to the floor of his closet. I availed myself of the lucky opportunity, and knocking down the porter, who endeavoured to detain me, I rushed forward and embraced Dupré. The baron was delighted, he carefully closed the door, welcomed me in the kindest way, and asked for my petition. "Oh you are joking, I replied, I am no petitioner; I am your old friend and college companion; I have come to see you, and to renew every assurance of my sincere friendship." I was so overjoyed on pronouncing

tion, or whether there is more of malignity in his assertion than of candour in investigation. I can only reply, that most of the errors he has so vauntingly detected might have been easily remedied by the introduction of a figure—mere errors of the compositor, or the dropping of a letter at press. These, Sir, are errors which candor would have supplied. In another part of the article of your correspondent, he charges me with *scandalous negligence*. Let me ask of your correspondent, Sir, whether I may not, with more propriety, and without the loss of temper, charge him with *scandalous meanness*, in an assertion so wanton and unprovoked. With regard to the playfulness of his satire, I would fain remind him, that he becomes very serious when he would be amusing, and very amusing when he would be serious. To conclude, Sir, as I have never aimed at perfection, never hoping to accomplish it, let me request your correspondent's attention to the following quotation from the Baronetage; and let me press upon his attention, that, as I have always invited and solicited corrections of the press, his corrections would have been attended to with more pleasure if they had been pointed out with a more liberal feeling.—

"Of his labours and industry in the pursuit, he would wish to say little. He has been abundantly recompensed for the time occupied in his very numerous personal applications, by the politeness and attention with which those applications have been honoured, and by the extensive aids which he has derived from them. The only regret which he feels in offering this result of his endeavours to the public, arises from a dread of too frequent error in treating on subjects, with regard to which perfect correctness is absolutely unattainable.

I am, Sir, yours, &c.  
29, Fetter Lane. JOHN DEARETT,  
Editor of the Peerage, Baronetage, and  
Imperial Calendar.

## ARTS AND SCIENCES.

### IMPORTANT DISCOVERY.

An opinion of the existence of an Antarctic Continent has prevailed ever since the discovery of America rendered us more intimately acquainted with the figure of the earth; nor, when all the circumstances that led to it are considered, can it be called an unreasonable opinion. The vast quantity of floating ice in the higher southern latitudes, justly indicated its origin to be in fresh water rivers and lakes, at no great distance. And again, the immense space of ocean, in the southern hemisphere, in the absence of such a continent, led to an inference that that beautiful arrangement and disposition of land and water, so conspicuous in the northern, was overlooked, and the equilibrium neglected in the southern hemisphere.

These considerations led many voyagers to search after this Terra Incognita, and particularly influenced the last voyage of Captain Cook. But it is not surprising that it should have escaped the observation of the circum-navigators of all nations, and have baffled the laborious perseverance of Cook himself? and that the numerous vessels (whalers and others) that have navigated the sea contiguous to such land for nearly two centuries, should have remained in ignorance of its existence? Yet such is the fact; and it is equally surprising, that the honour of its discovery should have been reserved for the master of a small trading vessel, nearly fifty years after the question seemed to be set at rest by the unsuccessful result of Captain Cook's navigation.\*

\* Captain Cook first explored the Southern Ocean between the meridian of the Cape of Good Hope and New Zealand; consequently far to the east of the land now discovered. In November, 1773, he left New Zealand, and employed several weeks between 180° and 90° West longitude, and 45° to about 72° South latitude; so that he never approached within 30 degrees (on the Antarctic circle) of the new continent. The only passages we think it necessary to quote from him, as illustrative of our present subject, are the following:—  
"In lat. 67° 45' long. 137° 12'," he says, "While we were taking up ice, we got two of the antarctic penguins so often mentioned, by which our conjectures were confirmed of their being of the petrel tribe. They are about the size of a large pigeon; the feathers of the head, back, and part of the upper side of the wings, are of a light brown; the belly, and under side of the wings, white; the tail feathers are also white, but tipped with brown: at the same time, we got another new petrel, smaller than the former, and all of a dark grey plumage. We remarked that these birds were fuller of feathers than any we had hitherto seen; such care has nature taken to clothe them suitably to the climate in which they live. At the same time we saw a few chocolate-coloured albatrosses; these, as well as the petrels above-mentioned, we no where saw but among the ice; hence one may with reason conjecture that there is land to the South. If not, I must ask where these birds breed? A question which perhaps will never be determined; for hitherto we have found these lands, if any, quite inaccessible. Besides these birds, we saw a very large seal, which kept playing about us some time. One of our people who had been at Greenland, called it a sea-bear; but every one else took it for what I have said."

Again, in lat. 65° 42', long. 95° 44': "I now came to the resolution to proceed to the North, and to spend the ensuing winter within the Tropick, if I met with no employment before I came there. I was now well satisfied no continent was to be found in this ocean, but what must lie so far to the South as to be wholly inaccessible on account of ice; and that if one should be found in the Southern Atlantic Ocean, it would be necessary to have the whole summer before us to explore it. On the other hand, upon a supposition that there is no land there, we undoubtedly might have reached the Cape of

In the absence of a more detailed narrative of this important discovery, which we presume is retarded for obvious reasons, resulting from the impolicy of making premature disclosures, the following few particulars may not only gratify curiosity, but will, in a great measure, we trust, counteract the ill effects of garbled and incorrect statements, which are beginning to find their way into the periodical press.

One of the evils attending mis-statements, in the origin of an important discovery, is, that of involving the question in a labyrinth of contradictions, from which in after times, it is difficult to unravel the truth. In the present instance too, as in former cases, a meritorious and enterprising, though obscure individual, is in danger of being deprived of the credit he so justly deserves, by probably adding to his native country a new source of wealth; the full worth of which would only be truly known by its possession by a rival in commercial enterprise.

A Mr. Smith, Master of the William, of Blythe, in Northumberland, and trading between the Rio Plata and Chili, in endeavouring to facilitate his passage round Cape Horn, last year, ran to a higher latitude than is usual in such voyages, and in lat. 62° 30', and 60° west longitude, discovered land. As circumstances would not admit of a close examination, he deferred it until his return to Buenos Ayres, when he made such further observations as convinced him of the importance of his discovery. On making it known at Buenos Ayres, speculation was set on the alert, and the Americans at that place became very anxious to obtain every information necessary to their availing themselves of a discovery, which they saw Good Hope by April, and so have put an end to the expedition, so far as it related to the finding a continent; which indeed was the first object of the voyage. But for me at this time to have quitted the Southern Pacific Ocean, with a good ship expressly sent out on discoveries, a healthy crew, and not in want either of stores or of provisions, would have been betraying not only a want of perseverance, but of judgment, in supposing the South Pacific Ocean to have been so well explored, that nothing remained to be done in it. This, however, was not my opinion; for though I had proved that there was no continent but what must lie far to the South, there remained nevertheless room for very large islands in places wholly unexamined: and many of those which were formerly discovered, are but imperfectly explored, and their situations as imperfectly known. I was besides of opinion, that my remaining in this sea some time longer, would be productive of improvements in navigation and geography, as well as in other sciences.

was pregnant with vast benefit to a commercial people. Captain Smith was however too much of an Englishman to assist their speculations, by affording them that knowledge of his secret which it was so necessary for them to possess; and was determined that his native country only should enjoy the advantages of his discovery; and on his return voyage to Valparaiso, in February last, he devoted as much time to the development of it as was consistent with his primary object, a safe and successful voyage.

He ran in a westward direction along the coasts, either of a continent or numerous islands, for two or three hundred miles, forming large bays, and abounding with the spermaceti whale, seals, &c. He took numerous soundings and bearings, draughts, and charts of the coast; and in short, did every thing that the most experienced navigator, dispatched purposely for the object of making a survey, could do. He even landed, and in the usual manner took possession of the country for his sovereign, and named his acquisition, "New South Shetland." The climate was temperate, the coast mountainous, apparently uninhabited, but not destitute of vegetation, as firs and pines were observable in many places; in short, the country had upon the whole the appearance of the coast of Norway. After having satisfied himself with every particular that time and circumstances permitted him to examine, he bore away to the North and pursued his voyage.

On his arrival at Valparaiso he communicated his discovery to Captain Sherrieff of H. M. S. *Andromache*, who happened to be there. Captain S. immediately felt the importance of the communication, and lost not a moment in making every arrangement for following it up; he immediately dispatched the *William*, with officers from the *Andromache*; and in this stage the last letter from Chili left the expedition, with the most sanguine expectation of success, and ultimate advantages resulting from it. and, if we are correctly informed, a fully detailed narrative has been forwarded to government.

On taking a cursory view of the charts of the Southern Atlantic and Pacific Oceans, it will be seen, that though Captain Cook penetrated to a much higher latitude, and consequently drew his conclusion from observing nothing but vast mountains of ice, it will be seen also that his meridian was 15 degrees further to the west of New

South Shetland, leaving a vast space unexplored on the parallel of 62° between that and Sandwich Land, in longitude about 28° west. He again made 67° or thereabouts, but in longitude 137° to 147° west. Perouse ascended no higher than 60° 30'; Vancouver about 55°; other navigators passing the Straights of Magellan and Le Maire; and most of them passing as close Cape Horn as possible, in order, as they thought, to shorten the passage to the Pacific, are circumstances that reasonably account for the protracted period to which so important a discovery has been delayed.

#### SCIENCE AND GASTRONOMY.

At a time when we see generals, physicians, and students, pretend to improve the difficult science of politics, we must not be surprised at seeing a skillful grammarian improve the art of cookery. M. Lemare, director of the Athenæum of Languages, has invented a utensil, which he calls *autoclave*. M. Lemare engages to dress his dinner in less than half an hour; and lately made the experiment with complete success before a numerous company. He had put into the vessel a piece of meat, vegetables, and as much water as is necessary for a dish for five persons. The vessel was placed over a fire, which was kept up with some pieces of charcoal. In 36 minutes the vessel was taken off, and left a few minutes to cool; and the reporter affirms, that the broth was excellent, and the meat thoroughly done. It is not necessary to open the pot to skim it, so much as once during the boiling, for at the end of the operation the scum is found at the bottom of the vessel, and does not mix with the broth. The advantages of this *autoclave* cookery are, 1st. that the soup is excellent, which is very natural, because the apparatus is hermetically closed, and nothing therefore is lost. 2d. That produce is much increased by the quantity of jelly yielded by the bones. 3d. That the cookery is far more expeditious than in the ordinary kettles, &c. This mode of cookery will be highly advantageous to the poor in particular. We leave the detailed description of the *autoclave* to those journals which are especially devoted to such subjects. If satisfactory and repeated trials confirm the utility of the invention, it will become highly important in its results, as it will then be evident that cooking may be performed in much less than the usual time, and with one tenth part of the fuel now employed. M. Lemare's process is a very simple, and, for that reason, very ingenious improvement of Papin's digester. It speaks much in favour of the invention, that, as appears from a letter of the minister of the interior, the *autoclave* has been in use above a month, in the school for the blind at Paris. Should it come into general use, M. Lemare will doubtless derive more profit from the sale of this apparatus than from all his discoveries in etymology, and his excel-

lent precepts on orthography; and this is in the nature of things. In this enlightened age, we undoubtedly set a high value on correctness of language, but a well dressed dinner is far more valuable.—(*Foreign Journal*.)

*Cure for the Hydrophobia.*—Doctor Lyman Spalding, one of the most eminent physicians of New York, announces, in a small pamphlet, that for above these fifty years, the *Scutellaria Lateriflora* L. has proved to be an infallible means for the prevention and cure of the hydrophobia, after the bite of mad animals. It is better applied as a dry powder than fresh. According to the testimonies of several American physicians, this plant, not yet received as a remedy in any European Materia Medica, afforded a perfect relief in above a thousand cases, as well in the human species, as the brute creation (dogs, swine, and oxen). The first discoverer of the remedy is not known: Doctor Dervoz, (father and son), first brought it into general use.

Modena, 21st June.

*Temple of Jupiter Ammon.*—The *Messager* Modena contains a letter from the traveller, Chevalier Frediani, dated from the ruins of the Temple of Jupiter Ammon, in the Desert of Barca (Lybia), the 30th of March, 1820, in which he says: "After a dangerous and fatiguing journey of sixteen days, I have at length arrived at the most celebrated monument of antiquity, which is situated about a league and a half from Schiaw, under 29° 22' North latitude. It has been visited by only a single European (Hornemann) since the time of Alexander the Great. The town of Schiaw made but a slight resistance; it capitulated on the most honourable terms, and retains its independence on paying an annual tribute to the Viceroy of Egypt.

#### EGYPTIAN TRAVELS, &c.

The friends of M. Caillaud, the celebrated French traveller, have recently received a letter from him, dated Cairo, April 16th. The letter seems to have been written with China ink, and as there was every reason to believe that the plague was raging in Cairo, during the month of April, it was steeped in vinegar. Unfortunately it has thus become almost illegible. Only a few lines remain of the last two pages. It is however satisfactory to know that M. Caillaud and M. Deterrez, his travelling companion, have invariably enjoyed good health. He mentions a new Oasis, (*Farafra*) which is not marked in any map.

After an excursion of four months and a half in the desert, M. M. Caillaud and Deterrez returned to Egypt, bringing with them an abundance of materials highly interesting both to the geographer and the antiquarian. They visited several Oases, and discovered several Egyptian and Roman temples, and three Roman fortresses, unknown to any previous travellers.

On the 1st of July, M. Caillaud intended to proceed to Thebes, in order to join the

*Chimica et Storia Naturale*, proceeds without interruption. At Milan the *Accademia delle Scienze*, and the *Conciliatore* are deceased: but the following still live:—1. *The Gazzetta di Milano*; 2. *Il Corriere delle Dame*; 3. *Gli Annali di Commercio*; 4. *Il Raccoltore*; 5. *Il Giornale di Medicina Universale*; 6. *L'Ape*; 7. *Il Foglio Bibliografico*; 8. *La Biblioteca Italiana*. "This advancement of the book trade in Italy of late years is the result," says M. Acerbi, "of the wise measures by which the present government abolished the fatal decree of 30th November, 1810, which laid a duty of a centesimo on every leaf printed in that country, and of 50 per cent. upon every foreign work. Now the new edition of the Italian Classics was immediately resumed, the edition of the classics of the 18th century begun, and Sonzogno's *Vinggi*, Silvestri's *Biblioteca Scelta*, and a hundred similar speculations, rapidly succeeded each other. Milan has become the staple place for the national and foreign book trade, where above 700 bales (1050 cwt.) of French, English, and Swiss works, besides German, are annually entered at the Custom-house.

The same gentleman who translated Lord Byron's poems into French, has announced Sir Walter Scott's poetical romances.

## METEOROLOGICAL JOURNAL.

JULY, 1820.

Thursday, 27.—Thermometer from 52 to 76.

Barometer from 30, 21 to 30, 18.

Wind S. W. 1.—Generally clear, clouds passing.

Friday, 28.—Thermometer from 52 to 76.

Barometer, stationary at 30, 20.

Wind S. W. and N. E. 3.—Generally cloudy; sunshine at times.

Saturday, 29.—Thermometer from 51 to 77.

Barometer from 30, 24 to 30, 26.

Wind N. E. and S. W. 4.—generally clear; light clouds passing.

Sunday, 30.—Thermometer from 48 to 79.

Barometer from 30, 26 to 30, 13.

Wind S. and S. E. 4.—Light clouds generally overcast. A little rain about 7 P. M. and about 11, heavy rain with thunder and lightning incessantly, which continued till about 1 o'clock.

The upper part of a halo formed about 8 o'clock in the morning.

Monday, 31.—Thermometer from 51 to 83.

Barometer from 30, 03 to 29, 99.

Wind E. S. 3. and S. W. 1.—A thick vapour, with light clouds, spread over the greater part of the day: sunshine at times.

Rain fallen, 475 of an inch.

AUGUST, 1820.

Tuesday, 1.—Thermometer from 58 to 75.

Barometer from 29, 99 to 30, 08.

Wind S. W. 3. and 4.—Clouds generally passing; sunshine at times.

Wednesday, 2.—Thermometer from 52 to 76.

Barometer from 30, 22 to 30, 26.

Wind S. W. 1. and S. 3.—Clouds generally passing.

On Sunday, the 6th of August, at 11 hours, 59 minutes, 11 seconds, (clock time), the first satellite of Jupiter will immerse into his shadow.

On the same day, at 13 hours, 52 minutes, 9 seconds (clock time), the fourth satellite of Jupiter will immerse into his shadow.

On Thursday the 10th, at 11 hours, 14 minutes, 26 seconds (clock time), the second satellite of Jupiter will immerse into his shadow. Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

\* \* \* To make room for our usual *Miscellanies*, together with the various interesting articles which appear in this Number, we have been obliged to borrow a part of the space allotted to *Advertisements*, which we shall claim the privilege of repaying in some future Number.

Several papers are unavoidably postponed.

On turning to their *L. Gazette* of 18th Sept. last (No. 139), our Readers will find an original *Account of the Carbonari*, now acting so prominently a part in Naples and Italy.

A Correspondent says, *Addition*, with a view of comparing the present face of Italy with the descriptions left us by the Romans, made preparatory collections from the Roman poets. He might (says Dr. Johnson) have spared himself the trouble, had he known that such collections had been twice made before, by Italian authors. My question is, to what Italian authors does Dr. Johnson here allude?

## THE LITERARY GAZETTE.

THE two Quarterly Parts of the LITERARY GAZETTE, from 1st January, to Midsummer, 1820, are now to be had at the Office, and of all Booksellers, News-vendors, and Clerks of the Road.

A few complete Sets from the commencement, in January, 1817, may also be obtained; and, as every volume forms a distinct publication, the Volumes for 1818 and 1819 are sold separately.

Most of the Numbers are still in print, and we shall be happy to supply them to Subscribers wishing to complete their sets or volumes: and any one not preserving their sets, would oblige us much by reselling to our publisher Nos. 1, 6, 23, 31, 32, 33, 35, 36, 40, 52, 53, 54, 56, 57, 58, 60, to 68 both inclusive, and 78.

The last half year's Gazettes contain Reviews, with copious extracts, of above one hundred of the most important new Publications, and a like proportion of such literary, scientific, and miscellaneous matter, as appears in this Number.

## Miscellaneous Advertisements.

(Connected with Literature and the Arts.)

British Gallery, Pall Mall.

THIS GALLERY, with an Exhibition of PORTRAITS of distinguished Persons in the History and Literature of the United Kingdom, is open daily, from 10 in the Morning until 6 in the Evening.

(By order) JOHN YOUNG, Keeper.

Admission 1s.—Catalogue 1s.—Historical ditto 2s.

THE Exhibition of MONSIEUR JERRING'S GREAT PICTURE, (from the *Lost*) 34 feet by 18, representing the surviving Crew of the Medusa French Frigate, after remaining Thirteen days on a Raft without Provision, at the moment they discover the vessel that saves them, is now open to the Public, at the Egyptian Hall, Piccadilly. Admission 1s.

Hogarth.

THE Subscribers to the new Edition of the Original WORKS of HOGARTH, are respectfully reminded, that, in conformity with the Prospectus, the first Number will, on September 1, be advanced in Price to 17. 6s.; and, in like manner, each successive number after the interval of six months from the date of its publication respectively. The 8th Number, just published, contains the following Plates:—1. Examination of Ramebridge, by the House of Commons. 2. Morning. 3. Second Stage of Cruelty. 4. Sarah Malcolm, and two Prints of Boys peeping at Nature. 5. The Laughing Audience; and a Chorus of Singers. London: Published by Baldwin, Cradock, and Joy, Paternoster Row.

\* \* \* Portfolios capable of containing the entire Set, are prepared at 15s. each.

## BOOKS PUBLISHED THIS DAY.

Dr. Rees's *Cyclopædia*, Last Part.

Vol. 32, Part 3, being the concluding Part of THE NEW CYCLOPÆDIA; or, Universal Dictionary of Arts, Sciences, and Literature. By ABRAHAM REES, D.D. F.R.S. F.L.S. &c. Editor of the last Edition of Mr. Chambers's Dictionary; with the assistance of eminent Professional Gentlemen. Printed for Longman and Co.; and the other Proprietors. The Subscribers to this Work are requested to complete their Sets immediately, as some of the Parts are scarce, and will shortly be entirely out of print, when the Proprietors cannot engage, and it will be entirely out of their power, to complete them.

Vol. 6, in 8vo. with coloured Plates, price 12s. boards. MEDICAL TRANSACTIONS, published by the College of Physicians in London. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, Vols. 1. to 5 of the above Work, price 3s. 6d. boards.

SATURDAY, AUGUST 12, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Private Correspondence of David Hume with several distinguished Persons, between the Years 1761 and 1778. London, 1820. 4to. pp. 285.*

To such of our readers as do us the honour to remember the volume of the Literary Gazette for 1817, we need not say, that we consider this correspondence to be an exceedingly pleasing addition to that interesting species of Literature to which it belongs. Our only regret in perusing the volume, is, that it does not contain more of these productions, which display so many celebrated characters in new and various lights. The quarrel between Hume and Rousseau, which made so much noise at the time it happened, is to us the least valuable portion of the work; but even the letters on this subject are curious and entertaining. The Countess of Boufflers appears to great advantage as an epistolary writer; and not only the letters of Hume himself, but those of the Earl Marshal of Scotland (Keith), unfold a number of little incidents and anecdotes, which are perhaps more attractive at the present day than when they were first recorded.

It will strike every one, that the manners both of English and French society have greatly changed since these letters were written; and that nearly as marked a revolution has taken place in the style in which persons of the higher class, and of different sexes, address each other. The formal gallantry of the old school may look antiquated to us; but we question if, considering the matter philosophically, it was not preferable to the familiar freedom of modern life. People when dressed in their holiday clothes, behave better than when in their common habiliments; and it is not improbable that a considerable improvement in our civil and social relations might be introduced by a slight recurrence to old fashioned etiquettes; which, though denounced as restraints, were (when not carried to ridiculous excess) far from being inconsistent with the most refined enjoyments. But this *en passant*—we now proceed to let the publication speak for itself.

VOL. IV.

The following whimsical proposition is contained in a letter addressed to Rousseau, by a Baron de Colval, and cited by that sensitive philosopher as an instance of the persecution of Voltaire.

"I have a proposal to make you. I request the same service from you, which you have received from the Vicar in Saroy, that is to say, to receive me in your house, without remuneration, for two years; to furnish me with lodging, board, fire and candle. You are the only person, who can conduct me, in every respect, to felicity, and teach me to die. The excess of my humanity, with its inseparable compacity, has induced me to become bail for an officer, in the sum of 3,200 livres. In settling my children in life, I have reserved for myself no more than a pension of 1500 livres—which you see is absorbed for upwards of two years. It is this circumstance which compels me to share your bread during the said interval. You will have no cause to complain of me: I am very temperate; I like nothing but vegetables, and am very little fond of meat. I can dispense with almost every thing, except soup, which I am in the habit of taking twice a day. I eat every thing, but never ragouts dressed in copper vessels, nor those refined ragouts, which poison.

"I apprise you, that I am become deaf, in consequence of a fall: nevertheless I hear very well with the left ear, without its being necessary to elevate the voice, provided that one speak slowly, and close to this ear. At a distance I maintain a conversation, with the greatest facility, by means of signs, which are very easy to learn, and which I will teach you, as well as your friends. I am not curious; I never ask questions; I expect that people should have the complaisance to communicate to me whatever passes in the course of conversation."

"The whole of the letter, (adds Rousseau) is in the same strain. You will tell me, that all this is nothing more than a silly joke. Granted; but I perceive that even in joking this worthy man makes me his continual theme and object, and this, Madam, tends to no good purpose. I am convinced, that I never shall be suffered to live in peace on this earth, till this man shall have forgotten me."

The following is the translation of part of another letter from Rousseau to Madame Boufflers, dated Motiers, 26th August 1764.

"You have the goodness, Madam, to wish to be informed of all particulars relating to myself. What shall I say? Nothing can be more uniform than my life; nothing more limited than my projects. I make the most of the present day, without taking thought for to-morrow; or rather, I contrive to pro-

long my existence more than I have made up my account for. I shall not make my exit from this stage sooner than nature shall please to ordain; but such procrastination does not fail to become irksome to me; for I have no longer any thing to transact here. A disgust for every thing consigns me every day more to indolence and inactivity. My physical ills alone put me a little on the alert. The spot which I inhabit, although sufficiently salubrious for others, is injurious to my state of health; this is the reason why, in order to avoid the ill effects of the air, and the importunities of the idle, I wander from one place to another, during the fine season. But when winter sets in, which in this part of the world is very severe and very long, I am obliged to remain at home, and to suffer. I have a long time thought of changing my abode—but whither shall I go? how arrange matters? I labour, at one and the same time, under the inconvenience of indigence and wealth; every sort of care affrights me; the carriage of my rags and of my books over these mountains is painful and expensive. Is it worth my while to think of quitting my house, when I am in the daily expectation of quitting my body? Whereas, by remaining where I am, I enjoy delicious days, wandering without care, without project, without occupation from wood to wood, and from rock to rock, always ruminating, but never thinking. I would give any thing in the world to be versed in botany; it is the genuine occupation of an ambulatory body, and an idle mind. I would not even promise that I should not be foolish enough to study it, if I knew where to begin. As to my situation, with respect to my resources, do not be the least uneasy on that head: I have as yet not been in want of the needful, and probably shall not wait for a long time to come. Far from finding fault with your offers, Madam, I return you my thanks for them; but you must acknowledge, that these offers would be ill applied, were I to avail myself of them, before I really stand in need of them.

"You asked for details; you ought to be satisfied. I am very satisfied with yours, with this one exception, that I have never been able to make out the name of the spot you inhabit. Perhaps I may be acquainted with it; in that case, how agreeable it would be to me to bear you company, at least, in imagination. For the rest, I pity you that you have got no further than to philosophy. I am much farther advanced than you are, Madam—with the exception of my day and my friends, I have come back to nothing.

"I do not find the Chevalier so unreasonable, since he amuses you. If he were merely unreasonable, assuredly he would not.

ver be able to accomplish that. He is greatly to be pitied, when the paroxysms of the gout come upon him; for one suffers cruelly on these occasions; but he has at least the advantage over me of suffering without risk. No villains will assassinate him, no person has an interest in murdering him."

We now select from two letters of Mr. Hume's to a friend of the same lady, the Marchioness de Brabantine, in which he not only speaks of his rupture with Rousseau, and relates some odd circumstances, but mentions public affairs, respecting which it is interesting to see the opinion of so great an authority.

"*Little-street, Leicester-fields, 16th of Feb. 1766.*

"You have sometimes, dear Madam, been embarrassed between opposite opinions, with regard to the personal character of M. Rousseau: his enemies have sometimes made you doubt of his sincerity; and you have been pleased to ask my opinion on this head. After having lived so long with him, and seen him in a variety of lights, I am now better enabled to judge; and I declare to you, that I have never known a man more amiable and more virtuous than he appears to me: he is mild, gentle, modest, affectionate, disinterested; and, above all, endowed with a sensibility of heart in a supreme degree. Were I to seek for his faults, I should say, that they consisted in a little hasty impatience, which, as I am told, inclines him sometimes to say disobliging things to people that trouble him: he is also too delicate in the commerce of life: he is apt to entertain groundless suspicions of his best friends; and his lively imagination, working upon them, felix chimeras, and pushes him to great extremes. I have seen no instances of this disposition; but I cannot otherwise account for the violent animosities which have arisen between him and several men of merit, with whom he was once intimately connected; and some who love him much have told me, that it is difficult to live much with him, and preserve his friendship; but for my part, I think I could pass all my life in his company, without any danger of our quarrelling.

"There is one circumstance, that renders him very amiable, and might serve to abate the envy arising from his superior parts; which is, that he is endowed with a singular simplicity of manners, and is, indeed, a perfect child in the ordinary occurrences of life. This quality, joined to his great sensibility of heart, makes him be easily governed by those who live with him; and his maid, in particular, has an uncontrolled authority over him. Shall I give you an instance? He showed me the letter which he had received from the Corsicans, in which he is invited to come among them, to frame them a body of laws, and to be the Solon or Lycurgus of this new commonwealth. He told me, that he had once intended to comply with this invitation, but, on consulting Mademoiselle Le Vasseur, he found she did not approve of the journey; upon which he laid aside all thoughts of it. His dog also has great influence with him; of which I shall give you an instance that may amuse you. Soon af-

ter our arrival, I prevailed on him to go to the play-house, and see Garrick. Mrs. Garrick gave him her box, which is much concealed from the audience, but opposite to that of the King and Queen; and their Majesties were privately informed, that they might there expect to see M. Rousseau. When the hour came, he told me, that he had changed his resolution, and would not go: for—what shall I do with Sultan? That is the name of his dog. You must leave him behind, said I. But the first person, replied he, who opens the door, Sultan will run into the streets in search of me, and will be lost. You must then, said I, lock him up in your room, and put the key in your pocket. This was accordingly done: but as we went down stairs, the dog howled and made a noise; his master turned back, and said he had not resolution to leave him in that condition; but I caught him in my arms and told him, that Mrs. Garrick had dismissed another company in order to make room for him; that the King and Queen were expecting to see him; and without a better reason than Sultan's impatience, it would be ridiculous to disappoint them. Partly by these reasons, and partly by force, I engaged him to proceed. The King and Queen looked more at him than at the players.

"When I have proposed to him schemes for enriching him, he has told me, that he dreads the inconvenience of changing his manner of life; particularly, said he, I should be tempted, if I were richer, to take another servant, which, I know, is taking another master; and I should in that case have my will in nothing.

"The public here has taken a great interest in M. Rousseau; and though we are now in the hottest time of our hottest factions, he is not forgot. Every circumstance, the most minute, that concerns him, is put in the news-papers. Unfortunately, one day, he lost his dog: this incident was in the papers next morning. Soon after, I recovered Sultan very surprisingly: this intelligence was communicated to the public immediately, as a piece of good news. Hundreds of persons have offered me their assistance to settle him; you would think that all the purses and all the houses of England were open to him. Did he understand the language, he would live very happily in this country. He is particularly pleased that nobody makes him speeches or compliments."

29th Aug. 1766.

"We hear that you was much alarmed in France with the prospect of war, upon Mr. Pitt's being taken into the ministry. That apprehension was always without foundation; but now more than ever, on account of his losing all his popularity, merely on account of his accepting a peerage. Of all the caprices of the people, in all ages, never was any more ridiculous and surprising. Lord Chatham is as much detested as ever Mr. Pitt was adored, without its being possible to assign any reason for this alteration. The folly, it is true, will probably pass in time; but this minister will never fully recover his former consideration, on account of his leav-

ing the House of Commons, which is the great scene of business."

"I saw to-day an Italian Abbé, and talked to him about the Court of Florence. He says that it has become a very disagreeable place, and that nothing can exceed the narrowness of mind in the Archduke and Archduchess. That princess rubs off, with her own hands, the paint and patches from the faces of the ladies, and makes them presents of tippets to cover their bosoms. I beseech you, never go to a place where you must be virtuous by constraint, lest you should take an inclination to become otherwise. You may, perhaps, be allowed, as an ambassador from France, to keep your *rouge*; but are you sure that you may not take a quarrel with virtue, when you see it accompanied with so much folly and ridicule? I beg my compliments to Madame de Vierville, and that you will believe me, with the greatest regard," &c.

In another letter Hume speaks of his constancy, as having become matter of jest. "That affair is now so totally ridiculous, that it can no longer give us the least shadow of anxiety. Agreeably to the licence of this country, there has been a great deal of railery on the incident, thrown out in the public papers, but all against that unhappy man. There is even a print engraved of it: M. Rousseau is represented as a Yahoo, newly caught in the woods; I am represented as a farmer, who caresses him and offers him some oats to eat, which he refuses in a rage; Voltaire and D'Alembert are whipping him up behind; and Horace Walpole making him horns of *papier maché*. The idea is not altogether absurd."

We have no space for further extracts at length; a multitude of detached passages might, however, still be quoted, as samples of the just reflections and good thoughts scattered through these papers.

"Was ever (says Hume, speaking of Rousseau's freaks) any thing in the world so unaccountable? For the purposes of life and conduct, and society, a little good sense is surely better than all this genius, and a little good humour than all this extreme sensibility." And Madame Bouffiers makes this admirable reflection on the quarrel. "The hands of friendship are entitled to respect, even after they are rent asunder, and the mere semblance of this sentiment is so likewise."

The translations are faithfully executed,\* and the whole work of a pleasing kind.

Letters written for the Post and not for the Press. London, 1820. 12mo. pp. 432.

With such a title it is hard to say how these letters have issued from the press. Many of them certainly are more fit for the intercourse of private correspondence than for the experiment of publi-

\* We may observe, that there are a few gallicisms and mistakes; *ex. gr.* "de pareils malheurs," (p. 190) is not accurately given, "similar misfortunes;" — the meaning is, such misfortunes.

cation. In truth, we can hardly tell what to make of them. Sometimes we fancied the writers were real flesh and blood Lady Lucy's, Lady S.'s, Mrs. H.'s &c.; and really their insipidity and want of object justify the suspicion; at other times we fancied we discerned some glimpses of meaning and design. At last we closed the book, as wise in these respects as when we opened it. On the whole we may say, that if genuine, the letters are hardly worth being diverted from their original destination and purpose; and if of literary manufacture, the author has miscalculated the measure of public curiosity, and greatly overlaid what was entertaining with what is unintelligible and insignificant. A hundred pages of tolerable matter are not a sufficient passport for four hundred of slip-stop, capital letters, and dashes.

The letters are from Scotland, Wales, Italy, &c.; and, leaving the others for the post, we select two of the fittest for the press; the first as a sensible epistle, and the last as the vehicle of a singular story.

"Lady S. to Lady T.

*Naples. No date.*

"I am truly sorry, my dear child, for the picture you give me of your young friend's married discomforts. I cannot, you know, judge under what views she changed her situation; but such disappointments are more often to be attributed to overstrained ideas of what marriage ought to be, and some romance as to our own powers of conferring perfect happiness, than to the reality of the evils she so feelingly disclosed. You must not be offended if I say your friend appeared to me to have more sensibility than sense; and having been considered what is called a beauty, I am not prepared to bestow all the compassion you do upon her present discontents: but since you desire to have her upon the list of my patients, I shall prescribe to the best of my power. I must first say, then, when her husband comes home ruffled by some circumstance he has met with in the world, and she flies up with a kiss, which she finds not very tenderly received, she must be content to be called a "fond fool," or to keep her kisses till a better opportunity. Going to her room to cry is childish; a man of sense will soon tire of that trick; and all the rose-water you tell me she employs to wash her eyes to make her "decent for dinner" would be better employed in brushing up those pretty ringlets of hers; which, if they adorn the smiling looks he used to find before her marriage, will sooner restore his cheerfulness, than all the parade she makes of smothered feelings. Don't, my dear, be taken in by all this stuff. Compare the difference of a sensible woman receiving her husband in good humour or bad, without teasing him with silly questions about what he is resolved she shall not know, and having temper and understanding to

soothe what may he amiss, or to partake of what may be agreeable at the moment,—and you will judge which of these women have the best chance of happiness: and those ladies who talk of their smothered feelings, always contrive to let enough escape to prove to him she is doing so. A man who is affectionate and kind-hearted must feel this; and do you suppose he will be the more attached to her after she has made him feel he has hurt her? By so doing, she lessens him in his own eyes, and he will naturally feel less happy in her society, than with those who treat him with smiles and consideration; which, probably, he has only to step into his carriage, and find in half a dozen well-lighted rooms, open to receive all husbands under similar feelings during the evening. You may say, "But no one there has such cause of complaint."—cause or no cause, we must manage husbands as they are, not as they ought to be, when we meet with such; and there are endless ways by which women, through their own folly, condense the cloud into a storm, which they might by one cheerful ray of good feeling, have dissipated at first; but this implies a little more self-discipline than, I imagine, your friend has ever put in practice.

"I fear, on looking over this, my prescription may not be very palatable; but unless you prove to me she is willing to take the bitter with the sweet, I can have nothing more to do with her.

"I wish I could fill your conservatory, my dear, from hence, such profusion of all those flowers you delight in are lavished upon every peasant's dwelling here: yet there is a sort of mockery in this; for the wretched state of those who breathe "perfume in every gale," might lead me to follow the moral strain beyond what you would find amusing. Adieu."

"Lady S. to Lady T.

*Naples, October, 18—.*

"I mentioned, my dear daughter, that I got the particulars of a most romantic and interesting history lately, and I only now have found leisure to write them down for you. When in public with the Marchioness of S—, I had seen her frequently address a very pleasing, fine young woman, whose name and rank I knew, but nothing more; and she said she wished I should be better acquainted with her before she told me her history. She was reserved, but had a mild sort of quiet melancholy in her manner, that attracted me very much; and you shall now learn the cause. I am not at liberty to give her full name, so you must be satisfied with her being called Rosalie, after her Saint. She was the daughter of one of the first houses in this country, and brought into the world with every advantage, having been educated at home, and under a very amiable mother, who, unfortunately, died when she was only fifteen. Her father had selected a youth for her partner in life every way worthy of her; and, what seldom happens, the young people were allowed to form an attachment before marriage, by a considerable degree of intimacy. The young Count's mother was a high, violent character; but

had not openly opposed this; however, she conducted herself in a manner that showed little partiality to her future daughter. All, however, went on till a few days before the marriage; great and splendid were the preparations, and future happiness appeared within their reach. The young people, as usual, were separated for the last two days: one hardly dare glance at the feelings with which they parted, to meet again in the happiest union; love and hope blinding them to all future chances against the completion of their happiness. The evening before the marriage day, Count P.'s mother came to his house, newly prepared for his bride, and said, it had been resolved the marriage should take place on that night, privately, to spare his lovely Rosalie's feelings, as she shrunk from the public solemnity, and that all should be ready, and at an hour she named, he would be called for by the father. Accordingly, every thing was so arranged, and the young man was conducted to church, his carriage following his supposed father-in-law. At the altar, which was dimly lighted, stood his mother and the bride, covered by a very thin silver tissue veil; and the ceremony proceeded. The youth, whose thoughts were fixed on his present happiness, and engrossed by the service, distinguished no one, and received his wife in full confidence. Silent she was, but tranquil; and his mother carried her home: all the *cortège* parted; and he followed to his own house, there to unveil the treasure of his heart. He found the saloon illuminated, and his brother and sister, who on some pretence had been kept absent from the ceremony, seemingly waiting in impatience with his mother beside the bride. The doors closed after him, and his mother withdrew the veil, and discovered to him that his wife was a beautiful idiot, whose large estates she had long coveted, and had taken this most wicked manner of obtaining for her family. The anguish that followed brought him to the gates of death, and the loss of reason had nearly been the price at which she gained the success of a plan, truly diabolical. His sister, a most amiable creature, soothed him, at last, into submission to his hard fate, after finding no means were left to set him free. Of the mother and idiot I say nothing; he never saw either, I believe, from that hour: public hatred followed both, you may suppose, though one only could be called guilty. Rosalie's fate, I believe, has drawn more tears than any event in real life ever did in Naples. Public proof was brought her father, next morning, of the marriage, but, it was added, the bride being veiled, her name was not known. Enraged, as you may conceive, he carried his daughter (in silence) to his villa, and there, I understand, with more of tenderness than might have been expected from his stern character, unfolded what he deemed the treachery of her lover. The death-blow to all her happiness was such, as her most interesting countenance proves, fifteen years cannot efface; and, for a couple of years, life seemed held by a very slender thread. That a young woman should remain unmarried out of a

convent, is a thing unknown; and her vast possessions made her father anxiously desire to see her married, before the fatal truth was made known to her, as the sacredness of sorrow had kept aloof all intruders, and her father resolved she should return to the world under the protection of a husband. How this was brought about, may be accounted for by those who know the state of society here. All she desired, when she found her father's will must be obeyed, was a full explanation of her situation to this Marquis —, whom she married.

Thus, my dear, was this tragedy brought to the most trying scene—the discovery of her lover's innocence, after she herself was another's. The Marquis undertook this; he is a cold character, but to her appeared sincerely attached.

"I have worked my way thus far, my dear daughter, to show you human nature under quite a new light. Rosalie was now only nineteen, when this hardest part of her trial was appointed her: but the effects were quite different from what might have been looked for; the cup of misery appeared to have overflowed, and she received the intelligence as a relief from the bitterness of her former pangs; and, grateful for his faith, she owed it was wisely done to place new duties before her, ere she was acquainted with his share in their mutual misery: this proved a greatness of mind, which she has never deviated from since.

"Once, and only once, they met in private society, and she requested only her father and husband might be witnesses. With such a woman, what must have been the effect upon all present. She clasped him to her heart, and wept in his arms; then turned to her husband, and said to Count P. "To this generous man we owe this indulgence; kneel with me, and swear it is the last intercourse we shall ever have together."

"You may believe this noble woman's example won him to follow her upright views; and, I am told, at no moment of their lives, during those years, has that row ever been broken: in public they meet, but the life of each is exemplary. She fills the station of a wife and mother to perfection, and is rewarded by the respect of her husband, and all her society. There is an elevated character in her sorrows and self-command, that attracts my veneration: and, as to him, I do think one of her most severe and secret pangs must be to read in his faded form, and fine dejected countenance, what he has suffered. To me, all the penance that superstition could invent, or romance ever dictated, falls short of this existence: but in all sorrows being shared, and virtuous, there must be support; and this, truly, she merits and obtains. In England, much feeling would be given to the husband; but, I suppose, there is not in Naples a man who has better reason to think well of his wife, and he chose the lot for himself, when he could not foresee it was to end so well.

"The idiot and mother both live, no one knows where. Count P. married his sister to a Venetian, and devotes his time to her

and her family. Adieu: my blessing ever attend you.

"Yours truly."

There are some odd blunders in the volume—perhaps typographical. A farewell evening in Scotland is called a *joy* (p. 29) instead of *joy*, the origin of which in the French *joie*, *fréside*, (where such entertainments are given) is very obvious; and a young lady (p. 111) writes, that she has all the weighty affairs of the *tenure* of her friend on the eve of marriage to attend to, which we confess we cannot comprehend at all,—that being a Vestal, and not a Nuptial, preparation.

Upon the whole, the gist of these letters, if they have any, is not obvious enough; and though pleasantly written, they are defective in striking materials for general relish.

*America, and other, Poems.* Liverpool and London, 1820. 12mo. pp. 72.

The largest poem in this small volume is a rather pleasing composition, descriptive of the author's feelings while travelling in America. These feelings do honour to his mind; and, as his verse flows easily in the Goldsmith fashion, though not of the Goldsmith stamp, there is nothing to challenge critical animadversion. The picture is very different in colouring from that drawn by Moore: we select a *passage* as a specimen; and, as it relates to the sea voyage across the Atlantic, we may be accused of an inveterate punning as the man who lost a wager by whistling through the *Wood Liddle* on seeing a fellow in the pillory, when he had laid a bet that he would not be guilty of a pun within a given time.

"'Tis a dull life, when, day succeeding day,  
Before us lies, a dark and watery way:  
The spirit sinks in languor when the eye  
Has gas'd for weeks upon the sea and sky,  
And the frail bark that bears us seems a loss  
And trembling object in a world unknown.  
And though, at times, with cooqu'd danger's  
pride,

Our bosoms swell as o'er the waves we ride,  
Watching the gleaming billow, or the sail  
That spreads in silvery whiteness to the gale,  
Still there's a drowsy sameness, and we feel  
Its deep oppression o'er existence steal;  
And the heart leaps, when bursts the cry of  
"LAND!"

Tho' barren rock it prove, or burning sand.  
The following is also a fair example—

And oh! how sick'ning to our hopes, to know  
That all the mind in youth's romantic glow,  
Warm from the talcs of Greece and Rome, be-  
liev'd;

Was but a splendid vision that deceiv'd;  
That man, however call'd, wherever plac'd,  
Still grovelling fingers with an earthward taste,  
And nations, individuals—slaves or free,  
Are but a mass of pride and misery.—  
Nor this the only morning-dream we knew,  
That fades in sadness, or that proves untrue:  
Are love's fond hopes more happy? Ev'n to-  
morrow

Rapture's warm sigh may end in tears of sorrow,  
And hearts, now bright in young affection's  
bosoms,  
So soon be wrapt in coldness or the tomb:

—High are our first aspirations; and we deem  
The heirs of Fame must more than mortal seem,  
The Poet be a demi-god, and rise  
Beyond this grosser frame's infirmities:—  
Then, oh! how ardently we long to soar  
Immortal flights, as they have done before;  
To share a kindred spirit, and to shine  
Like those our admiration holds divine!

—And though experience, with severer eyes,  
May make us wretched ere it make us wise,  
Yet still through life we fondly turn to dwell  
On all the guiltless heart hath lov'd so well.

The conclusion breathes the fervour so generally felt by Englishmen, who have been long absent from their native land, and learnt better how to prize it than those who remain at home.

O, for the hour when I shall press thy shore,  
For me'er, my country! I will leave thee more!  
No yearly pestilence infects thy air!  
No murd'rous Indian yells his war-whoop there!  
But legal pow'r o'er lawless might prevails—  
Wealth crowns thy cities, and content thy sales,  
And, warring with the world, thyself at rest,  
Thy sons are honour'd, and thy daughters blest;

The minor poems are pretty. We reprint two as instances.

#### BALLAD.

When the sky is black above, and the billows  
White below,  
And between the foaming swells we are lab'ring  
to and fro;  
When waves they roar beneath us, and thunders  
roll o'er our head,  
O think ye not, ye Landsmen, it is a scene of  
dread.  
But dreadful tho' it be, it cannot us appal,  
For we trust Affection pours her pray'rs, and  
Mercy hears them all.  
When the ship is on her beams, and the masts  
are all a wreck,  
Or, to 'scape thewhelming surge, we are lash'd  
upon the deck;  
When night is closing fast, and no hope of suc-  
cor near,  
O think ye not, ye Landsmen, it is a scene of  
fear?  
But fearful tho' it be, yet it cannot us appal,  
For we trust Affection pours her pray'rs, and  
Mercy hears them all.

But see the morn approaching, a vessel heaves  
in sight,  
The waves are sinking to a calm, the breezes  
they are light!  
She marks our waving signal, and swiftly bear-  
eth down,  
The red-cross is her flag, and her country is  
our own!  
With pleasure, then, ye Landsmen, our dan-  
gers we recall,  
For we feel Affection pour'd her pray'rs, and  
Mercy hears them all!

#### ELEGIAC STANZAS,

Written on the approach of Winter.

Bare are the boughs where clust'ring foliage grew,  
And loud the chilling winds howl o'er the  
plain;  
The hedge-row shines no more with morning's  
dew,  
But hangs, in gath'ring drops, the heavy rain.  
Another summer of my youth is gone,  
Nor left a trace to say it once was mine:  
In fully spent its golden hours have flown,  
Or idly lost to pleasure's glittering shrine.  
I fondly hop'd to seek the classic page,  
Or woo stern Science in her peaceful call:

—Still madder thoughts each passing day engage,  
And ev'n neglected lies the Muse's shell.

Yet dreamt I once to form some lofty strains  
Might bid my mem'ry live beyond the tomb:—  
But Genus flies from Polly's rapid train,  
And seeks the shadowy glen's inspiring gloom;  
Or, stretch'd upon some mountain's craggy steep,

He views the dark'ning scene that spreads around  
And hears, while bending o'er the foaming deep,  
Unearthly voices swell the tempest's sound:—  
'Tis his to bid the spirit fly from earth,  
And join the seraph-forms of Fancy's sky;  
To give each warmest, wildest feeling birth—  
Love's throbbing pulse, or Pity's melting sigh.

No feeble effort ever gain'd the meed  
That crowns the honour'd sage or gifted bard;  
To sleepless nights the laurel is decreed,  
And but a life can gain the bright reward.  
And what avails the high aspiring mind?  
The wreath of glory binds an aching brow;  
Nor can the breast its promis'd pleasure find,  
Though thousands praise, or realms in homage bow.

O, seek not Fame! The heart to Nature true,  
In moral independence may aspire  
To joys not disappointment can subdue,  
Nor want can lessen, nor indulgence tire.  
As sweetly breathes the charter'd minstrel's strain

When but Affection listens to the lay,  
As when it tones the World's applauding gain,  
And tut-tut! crowds their artless tribute pay.  
Then, O! for some sequester'd depth of shade,  
Some calm retreat to fond attachments dear;  
Where, Nature's grateful worship warmly paid,  
May pass in guiltless ease the changing year

There to green vale or leafy wilderness,  
At dewy morn, my lonely steps be sped,  
Music's sweet voice the social evening bless,  
And night devote me to th' immortal dead.  
In deeds of bounty, or in thoughts that raise  
The struggling spirit to a higher sphere,  
My life be pass'd; and if remote from praise,  
Free from each anxious toil, or guilty fear.

Calm, even as the ocean when at rest  
(And scarce by summer's breath its surface curl'd)  
Beneath the moon's mild beam, its tranquil breast  
Reflects the image of a brighter world.

The author mentions, in a preface, that his life is of an active kind; and he is, we are informed, a Liverpool merchant. Such relaxations as these must tend greatly to refine and elevate, as well as to relieve and charm the hurry of busy pursuits.

#### KENSINGTON.

*History and Antiquities of Kensington, interspersed with Biographical Anecdotes, &c. &c.* By Thomas Faulkner, Author of the *Historical Accounts of Chelsea and Fulham*. London, 1820. 8vo. pp. 624.

There is an amusing gossip character in these parochial histories, which renders them very agreeable reading; and, especially to persons resident within the bounds, they are interesting and curious. Mr. Faulkner's

preceding works on Chelsea and Fulham, have blazoned his name as a very diligent and pleasing writer in this way, and the present publication is of a character equally amusing. There are, to be sure, many episodes, which might be introduced into any other parish survey whatever; and perhaps one fourth of the volume might be lopped away without injustice to Kensington. Still however the compilation is consistent, and the original matter various. Such productions offer little for detailed remark. There is a good account of Holland House, and antiquities and the arts generally have their fair share of consideration.

In the *Domesday Book*, Kensington is written *Cheneseton*: in a Charter of Henry I. *Chensetuna*, and at subsequent periods, *Kensitune*, *Kinsintuna*, *Kensintuna*, and *Kensitune*. *Cheneset* was a proper name: a person so called held the manor of Huish, Somersetshire, in the reign of Edward the Confessor; so that perhaps this place may have been originally *Cheneset Tun*, or the *Town of Cheneset*.

In the Hall of Holland House is the model of Westminster's statue of Charles Fox, on the north side of Bloomsbury Square: upon which Lord John Russell has inscribed the following elegantly complimentary lines. Search History's page, there, reader! you will find

The best memorial of a Fox's mind:  
Behold the form—the sculptor's graphic art  
Has here preserved his weaker mortal part;  
Yet ask you still the charms which all subdued;  
Go walk up stairs, and see that charm renew'd.

Among the Virtuoso possessions of the nobleman thus handsomely eulogized, Mr. Faulkner mentions—

"Specimens of all the types in the Vatican Library, printed in the Propaganda press, A. D. 1640, on silk.

"The music of the 'Olimpiade,' an opera of Metastasio, well authenticated to have been transcribed by J. J. Rousseau, when that extraordinary man procured his livelihood by copies of this kind. The hand writing is so beautiful that it resembles copperplate engraving.

"Four volumes of MS. Plays of Lope de Vega, the first containing three plays in his own hand writing, with the original license of the censor."

Three original letters of Petrarch are also in Lord Holland's library.

A Major Codd, residing in Purson's Yard, Kensington, is spoken of as the possessor of a fine private collection of pictures, including the great masters Domenichino, Albano, A. Veronese, Schidone, Caravaggio, Correggio, M. Angel, and Raffael. The three last-mentioned are, a *Leda and Nymphs*; the *Fall of the Titans*, 15 in. by 9; and *St. Peter and St. John*, 14 in. by 11. A list of Lord Ennismore's select and superb collection, at his house in the Gore, is given. It is rich in Venetian and Flemish, as well as British masters. The pictures in Kensington Palace are also catalogued—several of them are in the Exhibition now open at the British Gallery.

As a further example of the very miscel-

laneous nature of the volume, we extract a few passages. Sir Isaac Newton, it is well known, died in Kensington: the particulars of this event are thus related from the MSS. of his nephew, Mr. Conduit.

"Sir Isaac Newton was never married. He was in his person of middle stature, latterly inclined to corpulency. His eyes were lively and piercing, and his aspect gracious. In his diet he was temperate and abstemious, but observed no particular regimen and he enjoyed uninterrupted health until within five years of his death, when he became afflicted with the stone.

"In January 1725, he was attacked by a violent cough and inflammation of the lungs, when he was persuaded to take a house in Orbell's Buildings, Kensington, where he had, in his eighty-fourth year, a fit of the gout: after which he was visibly better than he had been for some years, receiving great benefit from the air and quiet of the place."

"In the latter end of February, 1726-7, his attendance on the Royal Society, and the fatigue he incurred in making some visits in London, brought his old complaint of the stone, violently upon him, and Dr. Mead, and Cr. Cheelden, being called in, gave up hopes of his recovery. He continued to suffer frequent and violent fits of pain, with very short intermissions, without complaint, or shewing the least signs of peevishness or impatience. On Saturday morning, the 18th of March, he read the newspaper, and held a long discourse with Dr. Mead, and had all his senses perfect, but that evening at six, and the following day, he was insensible, and died on Monday the 20th March, between one and two o'clock in the morning."

From the sublime to the ridiculous is but a step.—At Campden House

"A remarkable caper tree in the garden, mentioned by Mr. Lysons, was standing till the winter of 1799. It had endured the open air of this climate, for more than a century. Miller speaks of it in the first edition of his dictionary. It was sheltered from the north, having a south-east aspect, and though not within the reach of any artificial heat, it produced fruit every year." • •

"In the year 1804 a duel took place in the meadows situated to the west of Holland House. Upon the spot where Lord Camelford fell, an antique Roman altar has been erected by Lord Holland. On the base, which is modern, is engraven the following inscription, in allusion to the fatal transaction:—

• • "I was on Sunday night, the 7th of March, 1724-5, at Kensington, with Sir Isaac Newton, in his lodgings, just after he was come out of a fit of the gout, which he had had in both his feet, for the first time, in the eighty-third year of his age, he was better after it, and had his health clearer, and memory stronger than I had known him then for some years."

April 15th, 1726.

"I passed the whole day with Sir Isaac alone, at his lodgings, Orbell's Buildings, Kensington, which was the last time I saw him. He told me then that he was born on Christmas Day, 1642.

HOC  
DIS. MAN. VOTO  
DISCORDIAM  
DEPRECAMUR.

"The horse on which Mr. Best rode to the place of hostile meeting, had been won by that *good shot* from his Lordship, in a contest at a mark with pistols; thus verifying the classic adage, *ἡ δόξα ἔσθ' ἂν ἀνδρὶν ἀνδρῶν* in allusion to the belt of Ajax and the sword of Hector."

"Opposite to St. George's Hospital at Hyde Park corner, stood a large fort, with four bastions, which formed one of the many flung up in the year 1642. It is incredible with what speed the citizens threw a rampart of earth all round the city and suburbs of London, strengthened with batteries and redoubts at proper intervals. This was occasioned by the alarm of an attack from the royal army. Men, women, and children, assisted by thousands. The active part which the fair sex took in the work, is admirably described by the luminate author of Hudibras, who (says he),

\* March'd rank and file, with drum and ensign,  
To trench the city for defence in;  
Rain'd rampiers with their own soft hands,  
To put the enemy to stands:  
From ladies down to oyster wenches,  
Labour'd like pioneers in trenches,  
Fell'n to their pick axes and tools,  
And help'd the men to dig like moles."

"Another similar rampart stood upon the site of the present Mount Street, and from which it took its name.

"*Moderate Intelligence*, 26 April to 3d May, 1654.—Hyde Park, May 1. This day there was the hurling of a great ball, by fifty Cornish gentlemen on the one side, and fifty on the other: one party played in red caps and the other in white. There was present, his Highness the Lord Protector, many of his Privy Council, and divers eminent gentlemen, to whose view was presented great agility of body, and most neat and exquisite wrestling, at every meeting of one with the other, which was ordered with such dexterity, that it was to show more the strength, vigour, and nimbleness of their bodies, than to endanger their persons. The ball they played withal, was silver, and designed for that party which did win the goal.

"*Several proceedings of State affairs*, 27th April to 4th May, 1654.

"Monday, 1st May, 1654.—This day was more observed by peoples going a maying, than for divers years past, and indeed much sin committed by wicked meetings with fiddlers, drunkenness, ribaldry, and the like; great resort came to Hyde Park, many hundreds of rich coaches and gallants in attire, but most shameful powdered hair men, and painted and spotted women, some men played with a silver ball, and some took other recreation.

"But his Highness the Lord Protector went not thither, nor any of the Lords of the Council, but were busied about the great affairs of the Commonwealth, and among other things had under consultation how to advance trade for the good of the people with all speed that might be, and

other great affairs for the good of the Commonwealth."

It is in this manner that Mr. Faulkner conducts us over the parish of Kensington; and we are sure that our readers, at least in that charming vicinity of the metropolis, will be much gratified with the perusal of his researches.

### *The Percy Anecdotes. Part IX. Justice.* London, 1820.

This is the continuation of the little publication which we have before noticed favourably, as a neat and pleasing collection of anecdotes and remark. The former are well chosen, and the latter generally unobjectionable. It might perhaps add to the interest, were the works quoted whence they are derived; but perhaps the editors would lose their claim to originality by that course. We transcribe a page or two as exemplary of the present Number, which has for its frontispiece a well-engraved portrait of Lord Eldon.

"*Clameur de Haro*.—In the time of Rollo of Normandy, a custom prevailed in that country, that in all cases of invasion of property, or personal violence, requiring immediate remedy, the party aggrieved called aloud on the name of the duke three several times, and the aggressor was instantly, at his peril, to forbear attempting any thing farther. The words of this invocation form a phrase still common in Jersey. *Ha Ro à l'aide, mon prince! Aa, or Ha*, is the exclamation of a person suffering; *Ro*, is the Duke Rollo's name abbreviated. Such is that famous *Clameur de Haro*, which subsisted in practice long after Rollo was no more, and is so much praised by all who have written on the Norman laws.

"A memorable example of the power of this severity was exhibited about one hundred and seventy years after Rollo's death, at the funeral of William the Conqueror.

"It seems that in order to build the great abbey of St. Stephen at Caen, where he desired to be interred after his decease, the conqueror had caused several houses to be pulled down to enlarge the area, and among them one whose owner had received no satisfaction for his loss. The son of this person (others say the person himself), observing the grave of William to be dug on that very spot of ground which had been the site of his father's house, went boldly into the midst of the funeral assemblage, and forbade them, in the name of Rollo, to bury the body there.

"Paulus (Emilius, who relates the story, says that he addressed himself to the company in these words:—

"He who oppressed kingdoms by his arms, has been my oppressor also, and has kept me under a continual fear of death. Since I have outlived him who injured me, I mean not to acquit him now he is dead. The ground wherein you are going to lay this man is mine; and I affirm, that none may in justice, bury their dead in ground which belongs to another. If, after he is gone, force and violence are still used to detain my right

from me, I appeal to Rollo, the founder and father of our nation, who though dead, lives in his laws. I take refuge in those laws, owning no authority above them."

"This bold speech, uttered in presence of the departed king's own son, Prince Henry, afterwards King Henry I. wrought its effect; the *Ha—Ro* was respected; the man had compensation made him for his wrongs, and all opposition ceasing, the dead king was laid in his grave.

"In the life of William the conqueror, in the Harleian collection, the incident is thus related:—

"When the bishop had finished his sermon, one Anselm Fitz-Arthur stood up among the multitude, and with a high voice said, 'This ground whereupon we stand, was some time the floor of my father's house, which that man, of whom you have spoken, when he was Duke of Normandy, took violently from my father, and afterwards founded thereon this religious building. This injustice he did not by ignorance or oversight, nor by any necessity of state; but to content his own covetous desire: now therefore I do challenge this ground as my right; and do here charge you, as you will answer it before the fearful face of Almighty God, that the body of the spoiler be not covered with the earth of my inheritance.'

"When the bishops and noblemen that were present heard this, and understood by the testimony of many that it was true, they agreed to give him three pounds presently for the ground that was broken for the place of burial; and for the residue which was claimed, they undertook he should be fully satisfied. This promise was performed in a short time after by Henry, the king's son, who only (of his sons) was present at the funeral; at whose appointment Fitz-Arthur received for the price of the same ground, one hundred pounds."

"*Corrupt Influence*.—The practice of privately influencing judges concerning causes before them, prevailed even in remote times of supposed simplicity. Hesiod, who had a troublesome law-suit with his brother Perses, inveighs strongly against it; he calls the Boeotian judges, *deceivers of presents*.

"In England it was the established usage, to pay fines for delaying proceedings, even affecting the defendant's life; at other times they were paid to expedite process, and to obtain right; and in some cases the parties litigant, offered part of what they might recover, to the crown, as a bribe for its favour. Madox mentions many instances of fines for 'the king's favour,' and particularly of the Dean of London's paying twenty marks to the king, that he might assist him against the bishop in a law-suit.

"The county of Norfolk (always represented as a litigious county, in so much, that the number of attorneys allowed to practice in it, was limited by a statute of Henry VI., to eight) paid an annual composition at the exchequer, that it might be fairly dealt with.

"Daniel asserts, that the influence of Alice Pierce was so great, that she used to sit on the bench with the judges in Westminster

Hall, when she interested herself in a cause. She was forbidden by a writ from Edward III. from interfering, under pain of banishment.

Charles II. in appeals to the House of Lords, used to go about whilst the cause was hearing, and solicit particular lords for appeal or respondent. The practice had indeed increased to a most shameful extent, just previous to the revolution; and all historians agree, that nothing gave deeper sensations of disgust, than the corrupt decisions which by such means were procured from the base and timid men who filled the seat of judgment.

"Whitelocke in his memoirs, p. 13, says, 'My father did often and highly complain against this way of sending to the judges for their opinions before hand; and said, that if Bishop Laude went on in this way he would kindle a flame in the nation. How truly he predicted need not be told.

"Dr. Donne, in his fifth satire, has the following witty allusion to the practice:—

'Judges are Gods; and he who made them so,  
Neanst not men should be forced to them to go  
By means of angels.'

"The satirist here plays on the double sense of the word 'angels,' signifying both a coin and a messenger.

"In Scotland so shamelessly did they go about the work of corruption of old, that there is actually extant an order of the Court of Session, or Act of Sederunt, as they call it, which appoints the particular hours of the day at which the judges may be solicited at their own houses!

"Amidst the systematic corruption which we find prevailed before the revolution, some solitary instances of an opposite character are however to be met with, which would have done honour to the purest periods of our judicial history.

"A nobleman of the first distinction went once to the chamber of Sir Matthew Hale, when Chief Baron of the Exchequer, and told him, 'that having a suit in law to be tried before him, he had come to acquaint his lordship with it, that he might the better understand the matter when it should come into court.' Hale immediately interrupted him, and said, he did not deal fairly to come to his chamber about such affairs, for he never received information of any causes but in open court, where both parties were to be heard alike. The nobleman went away not a little dissatisfied, and complained to the king (Charles II) of Judge Hale's conduct, as a rudeness that was not to be endured. His majesty desired him to be content that he had been used no worse, adding, 'that he verily believed the baron would have used himself no better, had he gone to solicit him privately in any one of his own causes.'

"*Pocotia*.—When Lord Mansfield one day took his seat as Lord Chief Justice of England, a man was brought into court to receive judgment for an assault, of which he had been convicted. He wore remarkably large whiskers, and was known to be very proud of them. His affidavit stated that he was unable to pay any pecuniary fine, and the court was unwilling to imprison him. On

this being intimated to Mr. Dunning, the counsel for the prosecution, he instantly replied, 'Then if it please your lordship, we will consent to mulct him of his mustachoes, and humbly pray your lordship that he may be shaved.'

"A highwayman, named Bolland, confined in Newgate, sent for a solicitor to know how he could defer his trial; and was answered 'by getting an apothecary to make affidavit of his illness.' This was accordingly done in the following manner: 'The deponent verily believes, that if the said James Bolland is obliged to take his trial at the ensuing sessions, he will be in imminent danger of his life.' To which the learned judge on the bench answered, 'That he verily believed so too!' The trial was ordered to proceed immediately."

*Italy and its Inhabitants; an Account of a Tour in that Country, in 1816, 1817, &c. By James Aug. Galiffe, of Geneva. London, 1820. 8vo. 2 vols.*

This work needs no apology for being written in English by a foreigner: we wish the style of all our native travellers, and authors, were as good. But Mr. Galiffe possesses higher recommendations. He thinks for himself; and even in descanting upon familiar subjects, his observations are intelligent and valuable. He certainly does not flatter our national character or prejudices; but we do not like him the worse on that account. Thank heaven, John Bull has a sufficiently high opinion of himself, not to care a curse what a Genevese may say or think of him. Nevertheless, there may be some truth in the remarks of Mr. Galiffe; and we advise the less dogmatical of our countrymen rather to reflect on the allegations, than express their contempt for the accuser. For ourselves we shall say, that we think the conclusion of the first volume unjust in its strictures; but on other points, such as presumption, impertinence, &c., we are not so sure that the author is wrong. Towards the Germans he is hardly more placid; and the French he dislikes. Switzerland and Italy, are the countries which he regards with admiration; the former having the honour of his birth, the latter the benefit of his opinions in unison with those of the liberal party. At the same time, he hates Buonaparte, and oppression; the Austrians at Venice; the settlement of Europe at the late peace, and Partition and Tyranny every where.

Such is the general character of the writer; and we confess that his sentiments acquire greater weight with us,

from the idea he has given us of his impartiality. When we dissent from him, it is rather that we distrust his judgment than doubt his fairness; and, making due allowances for the different optics with which persons of different countries and habits look at objects, we cannot say that we are very often at issue with this clever and entertaining writer.

These few preliminaries are thrown out, because Mr. Galiffe is more reflective than any tourist in Italy whom we have lately read; and we thought it right to make our readers a little acquainted with him, before we began our customary course of making him his own exhibitor. We commence with the very entrance into the theatre of his travels. He says, at page 13—

"It is time that I should say something of the famous road over the *Simplon*; though, indeed, so much has already been said respecting it, that I might perhaps be excused for passing it over in silence; the rather as I unfortunately do not participate in the extraordinary enthusiasm, which the very mention of it generally excites. I have met with numbers of sensible men who could not speak of this work of Buonaparte but in terms of the most extravagant admiration. And I have even found persons who had not seen the work, ready to quarrel with any one who could suppose that there was any undertaking in the world to be compared with it. It is, I am sorry to say, almost exclusively amongst the English that I have met with these enthusiastic admirers of every thing which is in any way connected with the name of that tyrant, to whose overthrow they have so mainly contributed. I really believe that many of them imagine that they are thus exhibiting only a generous liberality; but to me it appears the most unaccountable of all foibles. To raise a humbled but generous foe, is, indeed, a noble act; but to profess extravagant admiration for a cruel despot, the avowed enemy of freedom and of every liberal sentiment, is unworthy of the inhabitants of a free country.

"If the road over the *Simplon* were the first work of the kind ever thought of, one might, though detesting the character, admire the genius, of the man who had designed and accomplished it. But there existed previously many other roads of the same description, some of them much more admirable, when considered with reference to the great disparity of the means with which they were accomplished,—a circumstance which ought never to be lost sight of. Buonaparte ordered some hundreds of his slaves to cut a road over the *Simplon*, similar to those which existed in several other parts of the Alps and Apennines. It cost him, perhaps, sixty or eighty of his men, who were crushed by the falling of some of the galleries, or blown into the air by the blasting of the rocks. What was that to him—who, according to his own account, had a disposable

annual income of 120 or 150,000 livres? It cost him besides, a few millions of francs; but who believes that either he, or any of his creatures, deprive their tables of a single morsel of bread towards its completion? Besides, what was pecuniary expense to one who disposed, at his pleasure, of almost all the public and private treasures of Europe? Never can I profane my admiration, by bestowing it on the works of mere *despotic will*, acting upon the persons and fortunes of so many millions of men! Never can I bring myself to admire what I hate; and most cordially do I hate unlimited power. He who possesses it by the chance of birth, may often set little value upon it—may sometimes even take pleasure in fixing limits to its exercise; and in that case, (as Madame de Staël very justly observed, in speaking of the present Emperor of Russia,) his personal character becomes a Constitution for his subjects. But he who seizes it in opposition to every right, and without any other title than that of brutal force, will inevitably be a tyrant."

There is much good sense and rational truth in these remarks: the following is a more amusing illustration.

"*Monsieur de Chateaucœur*, in his *Letters on Italy*, hints at one of Buonaparte's chief objects in multiplying the means of communication between the different parts of Europe, namely, that of annihilating the boundaries which nature (or, to speak more religiously, which God) had interposed between them. This puts me in mind of a strange German novel, called '*Baron Fleming, Junior*;' the hero of which wisely resolves to restore the human race to what he considered its primitive beauty, by preventing from marrying, every man or woman on his estates who had not faxen hair and an aquiline nose; a whim which causes in the end the most dreadful disorders. The attempt to force all the nations of the earth under one yoke, and to blend them into one uniform race of slaves, is not much more absurd than the scheme for extirpating brown eyes and black hair from the future generations of a German barony. But what would be merely ridiculous in a country gentleman, is atrocious and intolerable in a sovereign despot."

Como and its concerns, at present so vitally interesting to us, occupy some of the author's attention; and we should be inexcusable were we to pass over his statements, however slight, for they are those of a neutral.

"The town of Como itself is not remarkable for its beauty; but, had it been as magnificent as Peterburgh, we could not have enjoyed it, besieged as we were at every step by crowds of beggars, whose numbers every donation seemed to double, and who hardly left us room either to move or to breathe."

"The next morning, Tuesday, the 8th of October, we disembarrassed ourselves of this plague, by embarking on the lake in a boat with four pair of oars. One of our boat-men took great pains to entertain us during the voyage with anecdotes and standing jests against Germans, country parsons,

and the Princess of Wales. But we paid little attention to him, being rapt in admiration of the scenery round us. Nothing can be more enchanting at first sight, than the panoramic view from the lake at a little distance from the shore. It is surrounded with hills covered with woods, villages, and palaces; the green of nature being here, as on other landscapes on this side the Alps, beautifully spangled with the silvery whiteness of the dwellings of man."

"The palace of the Princess of Wales lies on the shore opposite to Como, and has a grand appearance at a distance; but it is far from being a desirable habitation. The heat in summer, the frost in winter, and the mountain torrents in spring and autumn, make it, by turns, as disagreeable a residence as a palace can be. Her Royal Highness seldom spends there more than two or three days at a time, though she has laid out immense sums in roads, as well as in repairs and alterations of the palace. As we were told that no Englishmen were admitted, and as N——'s curiosity was not powerful enough to induce him to disguise, even for a few minutes, a circumstance on which he particularly prided himself, we did not attempt to land in the face of Her Royal Highness's Hungarian guards; but kept near the eastern shore of the lake which offers the greatest number of interesting places to visit."

"The first villa on the eastern side is that of the *Marchese di Cornaggio*; who has erected a small pyramid in his garden, as a monument to the memory of a faithful dog, by whose courage his life was saved in an encounter with robbers."

Mr. Galiffe draws a vivid portrait of the Milanese: it is worth studying, and as matters now stand, must be productive (we suppose) of changes. "When I speak (he says) of the Milanese, or of any other nation on this side the Alps, I wish to be understood as speaking of the general mass of inhabitants forming the medium between the highest and the lowest classes. I exclude from my judgment both these extremes, because they are very nearly alike throughout Italy; the former sensible, well-informed, acute and quick in thought; but selfish and distrustful; and for that reason slow in action, and incapable of either rash or noble deeds. The people of the lowest classes are individually good, collectively bad; they are both better and worse than in any other country; and they are more easily either led astray, or reclaimed, because they are open to a much greater variety of impressions than persons of their station in any other part of Europe. They may be driven momentarily to any excess, because their extreme poverty, and the love of pleasure, expose them to the most violent temptations: but they are incapable of persevering in mischief, because the same love of sensual pleasure softens and restrains the ruder and more violent impulses of their natural disposition. By the highest class I do not mean the whole body of Nobility, but only those amongst them whose great riches, rank, and connections, give them a powerful and extensive in-

fluence over large portions of the community. This class did not behave as it ought to have done, in the last revolutions. It ought to have stepped forth, and asserted its country's right to independence; and it would probably have succeeded; for the Lombards are susceptible of the highest degree of enthusiasm for great and noble objects. It may, however, be said on the other hand, that such efforts, if unsuccessful, do more harm than that cautious forbearance which temporizes with evil. And, after all, there is no law of prescription for nations. The people, who have borne a foreign yoke for centuries, still retain the same right to independence and to liberty, as these who have been only recently deprived of these blessings. The gifts of God are not to be alienated; and those who hold that any set of men are competent to sell the liberties of their posterity, are, in my opinion, as little deserving of the name of Christians, as of rational beings. A time, I hope, will come, when neither French nor German invaders will dare to consider as lawful prey, a nation so far superior to either of them, in every thing but military strength. But if this is not to be,—if the Lombards must have a foreign master, then undoubtedly a German Prince is better suited to them than a French one; though, for the moment, he be less agreeable to them. The French were abhorred, and would at last, I have reason to believe, have been massacred; but the Austrians are now even more disliked than the French were. The former by their military successes, inspired a certain degree of respect in a people but too susceptible of admiration for vain splendour: the latter by their heavy, ungraceful appearance, their coarse language, and unpolished manners, disgust the most elegant nation on earth;—a nation which, naturally enough, however indefensibly, is too lightly attracted by those exterior charms which itself so eminently possesses, and is inclined to despise the people in whom those attractions are wanting. But these are the very circumstances which ought to make the Lombards prefer the Germans to the French."

"The minds of the Milanese youth have indeed been tainted, like those of all the other subjects of Buonaparte, with the atrocious principles which he strove to inculcate. Every conceivable form of deception and fascination,—the dazzling promises of imaginary glory, the tempting promises of military or pecuniary rewards, the grossest historical lies, and above all, the sweet illusion of national independence,—were employed to mislead and corrupt them. But that noble candour which laid them open to error, is, in the end, its surest antidote. The Austrian government seems aware of this, and displays a moderation and mildness which are very creditable to its liberality. The most imprudent speeches are daily uttered and reported, without occasioning the least persecution; and young men who loudly profess unalterable attachment to their late Chief, are as kindly encouraged to take service under the present dynasty, as if the fullest reliance could be placed on

their loyalty. This conduct is judicious; and it would probably produce the wished-for effect, if it were associated with some few circumstances, of little importance in appearance, but of great weight in reality. The civil and military officers sent to Milan from Austria, ought to have been selected from amongst the most elegant and polished Germans. They ought to have been sent with a young, and generous, and gallant prince (if there be such an one in the house of Austria); and a brilliant Court ought to have been established here, to occupy, enrich, and amuse the different classes of the inhabitants. Had this been done, the success would hardly have been doubtful.

"Still better would it be if the Emperor of Austria were to become sensible of the necessity of separating his Italian from his German possessions, and of making the former the exclusive inheritance of one branch of his family: in which case, although the young Sovereign and his companions might at first dispense, as Germans,—their children would be Italians; and no appearance of a foreign yoke would gail the succeeding generation.

"But there is little hope of the adoption of either of these alternatives: and it seems as if Providence had other views for this beautiful country, than to let it vegetate under a master who so little appreciates its worth."

(To be continued.)

#### NEW RUSSIA.

The Marquis of Castelnar, who has passed his long exile in the Crimea, has just published an Essay on the ancient and modern History of New Russia.

He has employed twenty-four chapters on the History of New Russia, from the time of the Argonauts, who landed on the banks of the Ister (Danube), till the conquest of these coasts by Mahomet II. The colony of the Heracleons (Cherson) engages for a long time the attention of the reader. The name of this republic is connected with a multitude of great events.

Genoa and Venice, both eager after riches, contended for the tribute of the Black Sea. The intervention of the common enemy, the Tartars, is invited in this quarrel; the two powers exhaust themselves by the battles which they fight with each other: Tana is subdued by the arms of the Crescent, and Caffa purchases, by a disgraceful submission, an existence which it loses in a few years by the caprice of the sultan.

The taking of this city presents us with one of the most flagrant instances of Muscovite barbarism; 40,000 Genoese are sent to Constantinople to people a desert quarter; all the slaves fall to the share of the Grand Signor; the natives of the country are forced to ransom themselves, and 1500 male children, torn from the arms of their parents, are sent to swell the number of the victims of the seraglio. The most considerable houses, the palaces, the temples, are razed. Eight days after the taking of the city, Achmet gives a grand entertainment to

all the principal Armenians who had betrayed the country. When they take leave, he makes them descend a very narrow staircase, at the bottom of which the executioner, with his lifted axe, stands ready to cut off their heads!

The author lays before his readers the history of Tauris, become a Turkish province, and governed by the long succession of *Gherai*, the wretched sport of the intrigues of the seraglio; sometimes the executioners, and plunderers of their own subjects, sometimes engaged in mad wars, without faith in treaties, often without courage in battle. We shall acquire some idea of these descendants of Gengis Khan from the following portrait of one of those Tartar Princes. "He is said to have had a studious countenance, in which might be read the atrocity of his soul: flattery was the delight of the Khan: his courtiers were obliged to repeat to him incessantly that he was an incomparable man; that his power was without bounds; that his stature was noble, and his manly beauty superior to that of Mars: assuming a haughty countenance, and affecting an heroic gait, adding to the roughness of his features distortions of the muscles which rendered him frightful, he would ask, in a voice like thunder, whether Mars could inspire more terror; then rolling around his eyes, furious and wild like those of the tiger, he brandished his sword over the bowed heads of his courtiers, who applauded his dexterity so long as he touched none of them. This exercise was succeeded by serious occupations: he assembled his confidants, and deliberated with them on the means of deceiving his allies." Such was the character of the princes who governed Tauris.

#### ABYSSINIA.

(Concluded from our last.)

The following are further curious particulars, and related with the characteristic minutæ of our authority, Pearn.

"There are twelve *Lichouants* in Gondar, who officiate in the office of the Coptic Abbot, or the Egyptian bishop; these lichoants are twelve learned men who go by that name; they are not priests, and although the heads of all capital churches are authorized by them, in time of an Abbot they are under him. They keep the time, and indeed every thing is regulated by them. Their year begins from the day St. John was beheaded, which is the 1st of September with them, with us the 29th of August. Their year is divided into four quarters; the first quarter is called *Matthew*, the second *Mark*, the third *Luke*, the fourth *John*. They have also other names for those four seasons, which are *Zerry*, *Currunpi*, *Cowie*, *Aggie*;—as *Spring*, *Summer*, *Autumn*, *Winter*. Every month has thirty days, which at the end of every year leaves five spare days, which they call *Pogemy*: these spare days are from the last day of August to the 1st of September; and as they name their years the same as their quarters, after the last day of the year of *Luke* begins *leap-year*, which gives six days *Pogemy*; and although the

spare days are after *Luke*, and before *John*, *John* is called the *Leap-year*."

"All the chiefs and rulers in Abyssinia are subject to making false oaths, as well as the lower class. If any one wants to defraud or cheat a person he may have dealings with, by false witnesses, he may for a very small trifle purchase a witness that will swear any oath put to him. All capital oaths are taken in the church on Sundays and other holidays, where three priests stand in the middle of the church, before the altar; the middle one holds a large cross in his right hand and a lighted candle in the left; and the person who is to swear stands before him; and on being told by the other two in what manner he is to swear, he takes hold of the priest's right hand, which holds the cross, with his right hand, and by the left, he takes hold of the lighted candle, and with a loud voice says,—'If I would I now swear to be not true, may God blow away my soul from me, as I blow away the fire from this candle!' which he immediately blows out."

These pledges they regard as much as sham bail do their affidavits in our Common Pleas! Indeed, they seem to have hardly any sense of moral obligation. A capital oath frees a man from a charge supported by a thousand witnesses. For theft, or even for murder, "if you complain to the king, *ras*, or any other chief of the place you belong to, that you have been robbed, or have a brother or relation murdered, and tell him every particular, the only answer he returns is, Bring the offender to me, and I will give you satisfaction. So those who commit crimes in general escape, through their having no justices, no settled laws, and no constables. I know one or two who committed murder in Tegdi, and came to Indeter, where they are safe; and at the same time all under one chief, and all servants under one master. All murderers who are caught before they have time to escape to another province are brought before the chief, who sentences them death for death. The friends of the person murdered take the offender chained to the market-place, where all the relations of the deceased stab him in their turns with their knives or spears, and leave his corpse for his own relations to bury. If he has no one to bury him, the hyenas do not leave his corpse undevoured half an hour after sun-set. There are several murders forgiven by the parents or the relations of the deceased, in consequence of receiving money or cattle from the friends of the murderer; and two hundred cows will in general save the life of a murderer, excepting the friends of the deceased be very rich, and seek revenge sooner than property." • •

"In September is their greatest holiday, *Holy Cross*, when the king or *ras* reviews all his chiefs with their troops. Those chiefs are all dressed in splendid dresses; some have ornaments for their heads; and some, who are allowed by the king, wear a silver horn on their forehead, a mark of honour. No one is allowed to wear what they call a *betor*, which is a gold and silver ornament on the right arm, excepting he has killed an enemy

in the presence of the king or his commander; but all other ornaments are worn by those who choose, or can afford them. The king or ras has an elevated place built up with mud and stone like a stage, in the front of the *ashwar*, or court where the review is. This stage is covered with Persian carpets, silk pillows, and other valuable articles: in the middle is a cradle neatly covered, upon which the king or ras sits, with all his household servants standing round him. The troops then come in galloping helter-skelter round the *ashwar*, and riding for some time in a mad way, hallooing and making a great noise. They afterwards come one by one in their turns, at full gallop, to the foot of the raised place where the king is seated, and turn their horses round and round, shaking their heads and spears as if they were mad; boasting of themselves in such a manner as to make any stranger believe they were mad. I write the following only to show in what nonsensical manner the greatest noblemen in Abyssinia boast of themselves before the king: *And wond allier; and ambesser; and eart; ber igre and nebre; and negodar; coulou ferry li; and ferry mer dar net; Shangarier guddi; Garler guddi, &c.* I am man's master; I am a lion; I am fire; on foot I am a leopard; I am thunder; all fear me; I am the physic for fear; I have killed Shangariers; killed Garlers,—and a deal of other nonsense. All who have killed an enemy throughout the year have his pudenda hung to their right arm, which, after ending their speech, they throw down at the king's feet. This review lasts three days; after which every one knows his destiny, whether he is to remain governor of his districts, or whether another is to take his office. All preferment, breaking, making, and changing in the government is done at this time."

A young Abyssinian is quite unhappy and little honourable till he kills his man; and as war does not always afford him opportunities, he goes quietly into the country of the Garlers (guided, indeed, by one of the natives whom he bribes to do him that service), and kills any stray wretch he meets with, retaining home in inglorious triumph with the brutal proof of his murder hanging on his arm.

The Pagan Garlers, i. e. the inhabitants of Assow, Carrar, and High-yeer, are a brave people, and faithful to their word. They entertain much veneration for all great trees and waters, elect their kings for seven years, and drink the warm blood of the animals they kill as a luxury, though they will not eat the flesh raw like the Christian Abyssinians.

"The Arshengy and Dover Garler are Mussulmans: they make very handsome brass chains, which all Garlers wear about their necks; they also bring them to the Christian markets for sale: the Christians buy them for their horses' and mules' ornaments. They also bring a great many zebras' manes, which the Christians put about their horses' necks when saddled."

In the more civilized parts of Abyssinia, salt is the small money of traffic. This currency is

brought from Teltal, cut into pieces about ten inches in length and three in width, of a long square form. From thirty to thirty-five pieces go to the dollar in Indert; but the farther it is carried into the country, it passes for more. In Gondar, ten or twelve pieces are of the value of a dollar. The gold brought from Shangarier, of the size of a pin's head to a cloa, is exchanged for salt, knives, spears, cloth, &c. and is very pure, till adulterated with silver by the silversmiths of Abyssinia. This precious metal is valued according to their weights, which are the quarry, dream, vocate, and nattle, or pound. Ten quarries make a dream, ten dreams a vocate, and twelve vocates a nattle. There are no measures of length but the *gudger*, which is from the elbow to the point of the middle finger. Gunpowder is manufactured of better quality than in Arabia.

The Abyssinians are very polite. "No one ever passes his equals or betters without uncovering his breast, and bowing with his head, which they return in the same manner."

Our author tells a queer story of a remarkable disorder and its cure; but as this impeaches his sagacity, if not his veracity, we pass over his account of his wife's sickness and the remedy: and conclude with his conclusion.

"Ras Walder Serlassey is the strongest prince in Abyssinia, and has of his own eight thousand five hundred matchlocks, besides a great quantity belonging to his chiefs, about two thousand horses, and above twenty thousand shields-men; still he is as mean as a common Jew, and a great liar: though one thing is to his credit, he is very merciful to prisoners, &c. and he is a brave hard fighter. Ras Gabri is free, but barbarous to those he dislikes: he has about seven hundred muskets, and but few horse, though his country is the hardest in Abyssinia to conquer, through the strong mountains it contains, that are cultivated on the tops, and have water. It also commands all passes from the Amharrer to Tegri. Guxar is not barbarous, though he is of a Garler descent. He has eight thousand horse, but few muskets. Ras Ilow is not very strong, though his country produces brave soldiers: he is an ally constant to Walder Serlassey. Libban is barbarous and revengeful; he has about ten thousand horse, though Guxar beat him in two battles. Goge is uncommonly barbarous, and friendly with no one, but always at war; and indeed all except Ras Walder Serlassey fear him. Those are the great princes of Abyssinia, who have the whole country in their hands. The king Itsa Guarri, now in Gondar, has no sway at all, is very poor, and has nothing more than the name of a king.

*The Residences of the Kings now alive.*

Itsa Takeley Gorges	Arume.
Itsa Yoas	Begunder.
Itsa Yonas	Gogam.
Itsa Bedemarian	Seamon.
Itsa Guarri	Gondar."

We have been so much interested with this account, that we trust we have rather amused than tired our readers with the ex-

tent to which we have prolonged our notice; especially as the original has appeared in a work \* not likely to get into popular circulation, however high its claims are to the attention of the learned and philosophical.

CHELTONHAM WATERS.

*A Reply to Dr. Neale's Pamphlet, respecting the Nature and Properties of the Mineral Wells of Cheltenham. By James M' Cabe, M. D.*

We agree with the epigraph — "*Alibi sub judice lis est*;" and only notice this little pamphlet because it has noticed the Literary Gazette in a manner that almost amounts to an imputation of loving rather to take up a subject of censure than a subject of praise. Dr. M' Cabe may believe us when we say, that we were attracted to Dr. Neale's performance only by the importance of the question—the salubrity or insalubrity of Wells resorted to by thousands of our fellow creatures in anguish and suffering; and that if we did not review his own larger and more important analysis, it was simply because we had not seen it.

In what regards the general question, we think Dr. M. leaves it nearly where it was left by Dr. Newell's letter, which we cheerfully inserted in our publication, having no other object but the right understanding of the facts.

We cannot assent to the premises, that either success or ridicule are the tests of truth; and therefore do not consider the crowds that visit Cheltenham and drink in Spa, as establishing their character, any more than we consider Dr. Neale's just upon them as destructive of their reputation. His receiving money to write it into credit, is undoubtedly an unexplained circumstance, which affects his testimony in favour of one well, and his obloquy upon others. But we cannot resist the opinion, that his doubts had some foundation, when we find concentrations and solutions (no matter whence derived) mingled with the genuine springs; and even Dr. M' Cabe himself reiterating our counsel, to have the waters publicly analyzed by able chemists, and their constituent properties ascertained by better authorities than pumpers' oaths. We shall be happy to hear that this has been done; and have only to add, that an affidavit of the factitious means employed in some of the wells, was put into our possession on the other side, which, for reasons the opposite to those ascribed to us, we refrained from publishing.

## ORIGINAL CORRESPONDENCE.

INSANITY.

This most important subject, to which we have devoted several late numbers, in a manner which we trust will awaken public attention to it and ultimately lead to the amelioration of the unhappiest condition of human

\* Transactions of the Literary Society of Bombay, vol. 2.

† Dr. M. tells us 30,000 annually.

nity, has acquired something of a particular interest at this moment, from the melancholy suicide of a gentleman who had been confined as a lunatic in one of the mad-houses at Hoxton, and afterwards in another receptacle in the country, as mentioned in the newspapers of the day. The recollection of the treatment he had experienced preyed upon his mind. "All that he could do (says the Examiner) was to repeat that he had suffered most undeservingly himself, and that he was concerned at the little hope there existed of serving his fellow-creatures: all the power was in the hands of physicians, and they ——— You know the meaning of unfinished sentences. The next day he killed himself."

These matters are published to show that madhouses are not under proper regulations, and ought to be more strictly supervised. This may be necessary; but our object has been to point out far greater, because far more general evils, than any that could result from partial abuses: we mean the erroneous method of treatment for the cure of the insane, which prevails in this country, as well as on the continent. "The soothing system" is, we fear, better known by the farce at Covent Garden, than by its being practised in our madhouses; and notwithstanding the honourable parliamentary enquiries into, and labours upon, this subject, it is but too true, that the judicious as well as humane theory has not yet swept away the cruelties of old customs.

Let us look, as we proceed, at the admirable suggestions of the very able physician appointed to the charge of the naval and military patients at Hoxton, in 1815.

We there find a minute attention to the comforts of the afflicted; pains taken to keep hurtful impressions from their minds, as much as to minister to their bodies. Dr. Veitch, in the Report of the Evidence before the Committee of the Commons, speaks thus:

"On mustering the patients confined in the house of Sir Jonathan Miles, I found that they amounted to one hundred and fifty, including officers, seamen, and marines: one man has been since received, two have been sent to Bethlem, and two were this day discharged in consequence of an order from the Board."

"When I reflect on the great importance of diet, in the treatment of all diseases; and advert to the quantity of animal food consumed by the patients at Hoxton; I am of opinion that the proportion of such aliment is too great; I have, therefore, to recommend the quantity of beef or mutton to be diminished by six ounces; and, in lieu of which, eight ounces of bread-pudding or rice-pudding might be substituted. The occasional use of cooling fruit, particularly at this season of the year (*quære—July*), might be attended with advantage."

"If the quantity of animal food were still further diminished, it would prove useful; but the change it would be well to bring about gradually: salted meat and cheese should, however, in my opinion, be at once discontinued. The great object of diet in the

treatment of manics, is to avoid the extremes of repletion and hurtful innation.

"Conceiving the Board may approve my ideas on this subject, I have selected about fifty deranged men, with whom I could wish to commence this system, as the extent of their mental powers will enable me, by care, to establish a more improved mode of dining among them, and taking their other meals; and as manics may be rendered susceptible of emulation, and are capable of receiving useful impressions from example, as some of the mental faculties seem but little impaired by insanity, it can be gradually extended to others, when admissible, and likely to be conducive to their comfort and recovery. I therefore propose that the fifty selected should dine in the largest sitting room; that the tables from which they eat their food, should be covered with a tablecloth, and that each should have a wooden trencher, a spoon, and a tin cup without a handle, capable of holding a quart."

"As cleanliness is of the utmost importance in aiding the powers of medicine, in this disease, I suggested the propriety of a large bathing tub; and Sir Jonathan Miles gave directions that one should be constructed agreeably to my orders."

"It is highly desirable that the hurtful practice of chaining men down to benches should be conquered; and that those who labour under bodily disease, should also be attended to; and to accomplish these two important and necessary arrangements, five additional keepers will be required."

"The area in which the patients take their exercise, is small, and powerfully acted on by the sun; the thermometer stood at 96°, exposed to the solar rays. The summer is generally perceived to add to the already diseased excitement existing amongst manics; and holding this fact in view, it becomes necessary to guard as much as possible against the increased temperature, arising from the direct and reflected rays of light and heat. The colonnade for their taking shelter in during wet weather, is by no means sufficient for their protection from the sun, without their being most disagreeably and hurtfully crowded together. The erection of an awning, to extend from the wall to which they habitually repair, without regard to the intense and scorching rays of the sun, of the same character as that in use on board of ships of war, would accomplish this object, and contribute greatly to their recovery."

"I will now terminate this letter by observing, that if the cases sent with our seamen and marines to the naval hospitals were transmitted with the manics to Hoxton, and also the treatment they were subjected to while in hospitals and marine infirmaries, such information could not fail to prove highly useful, by throwing light on the character of the disease, with which they are so lamentably afflicted: their ages are even unknown at Hoxton."

These are the views at once of knowledge and sympathy; of practical experience, and universal philosophy. They comprehend however only a small portion of the sensible and philanthropic mode of treating this disease, to

the excellent effects of which we have been witness. These have convinced us in a way most gratifying to our feelings, that mildness, and not harshness, is the true principle on which to act in the cure of Insanity; but as we purpose returning to this subject, we shall not now go into further details.

As a curious matter in pathology, we may remark, that of a total of 145 manics from the service, the national proportions were 59 English, 43 Irish, 16 Scotch, 6 Welsh, and 21 foreigners. The quota of Irish is remarkably large; that of Scotch the reverse. It would seem that the English and Irish are most liable to the disease. But, whatever the country, we may rest assured that kindness and delicacy are the surest means of restoring the invalids to the ranks of rational beings.

## ARTS AND SCIENCES.

### AGRICULTURE.

A discovery of great importance to agriculture and public economy, is, that of the great advantages which result from the practice of *reaping corn before it is perfectly ripe*. This theory, which has just been promulgated by Mr. Cadet de Vaux, originates with M. Salles, of the Agricultural Society of Beziers. The following are the particulars:—

Corn, reaped eight days before the usual time, is, in the first place, secured from the dangers which threaten it at that time: this is only accidental; but a positive advantage is, that the grain is fuller, larger, finer, and that it is never attacked by the Weevil. The truth of these assertions has been proved by the most conclusive comparative experiments, upon a piece of corn, one half of which was reaped before the usual time, and the other half at the degree of maturity fixed by the ordinary practice.

The first portion gave a hectolitre of corn more for half a hectar of land. Afterwards an equal quantity of flour from the wheat of each portion was made into bread: that of the corn reaped green gave seven pounds of bread more than the other in six decalitres. Lastly, the weevil attacked the corn which was cut ripe; the other was exempt from it.

The proper time for reaping is that when the grain, on being pressed between the fingers, has a doughy appearance, like the crumb of bread just hot from the oven, when pressed in the same manner.

### MAGNETIC ELECTRICITY.

*Copenhagen, 22d July.*—Our celebrated naturalist, Oersted, has discovered a method of producing magnetic effects by means of electricity. The apparatus employed for this purpose is so powerful, that it can melt an iron wire 6 inches long, and 1-175th of an inch in diameter. The experiments have proved: that electricity has a great influence upon metals; and that the magnetic needle may be made to vary 60° by its influence. These effects seem to indicate laws of magnetism entirely unknown hitherto. M. Oersted continues his experiments on this interesting subject.

## ANTARCTIC COUNTRY.

It is stated, in recent arrivals from Valparaiso, that the Brig Williams (an account of the despatch of which, by Captain Sheriff, to ascertain the nature of the country discovered to the southward of Cape Horn) had returned from the survey. On her arrival off the harbour, and making her report to Captain Searle, of the Hyperion, orders were given that no intercourse with the shore should be permitted. This has naturally led to the inference, that the discovery turns out to be important, and that this precaution is taken to prevent the interference or claim of any foreign nation, previous to the usual measures of taking possession in the name of His Britannic Majesty. The only draughtsman on the station, competent to perform the scientific part of the investigation, was Mr. Hone, a son of the distinguished artist of that name; he accordingly went in the Williams, and made the drawings of the coast, &c.

\*. On this subject we have again to notice the rather unhandsome way in which the Literary Gazette is treated by many contemporary publications. It never copies one passage without mentioning whence it is derived; while its original articles (and there are hardly one column in any Number which is not entirely original) are transferred even to the most respectable journals, without acknowledgment. The interesting details of this discovery, for instance, were copied into the Morning Chronicle, verbatim, on Monday; and the curious description of the picture of the Queen's entering Jerusalem, into almost every periodical; as if they, and not we, had seen this curious production.

## ORIGINAL POETRY.

THE DEAD MOTHER: A DIALOGUE.  
*Persons, Father and Child.*

F. Touch not thy mother, boy—Thou canst not wake her.  
C. Why, father? She still wakens at this hour.  
F. Your mother's—dead, my child.  
C. And what is dead?  
If she be dead, why then 'tis only sleeping,  
For I am sure she sleeps. Come, mother—rise—  
Her hand is very cold!  
F. Her heart is cold.  
Her limbs are bloodless, would that mine were so!  
C. If she would waken, she would soon be warm.  
Why is she wrapt in this thin sheet? If I,  
This winter morning, were not covered better,  
I should be cold like her.  
F. No—not like her—  
The fire might warm you, or, thick clothes—  
but her—  
Nothing can warm again!  
C. If I could wake her,  
She would smile on me, as she always does,  
And kiss me. Mother: you have slept too long—  
Her face is pale—and it would frighten me,  
But that I know she loves me.

Come, my child.  
F. Once, when I sat upon her lap, I felt  
A beating at her side, and then she said  
It was her heart that beat, and bade me feel  
For my own heart, and they both beat alike,  
Only mine was the quickest—And I feel  
My own heart yet—but her's—I cannot feel—  
F. Child! child!—you drive me mad—Come  
hence, I say.  
C. Nay, father, be not angry! let me stay  
Here till my mother wakens.  
F. I have told you,  
Your mother cannot 'wake—not in this world—  
But in another she will 'wake for us.  
When we have slept like her, then shall we see  
her.  
C. Would it were night then!  
F. No—nahappy child!  
Full many a night shall pass, ere thou canst  
sleep,  
That last long sleep—Thy father soon shall  
sleep it.  
Then wilt thou be deserted upon earth:  
None will regard thee; thou wilt soon forget  
That thou hadst natural ties,—an orphan lone,  
Abandoned to the wiles of wicked men,  
And women still more wicked.

Father! Father!  
Why do you look so terribly upon me,  
You will not hurt me.  
F. Hurt thee, darling?—no!  
Has sorrow's violence so much of anger,  
That it should fright my boy? Come, dearest,  
come.  
C. You are not angry then?  
F. Too well I love you.  
C. All you have said I cannot now remember,  
Nor what it meant—you terrified me so.  
But this I know, you told me,—I must sleep  
Before my mother wakens—so, to-morrow—  
O father! that to-morrow were but come!  
IGNORIO SECONDO.

## A Dream of the Dead.

Mine earliest friend, I dreamt of thee,  
As if thou hadst not ceased to be,  
As if thy cold and narrow cell  
Had sent thee forth with me to dwell,  
And many a thought were free to play,  
Long buried with thy breathless clay.  
As in thy boyish days I viewed thee,  
Ere wasting, pale disease, subdued thee,  
What sport we pleased, it matters not;  
Like many a joy, 'tis now forgot.  
Across my mind it never darted,  
That thou wert of the souls departed;  
As little recked I of that truth,  
As in the sunny morn of youth,  
When, as the brief day bounded by,  
We took no heed that we must die.  
Between the dead and those who sleep,  
The shade of difference is not deep.  
In slumber's light and soothing reign,  
The soul escapes her fleshly chain;  
Through the free night roams far away,  
A prisoner all the gorgeous day:  
To those who die the soul returns not,  
Droops not in woe, in passion burns not;  
In death she spurns oppression's power,  
Through boundless time, in sleep an hour.  
My thoughts retire, nor tempt a flight,  
That asks celestial wings of light;  
But oh! my friend, the hope were sweet,  
That yet our parted souls could meet,  
And whilst our senseless frames are drowned,  
In slumber's placid lake profound,  
(Since time is but a sleep more sound)  
Our spirits in a lovelier sphere  
Could mix, as once they mingled here!

Oh! if that hallowed hope might be,  
How much thy soul would pity me,  
When, from those realms unrevived by ill,  
She saw me here a wanderer still,  
Forced with the world's impetuous stream,  
My sorrows true, my joys a dream.  
IGNORIO SECONDO.

[By Correspondents.]

TO ———.

On the Anniversary of our Wedding Day.  
The cherub'd day which hand with heart  
entwined,  
Returns to claim the tribute of my lay;  
To claim the homage of a grateful mind,  
The fittest incense for that hallowed day.  
Who could e'er wish such holy bonds undone,  
The purest, tenderest of all earthly ties—  
Dear as thou wert when first my heart was won,  
Hast thou not now fresh value in mine eyes?  
Were all as blest, could fondness ever rove?  
What were there awful in the marriage yoke;  
Can it be hard to swear eternal love,  
To one so made to be beloved as thou?  
Can it be hard to honour and obey,  
Where 'tis the first of pleasures to concede,  
And where dominion holds such gentle sway,  
That to be led is sweeter than to lead.  
Could I be banished by some harsh command,  
From thy dear converse, whither could I go?  
I should be lost without thy guiding hand,  
And past delights would deepen present woe.  
Oh, my young ear was with such tales purged,  
Of woman's falsehoods, man's inconstancy—  
That my heart sickened, and the world I view'd,  
As one 'twould cost no sacrifice to fly.  
But now with blest experience for my guide,  
It seems a paradise of truth and love;  
Could all the world allure me from thy side;  
Could aught surpass it save the world there?  
If this be slavery, I'm a willing slave,  
I hope—I know thou dost not wish me free,  
Since something whispers that the heart I gave,  
Could scarce be worthless since 'twas sought  
by thee.

CLARA.

## HORACE. BOOK I. ODE 22.

(Translation.)

When free from crime and pure in heart,  
Nor bow, nor Mauritaniae dart,  
Nor Pegasus, do we ever need  
The quiver charged with poison'd reed,  
Whether through Syria's parching sand,  
Or Caucasus' barbaric strand  
We journey, or along the shores  
Where fabled waves Hydaspes pour.  
As erst I strayed through Sabine grove,  
To sing of Ligeia and love,  
A wolf—not fierce monster yells  
In warlike Daunian's beechen dells  
Nor Juba's land, the lion's lair—  
Unarm'd—uninjured feel me there.  
Place me in climates, where no trees  
Are fanned to life by summer breeze;  
Where clouds obscure the sterile plain,  
And winter hails eternal reign—  
Place me—from human dwelling far—  
Beneath the Sun's bright burning car—  
Still loved shall thy sweet converse be—  
Still loved thy sweet smile, Laisa!  
Aug. 7, 1920.

A. G.

## SONO,

*Inspired by a Bottle of Claret.*

Talk not of Piers's fountain,  
Phæbus, or the tuncful nine—  
Hang the Heliconian mountain—  
Give me—give me, running wine.

Fill the bowl—oh fill it higher—  
And the noblest vessel piece;  
Bacchus only can inspire—  
Bacchus is the God of Verse!

R. W. E.

## SONNET.

*The Poet laments the death of his Cat, Scracco.*

Erewhile I did a gentle sonnet write,  
In praise of Scracco, my poor harmless cat;  
And shew'd how many virtues could unite  
In creatures that destroy the felon rat.

But she no more will doze before the fire,  
And with grave luxury enjoy the heat;  
Nor when from bus'ness dull I late retire,  
Her weary master in strange antics greet.

The prowling rat no more will be her care,  
Nor mouse, with aspect grim, to fright away;  
These, now secure, purloin the mouldy fare,  
And every dainty from the shelf convey.  
Not so when my poor Scracco was alive,  
For she far off the plundering herd would drive.

## SKETCHES OF SOCIETY.

## BELGIAN CARNIVAL.

We extract, from a proclamation of the burgo-master and magistrates of Brussels, the following particulars respecting the Jubilee, which was noticed in No. 184 of the Literary Gazette.

"On the occasion of the Jubilee, the following communal fêtes will take place:—

"On the three successive Sundays, the 16th, 23d, and 30th of July, there is to be a general Illumination throughout the city; the inhabitants are consequently requested to illuminate their houses with all possible brilliancy.

"There will be a grand calvacade and triumphal procession, on Wednesday, the 19th, Tuesday, the 25th, and Friday, the 28th. The procession will begin to move at three in the afternoon, and will parade the city until seven in the evening.

"On Friday, the 21st, an artificial bird will be fixed up on the Grand-Place, to be shot at; a silver coffee-pot will be the prize awarded to the victor.

"On the 27th of July, at ten in the evening, there will be a grand display of fireworks, representing a variegated temple, surrounded by palm-trees.

"During the whole fortnight of the Jubilee, should the weather prove favourable, bands of music will be stationed in the park, morning and evening; and an obelisk will be erected on the Place-Royale, to be illuminated every evening with gas.

"The inhabitants of the houses before which the processions and calvacades are to pass, are requested to ornament the fronts of their houses.

"During the fortnight of the Jubilee, the

coffee-houses and other public establishments will be permitted to remain open all night."

## POLITICS EXTRA.—IMPORTANT CASE.

Our readers, we are sure, will forgive us for bringing a matter rather personal than literary under their notice. For we do not know in what degree of danger we may stand; and not being in the habit of writing libels, as it has been declared in parliament most of our periodical brethren are, we are quite terrified by the legal formality of a paper which has just been addressed to us, i. e. to "The Editor and Publisher of the Literary Gazette." Though it does say "Gentlemen" at the top, there is a most appalling commencement—"Whereas I, the undersigned John Essex Hall, of Turnham Green,"—we turned blue as we read—"in the county of Middlesex, Esquire, was charged on the oath of Mr. Shuffelbottom (his doncy) on Tuesday last, at the Public Office Bow Street, with having assaulted him by spitting on him (his doncy) from my drawing-room window (but which I declare was most unintentionally done)," &c. &c. The affidavit proceeds to state how some of the newspapers have published an account of this important transaction (which, according to authentic information received by express from the seat of war, has caused a greater ferment at Turnham Green than the arrival of the Queen at the adjoining village of Hammersmith), and thus concludes:—"but the Public Ledger and Morning Advertiser having published a statement of the transaction in their papers of Wednesday last, charging me with indecency, &c. which is a most gross and scandalous libel, I had directed my solicitor to commence proceedings at law against the publishers of those papers: but they having promised to contradict the above report in their papers of to-morrow, I have in consequence declined commencing proceedings against them.

"I have, however, thought it proper to inform you, that the statements contained in such papers is a very gross libel upon me; and I hereby beg leave to caution you against publishing the same, and give you notice, that if you do so, I shall and will commence such proceedings against you as my counsel shall advise. Dated the 4th day of August, 1820.

"Witness—Thos. Taylor, J. E. HALL,  
Sol. Clements Inn."

After this, we trust no one will suppose that the superintendence of a Literary Journal is totally free from the troubles and dangers of the more busy world. For ourselves we know not what to do. Certain it is, that but for this terrific warning, we should never even have heard of, and therefore probably never have said a word about the affair of Hall and Shuffelbottom; but since it has assumed a shape involving the tranquility of Turnham Green, and consequently of the kingdom; and since so many of the royal residents, the metropolis itself, and the very Bishop's Palace at Fulham (not to mention the pictures belonging to his Grace of De-

vonshire at Chiswick, the barracks at Hounslow, and the barge trade on the Thames) are immediately within the sphere of this alarming transaction—*tua res agitur paries cum proximus ardet*—we feel that it would be a dereliction of our public duty, however threatened, to pass it over in silence. For the information of these Great Interests, then, it is, that we hazard the mention of the fact; and we are not without hopes that this warning may be sufficient to put them on their guard against the calamitous consequences likely to spring from the melancholy collision alluded to, of which the Radicals will unquestionably make a handle to shake the tree of our national prosperity to its roots. The following is a version of the affair by our Poet Laureat.

## HALL AND SHUFFLEBOTTOM.

*A Turnham-Green Odd. (Qu. Ode.—En.)*  
(Set to Music by Hook and I.)

## STROPHE.

Daughter of Nox, great goddess, (not knocks human)

Descend and fire my song;—I do invite thee,  
Nemesis' sister, dreadful Apple-woman.\*

Not as at Thetis' wedding do I slight thee:  
Say, what at Turnham Green caused such a brawl;

Did Hall spit on him, did he spit at all?  
What drawing-room such indecorum saw?  
Did such an insult tempt a man to draw,  
Or did his greater vengeance seek the law?

## ANTI-STROPHE.

Ah, sylvan haunts; ah, rudely rustic scene,  
With pond for goose, for ass the shade lane;  
Ah, pun-provoking, peaceful 4 Turnham Green,  
That discord should thy tranquil bowers prove—  
fane.

The tragic passions all thy Hamlet sway,  
Good fellowship with thee be sought in vain,  
And spitting send thy fellows on their way  
To Bow Street, and perhaps to Botany Bay.

## EPODE.

Dear Justice Birnie, upon thee we call;  
Bow thou their heads, and be their good adviser;

Preserve the peace of All, and Essex Hall §;  
Protect from Ledger and from Advertiser.  
Strange that a Squire may't from his window spit,

But that the newspapers must print it, rot  
Or his saliva that he can't emit,

But it must light on Mr. Shuffelbottom §  
Which Shuffelbottom, too, to show his breeding,  
Quite disconcerted with his lot,  
Will not walk off with what he 'as got,  
But must proceed to law-proceeding:  
And will not wipe the spittle from his cape,  
Chusing no slight a thing to work into a scrape.

## STROPHE II.

The spiteful and the spiteful thus  
About a trifle make a fuss;

\* The whole of this fine classical exordium, is an allusion to the *Detur pulchriori* matter which led to the burning of old Troy.—En.

† This seems to have some remote bearing upon the well-known story about sending the peas to Kensington. Vide Mr. Joseph Miller, *passim*.—En.

§ This is a fancy hit, after the manner of Corcoran and Breaknow.

Assaulting with a whip of froth—  
Of a whole suit this spoils the cloth;  
While that with fury so doth burn,  
He gives a law-suit in return.  
And all the Newspapers are meddlers,  
At least the *Hawkers* are, if not the Pedlars.

## ANTISTROPHES II.

Hear it not, Hounslow, for it is a grief  
Whence Shaftesbottom can have no relief:  
Tell it not, Journals, or as counsel's skill  
Advise to prosecute, Hall "shall and will";  
And Thomas Taylor, witness, will begin  
To trounce you most inclemently in Clements  
Inn.

## EPODE, or CATA-STROPHES.

New let us sing, God save the King,  
And keep us from his Bench;  
And on our case, may Common Pleas  
Nor Chancery e'er trench;  
And may we ne'er for Bow Street fear,  
For spitting or for riot;  
May Turnham Green in peace be seen,  
And Hall and Shaftesbottom quiet.

L. G.

## THE DRAMA.

## KING'S THEATRE.

The rumours relative to this establishment, are like the Ass's tale in *Rabelais*, partly true and partly false. In consequence of some financial arrangements, the theatre has been again offered to the purchase of the committee of noble persons who were in treaty for it last year; but the arrangements so rapidly made for it by some of the evening papers, are altogether unfounded. No change in the management is at present to take place; though of course, if a new proprietorship should be agreed on, some may occur before the opening. An idea of the actual profit of this fine theatre, when the property boxes shall be out of lease, which will be in four years, may be formed from the fact, that the net profits for this year (including the rent of those boxes) is already 18,000*l.* And yet, from the various causes which depressed all theatrical success, in the beginning of the season, it has been considered a remarkably unpropitious one.

ENGLISH OPERA-HOUSE.—*The Vampire*. This marvellous story, which attracted so much notice in the *New Monthly Magazine* as to lead to its separate and popular publication, has run the dramatic gauntlet from the Porte St. Martin through nearly all the minor theatres of Paris. Though it is of a perfectly melo-dramatic cast, it met with only a limited success; and, though adapted with considerable talent to our stage, by Mr. Planché (we are told), it promises only a very brief existence at the Lyceum. The dialogue was not a little bombastic, and the poetry poor. Were it worth while to criticise the conduct of such a production, it might be said that it is too much to have the plot thrice unfolded; first, by a preliminary vision; secondly, by a drunken servant; and thirdly, by the main action.—Consistency, in a piece of this sort, is not to be looked for; and accordingly it is a jumble of inconsistencies—not merely those springing from its unnatural ground-work, but of

manners, costume, combination, &c., all of which might have agreed, and were not necessarily outré. From the interest being betrayed at the commencement, the performance drags heavily on: Punch would be a thousand times better subject for a melo-drame. The scenery is appropriate, and Monsieur the Vampire (Mr. T. P. Cooke) being shot in an attempt to carry off a rustic bride (by way of having two strings to his bow) dies very prettily, with an effect of light upon his armour. His final disappearance, on the sinking of the moon, is also well managed. The other chief characters are the Lady Margaret, (Mrs. Chatterley), who acquits herself ably; Lord Ronald, her father, (Mr. Bartley), the personification of Leadenhall Market in disguise; M'Swill, a drunken benchman, (Harley), a clever repetition of himself, and laughable in the following song, to the tune of "Fy, let us a' to the bridal."

Faith, I'll awa' to the bridal,  
For there will be tipping there;  
For my lady's a going to be married,  
To whom I don't know, and don't care.  
But I know we shall all be as frisky,  
And tippy as pipers, good lack;  
And so that there's plenty of whisky,  
She may marry the devil for Mac.

So faith I'll awa' to the bridal, &amp;c.

I once left the bottle for Cupid,  
And bade an adieu to my glass;  
I sinner'd, and sigh'd, and look'd d' stupid,  
And courted a cherry-chick'd lass.  
She turn'd out a jilt:—"twere a lie should I  
Say, that it gave me no pain;  
For sorrowing made me so dry, that I  
Took to my bottle again.

So faith I'll awa' to the bridal, &amp;c.

They say there's five reasons for drinking,  
But more I am sure may be got;  
For I never could find out by thinking  
A reason why people should not.  
A sixth I'll not scruple at giving;  
I'll name it while 'tis in my head;  
'Tis if you don't drink while you're living,  
You never will after you're dead.

So faith I'll awa' to the bridal, &amp;c.

The other Scotch airs were more ineffective than we could have anticipated, from their judicious selection; but with the exception of *Down the Burn, Davie*, sweetly sung as a duet by Pearman and Miss Carew, they were "leather and prunella." There were two or three spirits; but, as they are not choice, we shall close without them.

HAYMARKET THEATRE.—On Wednesday, Mrs. Martyn exhibited as *Sir Harry Wildair*, in Farquhar's profligate comedy of *The Constant Couple*. We look upon this as in every sense of the word the *worst* performance of the season, and doing no honour either to the good sense of the management, which we have been hitherto so willing to applaud, nor to the professional reputation of the actress, which is so much benefited by being left out of the range of criticism. Mrs. Martyn performed the man of fashion as awkwardly as might be expected from a female; she lounged and languished through this animated part with provoking perseverance; but the chief offence was her dress.

Nothing in the way of female exposure could be less decorous; but her satin draperies revealed a secret, perhaps the last among her contemplations when she undertook the part—that her figure is remarkably ill suited for exhibition. Her face, as we are told, found its admirers; but the decency of the female costume has been more in her favour than she seems to have thought; and this exposure may have gone far to shake the humble triumph of her physiognomy. Sir Harry is the prominent character; and he being so disposed of, nothing more is to be said of the play, with perhaps the exception that Clücher's absurdities were very well hit off by Farley; and that the two enchantresses of the piece, *Lady Lurwell*, and *Angelica*, were sustained by two as ordinary women, either in the way of acting or person, as the stage affords.

## FOREIGN DRAMA.

## ACADEMIE ROYALE DE MUSIQUE.

*Aspasie* of Pericles, an opera in one act.—The author of this new opera has ingeniously rendered the rivalry of the Athenian general, Cleon, an obstacle to the union of Pericles and Aspasie. Cleon directs his vengeance against Aspasie, and he accuses her before the Areopagus of being an enemy to the Gods. Ignorant of the perils by which she is assailed, Aspasie thinks only of the dangers which threaten Pericles, who is on the point of departing to oppose the Spartans. During the celebration of a fête, on the birth day of Aspasie, Socrates announces, that the Areopagus is ready to sit in judgment on the presumptuous woman who dares to compare herself to the Gods. Pericles becomes her advocate; and, having overcome the judges by his eloquence, he procures the innocence of Aspasie, and Cleon is sentenced to banishment. The music is mediocre.

## VARIETIES.

Caroline R.—The queen has had two new carriages built in Audley Street; one is plain, the other emblazoned with the arms of royalty, and the cypher, C. R. While they stood at the coach-maker's, a very well-dressed gentleman walked in to admire them, and exclaimed, "Ave, ave, that will do! C. R. Caroline Res!"

Politeness.—A German at St. Petersburg, asked a gentleman if he did not think the German language very beautiful. "Certainly, Sir," said he, "languages are extremely beautiful things!"—*Guliff's Italy*.

Coincidence.—An earthquake was felt at Inspruck, on the 17th ult. It is singular that this phenomenon took place precisely at the time of the day dedicated to Saint Alexis, when the people assembled in church to put up their annual supplication to be spared from such a calamity as befel them in 1670. This is *shocking* misconduct in the saint!

The bone-mills in Germany are increasing much, and said to be now in full activity. The wars have supplied materials, and the journals tell that the powder is not only excellent as a manure, but much used in Eng.

and Belgium, in the manufacture of  
sugar and paste.

Monsieur Catallini, after giving concerts at  
Petersburgh, productive of 20,000 roubles  
each, has set out for the Chateaux of Zars-  
kiesko and Pawlowzki, where she is to sing  
to Alexander and his court. It is said she  
is to visit Sweden and Denmark.

*Sinking of a mountain.*—A high ridge of  
mountains on the Moselle, called the *Sieben  
Iren Berg*, has been observed for some  
ears past, to have in it very large clefts,  
which for the last five years measured above  
foot in breadth; thus exciting in the inha-  
bitants of the adjacent banks no unreason-  
able apprehension of an approaching fall of  
art of the mountain. This has now taken  
place. On the 7th of July, in the even-  
ing, earth and stones were seen rolling  
down from the summit, which continued  
increasing in quantity till 4 o'clock in  
the morning, when a whole mass of rock  
came loose, and fell with such violence into  
the Moselle, that it forced the water out of  
the channel, overflowed the opposite bank to  
some distance, and drifted away the vessels  
lying at Bruttig. The damage done is incal-  
culable; it appears that about forty vine-yar-  
ds have been precipitated with the rock into the  
river. The mountain on the opposite side,  
called the Kessel, likewise threatens to fall.  
As this mountain is rent and torn with fright-  
ful clefts, as well as at the top in the middle  
of lower parts, and the front part had sunk  
feet on the morning of the 8th, and large  
masses continually rolled down, it is to be  
dreaded that the whole enormous body will  
fall into the Moselle and fill up the greater  
part of the channel, which would make the  
river overflow its banks, and cause the most  
terrible ravages.

*German Travellers in South America.*—  
hence, 11th July.—Letters have just been  
received from Drs. Spix and Martins, dated  
a 17th and 19th of April. On the  
16th of August they embarked on the river  
Amazonas, and proceeded up it to-  
gether, as far as Ega, which is situated near  
the mouth of the Rio Negro: here they  
perished, that they might the better ex-  
plore the country. Dr. Spix proceeded  
along the main river as far as the Spanish  
waters; Dr. Martins sailed up the Impu-  
ma, which, as well as the Rio Negro, is an  
arm of the Orinoco, as far as the Cataract of  
Yacacora, which rendered it impossible to  
proceed. On this tour they approached  
within 80 leagues of the capital of Peru,  
having advanced from 450 to 500 leagues  
from Para. They spent almost the whole  
of months that their tour occupied among  
"who are," say the letters, "in-  
d cannibals, but only because they live by  
chase, and merely consider men as an-  
imals good for food." The travellers had  
been exposed to many hardships, arising  
from the exuberant vegetation of this  
country; but had the satisfaction of re-  
turning with a prodigious collection of natu-  
ral productions, on the 15th and 16th of

\* Some of the German periodical writers  
set themselves very merry with this expres-  
sion of the learned travellers.

April. It is probable they may be now at  
Lisbon, or at Madeira, whither they had  
resolved to sail on board a Portuguese ship,  
bringing with them seven young Indians.

Mr. de la Martine, author of the *Mé-  
ditations Poétiques*, a collection of elegies far  
superior to the general run of French poetry,  
which have excited great attention for this  
year past, died lately of a consumption, at  
Naples, where he was attached to the French  
Embassy, and had married a young English  
lady of large fortune.

## LITERARY NOTICES.

**PRINCE OF NEUWIED'S TRAVELS.**—  
This interesting work, of which the first  
volume only is yet published, has been so  
well received in Germany, that the first edi-  
tion of 1,000 copies is nearly exhausted in  
the short space of three months; and the second  
edition, in quarto, is now in the press.

We learn that Sir R. Ker Porter is pre-  
paring for the press, *Travels* during the last  
four years, which embrace a vast extent of  
country; namely, about that which comprised  
the ancient Assyrian, Babylonian, and Per-  
sian empires; from the banks of the Black Sea  
to the Euphrates, and from the Euphrates  
to the mouth of the Persian Gulf. The manners,  
customs, and costumes of the present race  
in these regions, are very curious, and will,  
we trust, be particularly delineated both  
with respect to their actual state, and with  
reference to the manners of the ancient inha-  
bitants. From a gentleman so competent,  
both with the pen and pencil, we have a  
right to expect a valuable work in most  
points of view, but especially in what re-  
gards the interesting antiquities of the primi-  
tive world.

Professor Dittmar, of Prussia, is about to  
publish, at Brandenburg, a journal entitled  
the *Aurora*, which is to treat exclusively of  
meteorology and the phenomena of the sea-  
sons. It is to be the official journal of fair  
and foul weather.

## METEOROLOGICAL JOURNAL.

August, 1820.

*Thursday, 3*—Thermometer from 56 to 74.  
Barometer from 30, 16 to 30, 04.

Wind S. by W. 3.—Generally cloudy.

*Friday, 4*—Thermometer from 60 to 72.  
Barometer from 29, 93 to 29, 96.

Wind S. W. 1 and 2.—Morning cloudy, with  
rain; clouds passing, with showers and distant  
thunder during the afternoon; in the evening it  
became clear. Rain fallen, 2 of an inch.

*Saturday, 5*—Thermometer from 50 to 63.  
Barometer from 29, 98 to 30, 03.

Wind S. W. 2.—Morning clear; the rest of  
the day generally cloudy, with rain at times.  
Rain fallen, .025 of an inch.

*Sunday, 6*—Thermometer from 54 to 68.  
Barometer from 29, 90 to 29, 77.

Wind S. 3.—Morning cloudy, with continual  
showers; afternoon and evening generally clear.  
Rain fallen, .125 of an inch.

*Monday, 7*—Thermometer from 54 to 69.  
Barometer from 29, 98 to 30, 09.

Wind W. by N. 2. and W. 4.—Clouds and  
showers passing during the morning; the rest of  
the day generally clear.

Rain fallen .02 of an inch.

*Tuesday, 8*—Thermometer from 45 to 67.

Barometer from 30, 15 to 30, 04.  
Wind S. by W. 2 and 4.—Clouds generally  
passing; in the evening it became clear.

Rain fallen .075 of an inch.

*Wednesday, 9*—Thermometer from 53 to 72.  
Barometer from 30, 13 to 30.

Wind S. W. 3, and 1.—Generally clear;  
clouds passing at times.

Harvest very generally begun.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

Jeholinda is inadmissible; we cannot take up the  
subject.

The request of a Constant Reader, to insert the  
prices of the books we review, would subject us to  
a 7s. duty on each, at the Stamp Office. Very  
few new works fail to be advertised in our last  
page, which give the information wanted.

## Miscellaneous Advertisements.

(Connected with Literature and the Arts.)

British Gallery, Pall Mall.

**THIS GALLERY**, with an Exhibition of  
PORTRAITS of distinguished Persons in the  
History and Literature of the United Kingdom, is open  
daily, from 10 in the Morning until 6 in the Evening.

(By order) JOHN YOUNG, Keeper.

Admission 1s.—Catalogue 1s.—Historical ditto 2s.

**THE Exhibition of MONSIEUR JERRI-  
CAULTS GREAT PICTURE**, (from the Lou-  
vre) 34 feet by 18, representing the surprising Crew of  
the Medusa French Frigate, after remaining Thirteen  
days on a Raft without Provision, at the moment they  
discover the vessel that saves them, is now open to the  
Public, at the Egyptian Hall, Piccadilly. Admission 1s.

Tomkins's Picture Lottery.

**MR. TOMKINS** begs to announce his in-  
tention to draw this Lottery as early as possible  
in the Spring. By the Act of Parliament just passed  
the time cannot be extended beyond July 1821; and in  
order to remove all impediments respecting the Draw-  
ing, Parliament have provided for a Drawing, under the  
direction of Commissioners, separately from the State  
Lottery, should the Numbers not correspond. The Public  
may therefore be assured that no disappointment  
can take place, as neither care nor expense has been  
spared to render the prizes engaged to be given in this  
Lottery of real value and excellence. Tickets, price  
3d. each, are on sale at the Exhibition of Specimens of  
Prices, Nos. 58 and 54, New Bond Street; and at all  
Lottery Offices, where Prospectuses may be had. This  
Lottery consists of 16,500 Prizes—valued at £25,250. The  
Purchasers of Two Tickets, one Red and one Black,  
are sure to gain a Prize, which may be value 7,500l.,  
4,750l., 4,000l., &c. &c.

## BOOKS PUBLISHED THIS DAY.

Price 6s. embellished with a portrait of B. R. Haydon,  
Esq. engraved in line, by W. H. Harvey.

**ANNALS OF THE FINE ARTS**, No. 17, con-  
taining a copious Memoir of Mr. Haydon, by the  
Editor; original Essays, Reviews, and Notices of the  
most prominent figures of English and Foreign Art.  
Published by Hurst, Robinson, and Co. 90, Chancery.

In 2 vols. 8vo. price 12s. 6d. with a Portrait engraved  
by Fittler, the second edition, of the  
**LIFE OF WILLIAM, LORD RUSSELL**,  
with some Account of the Times in which he  
lived. By LORD JOHN RUSSELL. Printed for Long-  
man, Hurst, Bess, Orme, and Brown; and J. Widdow,  
London.

Also just published, the third edition, in 8vo. price 12s.  
of the **LIFE OF LADY RUSSELL**, by the Editor of  
Mad. du Deffand's Letters, with Letters from Lady  
Russell to her Husband, Lord Russell; some Miscel-  
laneous Letters to and from Lady Russell, &c. &c. from  
the originals in the Possession of the Duke of Devon-  
shire.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 187.

SATURDAY, AUGUST 19, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### BRITISH FRUIT TREES.

*Pomarium Britannicum: An Historical and Botanical Account of Fruits, known in Great Britain.* By Henry Phillips. London, 1820 Large 8vo. pp. 378.

We know no class of readers which is not much obliged to Mr. Phillips for this very useful and very entertaining publication. It is one of those popular works which have of late years become (fortunately for the public) more common than at any former period, such as Kirby and Spence's Entomology, Huber on Bees and Ants, &c. &c.;—works, which, combining in a happy degree the pleasing with the instructive, teach us science as an amusement, and promote information and improvement by lively anecdote and curious story. It is thus that the author now before us has proceeded; and as his subject is one of general interest, his book is at once agreeable and important. From the most learned horticulturist, to the least anxious epicure that bites an apple, this volume deserves a friendly reception; and we are sure that it only needs to be known, to become a favourite. To contribute to render it so, and to gratify our readers, we shall make copious extracts from its miscellaneous contents; and we venture to say, that many excellent hints, as well as a good deal of entertainment, will be derived from these specimens.

Mr. Phillips' plan comprehends the history, the mode of culture, the produce, the uses, the medical properties, the edible recommendations, and anecdotes of the various fruits which are raised in England, from the Acorn (we speak alphabetically) to the Whortleberry. His introduction is a good eulogium on gardening, and he brings his favourite art from Eden to our times, through all the phases of Hebrew, Persian, Grecian, Roman, and more modern practice. It has also the merit of being the first history of the kind; and as this branch of science has made extraordinary progress of late, it is really a production of great novelty and practical utility, as well as of agreeable research and quotation: thus, as we have noticed, offering attractions to readers of every description, and blending the *utile et dulce* in an original style.

We begin our selections with a remarkable fact, from the preface.

"The Author considers, among other blessings, that gardening has bestowed on the city of London, that of it's being a preventive of pestilence and the plague, from the circumstance of it's making cleanliness a matter of profit in this immense metropolis, from whence the soil is so carefully removed to manure the ground occupied by gardeners in the environs, which are now calculated to exceed six thousand acres within twelve miles of London, that are constantly cultivated for the supply of the markets with fruit and vegetables.

"Stevenson informs us, that 3,500 acres of ground in Surry alone are employed as market gardens; and Middleton observes, that from Kensington to Twickenham, the land on both sides of the road for seven miles composes the great fruit gardens, north of the Thames, for the supply of the London market. It is gratifying to see the number of hands this ground employs. Even during the six winter months, it is computed that it affords work to five persons an acre, and at least double that number for the summer months, who are principally females; and if we add porters, hawkers, &c. it will be found to treble the amount, making the number exceed ninety thousand persons, who are in the summer months daily employed by the gardeners, within a circle of ten or twelve miles around London."

Mr. Phillips acknowledges his obligations to Pliny among the ancients, and to Gerard, the first English author, who wrote largely on fruits, at the era when horticulture began to be studied in this country: he further tells us he has "Ascertained, by the assistance of the Hortus Kewensis, that since the discovery of the new world, we have produced 2,345 varieties of trees and plants from America, and upwards of 1,700 from the Cape of Good Hope, in addition to many thousands which have been brought from China, the East Indies, New Holland, various parts of Africa, Asia, and Europe until the list of plants now cultivated in this country exceeds 120,000 varieties.

"But flowers have principally engaged the care and study of students in horticulture and botany, while fruits have been in comparison rather too much neglected, though of the two the latter are intrinsically the most valuable, for since the more frequent use of fruits and vegetables in this country, many dreadful diseases, as the leprosy, &c. are no longer prevalent, or have lost their beneficial effects."

We now pursue our course with little other remark; and placing merely the title of the chapter at the head, to indicate to what fruit this quotation refers.

*Acorns.*—"John Ellis, Esq. discovered that acorns can be preserved in a state fit for vegetation for a whole year, by enveloping them in bees wax: other seeds may be conveyed from distant countries, by the same means."

*Almonds.*—"Pliny states, that a decoction of the roots of the bitter almond-tree supplies the skin, prevents wrinkles, and gives a fresh, cheerful colour to the countenance; and that bitter almonds cause sleep, and ercate appetite. They were considered a cure for chailbains, as well as for the bite of a mad dog.

"Neumann states, that these almonds are poisonous to birds and all animals that come into the world blind. The Bohemians are said to bruise them, and to throw them where fowls frequent, which will stupefy those that eat them, so that they are easily taken by the hand."

*Apples.*—"The Wild Crab is the only apple indigenous to this country; and it is on this stock that most of our valuable apples have been grafted and raised by the ingenuity of the gardeners, who have, by sowing the seeds and studying the soil, so improved and multiplied the variety of this most excellent fruit, that it has now become of great national importance, affording an agreeable and wholesome diet, in a thousand shapes, to all classes of society.

"It was not until the 16th year of the reign of Henry the VIIIth, that Pippins were first introduced into England, by Leonard Maschal, who, in Fuller's words, 'brought them from over sea,' and planted them at Plumstead, in Sussex, a small village on the north side of the South Downs, near the Devil's Dyke. Maschal brought the first carp to England, and thus, at one time, furnished our orchards and our ponds with the rarest variety of each kind.

"The Golden Pippin is a native of Sussex, and is said to have been first reared at Parham Park, which is also situated on the north side of the South Downs. The Dutch acknowledge it to be an English apple in their catalogue of fruits, where it is called the 'Engeloehe goud Pepping.' The French call it 'Pippin d'Or,' which is a translation of the English name.

"Catherine, Empress of Russia, was so fond of this apple, that she was regularly supplied with it from England; and in order that she might have it in the greatest perfection, each apple was separately enveloped in silver paper before it was packed."

It has lately been believed, that several superior sorts of apples, and especially the Golden Pippin, had degenerated, and could no longer be cultivated with success in this country. Mr. Phillips is of a contrary opinion, and cites the authority of some expe-

rienced horticulturists against this notion. They impute the apparent decay of the trees (the moul, redstreak, stire, foxwhelp, pippin, &c.) to the unfavourable sproutings for successive years, but assert that they are now in full and perfect bearing. Mr. Phillips sensibly adds—

"I have made this digression, to prevent if possible our best apples from being stigmatised as a decaying fruit and unprofitable to the grafter, which would be the cause of their becoming scarce, and, in time, totally lost. I have not presumed to set my judgment in opposition to that of Mr. Knight, who is so justly celebrated for his attention to horticultural pursuits; but it behoves all who may write of this most valuable fruit, to recommend the graftings to be of the best kinds, and to throw out no hint that may cause our nurserymen to neglect it's propagation. Gerard, when he published his Account of the Apple in 1597, was a warm advocate for the cultivation of apples. 'Gentlemen that have land and living,' says he, 'put forward, in the name of God; graffe, set, plant, and nourish up trees in every corner of your grounds; the labour is small, the cost is nothing, the commodity is great, your selues shall have plenty, the poor shall have somewhat in time of want to relieve their necessitie, and God shall reward your good mindes and diligence.'"

Mr. Knight, above alluded to, has carried the propagation of fruit further than ever it was carried before.

"The apple blossom contains about twenty stamina or males, and generally five pointals or females, which form the centre of the cup or cavity of the blossom. The males stand in a circle, just within the bases of the petals, or flower leaves, and are formed of slender threads, each of which terminates in a small yellow ball or anther. As soon as the blossoms are nearly full grown, they must be carefully opened, and all the male stamina cut or extracted, so as not to injure the pointals or females. The blossoms are then closed again, and suffered to remain till they open spontaneously. From the blossoms of the tree, which it is proposed to make the male parent of the future variety, must be taken a portion of their pollen or farina, when ready to fall from the mature anthers, and deposited upon the pointals of the blossoms, which consequently will afford seed. By shaking the blossoms over a sheet of white paper, you will ascertain when the pollen is ready. It is necessary in this experiment, to cover the branches on which the prepared blossoms are, with a thin muslin or gauze, so as not to touch the flowers, or keep off the sun or air, but to prevent the bees or other insects from inoculating them with the pollen of other blossoms, which would make the experiment uncertain; and in order to obtain the fruit and the seeds of a large size, it is best to leave but few blossoms on the tree, and, at all events, to clear the branches on which the prepared flowers are, from all other blossoms. When the fruit is quite ripe, the pips or seeds should be sown at a proper season, and in suitable soil, and in about four or

six years fruit may be expected. Mr. Knight has also made some curious experiments between the peach and the almond, which will be found in the account of the former fruit. Among the new apples which the world have to thank Mr. Knight for, is the Grange apple, which fruited first in 1802, and obtained the prize of the Herefordshire Agricultural Society: it is the offspring of the Orange Pippin and the Golden Pippin. He also obtained the annual premium of the same society, in 1807, for the Siberian Harvey, an apple which fruited for the first time in that year. This tree was raised from the seed of the Yellow Siberian Crab and the pollen of the Golden Harvey. Mr. Knight also raised the Foxley apple, from the seed of the Yellow Siberian Crab and the pollen of the Orange Pippin: this fruit also received the premium in 1808, and it is said to rival the Golden Pippin in sweetness.

"The cultivation of this, our most valuable fruit, has been attended to with so much care of late years, that one of our great gardeners, (Mr. Hugh Ronalds, of Brentford,) exhibited at the Horticultural Society, in August 1818, sixteen varieties of apples, and in September he exhibited fifty-eight other sorts, all grown in his own garden, and considered the finest collection ever exhibited. In the month of October of the same year, he exhibited fifty-three sorts, making in the whole a variety of 127 kinds of this our staple fruit, which, in point of real value, takes place of all others, and affords a variety for all seasons of the year, both for the desert and for culinary purposes, as well as the drink of which Phillips in *Miltonian* verse has sung."

Perhaps some of our fair friends may not know that pomatum is so called from being originally made with apples.

"There is made an ointment," says Gerard, 'with the pulp of apples and swine's grease and rose-water, which is used to beautify the face, and to take away the roughness of the skin, which is called in shops pomatum, of the apples whereof it is made.'"

On this subject we shall only add one other important observation.

"The various diseases to which the apple-tree is subject, have occupied the attention and the pen of some of our greatest naturalists, as well as many of our eminent practical gardeners. Animals of different species are found to engender a variety of kinds of animalcula, particularly where cleanliness is not attended to. Trees, according to their kinds, attract different blights: our endeavours, therefore, would be in vain to avoid the blight affecting the leaves and blossoms of large trees; but as the trunk and branches of the apple-tree are often injured, and sometimes destroyed, by animalcula, an attention to the cleanliness of these trees cannot fail of being beneficial to their growth. It has therefore occurred to me, from observations and experiments I have made since compiling this work, that if the trunks of the apple-trees were rubbed with the leaves and young shoots of the elder, to which all kind of blight hath an antipathy, that those injurious although minute insects

would not only be destroyed, but that it would prevent their fixing themselves on these trees. As this is a matter of importance to the public, I shall feel obliged by the remarks of any gentlemen who may be disposed to try the experiment. The canker of apple-trees, I apprehend, is principally occasioned by the uncongenial quality of the soil. I lately travelled with a gentleman, who informed me, that having observed all his apple-trees became cankered at a certain state of growth, he was induced to examine the nature of the soil at the greatest depth the roots had penetrated, and which he found consisted of gravel. Not being willing to give over the propagation of apple-trees, he caused a pavement of bricks to be made on the bed of gravel, which obliged the roots to take a horizontal direction, and thereby prevented their reaching the gravel, since which they have been free from canker."

(To be continued.)

*Don Juan. Canto XI. London, 1820. pp. 37.*

One of the most pleasing circumstances which happen to those whose business it is to estimate the merit of literary productions as they pass from the press, is to meet with those efforts which, if they have not effected great things, yet afford a reasonable hope of future exertions, by the proofs they exhibit of natural strength. Of this class is the little work now before us; and, in thus regarding it as a youthful production, we believe we are not mistaken. The author, whatever be his age, is certainly young as a poet. Why he has chosen for his poem the title with which it appears, we cannot tell, unless it be to procure it attention; and the means are unworthy of real genius. Of the readers of "*Don Juan, Canto XI.*" few will suppose it to have proceeded from the pen of Lord Byron; and the writer had done far better, as well as far more honestly, had he ventured forth under his own standard. There are some parts of the poem at which those of its readers, who have been accustomed to the perusal of more regular and more polished compositions, cannot but smile. "The wanton growth tending to wild," proves a hand not yet tutored "to clear th' ambiguous phrase, and lop th' unwieldy line." "*Don Juan, Canto XI.*" seems, indeed, to be a production of one more accustomed to write than to correct. His Pegasus carries him at full speed, but not in a regular course, nor without giving sufficient proof that he is under the restraint of too tight a bridle.

Yet there is, in this little volume, an originality of conception, and vigour of expression, which, how much soever it might be enhanced by greater elaboration, possesses considerable attraction, even as a distant imitation of the Bard of Venice (not Venus), the real Juan. The lovers of descriptive poetry may take the following example.

Before them are the towers of other days:  
They, like imperial queen, in frowning mood  
Glared on the cowed beholder's wond'ring gaze;  
For there, in crested pride, that fabric stood,

Pushing its bulwark'd strength for many a rood  
E'en into ocean's reign. Though night and  
morn

Hear the wild wave-dash of his angry flood,  
Morning and night shall view him still forlorn,  
Shall view his towers deride, and smile his  
siege to scorn.

The grandeur of that scene could weave a spell  
E'en for that wand'rer's heart. The thundering  
crash

Of that old pile, still concentering as it fell,  
Driving the wild wave backwards; and the splash  
Of the rude billows, as they foam and dash  
Proud over ruined majesty; the sight  
Of some half-buried wretch; the fitful flash  
Flick'ring on ocean's surface from the light  
Of smould'ring ruins—these were to his soul  
delight.

Around him beat

The fresh'ning spray—

Hark! 'tis a bark lies beating on the shore:  
Hark to the cry of death upon the wave;  
Hark to the pealing cannon's minute roar;  
Hark to that yell: the coward and the brave  
Swell the wild tempest blast—they shriek where  
none shall save.

The 38th Stanza, (with the exception of  
the word "reasonless") possesses delicacy,  
simplicity, and beauty.

His once loved Haidee: she no more,  
Free as the winds, upon her native sands  
Shall wave the signal, through the breakers'  
roar

To guide her sire's tott'ring vessel to the shore:  
He wifeless, childless, reasonless, alone,  
Shall trace the silent beach; ask "if this poor,  
Old, feeble man had once a child?" then groan,  
And cry, "If such there were, ah! wherefore  
is she flown?"

We cannot bestow much praise on the  
music of the lines: yet there are some pas-  
sages which we must exempt from the ge-  
neral censure.

That sky,

That peerless sky, e'en ling'ring yet with day,  
Nor thou, pale queen, in night's more late  
decay,

Nor thou, earth's Eden, nor the liquid fall  
Of waters, nor old ocean's billowy play,  
Could charm their grief.

The story is of a ruffian hero, who de-  
stroys a victim of his seduction, and flies  
with an adulteress. She commits suicide,  
and he is, lying, seized by fiends. In this  
conclusion we find little to commend; and  
may tell the author, that we consider him as  
having given to his muse much greater lati-  
tude than even his "quid libet audendi"  
will allow. We would remind him, that the  
writer whom he quotes has taken care,  
shortly after this license, to introduce his re-  
strictive "sed non;" and that, however pro-  
per the marvellous may be when judiciously  
employed, we fear that here his own critic  
would say, "Sed nunc non erit his locus."

We would encourage, while we warn the  
writer: "murmuring" cannot "wing the  
wind;" *huge* can be applied only to bulk,  
and by no means to superficial expansion,  
and hence, "huge wastes," is not correct lan-  
guage. We *lure* by setting objects of desire  
before the eyes, and not by compulsion.  
"The earth cannot be said to 'pass like a  
scroll.'" *Atomless* must necessarily mean,

without an atom; and we cannot "swell"  
in a blissful dream.

But we are unwillingly wasting our space  
on verbal criticisms; and will merely ob-  
serve, that the epithets are not always well  
chosen; that the different members of sen-  
tences are not always dependent; that the  
metaphors are not always consistent; and  
that the versification is too generally inhar-  
monious, owing to the fault imputed to Le-  
onidas, that he too frequently pauses on a  
trochee.

After having offered these remarks on  
the little pamphlet now before us, we dis-  
miss it to our readers, as a work in the pe-  
riod of which they will find their time not al-  
together thrown away. We require more  
accuracy and greater polish; but there is  
certainly some poetical thought and imagery  
in the composition, which should belong to  
a mind above that of a servile imitator, and  
the thief of a title.

*Sermons, Doctrinal, Practical, and Occa-  
sional.* By the Rev. William Snow-  
den, Perpetual Curate of Horbury,  
near Wakefield. 8vo.

Whatever tends to regulate and fix the  
minds of men (more especially in times of  
public agitation) upon objects favourable to  
religion, virtue, and good order, must be  
acceptable on every account.

That religion is the salt of the world, no  
thinking man will deny; nor that in periods  
of great tumult and violence, *that salt* "will  
lose its savour;" or, in other words, the  
passions of men will obscure or obstruct its  
influence.

The author of these sermons is situated  
in a part of the country, which, from many  
circumstances of privation and distress,  
makes it in a peculiar degree necessary for  
the minister to use all diligence and circum-  
spection, both by precept and example, to  
counteract the effect of those exaggerated  
misrepresentations, by which the public mind  
is inflamed: and if we may judge from the  
tenor of these discourses, Mr. Snowden is  
well qualified for the task.

The volume contains twenty sermons, em-  
bracing in the doctrinal part, most of the  
essential points of the Christian faith; and  
in the practical, some of those interesting to-  
pics which regard the education of the poor,  
and the mischievous effects of pauperism.

In sermon the fifth, on Righteousness, the  
delusions and impositions of trade are pointed  
out, and exposed in such striking and proper  
colours, that we heartily recommend its pe-  
riusal to every dealer and chapman in the  
kingdom, who may happen to call himself  
a Christian.

Among the Occasional Sermons, are, as  
might be expected, some on the loss and  
affliction of the nation, from the death of our  
late beloved sovereign, his consort, and the  
much lamented Princess Charlotte.

Upon the whole, we may designate this  
volume as a compendium of religious and  
useful knowledge.

*Pinnock's improved Edition of Dr. Gold-  
smith's Abridgement of the History of  
England, &c. with a Continuation to  
the Reign of George IV.; also a Dic-  
tionary, Biographical, Historical, &c.  
and Questions for Examination at the  
end of each Section.* Sixteenth Edi-  
tion, 12mo. pp. 528.

We notice this new edition of a valuable  
work, because we consider it to be one of  
the most complete books of the kind for  
education that has ever issued from the  
press, and the improvements so copious as  
to merit a distinct eulogium. They consist  
chiefly of copious biographical, historical,  
and critical notes, illustrative of the text; of  
tables of cotemporary sovereigns and emi-  
nent persons in each reign; of very appro-  
priate poetical mottoes; of a map, to help  
the understanding of the ancient history;  
and of a chapter on the constitution, as well  
as additional chapters, to bring down the nar-  
rative to the present time. In all these re-  
spects, this edition and continuation of Gold-  
smith's abridgement meets our decided ap-  
probation; even though the choice of words  
might have been made more adwisely in the  
new chapters, so as to steer clear of all politi-  
cal bias. School-books of this description  
ought to furnish facts rather than opinions;  
neutrality is their greatest recommendation.

The editors deserve every praise for the  
pains and labour they have bestowed in per-  
fecting the publication; and we feel confident,  
that the sixteenth will be followed more ra-  
pidly than it has been preceded, by many  
other editions.

*The Angel of the World, and Sebastian,  
with other Poems.* By the Rev. G.  
Croly, A.M. pp. 182.

This volume, of which we have al-  
ready given an anticipatory account, has  
at last made its appearance. As a work  
of the press, it is a very neat specimen  
of the skill of English printing.

Having previously quoted so largely  
from the two longest pieces, we shall  
now restrict ourselves to two of the  
miscellaneous poems; one, for the cele-  
brity of the artist and the magnificence  
of the picture which it describes, per-  
haps among the noblest performances  
of the English school of painting; and  
the other, for the benefit of those fair  
readers who may suspect the depth and  
sincerity of the Poet's homage to the  
sex, living or dead.

SATAN.

*From a Picture by Sir Thomas Lawrence.*

"Satan dilated stood," Milton.

Prince of the fall'n! Around thee sweep  
The billows of the burning deep:  
Above thee looms the sullen fœt:  
Beneath thee bursts the flaming spire;  
And on thy sleepless vision rise  
Hell's living clouds of agonies.

But thou dost like a mountain stand,  
The spear unlifted in thy hand:  
Thy gorgeous eye—a comet shone,—  
Calm into utter darkness borne.

A naked giant, stern, sublime,  
Arm'd in despair, and scorning Time.

On thy curl'd lip is thron'd diadems,  
That may revenge, but not complain:  
Thy mighty cheek is firm, tho' pale;  
There smote the blast of fiery hail!

Yet wane, wild beauty figners there,  
The wreck of an archangel's sphere.

Thy forehead wears no diadem,  
The King is in thy eyeballs' beam,  
Thy form is grandeur unobscured,  
Sole chief of Hell's dark multitude.

Thou prison'd, a ruin'd, unforgiven!  
Yet fit to master all but Heaven.

SONO,

Thou loveliest of the lovely! where  
Is thy bright spirit gone?  
Where is thy gentle throne?  
In what sweet and silver sphere?  
Tell me, my Angela, that I  
All night on thee may gaze,  
And know thy temple's blaze  
From all the splendours of the sky.

Oh! if the loved in death return,  
To love and look upon  
The pale, heart-broken one,  
That weeps at midnight o'er their urn—

Tell me, when on the blissful air  
They stoop, that I may be  
Found fit to welcome thee,  
With hands and heart upraised in prayer.

Or art thou changed, and to mine eyes  
A thing invisible:  
Wrapped in the unpierced veil  
Of holy immortality?

No! thou wilt stoop to earth no more:  
Thy glory were profaned  
By thoughts to earth still chained,  
My Angela! thy trial's o'er.

And I will follow thee, sweet Love!  
Life's bitterness is past,  
The world is fading fast,  
My spirit wings its way above.

GALIFFE'S ITALY, &c.

(First vol.—Concluded from our last.)

At Verona, our Genesee, like an Englishman, visited the tomb of Juliet, and gives us rather a grotesque story about it.

"We went, as all admirers of Shakespeare are bound to do, to visit the tomb of Juliet; which is a stone-coffin in the garden of an ancient convent of Franciscan friars. The convent was formerly blown up by an explosion of gunpowder, and the coffin was recognized (it is said) by the hole made in it, for admitting air to the unfortunate bride. Incredulous people might perhaps mistake it for the basin of a fountain; but its shape and an excavation for the head, afford some ground for the speculation that it may have been a coffin; and if a coffin, why not Juliet's? An English Lady, who shall be nameless, and who had paid her devotions at this shrine some weeks before us, had taken it into her head to lay herself at full length in this tomb, like a monumental figure, with her hands piously crossed on her bosom. But it is dangerous to tempt the

devil, and especially in a monastery. The romantic visitor had no sooner clasped her hands on her breast, than a sudden gust of wind so disarranged her undefended garments, as to cause no slight confusion to herself, and some scandal to half a dozen male and female friends who accompanied her."

What would the Nurse have said, had she been alive and present? From Verona we fly to Venice, and here we take but one description.

"The poorest class lives almost exclusively on pumpkins, of which there are two sorts. The first and cheapest is that round and insipid kind, which is known all over Europe: it is called *Zucca barucca*, and a slice of it costs only one centime, equal to the tenth part of a penny. It is miserable food, but fire or six slices during the day are sufficient to keep body and soul together. The other sort is called *Zucca Santa*: it is more substantial, less insipid, and proportionally dearer; and is the favourite and usual food of that portion of the lower classes who are just above begging. Its form is that of a very long pear, its taste is not unlike that of a carrot, and the rind, when fried, forms a sort of resinous substance which is esteemed a great delicacy by the pumpkin-eaters. These pumpkins or gourds are sold, ready fried, in three or four different moveable stalls in every street; you cannot go ten paces, without meeting with some. They afford, perhaps, a less savoury, but certainly a more wholesome nourishment, than the greasy and dirty fritters of which the Amsterdam beggars are so fond, and to which they add a nauseous decoction of endive, dignified with the name of coffee, — a beverage fortunately unknown to the poor people of Venice."

At the little town of Fano, the theatre made a remarkable display. "The principal performers at that time were an excellent set of rope-dancers; and among their feats was that of a man and woman, running up from the stage to the gallery on two parallel ropes, without balancing poles, and dancing all the way with perfect ease. The evening's entertainment was closed with a very laughable farce, in which the lover disguised himself as a dog, and acquitted himself of all the functions of a dog with ridiculous, but disgusting, accuracy." Thus we see that Madame Saqui has had her prototypes in the exploits she performed at Covent-Garden: it is probable the hint of the dog-trick will not be thrown away on our tasteful managers.

Among the painters at Rome, the author speaks of one whose case is rather extraordinary. He says—

"Mr. Verstappen is, I presume, the first landscape painter in Europe. His colouring is admirable for truth, warmth, and luxurious beauty. I never saw water represented with such striking effect; his trees show a vigour of vegetation which equals nature itself; and his goats are the most charming animals that ever were produced on canvas. Mr. Verstappen was born in Holland, but he left that country twelve years ago, and is

not disposed ever to return thither. He looks upon Rome as his own country, because it is that of the arts and of artists. Switzerland he allows to be a very fine and picturesque country, but a much less fertile ground than Italy for a painter. His genius seems full of that glow which he admires in nature, and transfuses so faithfully into his works. He is just the man to have said '*Ed io son pittore!*' A remarkable particularity in him is, that he paints with the left hand; the right has either been cut off, or possibly he may have been born without it, but he does not like to have it observed, and always keeps it wrapt up in a handkerchief, or hid under his pallet. The price of Mr. Verstappen's largest paintings is one hundred and twenty pounds, and they are certainly very cheap. The smaller ones cost only from thirty to fifty pounds."

We see how some painters manage; and in an account of the Carnival recreations on the Corso, we have an example of the behaviour of ambassadors. The carriages are on each side, and the pedestrian crowd throng the centre of this street, which is not over wide.

"The Count de Blacas, the French Ambassador, drew upon himself the hearty curses of the people, by a proceeding for which he deserved to have had his carriage broken to pieces—as it certainly would have been in any other place than Rome. Choosing to make a parade of his privilege, he drove rapidly down the middle of the street, between the two files of other carriages, to the great peril of the crowd. When Mr. de Funchal, the Portuguese Ambassador Extraordinary saw this, he thought his master's honour required that he also should assert his right, and he therefore ordered his coachman to attempt to overtake and to pass Count de Blacas's carriage. Count de Blacas's man not knowing Mr. Funchal's equipage, as the latter was but lately arrived, would not allow his carriage to pass, until the Count, being made aware of the dispute, and seeing who it was, ordered his coachman to desist from the race. Mr. de Funchal, after his victory, immediately withdrew; but the stupid pride of the Frenchman was not satisfied with a momentary exercise of his most senseless and absurd of all privileges, but he drove thus three times along the whole length of the Corso. It must be observed, that there were several kings and queens, and royal princes, in the two files of coaches, none of whom shewed the least disposition thus contemptuously to break in upon the pleasures of a people, who are allowed only twenty-four hours in each year for their amusements. I cannot believe that a man capable of indulging in such a paltry triumph, would act with dignity and energy in cases of real moment; and I can well conceive the hatred which he inspired in France, of which I saw some very curious specimens at Paris."

In describing the society at Rome, Mr. G. falls into the silly absurdity of giving us

\* Mr. Corbould the English artist, we have heard, paints with his left hand.—Ed.

pages of characters in capital letters—princesses A's, Duchesses B's, &c. We never yet could imagine any possible reason for printing travels in this fashion. If the matters mentioned are meant to be unintelligible, it might be as well not to take up room with them. What is not fit to be disclosed should be wholly omitted; and it is an injustice to some readers (ladies, perhaps, who do not like to have curiosity excited and balked) to tantalize them with things that others may happen to understand, though they cannot. Instances of the folly we allude to will be found at page 408, and thereabouts. But the most strange, we had almost said the most whimsical part of this first volume, is the author's theory, that Rome was founded by Russians, or rather by their ancestors, the Scythians. His proof is derived from the analogy of the languages; and, as this enquiry is really curious, we shall copy the most prominent parts.

"Nestor, the oldest historian of Russia, says, that the ancient Slavonians were driven out of Mysia and Pannonia by the Bulgarians. We are told that the latter established themselves in Mysia in the fourth or fifth century of the Christian era, but Nestor may have been deceived by two narrations, or traditions, which coincided in some points; and he may have blended them into one. It is highly probable that the Slavonians inhabited Mysia in the most ancient times, and that some national disaster forced them to abandon that country; that the greatest number emigrated by land, but that a part of them embarked on the *Ægean Sea*, and were tossed about till they arrived on the Latin shore.

"It may be observed, that Mysia was so very near Troy, that this famous town was very possibly the real spot from which they started after its siege. This would reconcile all the chief traditions of both people,—which, in such researches, ought never to be lost sight of. But I am not at all prepared to assert, that it was *Æneas*, or that they were Trojans, who came to Rome. This alone is the point for the probability of which I contend,—that its founders, whoever they might be, spoke the Russian language.

"I must here warn my readers against a mistaken notion, which is very current even amongst well-informed people in Russia, (so that we must not be astonished at its having been adopted throughout the rest of Europe,) that the Russians took their language from the Slavonians, from whom they drew their origin. The language of the Russians in our days is unquestionably the original language; what is called Slavonian is only a dialect of it."

Struck with the notion of their identity, Mr. G. applied himself to learn the Russian tongue, and proceeded—

"I very early learnt, however, one circumstance, which was sufficient to spur me on through any difficulties and obstacles. This was the very singular coincidence between the Russian and the Latin languages, in respect of their want of articles. This peculiarity in the Latin language had already frequently surprised me. I could not con-

ceive how it could have arisen, seeing that all the languages derived from the Latin, as well as the Greek, had articles; and I had now no longer the least doubt, but that it involved a very interesting historical fact, which I grew more and more anxious to develop. I therefore took the first favourable opportunity of visiting Russia, where I applied myself to the study of the language with as much assiduity as my occupations of a more important nature allowed me. The Russian is so exceedingly difficult, that in spite of a facility of acquiring foreign languages which has been of the greatest service to me with respect to those of other countries, it cost me greater pains than any three of those which I had previously learnt. However, after two years' residence there, I had pretty well mastered it; and as soon as I thought myself sufficiently expert in it, I resumed the investigation which I had laid by for this pursuit.

"I cannot express the delight I felt at the discovery of the first very clear etymology which presented itself to my notice, that of *Senator*, from *Znaten*, which means noble.

"The next was *Populus*, from *Po Polon*, or (writing agreeably to Italian pronunciation) *Popoli*, which means about the plain, or the fields. The story of *Valerius Publicola* illustrates this etymology remarkably well; in teaching us that building his residence on a hill, was a circumstance which distinguished a chieftain from the common mass of the nation.

"*Plebs* was but too likely to have been derived from *Plebs* (apistle, scum.)

"*Rez* was probably taken from *Reed* (I harangue), for the first king was little more than an orator;—and the verb *rego* must have had the same origin.

"*Civis* may come from *Civi* (liberal,) pronounced as in Italian, *Cheevy*.

"*Milites* may be drawn from *Mily* (my friends), for this word was only applied to those who were near the chief, and had a right to bear arms.

"*Ludi* (games) may very reasonably be supposed to have had its origin in the Russian *Ludi* (a great many people); *Ludno* means populous, and crowded.

"*Ludi e'con realit* (to fling people down off horseback) was a proper etymology enough for the *Ludi Consualia*, without the interference of a god, *Consus*, who could have nothing at all to do with the games.

"In the *Lupercalia*, a goat was killed, and the priest touched with the bloody kulla the forehead of a boy, whose office it was to laugh during the ceremony. Very probably the lad was obliged to smile and say *Lob-perceoli*, "Do pierce my forehead," which was afterwards taken for the vocative case of *Lupercalia*, the priest who celebrated these games.

"In the *Palilia*, heaps of straw were set on fire, and people leaped over them: the signal given was doubtless *Palili* "the fire is lighted,"—and there was no occasion for the interference of a goddess *Pales*, who owed her origin to the same compendious principle of creation as the god *Consus*. But I have a still better reason to bring forward in

support of my etymology; for these games are celebrated up to the present time by the Russians, on St. John's day, in the month of June.

"I shall now proceed to the comparison of a variety of Roman words, with the words in the Russian language from which I believe them to be derived. I have already suggested what proportions it might naturally be expected that the warlike strangers who founded Rome, and their Italian wives, would respectively contribute to the formation of the new and mixed language of their descendants; and that if the larger portion of it, consisting generally of the ordinary language of peaceful and domestic life, was likely to be supplied by the women, it was still more probable that all the terms of war and of government, the names of their deities, religious ceremonies, &c. would be furnished by the men. It will be seen by the following list how far my theory is borne out by the fact, and how great a proportion of the names which I have succeeded in tracing to their Russian origin, belong to the latter class.

"The antiquaries inform us that the first Roman banners bore the figure of a hog: they were called *Signa*—*Suinia* in Russian, is a Hog.

*Tributu* comes from *Trebutu*, exacted. *Hostis*, an enemy,—from *Hosti*, strangers. *Jugum*; *Igo*, yoke.

*Fasces* or *fakes*: *Seathi*, bundles.

*Scuris*, *Sehira*, an axe.

*Spolia*, prey: *Spolia*, from the field of battle.

*Strages*:—*Stragenie*, a defeat, *Strah*, fear, terror.

*Cruor*, blood violently split; *Crow*, blood; the old word was *Sanguis*, which was retained for the fluid.

*Morior*, I die,—*Mora*, I kill.

*Fugro*:—*Fuigonat*, to put to flight.

*Vibro*:—*Fuibroast*, to dart.

*Rapio*:—*Hrabiti*, to plunder.

*Lato*, I fall:—*Slayboy*, weak; *Slabo*, weakly.

*Placo*, I appease;—*Placat*, to cry, to weep.

*Mollis*, I soften:—*Molin*, I beg, I pray.

*Immolo*, I sacrifice:—*Fuimolius*, I obtain by my prayers.

*Pugno*, I fight; *Pinair*, I drive,—I push *Seco*; *Secu*, I cut.

*Vapulo*, I am beaten; *Pabili*, they have beaten me.

*Mors*, *Mortis*; *Smert*, *Smerti*, death.

*Malum*, bad; *Molo*, too little.

*Trepidare*; *Trepetat*, to tremble.

*Micare*, to glitter, } *Meo* (pronounce Ma-  
*Dimicare*, to fight. } che,) a sword.

*Magistratus*; *Magustrashit*, I may inspire fear.

*Magister*; *Magustratchet*, I may take care of. *Hramnenses*, or *Hramnecis*, name of one of the three tribes of Rome; *Hramnog*, belonging to the temples.

*Luheri*, or *Luerci*, another tribe; from *Lac*, a bow; the legion, or Company of Archers.

*Azylum*; *Atyalat*, to banish.

*Mania*, town-walls; *Minsyn*, I stop, I cut short.

*Domus*; *Dom*, a house.

*Pons*, a bridge; *Ponere*, to bear up.  
*Arare*; *Arat*, to plough.  
*Strou*; *Strou*, (pronounce Stroyou) I build.  
*Pacere*; *Past*, to feed.  
*Alari*; *Alarut*, to speak.  
*Vider*; *Videl*, to see.  
*Validare*; *Healit*, to approve.  
*Eat*; *eat*, (pronounced *geat*, as Cicero said it was pronounced in Latin) to eat.  
*Est*; *Est*, it is.  
*Lubit*, it pleases; *Lubit*, to love, or to like.  
*Nox*; *Nuch*, night.  
*Dies*; *Den*, day.  
*Somnus*; *Son*, sleep.  
*Sol*; *Sol*, salt.  
*Vinum*; *Vino*, wine, and brandy.  
*Genet*, a son-in-law; } *Gena*, a wife  
*Generant*, noble; }  
*Vadua*; *Vada*, water.  
*Mare*; *Mare*, the sea.  
*Nubes*, clouds; *Nebena*, heaven.  
*Mensis*; *Mesiat*, month.  
*Ether*, air; *væter*, wind.  
*Boreas*; *Burus*, tempest, storm.  
*Caruifer*, an Executioner; *Carant*, to cut off the ears.

"I might add a great many more, for I collected above five hundred similar instances which I communicated to Mr. Karazin, a great many years ago, when he was writing his history of Russia. But I suppose the preceding will be deemed sufficient. I must however add a few, which are intended to prove that this branch, at least, of the great Scythian family, has made a greater progress in civilization, than some writers are willing to allow.

*Scrilo*, I write; *Serebu*, I scratch, I engrave.

*Pingo*, *pinxi*, *pingere*, to paint, to draw; *piachi*, *piachit*, to write.

*Recitare*, to recite; *chitat* (pronounced *chitat*, as the Italians) to read.

"I shall close this article with a translation of the principal proper names of the first Romans.

*Roma*; *Rrom*, brown, thunder.

*Romulus*; *Rromas-luch*, light of thunder, glittering of thunder.

*Remus*; *Rremu*, I roar, or rumble, like thunder.

*Tullus*; *Tul*, quiver, lac, a bow.

*Tarpeius*; *Terpegu*, I suffer.

*Pluminius*; *Plomingu*, blazing.

*Atratinus*; *Atraten*, armed cap-a-pè.

*Sempronius*; *Sempronitusyug*, I pierce seven through.

*Mucius*; *Muciu* pronounced like the Italian) I torment.

*Marcus*; *Murachina*, (id.) I frown.

*Cassius*; *Coassius*, I look wary.

*Sporius*; *Sporius*, I quarrel.

"I think finer names could not be chosen for such people.

"To these I must add those of some of their Divinities.

*Feretrus*; *Pecetria*, who beats to atoms, who crushes.

*Mars*, *Martis*; *Suert*, *Smertry*, death.

*Gradiens*; *Gradieng*, of towns.

*Ceres*; *Zerey*, who ripens.

*Neptunus*; *Neftoun*, who cannot be drowned.

*Jupiter*; *Jimpitat*, to feed life, to support it.

*Culum*; *Tielo*, the whole.

*Saturnus*; *Saturnog*, created.

*Pluto*; *Boh Plutef*, the god of thieves, miscreants, knaves.

*Pallas*; *Palach*, a tent.

*Minerva*; *Mir ne rea*, who does not break peace.

*Fulcanus*; *Folkugain*, the magician of fire.

*Venus*; *Veno*, a bride's portion, her marriage money.

*Rhea*; *Hrega*, heating.

*Smithæus*; *Zuinny*, of a serpent.

*Diæus*, godlike; *Dioey*, wonderful.

"I shall be glad if this opening should induce some learned man to go much deeper into this subject than I had leisure to do. There are many dialects of the Russian language, of which I know nothing but the names, and which might throw greater light on this matter."

This, though perhaps a fanciful, is certainly a very curious speculation, and we join the author in inviting inquiry into it.

#### THE PARSIS\*.

No religion on earth, that of the Jews excepted, has continued from such remote times as that of the Parsis, with so little apparent change of doctrine or ritual. Different opinions are held among them concerning the nature of things, and the writings ascribed to Zertusht are very imperfect on that subject. All the laity, or Behdins, consider Ormazd the author of good, and Ahriman the author of evil, as having existed from the beginning; and Zerwan, or Time, as a production of Ormazd; an opinion which seems to be favoured by the *Avesta*. But many of the desturs, following the expostitions of later authors, hold that every thing has originated from Zerwan, or Time, and that Ormazd was the first active and creative being produced by that original principle. Zerwan, however, is seldom mentioned in the sacred volumes of the Parsis; and if he was at any period esteemed the grand original principle of all existence; yet as he has long ceased to operate directly, and as all the changes of nature are held to be effected by the agency of Ormazd and Ahriman, from whom immediately flow all good and evil, Zerwan remaining inactive like the God of the Epicureans, the whole attention of the Persians being constantly directed to those two who possessed the immediate power of conferring benefits and inflicting injuries, Ormazd the agent of good is now regarded as the sole ultimate object of worship.

As Ormazd is alllight, purity, and excellence, and inhabits the primal light, so is Ahriman all darkness, impurity, and wickedness, and inhabits the primal darkness.

Ormazd and Ahriman appear to be co-etaneous. The first production of Ormazd was the *Ohover*, or *Homover*, The Word,

by means of which he created\* all material things, the heavens, the earth, and all that they contain.

The *Ohover* or Word is a text of the *Avesta*, held in great veneration.

While Ormazd was originally engaged in the enjoyment of his perfections, he discovered Ahriman at an immense distance off in mud and filth, and knew instinctively that he was to confound and delude his formations: Ormazd therefore employed himself for three thousand years in making the heavens and their celestial inhabitants the Feroehs, which are the angels and the unembodied souls of all intelligent beings. All nature is filled with Feroehs or guardian angels, who watch over its various departments, and are occupied in performing their various tasks for the benefit of mankind. Ormazd was induced to create those Feroehs at this time, as a protection against the Evil One, and as the means by which the world was finally to be purified from sin. Ahriman, dazzled by the refugence of light, and discomfited by the simple enunciation of The Word, or *Ohover*, fled to hell, where he created an opposite class of spirits, the Divs and Darujs, or male and female demons, the inhabitants of darkness and ministers of all evil, in order to annoy and injure Ormazd and his works. The *Vendidad* makes the evil beings so created amount to ninety-nine thousand nine hundred and ninety. Ahriman, cast down into the abodes of darkness, there completed the second period of three thousand years, during which time all the productions of Ormazd were free from wickedness and pain, and happiness alone prevailed in heaven and on earth. But the universe was still in a state of comparative waste. During this second period of three thousand years the other Amshaspands or superior angels, for Ormazd himself is considered as the first, were produced. Of those now created, the first, Bahman, was to watch over living animals, and to keep peace among men; the second, Ardechehest, presides over fire; the third, Shahrivar, was placed over metals and riches; the fourth, Spandarmad, a female angel, watched over the earth; the fifth, Khurad, diffuses the blessings of running water and of plenty; the sixth, Amordad, watches over the multiplication of trees, plants, and grain. Ahriman, on his part, created six superior Divs to counteract and injure their operations.

Ormazd, having arranged the heavens, assigned to various guardian angels the charge of all the stars and planets; of the different months and days of the month; of the three watches of the day and two of the night; of the elements and their parts. All nature is full of watchful guardian spirits.

Yet in spite of this multiplication of superior beings, and though in the Liturgy of the Parsis all of these are occasionally addressed, they are never worshipped as deities, but

\* The Word acts a very dark and uncertain part in the *Zend-Avesta*, *Couverture de Zoroaster*, vol. i, part ii, pp. 86 and 87, where The Word is invoked. See also pp. 128 and 139, which is very curious, and like St. John i. In vol. ii, p. 239, it appears as the *AV* of the Hebrews.

\* Abridged from a very interesting account of the Fireworshippers in India, by William Erskine, Esq., and inserted in the second volume of the Bombay Literary Transactions. Ed.

only as the media through which praise is conveyed to the Supreme Being, to whom all adoration is finally addressed; the ancient Persians, like the modern Paris, being strict Unitarians.

According to one system, (for even among the Persians there are various systems,) towards the end of this second period of three thousand years, the Feroher, or disembodied prototype of man, which was still in the heavens, being delighted with the appearance of order and harmony that reigned on the earth, Ormazd proposed that it should descend in order to combat the Darujs, and contribute to the eradication of evil from the lower world, promising that he should finally restore the souls of men to their celestial abodes.

Ahriaman trembled in hell at this appalling intelligence. The Divs, or demons whom he had created from time to time to keep pace with the creations of his rival, asked him to rise and combat this new enemy, to whom the destruction of sin was destined. After various reviews of his troops, and some indecision, he at length rose up with his hands, combated the light, and by means of his demons, many of whom assumed the appearance of serpents, of flies, and of venomous and ravenous animals, confounded all things on earth. Ahriaman, who after penetrating into heaven had thrown himself on the earth in the form of a serpent, perched up every thing by a burning drought. By his orders the Feroher of man, which by an odd enough arrangement contained also that of the bull, whose shape it had assumed, was wounded, and finally died. From the right fore-leg of this celestial bull, at the moment he expired, fell Kayomers, the parent and king of the human race; from the other parts of his body issued the germs of numerous animals, trees, and vegetables, useful to man.

Kayomers, the father of the human race, was created to live for ever, but Ahriaman attempted to destroy him. The parent of evil covered the world with night, and burned it up by his demons. He attacked the revolving sphere, which Ormazd preserved. For ninety days and nights did the angels of Ormazd and the demons of Ahriaman encounter each other: at length the latter were precipitated into hell. Ahriaman was completely expelled from heaven, to which he has never since attempted to return; but from hell he penetrated through the earth, and renewed his war on all the productions of Ormazd. Kayomers died of the injury he had sustained.

We are not yet arrived at the end of fable. In forty years a plant like the *rice* spring from the seed of Kayomers, bearing living fruit resembling two human bodies united together, and inclosing fruits that contained ten different species of men. The two bodies became Mashia and Mashiane, a male and a female. Ahriaman, finding that they adhered to Ormazd, whose influence was superior to his own, resolved to corrupt them. By his lies he induced them to rebel. They became Darvands, and their souls were doomed to hell till the resurrection. A flood succeeded

which covered the earth to the height of a man, and killed the Kharfesters, or evil beings invested with bodies, that had taken shelter in the holes of the earth; from their remains poisons and putridity and noisome animals arose. The hapless pair were still doomed to new trials, and were seduced by Ahriaman to drink the milk of a goat, and to eat the fruit of a tree, by which they lost their remaining advantages. They ceased to praise God, and the Divs raised quarrels between them. Ahriaman from hell invited them to worship the Divs, and Mashia poured out libations of milk to the north, the region of darkness. After fifty years the hapless pair met again, and had several children. The whole of this cosmogony is evidently Chaldean, and often reminds us of the fable of Paradise Lost. It ought to be remarked that it is extracted from the *Bundehesh*, a Pehlvi work, written posterior to the fall of the Sassanid dynasty, and from Persian works of a still later date, which do not in every particular agree with the cosmogony of the *Vendidad*. The *Vendidad* indeed often alludes to mythological tales as known, without explaining them. The account of the cosmogony is no part of the popular doctrine. Not one in a hundred even of the Destrus has studied it. It is given here chiefly on account of its coincidence with some very ancient notices of the opinions of the Persians.

Misery and sin having thus found their way among the children of men, some prophet or deliverer was required to rescue them from the wretchedness and deilement under which they laboured, and to guard them from the temptations and dangers that pressed on every hand.

Before the age of Zertusht certain distinguished saints, such as Hom, Jenishid, and others, had instructed mankind in the will of Heaven. But the whole law was at length promulgated by Zertusht, the chosen of Ormazd. It teaches how to keep away and to subdue all bad demons, the authors of evil in the world, and how to attain perfect bliss here and hereafter. Since the time of Zertusht no demons have been allowed to assume a visible form.

It appears therefore that the leading, or at least the most commendable, doctrines of the Parsi religion are, to adore Ormazd as the author of all good, to preserve purity of thought, word, and action; to reverence all the angels and subordinate spirits and agents of Ormazd, with which nature swarms in all her elements, and to pay them honour. For this purpose, endless prayers must be repeated, as contained in a tedious liturgy, which prescribes the solemn words to be used not only on great and important occasions, but even on the most common and vulgar operations and functions of life. Numerous vain and frivolous ceremonies are prescribed; some to be performed by the priest, and others by the laity themselves. As the language of the *Zend-Avesta* is known to none of the vulgar, and to few of the priesthood, the stated prayers are mumbled over as contained in the ritual, with incredible velocity, and are considered rather as charms and in-

cantations producing effects by their sound, than as in any degree fixing the mind on its object, or elevating it to the father of spirits.

The whole system is founded on the supposition of a continued warfare between good and evil spirits, which fill all nature; and religion is the art of gaining the aid of the former, and, by due observance of the law, of inducing them to assist the votaries of Ormazd.

The great visible objects of veneration are the elements, and especially the Fire. Light is regarded as the best and noblest symbol of the Supreme, who is without form. In consequence of this veneration for light and fire, the sun, moon, planets, stars, and the heavens themselves, are objects of peculiar respect; and in praying, they delight to turn to them, especially to the rising sun. They have no temples considered as the residence of God or of superior beings, nor any images or paintings of Ormazd or his angels. Their *ateeh-kahela*, or fire-mansions, are merely edifices for guarding the holy fire undefiled and unextinguished.

In all their temples, if they can be so called, the sacred fire is kept for ever burning, and it is approached with the greatest reverence. Their most awful ceremonies are performed before it.

There are two species of the sacred fire in India, the *behrām* and the *adīrān*; the former of which ought to be composed of a thousand and one different species of fire, and the latter of at least fifteen or sixteen. These various kinds are enumerated, as fire generated from rubbing two pieces of wood, from a kitchen fire, a funeral pile, &c. Some of them evidently originated in India. The *behrām* fire, to which high reverence is paid, is found only in three temples in all India: at Udvari or Udipūr, a town near Doman; at Nausari; and at Bombay. The *adīrān* fires are much more numerous; there being five or six of them in Bombay alone, and many in other places. Each temple has only one sacred fire before which the daily prayers and certain others are read. There are occasional services, as, if a person wishes the *Yeath*, *Vampered*, or *Vendidad* to be read for the benefit of a living or dead person; and, for more solemnity, that it should be in the fire temple. In such instances, any fire is brought from without, placed in the temple, and, if it be a *behrām* fire temple, is removed again when the business is over: if an *adīrān*, it is placed below the *adīrān* fire. The great fire, whether *behrām* or *adīrān*, is seen, at least in India, by all Parsis; certain ceremonies being performed before it.

These fire temples are always covered, and so constructed, that no rays of the sun can fall directly on the sacred fire which they contain. Certain parts of their liturgy are repeated only by the priest standing or sitting, in long and pure white attire, in the fire temple, before the sacred fire. On his mouth is the *panām*, a small piece of white cloth, to prevent the saliva from spurring or dropping out to defile the fire while he reads the *Vendidad* or other sacred volume, chant-

ing the suitable texts. When he reads the *Yasht*, *Fespered*, or *Fendidd*, before the common fire, he holds in his hand the *barsom*, tied by the cord called *evangan*. The *barsom* consists of a number of small twigs, about a span long, which have been previously cut from a particular\* tree by the priest with a consecrated knife and with great ceremony. These, from time to time, at particular parts of the prayer or reading, are placed on the *mahrub*, or stand. The fire is usually fed with any dry wood. The prayers of the Parsis are not repeated distinctly, but muttered through the teeth with a kind of inarticulate noise, without opening the lips. In reading the *Avesta*, the passages containing the directions inserted by the mobeds are perused in total silence.

They have various classes of priests, of whom the chief are the *destdrs*, who ought to study their sacred books, and are the doctors and expounders of the law. Not being officiating priests, they are not necessary to a fire temple. Next are the *mobeds*, who are the ministering priests, read the holy books in the temples, and superintend all religious ceremonies, whether there or in private houses. They are not in general learned, seldom understanding the meaning of the books which they read, or the prayers which they recite, these being in the Zend or the Pehlvi languages.

In their public prayers much use is made of the consecrated water called *sor* or force. It is supposed to be powerful in repelling demons, and to impart peculiar efficacy to the sacred rites. In the course of the service they pour it from one cup into another, dip the point of the *barsom* into it, and sprinkle another *barsom* with it. After the religious service is over, it is poured into a spring or running stream, which it is supposed to purify.

The *hom*, also of singular use in their ritual, and, like the *sor*, perpetually alluded to in their sacred volumes, is the consecrated juice of a particular shrub, which is brought from Persia, pounded and prepared with many ceremonies. Besides its important uses in the public devotions, it is usual to give a drop of it to a new-born infant to cleanse it from the impurities of the womb; and to persons supposed to be at the point of death, in order to keep away malignant demons, and to purify the departing soul for future bliss and immortality.

Besides the occasional prayers or ejaculations that the Parsis are taught to repeat in particular circumstances, each Parsi ought to pray at five stated times every day; once between sunrise and noon, once between noon and the middle point between noon and sunset, once between that point and sunset, once between sunset and midnight, and lastly between midnight and sunrise. On awaking in the morning and rising from his bed, he first of all unties and ties again his *kusti*. As he ties each knot in the form prescribed, he ejaculates or mutters

the prayers ordained for the purpose. They pray in all situations, whether public or private, frequently interrupting their prayers to scold or give directions.

When a child is born, a name is given it, either at the moment of birth or a few days after, with little ceremony. The chief solemnity is on investing a child, whether male or female, with the *kusti*, or consecrated cord or girdle, and the *sadra*, or sacred shirt: the former is made of seventy-two threads of camel's hair, or of wool. He receives them between the age of seven years and of fourteen years and three months, never laying them aside till his death, except to change them, or for temporary purposes. The *sadra* is worn below the *kusti*, and next the skin. These are considered as the armour of a Parsi man against the temptations of Ahriman.

Their most efficacious morning ablutions are with the urine of the ox, after which they wash themselves with pure water.

The Parsis do not admit of polygamy, unless the first wife be barren, when a second may be taken. The priests may marry as often as the laity.

The use of concubines is strictly forbid, but the practice is widely different.

No Parsi can eat or drink out of the same vessel with a person of a different religion; nor are they fond of drinking out of the same cup with another Parsi, for fear of becoming a sharer in his sins.

They have something similar to auricular confession.

The Parsi is one of the few religions that has no fasts. God delights in the happiness of his creatures; and it is even meritorious to use the best meat and drink, the best clothes, and the best accommodations of every kind that are attainable.

As to their meats, all birds and beasts of prey, with the dog and the hare, are forbidden. Pork is not forbidden; but by a direction of one of the *reemets*, the swine ought to be kept apart and fed on clean food for a twelvemonth before it is killed.

Few good works are in their estimation more meritorious than the planting of trees. They have a great unwillingness to cut down any fruit tree.

Their reverence for the elements makes them careful in no manner to defile them. No impurity is allowed to be thrown into the fire or the water. None of them are smiths, through prevented by no positive injunction: they never extinguish any light, nor do they enlist as sepoys, pretending that they dare not defile the fire by the use of fire-arms. In the great fire in Bombay in 1803, they stood for a long time idle, witnessing the progress of the flames; but when they found them continuing to spread, to the ruin of their houses and property, their interest got the better of their scruples, and many of them wrought with great alacrity, both in procuring water and in helping to extinguish the fire. All other natives of the East, when about to take an oath, cast off their shoes or sandals; the Parsis alone put them on, so as in some measure to insulate themselves

from the elements. To their reverence for the water, as well as to their want of good seaports, may be ascribed their aversion in all ages to navigation; though in cases of necessity, as in long voyages, their law allows them to throw impurities into the sea. Hence, too, they never bury the bodies of their dead, for fear of defiling the earth, but leave them to moulder away, and to be consumed by the birds of prey. Their *dohs*, *mekhs*, or places of sepulture, have often been described. They are round towers, having platforms or terraces near the top, sloping gently to the centre, in which is a round hole for receiving the bones and decayed matter. On these the dead bodies are laid, exposed to the wind and rain, and to the birds of the air.

As it is supposed that the malignant spirits, ever watchful to injure mankind, are particularly eager to assail the soul at the moment of its separation from the body, the Parsi not only recite prayers and read their books near their dying friends, to keep the demons away, but are careful to have a dog close by, as they imagine that that animal, from its quick-sightness will perceive, and by its barking will alarm and chase away, the infernal assailant.

The dead body is dressed in clean but old clothes, and conveyed to the place of exposure on an iron bier; for wood being the aliment of fire, it might, if wooden, be accidentally burned, and so the element of fire defiled. The bearers are tied to each other by a piece of tape, to deter, as they allege, by their union, the wicked demons who hover round the body from defiling them. They place meat and drink near the body for three days, as during that time the soul is supposed to hover around in hopes of being re-united to it. They watch the corpse to see on which eye the vulture first seizes: if on the right eye, it is a fortunate sign. The dogs drive away the evil spirits, who during that time are continually on the watch to carry off the soul to hell. If a dog takes a piece of bread from the mouth of the deceased, his happy state is considered as secure. He who touches the dead is impure for nine days. On the fourth day the soul ceases to linger about the body, and goes to happiness or woe.

Should any one revive after having been carried to the *dokhmeh*, he is shunned by all, as having had commerce with impure spirits, till duly purified by the priest. But there is reason to imagine that the popular superstition goes still further, and that no return is now ever heard of.

When the fourth day has arrived, the angel Serioah appears, and carries the soul to the bridge of Chinaved, which extends from earth to heaven: the evil spirits attempt to bind and ruin it, the good angels protect it. The angel Rasmherast weighs its actions, standing on the bridge: if the scale of good preponderates, the bridge, which in its natural state is as narrow as a hair, widens, and the celestial dog that guards its further extremity suffers the soul to proceed on to heaven: if the evil prevails, the

\* In India, from the difficulty of procuring twigs of the proper wood, small rods of brass, sometimes of silver, are used.

soul is precipitated over the narrow bridge into the gulfs of hell which open below. Other accounts represent the virtuous as met by an angelically beautiful form, which addresses them, saying, that it is their good works come to conduct them to heaven: the wicked are encountered by a hideous monster, their evil works, that drags them down to the fiery pit.

The good who are allowed to proceed to heaven immediately enter on the enjoyment of inexpressible felicity.

The river of hell is composed of tears shed for deceased relations, all mourning for the dead being unholy.

The *Parsi-namch* describes the punishments of hell, which very much resemble the vulgar notions of the Christians on that subject. They are inflicted by scorching fire, by serpents, by devils gnawing and tormenting their victims, tearing some limb from limb, hanging others on hooks, and hewing them to pieces alive: some of their tortures are as hideous as any described in Dante's *Inferno*.

Besides heaven and hell they have a middle state, or *hamestan*, where the souls of those whose good and evil actions are equally balanced remain till the judgment.

The *Parsi* hell is not eternal. When the third three thousand years are past, in which the influence of Ormazd and Ahriman are equally divided on earth, and which include the present time, the fourth three thousand years commence, which are to belong to Ahriman, and in which scourges of every kind, pestilence, contagion, hail, famine, war, are to afflict the earth; and human kind is to be reduced to the last degree of suffering and misery.

At the end of that period is the resurrection. Ormazd is then finally triumphant. Each element gives up what it holds of man. Two liquors, the *hom*, and the milk of the bull, *heziosh*, will restore all mankind to life. Kayomers will rise first, then Meshi and Meshiane, and afterwards all their posterity, whether good or bad.

The angel Sosiosh is the judge. The wicked will see the deformity of their crimes and bewail their transgressions. They will be punished for three days and three nights, into which time there will be compressed an aggregate of suffering more painful than 9000 years of torture. The pure and the blest will weep over the sufferings of the wicked. The lamentations of the tortured will rise from hell to Ormazd, who will deliver them. The blazing star *garshar* will fall on the earth, the hills and mountains will melt with ferent heat, and all mankind will pass through the liquid boiling mass. The just will feel it only milk-warm; the wicked will suffer excruciating agony, but it will be the last of their sufferings.

Ahriman will cross the bridge of Chi-rnevad and return to hell; he will be burned and purified in boiling metals. Hell itself will undergo this purification: all its impurities will disappear. The mountains on the earth will be levelled, and earth become a paradise. Nothing will wax old. Mankind will remain in eternal pleasure, knowing

and loving those friends and relations whom they loved on earth. Ahriman himself will be restored, and evil will disappear from the universe; but on this, as on most other of the doctrinal points, there is a diversity of opinion. Indeed it may be said that the usages and ceremonies are the only certain part of the *Parsi* religion. The popular opinion is, that Ahriman and all his Divs and demons will be annihilated.

Such is a general view of the religion of the *Parsi*, collected from oral communications, and from their sacred books, as well those which are ascribed to Zoroaster, as those which are confessedly of later date and explanatory of the former.

## ORIGINAL CORRESPONDENCE.

### INTERESTING DOCUMENT.

The following is literally copied from an original autograph of the unfortunate Lord Strafford: we believe it has never before been printed. The unhappy nobleman was not so much to be pitied as his royal master, when the assurance it rests upon was forfeited to cruel necessity.

Sweet Hartie.—It is long since I writ unto you, for I am here in such a trouble as gives me little or noe respect. The charge is now cum inn, and I am now ale, I praye God, to tell you, that I conceaue there is nothing capital, and for the rest I knowe at the worste his Ma'y will pardon all without hurting my fortune, and then wee shall be happy by Gods grace. Therefore comfort your self, for I trust the cloudes will away, and that wee shall have faire weather afterwarde. Firewell.

Your loving husbande,

Tower of London,  
4 Febr. 1640.

STRAFFORD.

My Wife.

### To the Editor of the Literary Gazette.

Sir.—Will you have the goodness to ask Mr. Pinkerton what was the reason he omitted the city of Kilkenny in his map of Ireland in his Atlas? On referring to the map you will find he has done so. In the map of England he might as well have left out Manchester or York; for Kilkenny is as important in Ireland as they are in England.

As I do not like long letters, I shall here conclude with observing that such an omission was very careless in Mr. Pinkerton; and that carelessness as culpable might be traced in several of his other maps.

I remain, Sir, Your humble servant,  
Kilkenny, W. T. D.  
August 5, 1820.

### A DAY IN PALERMO.\*

Since every circumstance relating to Palermo derives additional interest at the present moment, from the sanguinary insurrection of which it appears to have become the scene, I am tempted to send you an account

\* We are indebted for this lively picture to an anonymous correspondent, who will please to accept our thanks for it.

of a single day, which I passed there in 18—, when, being oppress by ill health and fatigued by a hurried journey through the island, I was anxious to snatch an interval of repose in the smiling capital of *la bella Sicilia*. Enchanted by the delicious scenery, in which the city stands enlashed, I committed myself without reserve to the conduct of a *rales de place*, not doubting that wheresoever he might lead me throughout so fair a paradise, I should find abundant objects to gratify my imagination, and revive my drooping spirits. We accordingly drove to the suburban village of Bagheria, and stopped at the palace of Prince Palagonia. Brydson's description having escaped my recollection, I was not prepared for the detestable display of perverted taste which pervades the gardens of this sumptuous Bedlam. Every horrible contortion and disgusting combination of animal form, which the caprice of a madman could devise, or the funds of a principality command, has been embodied in the statues which surround the villa. *Agri somnia* start into life, and the transient creations of nightmare and indigestion are stamped with the durability of solid stone. I entered the house, in hopes that the scene within would repay me for the horrors of the approach. A deserted mansion, however, is never an enlivening sight, and the long line of the Palagonias, each glaring from his pannel, in all the prominence of *alto relievo*, rendered the "dusty darkness" of the uninhabited chambers still more appalling. The formal dresses of the last century, in which many of these figures are represented, being executed in the substance called *brocatello*, and preserving the colours and semblance of reality, threw an effect of more than usual paleness on the "dull cold marble" of their features. I had seen enough of the Palagonias; and my guide proposing a visit to Prince Butiro's Certosa, I hastened thither to change the scene. I was disappointed, however, when, on entering, I discovered the nature of the exhibition. A display of wax-work has at best no claims for me; but a display of faded and neglected wax-work never fails to inspire me with disgust. The marble Palagonias were pale and inanimate; but the waxen inhabitants of *la Certosa* had an indescribable animation with their paleness, which I thought even more disagreeable. Early recollections of Mother Shipton perhaps mingled with the feelings of the moment, and I am convinced that if any one of the "filthy hags" who smiled around me, had given the slightest intimation of a disposition to kick, she would have unnerved me for the rest of the day. I hurried my Cicerone from *La Certosa*, and charged him as he valued his future dollars, to shew me thenceforth nothing but what was human. Poor Gaetano was all obsequiousness, and we rapidly returned to Palermo and the haunts of men. The carriage stopped at the gate of a convent; I was informed that it was necessary to descend; and before I knew whither I was going, I found myself in the Catacombs of the Capuchins. Here fresh horrors awaited me. These galleries of the dead, which surround a considerable subterranean square,

are lined by a grisly band of human corpses, each in an erect position, and dried by an artificial process. The different stages of decay to which time had reduced these mouldering exuvie, the fantastic attitude into which the progress of desiccation had thrown the limbs of some, the tattered garments and blackened fibres still clinging to the skeletons of all, presented the most hideous picture of death and distortion which it was ever my lot to witness. Among the rest I observed the grinning remains of one of the Norman Kings of Tunis, a gilded crown upon his skull, and a tarnished sceptre in his impotent and bony fingers. Even "Tibalt festering in his shroud," was not wanting to complete the group; for the friars pointed out to me the body of a Sicilian duellist, slain in a violent rencounter, and shewed with peculiar satisfaction, the set teeth, the contracted muscles, and the deep gash on the forehead, which betokened the manner of his death. Sickened by what I had seen, I was glad to ascend into the church above, where the first breath of incense seemed to be like a gale of paradise. I was anxiously traversing the pavement towards an open door through which the cheerful sun of Sicily was streaming, with its usual splendours, when my guide, suddenly plucking my sleeve, directed my attention to a part of the aisle, where sat the corpse of a physician, who had been recently brought thither for interment. The remains of the poor old man were tricked out (as is usual in the South) in a tawdry suit of full dress, and were placed, as if in mockery of mortality, in an upright position, on an elevated velvet chair. His head was sunken upon his breast, but the expression of his features was not like that of sleep. I did not pause to examine the humiliating symptoms of change and dissolution, which were stamped on the visage of the deceased; but proceeded hastily to the hotel, where my first business was to dismiss Gaetano, whose face had become associated with so many disagreeable impressions. Since I could not deny that in confining himself at last to human exhibitions, he had kept the word of promise to mine ear, though he had most woefully broken it to my hope, I thought myself bound to pay him his stipulated dollars, and then—"Now," said I, "to dinner with what appetite I may." Scarcely, however, had I helped myself to the first spoonful of macaroni, when the grateful wretch came running back to inform me that the execution of a murderer was just about to take place, and that if I would trouble myself to step to the window, I might see the malefactor pass. Already the chaunt of the procession was heard in the adjoining street; so that, as eating was now out of the question, I no longer hesitated to put myself on board the Neapolitan packet, which carried me from Sicily for ever.

## ARTS AND SCIENCES.

### AGRICULTURE.—IMPORTANT DISCOVERY.

Of all the animals which share with man against his will the fruits of his labours, the

weevil in corn is one of the most formidable, on account of its voracity, its diminutive size by which it eludes the observation, and its extraordinary fecundity. It is, besides, so impassible, or tenacious of life, that no means of destruction hitherto employed have been able to extirpate it from buildings in which it was once lodged. Besides its ability to endure very long abstinence from food, it braves even aspersions with muriatic acid, and fumigation with sulphur: nay boiling water and brandy are stated not to destroy it in the principle of life. As this insect is reported, by French writers on agriculture, to destroy annually a tenth, and sometimes even a fifth part of the harvest, a simple, easy, and cheap mode of effectually destroying it has long been sought, but without success. A French gentleman, of the name of *Cheest*, appears to have really discovered such a method. He has applied it with complete success in various places in France, and has received the most satisfactory testimonies from the Mayors and other persons who have witnessed the results of his experiments. He has also laid his plan before the Royal Agricultural Society, which appointed a committee to examine the truth of his statements. The Committee, after a series of successful experiments for seven years, declared that the method perfectly answered the purpose; and Count de Cazes, as Minister of the Interior, recommended the Prefects to make the invention known. *Mr. Cheest* is, we hear, now in England, and intends to submit his invention to the Board of Agriculture.

### THE ANTARCTIC COUNTRY.

Government is, it seems, fitting out an expedition for the new country, and several of the Southern whalers have already sailed thither. The account which we gave of Captain Smith's voyage has led to various letters in the newspapers, and particularly in the *Morning Chronicle*, denying that this was a discovery, and asserting that the coast was known to the Dutch long ago. These strictures grow out of an utter misunderstanding of what we stated; for the whole gist of our remarks was laid on the failure of Captain Cook to make out a land previously discovered, though not accurately laid down in the charts of any navigator. Nor did we insinuate the slightest blame upon that justly renowned officer, of whose efforts, perseverance, and great achievements, none living entertain a higher opinion than we do. Captain Cook we consider to be one of the greatest ornaments of his profession, belonging to a country blazing with the glories of its sailors.

ANTIQUITIES.—*Coblentz, 24th July*.—Many fabulous and absurd tales are in circulation respecting the discovery of two coffins which were found, in March last, near Castell, opposite Mannheim, by some labourers who were digging up turpins. All that has yet been found has been purchased by the Museum of National Antiquities at Bonn. The articles consist of eight large glass vessels of interesting forms; two bowls;

three solid silver pins, ornamented with large beads; fragments of a vessel of agate-spath, which was broken to pieces because the workmen took it for precious stones joined together; lastly, bronze ornaments of a small box, on which the story of Diana is represented in beautiful chased work. Some large heads that served as ornaments are masterly. The key, which is much ornamented, and of good workmanship, is still sticking in the lock.

The antiquities were in two stone coffins, with lids. It is remarkable, that no coins were found in the coffins, as there cannot well be any doubt of their Roman origin.

Not long since there was found in the same field a silver coin of *Didius Julianus*, whose coins are extremely rare. It is highly probable that an accurate description, and drawings of these antiquities, will be given to the public.

## LEARNED SOCIETIES.

### CAMBRIDGE, Aug. 4.

Messrs. H. Hamington, T. Roberts, and R. Oke, Scholars of King's college, were on Sunday last admitted Fellows of that society.

The Rev. N. H. Arthy, of Caius college, was admitted Master of Arts on Thursday, the 6th ult.

### ROYAL ANTIQUARIAN SOCIETY OF FRANCE.

This body lately held its second public annual sitting, at which Count Sineon presided. M. Bottin, the Secretary General, delivered an account of the annual proceedings of the society, from which it appeared that 87 manuscript memoirs, and 35 printed works, were received during last year, all treating of subjects relative to monuments of antiquity, manners, and national customs.

Baron de Ladoucette delivered an entertaining discourse on the manners and customs of the inhabitants of the Department of the Upper Alps; and M. Angris read an excellent article on the Thermæ Palace, and its gardens, from a manuscript, entitled, "*Histoire physique, civile, et morale, de Paris*," from which it appears that the construction of that ancient edifice is to be attributed to Constantius Chlorus and not to Julian.

The decisions pronounced by the Royal Academy of Fine Arts of the French Institute, are as follows:—

*First prize of Painting*.—M. Amable-Paul Coutan, of Paris, aged twenty-eight, a pupil of M. Gros.

*Second prize*.—M. Pierre-Raimond Jacques Monvoisin, of Bourdeaux, aged twenty-six, a pupil of M. Guerin.

The academy made honourable mention of M. Charles Philippe Larivière, of Paris, aged twenty-one, a pupil of M. Girodet. Having already received the second prize, the same honour could not again be conferred on him. The academy, therefore, awarded him a gold medal.

## FINE ARTS.

COUNT BERGAMI.—By the time our next Number appears, the public will have a portrait of this individual, engraved by Cooper, from, as we are informed, a portrait taken at Rome. He already figures lithographically in the Paris print-shops, but we do not know if the likeness be authentic. One of the French Journals says that portrait is quite the rage now, and that designs of every other kind have been superseded by these resemblances of persons who attract the attention of the world. The latest of the Parisian efforts, it informs us, are Talma (younger than reality), B. Constant, Demarçay, and Bergami: and "certes, (adds the observer,) this personage, with his broad shoulders and thick black beard, appropriately completes this collection." "We shall be curious to see if the London picture agrees with Carlotti's features in the Queen's Entry into Jerusalem, which remarkable piece is, we observe, announced for exhibition in Pall Mall.

## ORIGINAL POETRY.

ALBERT.

A wayward youth was Albert. In the day of infancy, whose wants are all comprised in natural food, and slumbers light and long, He was uneasy at his mother's breast, Nor slept the quiet sleep of other babes. Those imitative sounds, that early break In half-formed accents from the prattler's lips, With him were late and few.—It seemed as if He had no childish wants, and needed not The phrase of childhood—yet his ear and heart, Alive to Nature's voice, in crashing thunder Found music ever. He would face the glare Of flickering lightnings with a brow upraised, His light locks drenched with rain. The howling storm.

Of winter, when it raged the liveliest night, Waked him to pleasure—if a quiet smile, And glistening eye, that thro' the casement marked Dark clouds sweep o'er the moon, betokened pleasure.

Ere yet his limbs could bear their load a mile, The catarrh's deep voice, in distance dard, Had lured him to the margin of its wave. Oh! had a mother's eye beheld that child, Perched, like a lonely bird, above the roar Of headlong waters, had she surely thrilled With all a mother's dread for him she loved. But Albert had no mother; she had died, And left him with a sire of vulgar mould, Immersed in the world's business, who disclaimed To watch the wanderings of a wayward boy. One sister loved him, yet unknowing why; He ne'er requited love, nor felt neglect. Yet, in maturer years, his eye would dwell Upon that sister, when she marked him not; And then a tear would start, that spoke affection—

Mourful affection—suited to his soul. He shunned all human lore; in Nature's book He read, while Heaven's bright eye shone full upon him,

Or by the lovely light of evening skies, Or by the moon's cold beam. What other page,

"Certes ce personnage aux larges épaules, à la barbe épaisse et noire, termine agréablement cette collection."—*Journal de Paris*.

Than mighty Nature's, could delight a heart That held no commerce with the ways of men? Wit, to his ears, was but "a tinkling sound;" He better loved the sheep-bell's chime, that made

The light breeze musical. Of great men's deeds The tale was irksome, for he found no chord, To warlike notes rose, on his breast.

To stripling's height he grew;—and ranging free

Among the lonely hills, would shun for days The sight of man; nor could the village bell, That from the vale announced the morn of

prayer, Lure him, though not unmindful of its music, From the rude rocks to join that holy rite. "Twas said, the youth was heedless of a God; But their's were narrow minds, who spread the tale:—

On the dark mountains, where, beneath his ken, The Maker's wondrous works lay wide exposed, River, and waring wood, along the vale, And, on the verge of heaven, fantastic rocks, Whose grandeur mocked the piles of human art;—

There, with that broad blue dome above his head, He had been seen in the attitude of prayer By goatherd, who pursued a straggling kid, And listened, while with faltering voice he spoke:—

"Father of Nature! Thou, whose awful presence

"Is felt, not seen, whose majesty these hills "With stormy voice proclaim, benignly look, "From where thou dwelt'st in light, upon a youth

"Who seeks thee through creation's noblest scenes.

"Forgive him, if he shun devotion's forms— "If, from the temples built by human hands, "His thoughts are wandering far, to Nature's shrine,

"Which thou hast raised;—but, Oh! forgive him not,

"If he forget, amid her sacred haunts, "To breathe a prayer of gratitude to thee!"

The rude hind paused—it seemed as if a form Of more than human brightness knelt before him.

It had been sacrifice to break a trance So rapturous—so angelic: softly, then, The peasant stole away, yet turned to view Th' enthusiast's pallid cheek, with tears suffused, His quivering lip, and bright uplifted eye.

The dawn of manhood rose on Albert now.— But not with ruddy light, for vigorous health Was his no longer. He was forced to quit His favorite haunts, with all their lone delights, For the dull shelter of his native roof.

But in those fleeting hours, when feverish sleep Released his bounding spirit from the chains Of bodily weakness, he would roam in dreams Through scenes once loved, but now with dangers fraught,

Of fancy's dark formation; and he told That favorite sister, how from rock to rock A fend hung on his footsteps, urging them, Till from the top of some jagged precipice He fell, and falling, waked! Such nightly horrors

Made slumber terrible. His frame decayed, Till Nature could no more. He died in peace, For heavenly visions hovered round his head, And he had sighed for rest. That one dear sister,

That only friend who loved him, closed his eyes; And as she wiped the glistening tear, rejoiced That Heaven thus early snatched a brother's soul,

So wild, so pensive, so unfit for earth.

The gates of death are closed upon that youth: Yet fancy loves to picture, from the past, What might have been, though now she deeply feels

It cannot be. He had a poet's soul, That silent wrought, unconscious of itself; And song will flow from bosoms such as his, Like clear springs from their fountains; so neglected,

Or perilous prize might have awaited him,— Both fatal to his soft and glowing heart. He might have loved, and pined in wretchedness—

He might have loved, and known felicity,— But of such rainbow brightness, so adorned With hues, the creatures of his own warm soul, That, all too soon, they must have died away, And melted to a tear. Of this be sure,

No mean self-saving thought, no worldly stain, Would have debased his spirit. He sleeps in peace.—

His soul hath undergone the mighty change, Whate'er it be, that bars vicissitude.

UNNOTO SECONDO.

## [By Correspondents.]

PARODY.

Rich and rare was the chain he wore, And a long white wand in his hand he bore; But oh! his paunch strutted far beyond His bright gold chain, and his snow-white wand.

"Oh, Alderman, dost thou not fear to go, Where the turtle shall smoke, and the Burgundy flow?"

Are the doctors so sparing of lancet and pill, Not to phlebotomise or bleed thee for this night's ailment?"

"Good man, 'am," said he, "I feel no alarm; Nor turtle nor Burgundy does me a harm; For though of your doctors I've had a score, I but love good eating and drinking the more."

On he went—and his purple nose Moon over dish, platter, and bottle glows: And long may he stuff, who thus defied Lancet, pill, bolus, and potion beside.

Pinegar Hall.

J. R.

On seeing David Grace, who formerly kept a Rope-maker's Shop on the Coal Quay in Cork, hanged for a Highway Robbery in that city, in April, 1820.

[See Lord Byron's English Bards and Scotch Reviewers, line 569, &c.]

Lo! David Grace unto the gallows led, No more as highwayman to earn his bread, Views his own work upon the twists that deck With hempen cravat his denuded neck; Keen were his pangs—but keener far to see He made the rope that tied him to the tree; While the same cord he sold within his shop, Formed the last knot which lashed him to the drop.

R. D. R.

## TO LUCINDA.

Say, does the morning's blushing hue That face of beauty streak? Is it the rosobud that we view, In bloom upon that cheek?

Is it the lily's tender white, That clothes that lovely neck? And does the snow's more radiant white, That brow of lustre deck?

Does Ocean furnish with it's pearl,  
Thy teeth's resplendent row,  
And for thy lip, delightful girl,  
It's coral stores bestow?

Pearl, lily, coral, now unite—

No more, you amorous ninny;  
Rouge gives the red, whiteled the white,  
The teeth, Signor Ruspini.

I. A. B.

## SKETCHES OF SOCIETY.

### BOOTS.

"Shewed him his room, where he must lodge  
that night,  
Pulled off his boots, and took away the light."  
MILTON.

The suppression of the monasteries was the great cause of bringing the class of persons known by the name of *Boots*, into employment and consideration; previous to that period inns were uncommon, and *Boots* consequently unknown. The constellation, *Bootes*, had nothing to do with their origin, and their ruling planet was neither more nor less than a sign. Neither, as the malicious have insinuated, were they named from *booty*, on account of their levying contributions on travellers: on the contrary, if this noun had any influence in their baptism, it must have been on the rationale of *lucus a non lucendo*, just as the female attendants are called *Chamber-Maids*; for of all the *In-mates* of a tavern, poor *Boots* is always the worst paid. The plain fact is, that the appellation of this meritorious class was at first an odd compound of *Boot* and *Catcher*, from the distinguishing labour of pulling or catching off the boots of visitors; and this was abridged to *Boot-catch*, which in turn suffered amputation, and in the fashion for shortening every thing, from ladies waists to the duration of parliaments, was abbreviated into simple *Boots*.

Originally, too, the office was one of little dignity or importance, the mode of operation being derogatory to the honour and honourable part of men. Mechanism had not reached the perfection it has attained in our days; and the release of legs from their leather incumbrances, was performed by a singular application of human means, manual, pedal, and fundamental; so that of *Boots* it might far more truly than of others he said, in the words of Prior, that they had—

"Their ill's all built on life, that fundamental ill."

Bunbury's caricature of the man of feeling, illustrates this delicate subject to the eye; and it is not necessary to go into the philosophy of the matter, in order to ascertain how far compression, repulsion, centripetal or centrifugal force, or other principles of motion, are involved in the effect. But as the Queen finely says in her answer to the Middlesex Address, "the improved spirit of the age is seen in the intellectual advancement of man through all the gradations of the social scheme," so it has faced with *Boots*—the admirable invention of the Jack has almost entirely done away the use of the

Fork formed by the human frame; and the mental of the inn, however drudged, will no more submit to the degradation of his predecessors. No, he would rather suffer his Mistress's wrath and a discharge, and braving her fury, exclaim with Lear—  
"Let it fall rather, though the first invade  
The region of my heart."

Thus I have demonstrated the difference between Jack Boots and Boot-Jacks.

These things suggested themselves to my mind at the Old Ship Inn, at Brighton, last week; and being of a very philanthropical disposition, I was mightily pleased to observe the consequence now attached to a once low and despised condition of Britons. I am not without hope that a similar amelioration may be produced in the affairs of *Pots*, alias *Pot-boy*, whom it is melancholy to see so generally aged, bandy-limbed, decrepid, distorted, under-dressed, and depressed, the butt of all the kitchen, and the cuffed-about of all ranks. Not so *Boots*, upon whom so much depends. Aware of his value, he brings in your Turkey slippers, with the air of a *Paasha* of three tails, if not of a grand seigneur. Upon his brush, he well knows, rests the whole question, whether your external polish, from the hathband to the shoe-ite, shall declare the gentleman, or cause you to be looked upon as a shabby fellow. His is the whole care of the outward, as the cook's is the charge of the inward man; while the chamber-maids (as aforesaid) and the waiters are their ministers. The Steyne bears witness to their triumphs. There I observed the worthies of the London counter and shop-board, whose faces are as familiar to me in the Strand and Piccadilly as the parcels which always occupy their hands, in all the dash and stiffening of exquisite dandyism. No longer bustling along with goods to deliver, their gait was stately, their paces slow, and their carriage upright and stayed. The silk handkerchief which erewhile rapt a package for a customer, now protruded from a breast pocket, or graced a neck, in folds as smooth as labour could accomplish and brooch retain. But above all, the efforts of *Boots* gave the finishing touch to dustless coat and brilliant boot; and it was really no easy matter to distinguish the gentlemen (if there were any) from the imitator.

But concerns of still higher concernment depended on our friend *Boots*. The call of "incense breathing morn" was assigned to him, and the early coach depended for its passengers on his punctuality. It was Monday, and the city swarm which left that hive on Saturday, had to buzz back to the business of the week in good time. Woe to the retail of Cheapside, woe to the counting-house, woe to the Stock Exchange, woe to the keeping of appointments, woe to the payment of bills, and woe to the preservation of credit, if *Boots*, overcome by the fatigues and pleasures of Sunday, had lumbered over the hour, and enjoyed past five o'clock—

"Tired nature's sweet restorer, balmy sleep."

Affairs of the utmost pith and moment had no other security for success or disaster than the waking and memory of this exceedingly

important personage. Nor did he, in the instance under observation, fail to fulfil most scrupulously the duties intrusted to him. About day-break his commanding voice was heard in the passages and galleries; his dictatorial knocking resounded from door to door. Starting from repose, I cried—

"Wake Duncan with thy knocking,

Ah, would thou' hadst—

and not me; for what with enjoying the Sabbath according to modern usage, I was completely tired, and hated the very thoughts of that holier age, when—

"Time was a sober Englishman would knock  
His servants up, and rise by five o'clock."

But the deed was done. In rain I invoked *Hermes*, with his "sleep-compelling rod;" *Boots* was too much for him; and the mingled rap and cry—"You Gentleman at No. 29, for the six o'clock Dart"—"Sir, you *are* to be called."—"Waiting below for the packet." "Luggage ready," &c. answered from within by yawns that seemed to be everlasting, and to bid as fair for immortality as any human action could, entirely banished *Morpheus* from this quarter of the Old Ship.

I dressed and got on Brighton's dirty beach, where I ruminated on the inadequacy of *Boots*' remuneration, and the injustice of fortune. The waiter, I noticed, pocketed his half-crowns and crowns; the chamber-maids got sometimes more and sometimes less, according as the beds were made to please their occupants; but alas, for *Boots*, on whom the whole fabric of appearance, of profit, of conduct, of regularity, is built, a little sixpence, or shilling at the utmost, is his allotment.

Were I *Boots*, thought I, I should purposely oversleep myself some morning, and then leave the world to the confusion I had created. Then would the value of my services be more correctly appreciated, and beaux with dirty shoes, and traders too late for London, and trunks forgotten, and parcels lost, and coaches empty though places were taken, and appointments broken, and quarrels ensuing, and duels fighting, and lovers parted, and bathing neglected, and the devil and all happening, would show that, from the sole upwards, the conservation of the social system is entirely founded on—

*Boots*.

August 15th.

## THE DRAMA:

THE KING'S THEATRE.—The legal difficulties and pecuniary embarrassments in which this unfortunate theatre has been so long involved, led to its foreclosure on Tuesday, though a few nights still remained of the season 1819-20. It is a pity so fine an establishment should go to wreck in this manner: we trust it will soon be restored to the fashionable world for brilliant resort and refined pleasure.

DRURY LANE.—This theatre was opened on Tuesday, for a sort of intercalary season, in order to exhibit Mr. Keen in a series of his characters previous to his visit to Ame-

rica. He commenced with Richard III., and played Jaffier on Wednesday; the former one of his best, and the latter one of his most inefficient parts. Thursday and yesterday were given to Hamlet and Sir Giles, thus inverting the position—the former being a very indifferent, and the latter a very vigorous personification. Sterling farces have followed each of these tragedies, and the theatre has been as well attended as could have been expected.

HAYMARKET THEATRE.—*Exchange no Robbery; or the Diamond Ring*. A three act comedy, from the lively pen of Mr. Theodore Hook, with the above double title, was produced here on Saturday. It was successful, and its success depended upon one of the characters. The plot is nevertheless, though slight, not unskillfully constructed; and the other characters, if not altogether novel, at least well drawn and effective in their several dramatic relations. Sir Christopher Cranberry, (Terry) an old East Indian, returns to this country with a young and thoughtless wife (Mrs. Marlyn), and a ward, Miss Melrose, with a fortune of fifty thousand pounds, which she forfeits if she marries contrary to her guardian's wishes; Sir Lennox Leinster (Connor), an admirer of Lady Cranberry, who wishes to seduce her; Captain Littleworth (Barnard), the commander of the vessel which brings them to England, and the lover of Miss Melrose; and a French valet (Farley), and a waiting woman, complete the upper and travelling cast. The Home party consists of Swipes, the publican, to whom had been confided the charge of a son of Sir Christopher Cranberry's, the fruit of a stolen match offensive to his family, previous to his going to India; Mrs. Swipes (Mrs. Gibbs), a second wife, landlady of the Pig and Windmill, a shrew and hussy; and Sam Swipes (Liston), a lubberly pot-boy, the essence of low vulgarity. Swipes' son by his former marriage, and of the same age with young Cranberry. The publican, terrified at the return of Sir Christopher, from whom he has continued to receive two hundred pounds per annum, for the education of his son, though the boy had run away fourteen years ago, and was supposed to be drowned, confesses his villainy to his helpmate, and they contrive between them to palm Sam, the Pot-boy, on the fond father, for his lost child. The disgust of old Cranberry at this unlicked cub, and the gross habits of his fancied offspring, who is in love with Polly Vatts, a kitchenmaid to a milliner in Cranbourn Alley, with red hair, red elbows, and a roguish squint in one eye, constitute the humour of *Exchange no Robbery*. Two intrigues, a high one between Sir Lennox and Lady Cranberry, and a low one between the French valet and Mrs. Swipes, diversify and assist the development of the plot. The Irish baronet speaks bombast, and always ends with "you'll excuse my being figurative" (a custom more honoured in the breach than in the observance); in pursuing his plans, he persuades the lady to become his debtor to the amount of four hundred pounds, for the purchase of a ring, which however fails to reach its destination, and

comes in the sequel to be exposed, and cause the loss of his vice-money. The French gallant is detected behind a curtain, and when Swipes reproaches his faithless rib, she retorts, and discovers to Captain Littleworth, that he is the real heir and representative of the house of Cranberry, and Sam the Pot-boy, an unconscious impostor. This of course produces a happy denouement—faults are forgiven; Littleworth marries Miss Melrose, and Sam Swipes is made happy with the Hebe of Cranbourn Alley, the red ellowed Polly Vatts. The comedy altogether is light and playful, though there are a few good sentiments scattered over its surface. In the scenes in which Sir Christopher admonishes his giddy partner not to admit the attentions of Sir Lennox, and in those in which the pretensions of Littleworth are discussed. But the general moral is far from being conducive to virtue and propriety: political justice is neither executed upon the vulgar profligates, nor upon the misdemeanours of the seducing friend and half yielding wife. As in real life, the confines of imprudence and guilt are not to be trodden with impunity, so neither ought they to be represented on the stage without adequate punishment. The principal parts were well acted. Terry, with a little too much shaking of hands, gave a fine and natural picture of the old Baronet. Connor, always respectable, achieved as much for the younger knight and his tropes as could be done. Farley was a capital Frenchman, and Mrs. Gibbs, excellence itself in Mrs. Swipes. But the prop of the edifice was Liston, in the Pot-boy gentleman. His ambition to set the other performers laughing, so as to render them incapable of going on with the dialogue, was the only fault we had to find with him: in this, if to succeed were desirable, he was peculiarly fortunate on the night we were present, for the author's comedy very often stood still for the actor's. It is a happy hit; and the slang and nonsense with which Liston enriches it, are so ludicrous, and yet so true, that it is not easy to resist their effect. We could have wished Polly Vatts herself to have appeared, if any one could have been found, to play up to such a sweetheart. The heat of the weather, and perhaps the unsettled state of the times, prevent even this small theatre from filling; nor indeed can we say, that the performances altogether are of so high an order as they might be, though the leading characters are ably sustained.

#### FOREIGN DRAMA.

THEATRE DES VARIETES.—First representation of *La Georgienne à Londres*, or *Les Reformateurs*; a vauville, in one act.

This piece was to have been brought out during the Persian Ambassador's residence in London; but it was unfortunately delayed.

*Hulkem*, a rich Persian merchant, travels through Europe to study the manners and customs of different nations. In spite of oriental jealousy, he takes with him his favourite female slave, *Zeluhé*. On his arrival in

England, he neglects the beautiful *Georgina*, who leads a melancholy life, confined to her apartment, under the care of an old woman named *Clarissa*. The diuenna is not, however, quite so obdurate as the Persian eunuchs: she is a staunch radical; and she determines, if possible, to win over the young slave to her party. She informs *Zeluhé* that two celebrated reformers, *Mr. John Bull* and *Lord Archieve*, have taken a lively interest in her case, and propose putting an end to her captivity. But the Georgian slave, unfortunately, evinces no sort of taste for liberty, and instead of shewing gratitude towards her protectors, she discloses the whole affair to *Hulkem*.

The merchant conceals himself in the apartment, while the two reformers read to *Zeluhé* the English constitution, and explain the law which authorizes an English husband to get rid of his wife by selling her in Smithfield, with a rope round her neck. On hearing this, *Hulkem* bursts from his hiding place, and informs the radicals that the Koran forbids any stranger to enter the apartment of the wives of a Mahometan, and that by virtue of this article he has a right to throw them both out of the window. *Zeluhé*, however, intercedes in their behalf; *Hulkem* pardons them, and they take their leave, very well satisfied at being allowed to depart through the door instead of the window.

#### THEATRE DE LA PORTE SAINT MARTIN.

First representation of *Le Mariage du ci-devant Jeune Homme*, or *Il faut faire une Fin*, a comedy in one act, in verse.

The author of this piece was encouraged to brave the dangers attendant on the production of a comedy in verse at the Boulevards, by previous success; for the play had already experienced a favourable reception at the Bourdeaux theatre. Old Bois Sec is extremely desirous of being thought a young man. His everlasting youth has greatly deranged his affairs; and Labranche, his valet, advises him to marry his cousin, Pulcherie, a superannuated spinster, as ridiculous as her dear relative, and who for twenty years has cherished an ardent passion for the volatile youth. But Bois Sec has fallen in love with his ward Amelia, by whom he fancies he is adored; and, in order to render himself more agreeable to his mistress, he determines to learn fencing. Unfortunately, Amelia's lover, Sainville, who is an officer of dragoons, assumes the disguise of a fencing master, and gives Bois Sec so good a lesson that he can scarcely move from the effects of fatigue. Our ci-devant jeune homme, is greatly surprised when Amelia rejects his proffered hand; and what adds to his vexation is, that he has laid a considerable wager with his cousin, (who in her turn, fancies she has captivated Sainville) that he will be married before her. The fear of paying the wager makes him resolve to marry the old lady, and this union is of course accompanied by that of Amelia and Sainville.

The versification of this little comedy is easy, though not very correct; and the dialogue contains many good points.

## VARIETIES.

The celebrated Baron Von Drais, the original inventor of the *velocipede*, has lately announced in the foreign journals the discovery of an improvement in telescopes. The Baron (says a quizzing journalist) asserts, that his *sawing*, or *raising* telescopes, as he styles them, embrace twenty-two degrees and a half of the horizon, in spite of the interposition of any object whatever.

The following anecdote of general Ross, the conqueror of Washington, has never we believe appeared in print. He was educated in Trinity College, Dublin, during the Prevostship of Hutchinson, who was pretty generally disliked in College, and accused of keeping it in a perpetual ferment of electioneering and other intrigues. In carrying on these, he frequently made use of the assistance of his son's tutor, Adair, afterwards Dr. Adair, master of a highly respectable classical school in Fernoy, who has been some years dead) and he of course shared the unpopularity of his employer. Ross and he had a particular quarrel, and the future general revenged himself on his antagonist, by caricaturing him (for which art he had a peculiar talent) in the act of bestowing a salutation on a very unsexedly part of the prevost's person, with the motto of "tenacem præparavi virum." He posted it on the College gate, and it nearly procured him the honours of an expulsion.

Puns on names are so easy to make, and so hard to be comprehended, except on the spot where they are vented, that it is seldom worth while to write them. Perhaps this may pass. A member of parliament who was paying his addresses to a lady of the name of Weekes, had gone up to town to attend his parliamentary duty, and returned in a very short time. On its being remarked that he had not delayed long in the metropolis, it was replied, that he had business to attend to at home, from which he could not be long absent. "True, (said a person) Mr. ——— can be absent for days, but it is quite impossible he should be so for *Weeks*."

*Miss Edgeworth's bull.*—This lady has written a most witty essay on Irish Bulls, in which she is very eager to defend our honest neighbours across the channel from the imputation of bull-making. She herself however appears to have fallen into the practice, which is very contagious, in the following passage of her life of her father—we know not whether in jest or earnest. She tells us (*Edgeworth's Memoirs*, vol. 2, p. 355), "The last letter poor Johnson ever wrote, or I should rather say, dictated, was to my father; it was in his nephew's handwriting, and gives the following account of his death." Dr. Johnson, it was said, believed in ghosts; but we think it still harder to believe that his namesake wrote or even dictated a letter, containing an account of his own death.

Another. The translator of Madame de La Roche Jaquelin's Memoirs, has caused that no-

ble lady to make a very fair bull, without, we presume, any cooperation on her part. The memoirs are dedicated to her children, and the translator makes her use the following sentence, in witnessing them: "I feel a mournful pleasure in recounting to you the life and death of your parents and friends." This admirable blunder, which makes a mother tell her children of the death of their parents, must arise from ignorance of the meaning of the French word *parents*—relations.

Among the apologies received by the Lord Chancellor from Peers praying to be excused attendance on the Queen's trial, the *Morning Chronicle* of yesterday states one urging a very sufficient reason, namely, "The Bishop of Cloyne, dead!" Thus we see that the fact of posthumous correspondence does not rest only on Miss Edgeworth's authority.

*Fruit and Timber.*—In the Commercial Dictionary for Ireland, Scotland, &c. lately published (which by the way is a most ridiculously incorrect work) under the head *Dungarvon*, is the following paragraph. "It (*Dungarvon*) was formerly noted for its export of fruit and timber to Dublin; but the trade has lately declined, and in its place has sprung up a considerable export of corn, butter, and provision, to the ports of the English Channel," p. 191. Fruit and timber! Somebody must have been laughing at the unfortunate compiler, for the export of *Dungarvon*, designated by this splendid title, was literally no more than *potatoes* and *brooms*. The joke is quite proverbial in the South of Ireland; and it seems hardly possible even for a bogman to have been lummaged by it.

*New Sport.*—A new species of entertainment, entitled *Les Jeux d'Eleusis*, has recently been produced at the Tivoli Gardens in Paris. It consists of an animated representation of the festivals in honour of Ceres, which were celebrated by the inhabitants of Eleusis, in Attica, and which probably first inspired our ancestors with their taste for tilts and tournaments. The first part of the performance consists of a combat of gladiators, armed with swords and shields. Next appear two combatants, both in the character of Hercules, who fight with admirable spirit for the space of ten minutes, and the victor is crowned with a wreath of laurels.

*Bees.*—A Berlin paper mentions that a merchant and his wife proceeding from Brandenburg to Wittenberg, in an open carriage, were attacked by a swarm of bees, in such a cloud as to darken the air, which stung them dreadfully. The merchant is seriously ill in consequence of the wounds he received; the lady's case is however not so dangerous, as she took refuge in a wet ditch. The coachman's life was for some time despaired of, and the horses were so severely stung, that they survived only an hour and a half.

Count de Forbin, the Director General of the Museums of France, who has been for some time in Sicily, collecting objects of antiquity, has arrived at Naples on his way home.

## LITERARY NOTICE.

*The Classics in Arabic.*—The learned world may reasonably expect in a few years, complete and perfect translations of *Plutarch*, *Sallust*, *Livy*, *Tacitus*, *Aristotle*, *Hippocrates*, &c. from the Arabic; the French have been lately assiduous in their researches after such Arabian treasures.

Mr. Giardin, the French Ambassador at Constantinople, has sent to Paris fifteen valuable works in Arabic from the Imperial Library at Constantinople, among which are the complete works of *Plutarch* and *Herodotus*!

The works of *Aristotle*, *Hippocrates*, *Livy*, *Tacitus*, *Sallust*, &c. are known to have been translated into Arabic, and might be discovered and purchased by well-directed search after them, at Fas, Morocco, or some other parts of West or South Barbary.—Mr. Jackson, in his recent travels in those countries, annexed to Shabney's Account of Timbuctoo and Housa, page 325, says, "It is more than probable, that the works of many Greek and Roman authors, translated during the era of Arabian learning, are to be found in the hands of literary individuals, in several parts of West and South Barbary."

Note.—It is well known that *Tacitus* and *Livy* are imperfect, as we have them in the original Latin.

## METEOROLOGICAL JOURNAL.

AUGUST, 1820.

*Thursday*, 10.—Thermometer from 45 to 75.  
Barometer from 30, 42 to 30, 44.  
Wind S.W.  $\frac{1}{2}$ , and W. S.W.  $\frac{1}{2}$ .—Generally fair. The sun shining through light clouds.  
*Friday*, 11.—Thermometer from 49 to 76.  
Barometer from 30, 43 to 30, 36.  
Wind N.W.  $\frac{1}{2}$ , and S.W.  $\frac{1}{2}$ .—Generally clear, at times hazy.  
*Saturday*, 12.—Thermometer from 48 to 73.  
Barometer from 30, 35 to 30, 30.  
Wind N. and N.W.  $\frac{1}{2}$ .—Generally clear.  
*Sunday*, 13.—Thermometer from 49 to 73.  
Barometer from 30, 29 to 30, 20.  
Wind N.E. S.W. and S.W.  $\frac{1}{2}$ .—Generally clear.  
*Monday*, 14.—Thermometer from 49 to 74.  
Barometer from 30, 18 to 30, 08.  
Wind S.W.  $\frac{1}{2}$ .—Generally clear.  
*Tuesday*, 15.—Thermometer from 48 to 78.  
Barometer from 30, 05 to 29, 97.  
Wind S.W.  $\frac{1}{2}$  and 2.—Morning clear, the rest of the day generally cloudy.  
*Wednesday*, 16.—Thermometer from 58 to 76.

Saturn is now a beautiful object in the East, with about 7° more northerly declination than Jupiter.  
On Tuesday the 22d instant, at 16 minutes, 28 seconds after 10 in the evening, the first satellite of Jupiter will immerse into his shadow.  
Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

"A Thief-taker" informs us that the lines signed B. W. E., in our last, are a plagiarism from an old volume of the *London Magazine*.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

#### British Gallery, Pall Mall.

**THIS GALLERY**, with an Exhibition of PORTRAITS of distinguished Persons in the History and Literature of the United Kingdom, is open daily, from 10 in the Morning until 6 in the Evening; and will be closed in the course of the ensuing week.  
(By order) JOHN YOUNG, Keeper.  
Admission 1s.—Catalogue 1s.—Historical ditto 2s.

**THE EXHIBITION OF MONSIEUR JERRECAULT'S GREAT PICTURE**, from the *Loon* of the Medusa French Frigate, after remaining Thirteen days on a Raft without Provision, at the moment they discover the vessel that saves them, is now open to the Public, at the Egyptian Hall, Piccadilly. Admission 1s.

#### The Queen's Picture Entry into Jerusalem.

**THIS Cabinet Picture of the QUEEN'S PUBLISHED ENTRY INTO JERUSALEM**, painted for her Majesty and according to her directions, by the celebrated Roman artist Carlotti, is now exhibiting at No. 18, Pall Mall. This curious composition contains Portraits of the Queen, of Count Bearn, of young Austin, and of all the remarkable persons in the numerous suite which accompanied her on this memorable occasion. Admission 1s.—Descriptive Catalogue 6d.

#### Dr. Rees's Cyclopaedia Completa.

**THE Proprietors beg to inform the Public** that complete sets of this valuable Work, which is just completed in 48 volumes, including the Plates, may be now had of all the Booksellers. Of all the Encyclopaedias to which the original and celebrated Dictionary of Chambers has given birth, the Cyclopaedia of Dr. Rees is the most comprehensive. The long life of the learned and indefatigable Editor has been unremittedly devoted to its improvement, aided by his numerous and able Coadjutors. The elegant and accurate engravings of Lowry, Milton, and Scott, which illustrate this Publication, are in themselves of superior utility and value, and render the Work unique in this popular Class of Publications. In order, indeed, to insure every perfection in their power, and to fulfil their original promise, the Proprietors have expended nearly Three Hundred thousand Pounds on the Work. The Subscribers to this Work are requested to complete their Sets immediately, as some of the Parts are scarce, and will shortly be entirely out of print, when the Proprietors cannot cogize to complete them.

### BOOKS PUBLISHED THIS DAY.

**5. SELECT WORKS OF THE BRITISH POETS**, with Biographical and Critical Prefaces. By Dr. Aikin. In one large volume of 512 pages, medium 8vo. price 18s. extra boards.

The object of this Work, which is entirely new, is to comprise, within a single volume, a Chronological Series of the British Poets, from Ben Jonson to Beattie, without any mutilation or abridgement, with Biographical and Critical Notices of their authors. The contents of this volume are so comprehensive, that few poems, it is believed, are omitted, except such as are of secondary merit, or unsuited to the person of youth. The Work, within these bounds, may be termed a "Library of Classical English Poetry," and may safely be recommended to the young, to the Schools in general, and to the Libraries of Young Persons.

**6. THE LIFE OF WESLEY; and the RISE AND PROGRESS OF METHODISM**. By ROBERT SOUTHBY, Esq. In 2 vols. 8vo. with portraits, 11. 8s. boards.

**7. HISTORICAL ACCOUNT OF DISCOVERIES AND TRAVELS IN ASIA**, from the earliest Ages to the present Time. By RICHARD MURRAY, F. R. S. &c. In three large volume octavo, with three sheet Maps, engraved by Hall, price 21. 2s.

**8. ANNALS OF THE REIGN OF GEORGE THE THIRD**. By JOHN AIKIN, M. D. In Two Volumes, 8vo. price 11. 8s. boards. A New Edition, brought down to the period of his Majesty's decease.

**9. LETTERS** from Mrs. DELANY (Widow of Doctor Patrick Delany) to Mrs. FRANCES HAY, from the year 1779, to the year 1798, comprising many unpublished and interesting Anecdotes of their late Majesties, and the Royal Family. Now first printed from the original Manuscripts. In post 8vo. price 6s. 6d. boards.

**10. TRAVELS** in various COUNTRIES OF THE EAST; being a Continuation of Memoirs relating to the Asiatic Turkey, &c. Edited by ROBERT WALPOLE, M. A. This volume contains the

last Travels of the late W. G. Brown, Esq.; — also a Journey through the Desert to Mount Sinai; another to Susa, in Persia; and various Communications relating to Parts of Asia Minor, Syria, and the Islands and Continent of Greece. In 4to. with plates, 32s. boards.

No. 188.

SATURDAY, AUGUST 26, 1820.

PRICE 3d.

## REVIEW OF NEW BOOKS.

*Posthumous Letters, from various celebrated Men; addressed to Francis Colman, the Elder; with Annotations and occasional Remarks, by George Colman, the Younger, &c.* London, 1820. 4to. pp. 347.

Our readers are aware how much we like works of this kind. Though private correspondence does not altogether glaze the breast of man with that window, of which an ancient philosopher spoke, it lays the inner machinery of nature open to a certain extent; and while histories and essays present us with writers in the shape in which they wish to appear, letters of friendship and business throw off the case, and show them to us at least somewhat more like what they are. It is the difference between being dressed for a ball, and undressed for bed; if not quite nude, at any rate not covered with ornaments: it is to come more home to the title page, the difference between the Editor in grand gala on a court day as lieutenant of the yeomen, and at his own fireside in his nightgown and slippers: to say which is preferable would be an insult to common sense.

All the question with us then is upon the quantum of merit in volumes like that now before us; the interest we feel in the writers; the public curiosity attached to their subjects; and the manner in which they treat them. In these respects, Colman's *Posthumous Letters* possess many claims to popularity; and though we think the quarto shape rather formal and imposing, yet it must be stated that the price is by no means high (25 shillings). Some of the letters might perhaps have been omitted without injury to the work; but we could hardly expect, from the filial sentiments of the Editor, that he should have viewed them in the same light in which a stranger looks upon them, for they are chiefly the praises of his father from distinguished men, in return for presented copies of the translations of Terence's Comedies, and of Horace's *Art of Poetry*. Others, from Actors about their engagements, are however less generally worth perusal, and seem

to be merely make-weights. These, with a few exuberances and free allusions, are all that hypercriticism can object to in this otherwise very agreeable miscellany.

The letters are classed as follows. *First*, those to the Editor's Grandfather, Francis Colman, while Minister at the Court of Tuscany. *Secondly*, those to his father, in which the principal subjects are arranged and kept as much as possible together. The character of the whole is ingeniously and cleverly drawn, at page viii of the preface—

"Some of the letters from celebrated men, in this collection, possess little farther interest than that of having been written by them;—but the epistolary *small-talk* of distinguished persons, or a specimen of their familiar style, or a note from them of the most trivial description, are interesting to perhaps nine readers out of ten: and, if this be admitted, it is trusted that no very grave censure will fall upon the editor who prints even their *little-tattle*,—provided it be not that dross from the ore of a superior mind which (as in too many instances, such as in the works of Swift,) the author never intended to expose, and never *should* have been exposed, to public inspection.

"In respect to the theatrical letters,—the history of our stage, and the biography of its retainers, have been detailed, by various hands, down to the present day: but, notwithstanding this harvest of dramatic information already gathered in, there are still innumerable gleaners in the field;—by such researchers, something may be picked up, here; something which, if not hitherto entirely unknown, may be supplemental to, and corroborative of, what has been previously told:—at all events, these papers were never in print before."

Our first step naturally falls upon the letters to Francis Colman. The subjoined judicious remarks are from the pen of William Pulteney, afterwards Earl of Bath, and whose wife, Miss Gumley, was the sister of Mrs. Colman. It is dated 21st September, 1727, and reads a good general lesson of life, though dictated by an avaricious person, and enforcing maxims, thank Heaven, far from being without noble exceptions.

"Now I have given you this trouble I must take a farther liberty, and you must not be angry with me if I chide you a little for your extravagance; What makes you throw away your money in Presents? I am much concerned for your expense on my account, and I blame you for it on any other body's, believe me Coleman, there are very few people worth valuing so much as to make oneself a farthing the poorer for them. For my part, I own that I am grown quite

out of humour with the world, and the more I grow acquainted with it, the less I like it. There is such a thing as Cunning, there is falsehood and there are views of self-interest that mix themselves in almost all the friendships that are contracted between man and man. These make friendships hardly worth cultivating any where I am sure no where worth being at any considerable charge to preserve it. Do not mistake what I have said. I mean it not particularly to any one person, but in general I am sure what I have said is true."

We now take another example of Lordly writing about a hundred years ago, to which, such is the inveteracy of habit, the Editor appends a pun on the death of his own Grandfather.

"From the Earl of Essex.

"My Dear Colman,

"As the formal letter," is now over, give me leave to write to you as from an Old friend, who is sorry he is so near you, & can't come quite to Florence to make you a Visit, I need not assure you if you come this way I shall be extremely glad to see you. I should be very much obliged to you if you would let your Steward buy me a good Par-pisan cheese, and some Mortadella's, &c send them to this place, and lett me know how many dozen of Florence one of your Chests Holds, & if its a good time of Year to send me some White & Red; y<sup>e</sup> White I should be glad to have of the sweet sort. and when I have your answer, I will send you word what Quantity I w<sup>o</sup>uld have, & you will lett me know to whom my Banquet shall Pay the Monny, & I should be very glad to know what Prices the marble Tables made at Florence come to, & what are the Common sives you have of those with Birds & Flowers in them. I beg a thousand pardons, my Dear Colman, for giving you all this trouble. Pray my compliments to Mr<sup>s</sup> Colman, & am, in a great hurry my Dear S<sup>r</sup>

"Most faithfully Y<sup>r</sup>

"Turin August y<sup>e</sup> 26th 1732.

ESSEX."

"The British Resident at Florence was now approaching that solemn period which terminated his residence in this world. Mr. Francis Colman's declining state of health is evident, from the subsequent letter; and, in that which follows it, his DEATH is mentioned, quaintly enough, in a *Postscript*."

This postscript is indeed a rare one; but

• The formal letter must have been the official opening of Lord Essex's correspondence (on his arrival at Turin) with a diplomatic brother. There is, certainly, nothing "formal" in the present *surcoat*; which is an admirable specimen of the utter contempt evinced by many men of rank, in his Lordship's day, for pen-dentry, in their familiar epistles.

we must prefix the letter, to lend it its full force.

"From Mary Colman to Mrs. Tyndal!"

"Madam

"Mrs. Colman being uncertain whether she shall return to Florence to-morrow or No, desires that you will take all possible Care of the Child, and notwithstanding you will be obliged to attend the Consul who will be with you to-morrow, yet she begs that you would at the same Time leave the Child in the safest hands, as likewise take care of every Thing committed to your Charge, especially *Dear Pinner*, and not leave her to Cry but to take her with you every where where you properly can; which at present concludes from

"Yrs

"MARY COLMAN.

Pisa, Apr 20, 1733.

"P. S. Mr Colman departed this Life this Morning at 35 Minutes past 7 o'Clock."

"To Mrs. Tyndall, Florence."

On the death of F. Colman, Lord Bath took charge of his son, and there are a number of letters from that nobleman to his ward. In one of them he quotes the following epigram, which it is probable he wrote himself, but which he describes as being dropped in the House of Lords by a Wag on a debate about bringing in Irish Cattle, when the Duke of Newcastle observed that "beef gave additional courage to soldiers."

Since Beef adds more Courage to Soldiers in Battle

I consent to the bringing in Irish Cattle.

But add then a Clause to the Bill, which annuls All free Importation of Irish Bulls.

To another of his Lordship's epistles, in which he lectures George on economy &c., is this note.

"Lord Bath's parsimony, in trifling matters, was, sometimes, laughable. I had the following anecdote from my father:—In a rural lane, through which the noble Earl often passed, in his carriage, a gate was placed across the road, which was opened for travellers by an ancient female. His Lordship, one day, touched by the appearance of the old woman, gave the word to halt—the ost-riders echoed the order,—the coachman pulled up,—the carolade stood still!—and William Pulteney, Earl of Bath, stretching forth his hand from his Coach-and-Four, bedecked with coronets, threw to the venerable object of his bounty—a half-penny!"

At the end of this division of the correspondence, is a very curious explanation of the motives which induced Will Pulteney to abandon his party, and connect himself with the court by accepting a peerage.

We shall briefly copy some of the most remarkable passages. A M.S. of G. Colman (the elder) mentions his visiting Lord Bath, and finding him with Hooke the Roman Historian.

"Upon my first entrance into the Room, (he proceeds) L<sup>d</sup> Bath was just closing an Account of a Conversation between himself

\* Who Mary Colman was, is uncertain: probably, a sister of Francis, whose death she announces.

and The King, by which it appeared that the Partizans in the Opposition had had some differences among themselves. Upon this occasion His Majesty made use of these words to L<sup>d</sup> Bath. 'As soon as I found you were at variance among yourselves, I saw that I had *Two Shaps to deal with*, and I rather chose to come to you, because I knew that your aim was only directed against my Ministers, but I did not know but the Duke of Argyle wanted to be King Himself.' These words, it was agreed both by L<sup>d</sup> Bath & Mr Hooke were suggested to His Majesty by Sir Robt Walpole.

"Mr Hooke then said that he had always looked upon his Lordship's conduct in that affair as a mystery, and so did most other people, who cried 'It is strange that Will Pulteney should be taken off by a Peerage, when we all know that he might have had one, whenever he would, for many years before.' But that he had conversed with some of his Lordship's friends, who, though they also looked on his conduct as a mystery, still believed that he had good and honest reasons for what he did.

"His Lordship replied that he certainly had, that there were several curious Anecdotes relating to that affair; and some particulars known to no soul living except the King & himself; that he had never made any minutes of those transactions, but, that he could easily recollect all the principal circumstances; which he would at times endeavour to do, in hopes that Mr Hooke, as he had a fine pen, would, if he survived his Lordship, work up those materials into a sort of History of this affair."

The negotiations are then related, and it is added—

"Among many other particulars which fell from Lord Bath on this occasion, & which from the confusion and irregularity of the conversation I cannot well recollect, I particularly remember the following. When things began to draw to a Crisis, and the parties in the Opposition saw themselves soon likely to come in, they became at variance with each other concerning who should have the best places. This it was that occasioned that speech of the King's mentioned in the beginning of this account, and destroyed, said L<sup>d</sup> Bath, that glorious scheme which I had laid of bringing about a reconciliation in the Royal Family on a proper foot, & retiring with honour myself. When I found (continued he) what they were driving at, I went to the Prince of Wales, and first asked him whether the others in the Opposition had not been there before me. The Prince frankly owned that they had been with him. I then told him that I found that their views were directed to the securing rich preferments to themselves,—but that my sole aim was to reconcile His Royal Highness to the King on a proper foot, & to make him appear in a right light as Prince of Wales. To convince him of this, I only begged to come alone, & confront all the rest in His Royal Highness's presence; upon which the Prince appointed a meeting at his House in Pall Mall, at eight o'clock that evening. I went accordingly, and

found them there before me, viz., The Duke of Argyle, Lord Chesterfield, Lord Gower, Lord Colham, & Lord Bathurst. Each of these spoke in his turn, and I answered each successively. When we had all spoken, The Prince said that he thought Mr Pulteney acted from the best motives, & delivered it as his resolution that he would go in with him. This was so sore a mortification to the Duke of Argyle that it is thought to have been the occasion of his death."

All that we can gather from the story is, that then, as now, the most violent opposit-  
onists might be prevailed upon to change sides; but from politics, we will divert our readers with two anecdotes.

"The confederates (in the war of 1763) hang up all the Russians (generally by the feet) who fall into their clutches, and the Russians put to the sword the Confederates; the Russian Cossacks have an admirable sang froid in these executions; the other day at a place call'd Rava forty or fifty Confederates were condemn'd to the Bayonet, but as They were tolerably well dress'd, They were desir'd to strip for the ceremony, the Cossacks not chusing to make any holes in their coats."

George Garrick was always ready at his brother's call. "George usually inquired, every night, on coming behind the Scenes, at Drury Lane, 'has David wanted me?' On it's being idly asked how George came to die so soon after the demise of his celebrated relation, the answer was,—*David wanted him.*"

There is a singular letter from Mathew Guthrie, which owing to its length we postpone, with the purpose of inserting it entire in a future Literary Gazette; and now pass on to a very interesting one, from Oliver Goldsmith, to Mr. Colman, who was Manager of Covent Garden Theatre.

"From Oliver Goldsmith."

"Dear Sir,

"I treat you I relieve me from that state of suspense in which I have been kept for a long time. Whatever objections you have made or shall make to my play I will endeavour to remove and not argue about them. To bring in any new judges either of its merit or faults I can never submit to. Upon a former occasion when my other play was before Mr Garrick he offered to bring me before Mr Whitehead's tribunal but I refused the proposal with indignation: I hope I shall not experience as hard treatment from you as from him. I have as you know a large sum of money to make up shortly; by accepting my play I can readily satisfy my Creditor that way, at any rate I must look about to some certainty to be prepared. For God sake take the play and let us make the best of it, and let me have the same measure at least which you have given as bad plays as mine.

"I am your friend and servant,

"OLIVER GOLDSMITH."

George Colman, Esq.

\* The much celebrated Goldsmith:—The Comedy in question, here, is "*Sic Stoops to Conquer*," which succeed'd greatly.

Our next is a favourable specimen of the celebrated Macklin.

"From Charles Macklin.

"Dr Sir,

"I have just received a Species of Irish female Garniture which accompanies this note. I think it has some fancy in it, tho' manufactured in Bostonia. It consists of Seven Yards, enough for two gowns, or one Sague & Petticoat, I have often tried at Compiliments to the fair Sex, but not finding myself happy at that kind of Eloquence I have taken my leave of it for some years. I request that you will dispose of this Trifle in your household, and that you will be so kind as to exercise your Genius, in my name, on this occasion in apologetic Compliment & Persuasion, which will inrich oblige yours, as you would have him,

August 7th 1773

CHARLES MACKLIN.

"P: S: I hope you are, in the midwife Phrase, as well as can be expected in your Condition. I hope you are near your time. Apollo Send you a good hour. \* I have had a disagreeable one lately—my Son unexpectedly, unprofitably, & unwellcome, returned from the East-Indies in disgrace, & justly, for being a bon vivant and guilty of all the idle Consequences of that unmercantile, & indeed as he has managed it, ungentlemanlike Character. I was proud of his Employment in that honourable Service, as it is capable, by an assiduous & faithful discharge of that Trust, of furnishing great Knowledge & dignity of mind, & of rewarding the man with wealth and honour. I was proud of the Parts nature had given him, & of the Cultivation I bestowed upon them; I was confident of his assiduity & Success, & loved him to a paternal pitch of Zeal—now Judge I am now the most perturbed Father in this Land. I can not eat, I have not slept this week I can not read, nor remember; & tho' Justice has disgraced him, still he is mine,—& I think I shall still be happy in him—for he has a fine understanding, & is Sick in bed with Self disgrace & Penitence—which must reform—or kill him. which is my only comfort."

"My Chains are forged ready for putting on, this unhappy Incident has prevented my Seeing you—I find paternal affection & Philosophy make a most unequal Conflict, nature will not be defied, she must have her way or make her Exit—you are a Father, may you be a happy one—I pity the Character,—especially if the Fool is proud & fond,"

"To George Colman Esq."

The following relation an odd occurrence respecting the Beggars Opera.

"From the Magistrates in Bow Street.

"The Magistrates now sitting in Bow

\* From the date of this letter, the Comedy, with which my father was then pregnant, must have been the *Man of Business*; not the most thriving of his literary children.

\* Macklin has been thought, by many, to be a man of little feeling—but, surely, his sentiments of paternal tenderness (so naturally here expressed) come from the heart, and are very affecting.

Street present their Compliments to Mr Colman, and acquaint him that on the Beggar's Opera being given out to be played some time ago at Drury Lane Theatre they requested the Managers of that Theatre not to exhibit this Opera, deeming it productive of mischief to Society as in their Opinion it most undoubtedly increased the Number of Thieves, and that the Managers obligingly returned for Answer that for that Night it was too late to stop it, but that for the future they would not play if the other house did not. Under these Circumstances from a Sense of Duty and the Principles of Humanity, the Magistrates make the same request to Mr Colman and the rest of the Managers of his Majesty's Theatre Royal Covent Garden; the same Opera being advertised to be played there this Night

"Bow Street, October 27, 1773."

Answer.

"Mr Colman presents his Best Regards to the Magistrates with whose Note he has been just honoured. He has not yet had an opportunity of submitting it to the other Managers, but for his own part cannot help differing in opinion with the Magistrates, thinking that the Theatre is one of the very few houses in the Neighbourhood that does not contribute to increase the number of Thieves.

"Covent Garden—W'ednes. Morn."

The matter seems to have gone no further. But perhaps the most entertaining portion of the volume under notice, consists of letters from Garrick to Colman, principally written while the former was travelling in France and Italy. A very warm friendship subsisted between these individuals; and we are sorry to add, that his correspondence does little credit to Garrick, either as an actor or a man. It is indeed quite melancholy to notice the littleness of mind, and low worldly cunning, which it too frequently suffers to peep out. The following extracts appear to us, however, to be exceedingly entertaining. (Garrick is at Paris, Anno, 1763, he says—

"You can't imagine, my dear Colman, what honours I have received from all kind of People here,—the Nobles & the Litterati have made so much of me that I am quite ashamed of opening my heart ev'n to You. Marmontel has wrote me y<sup>e</sup> most flattering Letter upon our supping together, I was quite in Spirits & so was the *Choirin*, who sup'd with us at Mr Neville's. She got up to set me a going & spoke something in Racine's *Athalie* most charmingly—upon which I gave them the Dagger Scene in *Macbeth*, y<sup>e</sup> Course in *Lear*, & the falling asleep in *John Brute*, the consequence of which is, that I am now star'd at y<sup>e</sup> Playhouse, and talk'd of by Gentle & Simple as y<sup>e</sup> most wonderful wonder of wonders—the first Person I did going to England shall bring you Marmontel's Letter—D'Alembert was one of y<sup>e</sup> Company & sings my praises to all y<sup>e</sup> Authors of the Encyclopedie."

From Naples, 21 Dec. the same year—

"I am to have the honour & satisfaction of seeing the King's Italian Actors perform

before him in y<sup>e</sup> Palace, which is a most extraordinary favour; they perform *Estemore*, & the Nobleman, who stands in the place of y<sup>e</sup> Lord Chamberlain has sent me word, that if I will write down any dramatic Fable & give the Argument only of the Scenes, in 24 hours after they shall play it before me as y<sup>e</sup> greatest Compliment they can pay me—I shall work at it to-morrow—I hear there is one great Genius among the Performers—the Situation and Climate of this place are most extraordinary, & the People are still more so; they are a new race of beings, & I have the highest Entertainment in going amongst them, & observing their Characters from the y<sup>e</sup> highest to y<sup>e</sup> lowest—I was last night at their great Theatre, which is a most magnificent one indeed; I was really astonished at first coming into it—it was quite full, & well lighted up—but it is too great \*, & the singers were scarcely heard—the famous *Gabrielli* pleas'd me much; she has a good person, is the best Actress I ever saw on an Opera Stage, & has the most agreeable voice I ever heard; she sings more to the ear than to y<sup>e</sup> heart."

"I cannot quit you till I say something about Rome: I hardly slept the night before I arriv'd there with y<sup>e</sup> thoughts of seeing it—my heart beat high, my imagination expand'd itself, & my eyes flash'd again, as I drew near the *Porta del Popolo*; but the moment I enter'd it, I fell at once from my airy Vision & Utopian Ideas into a very dry ill looking place (as they call it) with three crooked streets in front, terminated indeed at this End with two tolerable Churches—w<sup>as</sup> a disappointment! my Spirits sunk & it was with reluctance that I was drag'd in the afternoon to see the Pantheon—but my God, w<sup>as</sup> my Pleasure & Surprise!—I never felt so much in my life as when I enter'd that glorious Structure: I gasp'd, but could not speak for 5 minutes—It is so very noble, that it has not been in y<sup>e</sup> Power of Modern Frippery or Popery (for it is a Church you know) to extinguish its grandeur & Elegance—Here I began to think myself in Old Rome, & when I saw the ruins of the famous amphitheatre—

"*Onnia Cæsareæ cedat lae* or Amphitheatre—I then felt my own littleness—and was convinc'd that the Romans were as much superior to the Moderns in Every thing, as *Vespasian's* Amphitheatre was to *Broughton's*—it is impossible, my dear Colman, to have any idea of these things from any Prints that have been made of 'em,—all modern performances look better upon paper, but these Ruins are not to be conceiv'd, but by the sensible and true *Archæologist* of your own *Eyes*. The I am pleas'd, much pleas'd with Naples, I have such a thirst to return to Rome, as cannot possibly be slak'd till I

\* If any one be curious enough to ascertain the dimensions of the Theatre here mentioned, (of San Carlo, it is pretence), he may, then, possibly discover Garrick's opinion, though posthumously given by him, in respect to the magnitude of the present Playhouses in Drury Lane and Covent Garden.

† Broughton, of pug Black & emory.

have drunk up half y<sup>e</sup> Tiber, which, in its present state, is but ascurry draught neither. It is very strange that so much good poetry sh<sup>d</sup> be thrown away upon such a pitiful River; it is no more Comparable to our Thames, than our modern Poets are to their Virgils & Horaces."

(To be concluded in our next.)

#### GALIFFE'S ITALY.

(Second Volume and concluding Notice.)

We do not find this volume quite so much to our tastes as the first. It contains further observations on Rome, and accounts of Naples, Florence, Bologna, Milan, Turin, &c. through which it is not incumbent upon us to follow the author, though his remarks are generally shrewd, and his trivial matter not more abundant than is usual with those who travel over a well known track. A few miscellaneous extracts will afford our readers sufficient insight into its delicacy. There is at setting out a well drawn, perhaps a little exaggerated picture, of the modern Romans.

"A modern Roman (says our author) is, indeed, a singular being. Mr. Edward Banks described them by one of the best comparisons imaginable. He said they put him in mind of impressions of engravings from worn-out plates. This is exactly true: they seem to be but half finished; and in most parts so faintly portrayed, that you cannot conceive why nature perseveres in striking off more copies of them. Wherever the strokes are deep and strong, you may be sure there is a blot.

"The Romans are a sullen, pale, spiritless, morose people. They hardly ever speak, except to beg alms, which when offered they absolutely tear from the giver, without taking the trouble to thank him for them, and without showing the least satisfaction at having obtained them. They are not at all like the Italians we had previously seen; in fact, they are like no other living beings. The whole nation seems tired of its existence, and waiting for the sleep of death. Walking, seeing, hearing,—every act in short seems to be a painful exertion of exhausted mind and body. I never saw one of them smile.—I am now speaking of the native Romans of the lower classes, not of the temporary inhabitants of Rome, who come from various districts far and near, to gain their livelihood in the city."

The following notice of the leading men at Rome is interesting at this period, when Italy shudders with revolution.

"It appears to be generally admitted, that Cardinal *Gonsalvi* is the most liberal Minister that any Pope ever had; and most people think he would do a great deal of good if he possessed sufficient power; but he is for that very reason detested in the Conclave. He has not received Holy Orders, and may thus still marry if he chooses,—which I had always thought impossible for a Cardinal. But he does not stand alone in this respect. The Cardinals *Pacca* and *Albani* are similarly circumstanced, and possibly others with whom I was not acquainted. Cardinal *Gonsalvi* is yet comparatively young, (not above

fifty or fifty-five years of age,) stout, good-looking, gentlemanlike, civil, and cheerful. But it is extremely difficult (I might rather say, that it is quite impossible) to judge correctly of him at present. It is thought that if the Pope were to die soon, Cardinal *Loti* would most likely succeed him; but the intrigues of the Conclave are much too deep for the penetration of strangers."

Proceeding, we have proof that the age of superstition is not past. "Whatever may be the liberality of the Prime Minister, it is not sufficient to put a stop to the most absurd superstition. Little prints of the miracles attributed to the present Pope, were publicly sold in the streets of Rome; and some time before our arrival, an immense number of his shirts were sold in retail to the common people, and perhaps to better informed persons also, who fully believed that a small piece of one of them boiled in their soup, was the surest of all remedies against any disorder! I could not have credited this story, if I had not had it from a very honest merchant, who told it to me in the simplicity of his heart, as a thing of which no real Christian could entertain a doubt. This boiling of small rags is a common practice, as well with respect to the shirts of clean Saints, as to the dirty gowns of shirtless Friars. The gown of St. Francis must have had a train of prodigious length,—for the sale of it still continues!"

A sketch of a play at the Teatro Nuovo at Naples, must amuse the English public.

"There was a good set of performers at this theatre, amongst whom Signora Tessari, was particularly eminent. I saw a play here, of which the scene was laid in England, and as it is curious to observe the notions which the people are taught to entertain of England, and of the British Government, I shall give a short sketch of the piece. The scene (as I have said) lies in London; and the principal actors are, 1. An Alderman Voender, who is represented as a minister invested with despotic power. 2. A Milord Utson, Lord Mayor of London, who is yet superior to the former; for he appoints and cashier even Aldermen of his own private authority. 3. Mr. Voender, Jun., who has married without the consent of his father, but the latter has seized upon the bride, sent her to India, and spread the report of her death. 4. A Captain of a man-of-war, who brings the young woman home again, and with her is cast into prison by the Alderman, in the presence of the Lord Mayor,—without any sort of accusation, or any other pretext than that it is the Alderman's will! However, the friend of young Voender, who had perfidiously betrayed him into his misfortunes, now repents, and with the help of the Lord Mayor brings the play to a favourable conclusion. The dress of the Alderman was a magnificent coat, with a gold embroidery of six or seven inches in breadth, two brilliant stars, and a blue ribbon! After such profusion of distinctions, it will be seen that it was no easy matter to keep up the dignity of the Lord Mayor in a becoming proportion, consistent with the means of the treasury and the wardrobe of the theatre: but the object

is attempted to be accomplished by investing him with a star or two more than the Alderman."

Alderman Wood himself could not appear in greater glory. From the play we learn a description of the last sad scene of all, a funeral solemnity, if we may quote the author in calling it so, at the monastery of San Lorenzo, Salerno.

"The corpse of a woman was brought to the church, laid not in, but upon a coffin, covered with fine cloth, with gold fringe and tassels. The body was very decently attired, and showed the deceased to have been a person in a respectable station of life; but the only attendants were, a young man who preceded it with a torch, four penitents in their white gowns and masks who carried the bier, and a woman who followed. As soon as they came into the church, a monk began to sing the Office for the dead, to which one of the penitents chanted, or rather yelled, the responses. The latter had very comfortably seated himself in a chair, with his greasy cap on his head; and during all the time that he was thus joining in the service, he was busily occupied in picking up the mortuary cloth, the gown, and other paraphernalia, which had been hired for the ceremony. He mingled the two occupations with the utmost composure and impartiality; sometimes singing with one end of the picking strings in his mouth; and the whole proceeding was the oddest burlesque of devotion,—the most comical solemnity I ever beheld. As soon as the singing was concluded, they placed the body in a vessel like a kneading-rough on the floor, and the woman took away the pillows which had supported her departed friend's (or mistress's) head, together with the white shoes from her feet, thereby exposing a pair of ragged stockings. A trap-door formed of two square stones, was then raised, and one of the men taking the body in his arms, carried it down a flight of steps into a spacious vault below, where he placed it in an arm-chair, in a numerous circle of dead gentlemen and ladies, who were all in like manner gravely seated round the vault, waiting till the places should be entirely occupied. When the circle is complete, all the corpses are then taken together and thrown without further ceremony into another and a deeper vault. When I observed to one of the attendants, that the stench of all these hodies must be dreadful, and might even be pestilential in summer, the man replied,—'What shall I say to you? it is our profession.' ('*E nostra arte*.) Just as if his health and that of his brother "artists" were all that I could be solicitous about."

We shall only add one paragraph more, relative to the burning of flies on the Arno at Florence, which curious act is thus narrated:—"On the 26th of July I witnessed an extraordinary spectacle,—that of the annual burning of several millions of flies, which ascend the river once a year towards the end of July or the beginning of August, and are immediately devoted to the flames. Great fires are lighted for this purpose on the two upper bridges, into which immense clouds

of them rush in rapid succession; the ground was covered with their remains to the depth of two inches at least, all round the fires. This operation seemed to inspire every one with mirth, and one of the destroyers availed himself of the good humour of the spectators, to raise voluntary contributions among them for the wood and straw which he had burnt in pretty large quantities."

In conclusion, we have to repeat our approbation of this work, which we consider to be among the best contributions from Italy of late years.

#### BRITISH FRUIT TREES.

We resume our extracts from Mr. Phillips' excellent work on this subject, whereon so general an interest is spread over our gardens, orchards, and tables; and, as in our last Number, do little else than indicate the various subjects by (in printers' phrase) an italic side-head. We begin with some curious particulars relative to the

**Barberry.**—"I have (says the author) a barberry-tree in my garden near 20 feet in height, the branches of which extend over a circumference of 60 feet. It has been covered with blossom this spring, and had a pleasing effect in the shrubbery; but was so offensive for about a fortnight, that no one would walk near it during that time. It seems particularly attractive to singing birds, wherever it is planted, especially the bullfinch and the goldfinch, both of which often build in these bushes.

"A very singular circumstance has been stated respecting the barberry-shrub,—that corn sown near it, proves abortive, the ears being in general destitute of grain; and that this influence is sometimes extended to a distance of three or four hundred yards across a field. This is a just cause for banishing it from the hedge-rows of our arable fields, for which, otherwise, it's thorny branches would have made a desirable fence. When this coral-like fruit is ripe, it adds much to the beauty of the garden; but it's acidity is so great, that even the birds refuse to eat it."

**Chestnut.**—"The remains of very old decayed chestnut-trees may be seen in the Forest of Dean, Enfield Chase, and in many parts of Kent. At Fortworth, in Gloucestershire, is a chestnut-tree fifty-two feet round: it is proved to have stood there since the year 1150, and was then so remarkable, that it was called "The great chestnut of Fortworth." It fixes the boundary of a manor. Mr. Marsham states that this tree is 1100 years old."

"Chestnuts stewed with cream make a much admired dish, and many families prefer them to all other stuffings for turkeys; they make an excellent soup; and I have no doubt but that chestnuts might be advantageously used in cooking, so as to make many agreeable and wholesome dishes. I have had them stewed and brought to table with salt fish, when they have been much admired, but it is exceedingly difficult to introduce any article as food that has not been established by long custom; and it is not more strange

than true, that the difficulty increases, if the object be economy.

The justice of this remark will be acknowledged by every observer.

"His true, 'tis pity; pity 'tis, 'tis true.

"The importation of chestnuts is very considerable both from Spain and Portugal, yet I believe it is rare if ever there is a single meal made from them in this country. The Catalonians have this strange religious practice. On the 1st of November, the eve of All Souls, they run about from house to house to eat chestnuts, believing that for every chestnut they swallow, with proper faith and unction, they shall deliver a soul out of purgatory."

"The great chestnut-tree near Mount Etna is perhaps one of the most extraordinary trees in the Old World. It is called 'The chestnut-tree of a Hundred Horses,' from the following traditionary tale: Jean of Arragon, when he visited Mount Etna, was attended by her principal nobility, when a heavy shower obliged them to take refuge under this tree, the immense branches of which sheltered the whole party. According to the account given of it by Mr. Howel, this chestnut tree is 160 feet in circumference, and, although quite hollow within, the verdure of the branches is not affected; for this species of tree, like the willow and some others, depends upon its bark for subsistence. The cavity of this enormous tree is so extensive, that a house has been built in it, and the inhabitants have an oven therein, where they dry nuts, chestnuts, almonds, &c. of which they make conserves; but as these thoughtless people often get fuel from the tree that shelters them, it is feared that this natural curiosity will be destroyed by those whom it protects."

**Wild cucumber.**—"The juice of wild cucumber leaves dropped with vinegar into the ears, was thought a good remedy for deafness. A decoction of the fruit being sprinkled in any place will drive away mice;" it was also said to cure the gout, &c.; indeed, so many virtues were attributed to it by the ancients, that if we were inclined to give credit to them, it would cause our wonder to find they had any complaint uncured."

**The Currant.**—"This agreeable and wholesome fruit is undoubtedly a native of our country: it was formerly found growing in the wild state, in woods and hedges in Yorkshire, Durham, and Westmorland, as well as on the banks of the Tay and other parts of Scotland. As a further proof of its being a northern fruit, we have no account of its having been at all known to the ancient Greeks or Romans, who have been very accurate in describing all the fruits known in their time. It seems not to have grown so far south as France; for the old French name of *groscaille d'outremer* evidently bespeaks it not to have been a native of that country, and even at the present time their language has no appropriate name for it distinct from the gooseberry. The Dutch also acknowledge it not to have been indigenous

\* So simple a remedy for a destructive pest, is worth trying.—Ed.

to Holland, where it was called *bonshins over zee*. Whether the Dutch first procured this fruit from Britain, or from any other northern countries, we must acknowledge ourselves indebted to the gardeners of that country for so improving the size, if not the flavour of this fruit.

"The English name of currant seems to have been taken from the similitude of the fruit to that of the small Zante grapes, which we call *currants*, or *Corinths*, from Corinth, where this fruit formerly grew in great abundance, and which are so much used in this country for cakes, puddings, &c.

"The Italians seem to have no other name for the currants than *uettie*, little grapes. At Geneva they are called *raisins de Mars*. The currant does not appear in the list of fruits published by Thomas Tusser in 1557, which I have transcribed to shew what fruits were cultivated in the latter part of Queen Mary's reign.

"Apples of all sorts, apricots, barberries; bootlesse, black and white; cherries, red and black; chestnuts; cornet plumbs; damians, white and black; filberts, red and white; gooseberries; grapes, white and red; green or grass plumbs; hurril berries; medlars, or meles; mulberries; peaches, white and red; peera of all sorts; peer plumbs, black and yellow; quince-trees; raspas; raisons; small nuts; strawberries, red and white; service trees; warden, white and red; walnuts; wheat plumbs."

The black currants, which were formerly called *quinancy berries*, on account of their great use in quinsies, are natives of Sweden and the northern parts of Russia, as well as the northern counties of England, where they have been found in their natural state, growing in alder swamps, and in wet hedges by the banks of rivers. In some parts of Siberia, the black currants are said to grow to the size of hazel nuts. The inhabitants of that country make a drink of the leaves: in Russia a wine is made of the black currants; and it is also made in some parts of England."

"The currant-tree that was brought from the Isle of Zante, by our Levant traders, and first planted in England in the year 1538, I conclude was the vine that produces the small grapes which we call currants, and of which the English use more than all the rest of the world together. This fruit grows in great abundance in several places in the Archipelago. We have a factory at Zante, from whence we import them so closely pressed by treading, that they are often obliged to be dug out with an iron instrument, the natives thinking we use them as a dye."

A few grammatical inaccuracies will be observed in these quotations; but they do not seem to render the sense of the author doubtful, and therefore we spare our readers the trouble of a gloss.

**Elder.**—"The leaves of the elder-tree are often put into the subterraneous paths of moles, to drive those noxious little animals from the garden. If fruit-trees, flowering shrubs, corn, or other vegetables, be whiped with the green leaves of the elder

branches, insects will not attach to them. An infusion of these leaves in water is good to sprinkle over rose huds, and other flowers subject to blights and the devastations of caterpillars."

*Fig.*—"The Athenians were so choice of their figs, that it was forbidden to export them out of Attica. Those who gave information of this fruit being sold contrary to law, were called *syphophantai*, from two Greek words signifying the discoverers of figs; and as they sometimes gave malicious information, the term was afterwards applied to all informers, parasites, liars, flatterers, impostors, &c. from whence the word *syphophant* is derived."

"At Oxford, in the botanic garden of the Regius Professor of Hebrew, is a fig-tree, which was brought from the East, and planted by Dr. Pocock, in the year 1648. Of this tree, the following anecdote is related: Dr. Kennicott, the celebrated Hebrew scholar and compiler of the Polyglot Bible, was passionately fond of this fruit; and seeing a very fine fig on this tree which he wished to preserve, wrote on a label, 'Dr. Kennicott's fig,' which he tied to the fruit. An Oxonian wag, who had observed the transaction, watched the fruit daily, and when ripe, gathered it, and exchanged the label for one thus worded: 'A fig for Dr. Kennicott.'"

"It is a curious fact, that fresh-killed venison, or any other animal food, being hung up in a fig tree for a single night, will become as tender and as ready for dressing, as if kept for many days or weeks in the com-

mon manner. A gentleman, who lately made the experiment, assured me that a haunch of venison which had lately been killed, was hung up in a fig-tree when the leaves were on, at about ten o'clock in the evening, and was removed before sun-rise in the morning, when it was found in a perfect state for cooking; and he adds, that in a few hours more it would have been in a state of putrefaction."

*Filberts.*—"It is supposed, that within a few miles round Maidstone, in Kent, there are more filberts growing at the present time, than in all England besides, there being seven hundred acres planted with filbert-trees in the vicinity of that town. The London market is entirely supplied from thence with these nuts, which are excellent in quality, and, if quite ripe, will keep good for several years placed in a dry room. Filberts are not only much more agreeable than the common nuts, but are esteemed wholesome and nourishing when taken in moderation."

*Gooseberry.*—"The gooseberry, which is now so much and so justly esteemed, is a native of Europe; and as it grew in the woods and hedges about Darlington, Cambridge-shire, Norfolk, and other northern counties, in the wild state, I consider it indigenous to this country, although Drs. Smith and Miller both entertained doubts of its being truly so. It appears not to have been known to the ancients, either in Greece or Rome, as their authors have made no mention of it; but it is noticed by the earliest naturalists who have written in this country, notwithstanding it was a fruit much neglected, according to Allioni's account, who says, 'they are eatable, but somewhat astrigent.' Gerard says, 'it is called *feaberry bush*, in Cheshire, my native country; and I find that it had the same name in Lancashire and Yorkshire. In Norfolk it was abominated into *feabes*. It appears to have taken the name of *gooseberry*, from its being used as a sauce for young or green geese."

"I have not attempted to give even the names of all the varieties of this fruit, finding them so numerous, that one nurseryman furnished me with his list, and obliged me with a sight of 300 varieties, the largest of which in weight was equal to three guineas and a half." [Three grains and a half, we presume.]

"The pale gooseberry was first brought from Flanders in the year that Henry the Eighth received the title of *Defender of the Faith*. This monarch, and his daughter Queen Elizabeth, seem to have encouraged the art of gardening, as, during their reigns, most of our best fruits and vegetables were first introduced and cultivated in this kingdom; but even during the reign of these sovereigns, gooseberry leaves were used as a sallet by those who could not afford to send to Holland for a lettuce. The gooseberry is but little esteemed on the continent, for want of being more known; and foreigners seem astonished at the size and flavour of this fruit in England."

(To be concluded in our next.)

*Julia Alpinna: with the Captive of Stamboul, and other Poems.* By J. H. Wilson, author of *Asiatic Hours*. London, 1820. 12mo. pp. 237.

"Many men there be (saith the honest old writer of *The Testament of Love*) that with eres openly spied, so much swallowe the deliciousnesse of jests and of ryme, lequint knittinge coloures, that of the godnesse or of the badnesse of the sentence take they litel hede or els none." Towards this sect, the author betrays a strong tendency. With glimpses of poetry, and a fine tone of poetical feeling throughout, he frequently contrives to be unintelligible, and does so multiply words, that ideas, originally good, and conceptions in their generation vigorous, come to be extinguished in the most dilute verbiage that can possibly be imagined to weary out the attention of the reader. Diffuseness is the bane of Mr. Wilson's *metre*; and, as these ladies are sometimes personified with wings, flying about, we may say, that her flapping flight more resembles the heavy bustard than the soaring eagle, or even swift evolving swallow. Mr. W. has also either contemned the counsel which we offered him on his *Asiatic Hours*, (*Literary Gazette* for 1819, p. 632.) or has found it beyond his art to avoid the style of composition which disfigured that work. If proper words in their proper places be a desideratum in verse, the numerous misapplications of epithets which appear in these numbers, are quite fatal to their character. A chaos of language is a very different thing from the occasional use of a bold phrase, and that sort of daring genius which led a Milton to sing of "Darkness visible." Mr. Wilson is unlucky in this respect; and, as it seems to be done in defiance of criticism, we shall point out a few instances of the absurdity which the defect involves.

We but add—of things destroyed,  
One atom to the mighty word. p. 3.

This is a double puzzle; first a thing destroyed being still an atom and that atom, being added to what nevertheless remains a being!

Their passionate orbs (of eyes) such brilliance  
hunted,  
As soothed by turns. 19.

The haunting brilliance of her soothing eyes, however, is beaten by her smile, which is

A glow, bursting half from gloom,  
So vividly, and yet so swift,  
We cannot fix its transient bloom,  
For pleasure's, or for sorrow's gift;  
But deem it heaven's own cherubin,  
Lighting the lamp of soul within.

All which so dazzles us, that we think it nothing but rhapsody. Diana's temple is  
The ambrosial pall that shuts out sin. 21.

And the following is a curious effect of memory—

When the bright past appeared a blot,  
Which apathy remembered not. 23.

\* [On the subject of this review, as commenced in our last, we have received the following, which we insert, as well for the information it notes, as for the opportunity it affords us of saying, that we esteem the volume it refers to, and its companions, the *Conversations on Chemistry*, and on *Political Economy*, to be among the most valuable manuals in the English language.—L.D.]

Hickory.

"Sir.—My Tutor takes in your *Literary Gazette*, and I am sometimes favoured with a perusal of it, which amuses me greatly. In your last article of the last week's number, on the diseases of fruit-trees, the author, whose work you are reviewing, recommends the trunks of apple-trees to be rubbed with the leaves and young shoots of elder, to which all kinds of blight hath an antipathy, and those injuries, although minute insects, would not only be destroyed, but that it would prevent their doing themselves on these trees; and he requests the remarks of any of your correspondents who may try the experiment. Now, Mr. Editor, in a most interesting book, called *Conversations on Botany*, which I gained as a prize, I find the following information:

"*Elder.*—Why does the gardener spread elder leaves near the mole hills?

"*Moth.*—To keep away the moles, which will not come near elder. You may have seen the conchman also putting branches of it in the horses' heads, to keep off the flies; for few insects can endure the smell of this plant. The faculty that most animals possess of distinguishing one plant from another, by the smell or taste, and of knowing whether they are noxious or salutary, is very extraordinary, and of great importance."

Tyro."

We cannot comprehend

A color, making bright the shape  
And attitude of things. 33.

Nor how—

—the *morn's* whitest earliest flush  
Flew from the *morn's* gales of pearl. 36.

Nor how—

The long processional departs. 43.

Nor how—

The purple almous (has) its light tread  
When prostrate caravans lie dead. 51.

Nor how war can be called a "miscreant-  
ing crew, 53; or come charioted in a *teag-  
gon*, 54, with "Eycballs that act the gorgon-  
ous part," illud; all which, in truth, are  
tanto us nonsense, and worthy of the dogged  
relative to the same subject which we  
here introduce, by way of parenthesis.

Heaven's angry Angel pour wrath on thee, War!  
Ambition and Cruelty harness thy car,  
And Rain, and Rapine, and fell Decay,  
Herald thee on thy lightning way,  
Thou cancellst Treaty at thy nod,  
Crumblest the robes of the Price; God!  
On the palace of kings and the peasant's cot  
Thou turnest thy visage and they are not;  
Where thy hurricane hurls, a capitol burns,  
And infantry's ashes fill innocent urns.  
Wrath on thee, War! thou hast given to the  
tomb

Tens of thousands to dread the day of doom;  
Thou hast fixed on the age that is rolling by,  
The terrible charm of the rattle-snake's eye;  
They have come to thy altar with fire and spell,  
To people the chambers of death and hell,  
To royal smiles, and yet beauteous vows,  
They crown thee with laurel and myrtle-bows;  
And minstrels throng to their hallowed spring,  
Thy sanctified homilies to sing;  
Dressing to nations a frenzied fire,  
Sorrow to mercy, and shame to the lyre.

Yet this stuff is followed by a sweet in-  
vocation to grief, when Helvetia has lost her  
last battle, which shows how capable the  
author is of better things.

Princess of mountain, Good, and fell!  
Helvetia! to thy crown—farewell!  
Weep! for thy patriots' hopes are o'er;  
Weep! for thy freedom is no more;  
For those who live, and those who sleep  
In death's cold chains of bondage weep:  
'Tis morn! (how can the morn look gay  
On the lost field of yesterday!)

Then again comes the ridiculous—

The clouds, which form the sun's pavilion,  
Are rolled in beautiful vermilion,  
Nor one faint shape of *andreas* wear,  
For all the thousands bleeding there,  
The ibex comes as it was wont  
At sunrise to the crystal font,  
But starts with trembling foot aside  
In horror of the waters dyed.  
No human voice or footstep fills  
The echo of the lonely hills.

At p. 66, we are told of there being no  
human sound to electrify the silence, while  
"The world flows on;" but we shall disturb  
no more of the ashes of Julia Alpina in this  
respect. The captive of Stamboul is equally  
filled with ill-sorted words. At the very  
outset the sea breaks

Deep, deep, below the turret's base,  
As though some giant heaved his mace.

And shook with an eternal sound,  
The dungeon vaults that tremble round.

Nor your giants don't shake by hearing  
the mace, especially with an eternal sound;  
nor are shaking and trembling synonymous.  
A greater miracle still is a young Trouba-  
dour in his proteneal wood.

When wine, and wit, and woman's praise,  
Had made his soul—an orb of rays! 100

We hear farther on of a night—

Which from heaven's recording loof  
No line might blight. 107.

And of a sea view, we will venture to say  
quite novel to our painters, where the "far  
projecting shadow of a cliff lay on a bright-  
ening bay."

The riddle of the morn's flush flying from  
the morn's gales, in the preceding poem, is  
countenanced in this, for there is an appoint-  
ment to meet,

—when at set of sun  
The bearded Innom's chant in air,  
From mosque, proclaims the morn's done. 113.  
By a droll anticipation, and in the like spirit  
with which the warriors conclude in the  
same page, that "fall or flee," their *intrat*  
rites shall be paid to freedom. The follow-  
ing is also a rather ludicrous instance of the  
simile of dissimilitude.

He stood as rooted to the spot  
By some overmastering charm!  
So have I seen in vernal woods,  
Freeding amid the violet's buds,  
With seeming calmness in its eye,  
The darkly-brooding serpent lie.

We fancy the author is the only person  
now alive, who ever saw a serpent of any  
sort, darkly-brooding or otherwise, lie at all,  
and far less lie *unerring*, like a man who  
stood, and far less who stood rooted. We  
assure Mr. Wiffin that good sense is the  
spirit of all good poetry; and that this misap-  
plication of words is the ruin of his imaginative  
and descriptive powers. Horace's advice is  
worth attending to

Scribendi recte

Sapere est principium et finis.

To justify the objections on this head, which  
we have urged so strongly, because we are  
sorry to see the author's fine perceptions of  
nature, feeling, and genius, thus perverted in  
their development, we shall only further  
add two or three passages.

Intense distractedness of mein  
Upon his blanched front is seen. (p. 119.)

Mien upon his front, forehead!

A seeming virtue, but a wily foe. (131)

What is the opposition?

To continue

With naught but the sun-forging swallow, and  
cloud  
Soaring free,—soaring free!—in calms regions  
of noon

Of their limitless pleasure and liberty proud,  
And alone on the frailty of fortune relying. 145.

This appears to be inexplicable nonsense.  
What cloud is proud of pleasure and liberty,  
and what is the *frailty* of fortune on which  
it and its swallow companion rely. But we  
will not pursue this unpleasant speculation,  
nor shall we waste time in pointing out the

mean expressions which occasionally intru-  
de these pages. Availing himself of the modern  
license in poetry, the author makes such un-  
allowable rhymes, as wrath—fall, unav-  
ed, sword—planet, granite—fall, capitol—  
forewarning, dawning, morning—now, por-  
tico—temple, tremble—faith, death—dare,  
war—eye, virginity, &c. &c.: the last occurs  
in a strange account of a statue of Diana,  
which has

—that full, unmisplured eye

By genius' most divine excess  
Fixed in the *Vision of Virginity*!!

We have also to reprehend the author for a  
sprinkling of grammatical inaccuracies and  
errors in construction, originating in the ne-  
cessity for finding rhymes in tenues of verbi,  
where the sense of the passages would not  
have gone to look for them.

Of the pleasing thoughts ill expressed, we  
shall quote the picture of a fond father con-  
templating his child.

Gazing on her, a smile and sigh  
Would strive with him, she knew not why,  
She knew not why—she could not know  
How bitter thoughts on sweet ones grow,  
When in the daughter's face, we kiss

The mother's charms, those charms which  
lighted

Our young, romantic hearts with bliss.  
The lone caressed, the quickly blighted;  
When that dear love of early years  
Lies low, and cannot heed our tears!

Refined taste will here detect the poverty  
of the word *beet*, and the confused weakness  
introduced for the sake of the rhymes *his*  
and *blighted*.

Before doing that justice to Mr. Wiffin  
which his talents deserve, by quoting some  
specimens of his better parts, we shall ven-  
ture to suggest to him, and to all writers of  
the same school, that a very efficient cause  
of their diffuseness and consequent want of  
interest, is to be traced to the nature of the  
plan in which they think they can construct  
a good poem. In his preface Mr. Wiffin  
says, "With regard to any objection that  
may arise in the mind of the reader from the  
paucity of incident in this little History, it  
may not be irrelevant to remark, that al-  
though the mind may be amused by the vivid  
and various delineation of fictitious events,  
the better sympathies of the heart are much  
more likely to be excited by the simplest  
narrative, founded on real circumstance, and  
the play of the sweet and amiable affections,  
than by the most complicated tissue of situ-  
ations that have no basis beyond the imagi-  
nation." Now our opinion is, that the reader  
who peruses a composition of considerable  
length in an hour's time, which cost the  
poet many a day's toil, ought to have  
some incident to link his mind to the fast  
following changes of passion, and varieties  
of sympathy which are sought to be excited.  
The heart may be playful on Monday when  
he convalesces on; part, and grave on Satur-  
day when he writes another; but the reader  
cannot cram these transitions into the space  
of ten minutes; and there must be some  
action to lead him to those rapid alternations  
which the author, owing to the long intervals  
that occur to him, does not perceive.

The following extracts will show that it is neither from want of ability nor of admirable sentiment, that Mr. Wilkin has afforded grounds for the foregoing remarks. Julia Alpina begins thus beautifully—

With rapid wing, in ceaseless flight,  
Time sweeps along, and leaves in night,  
Each brilliant aim of life's short span,  
The joys and agonies of man.  
The storied arch that Glory rears,  
He mantes with the moss of years;  
O'er Beauty's urn in ivy creeps;  
Shatters the tomb where Valour sleeps;  
And quenches, ne'er to burn again,  
The fire in Freedom's awful fane.  
He sends the beating wind and shower  
Proudly to battle with the tower,  
And when in ruin they have rent  
Frieze, portico, and battlement,  
With scoffing lip he seems to say,  
"Weak worm! thou too shalt be as they;  
Soon passion's fire, shall leave thine eye;  
Ambition fade, and feeling die;  
Hope faithless find its splendid trust,  
Thy pride claim kindred with the dust,  
And nothing more of thee remains,  
Than what remembrance views with pain,  
A starting Vision, void and vain."

Alpinus leaves home for battle; and a favourite tree is thus tenderly painted.

It spoke of all that's blest and pure;  
Of happiness that cannot last;  
Of hope, but hope may not endure;  
And peace, but peace itself is past.  
It spoke of a deserted claim,  
It seemed to whisper Julia's name.  
And must be leave that floor, where first  
Her footsteps ran, her charms were nursed?  
Leave the sweet tennil which entwined  
With each emotion of his mind?  
How could he see his daughter's face,  
How meet her mournful, mute appeal.

A vessel under sail—

With bounding prow and bending pine  
Across the roaring Bosphorus,  
She yet bears nobly through the brine,  
As if she ever wrestled thus,  
And ne'er her pendants gave to fly  
In crystal bay or purple sky.

The captive's wife, in the second poem—

She seeks not,—rather shuns repose;  
And now her faded aspect shows  
Her many passions sunk in one—  
The brilliant eye of other days,  
Dim, and the bosom cold to praise,  
Which charmed so much when life begun;  
Sorrow alone on her white brow sits,  
And some deep feeling gleams by fits,  
Like ruins of the spirit's light  
Burning on through years of pain,  
As the moon's track on the main,  
Glimmers through the dark midnight.

The rise and fall of empires is treated in a highly poetical strain (though *fire* is expressive, and to call *glow* a *thirst*, is bad).

See first how splendour's rushing rays adorn  
The peopled towers of empire in her morn;  
Thither the yet barbaric nations pour,  
And Battle's blast is blown from shore to shore.  
By fire and freedom in her bright noon nursed,  
The glow of genius is a glorious thirst;  
Then Power his pinnacle bestrides, and we  
View Taste spring forth, like Venus from the sea,  
Radiant, and pure, and goddess-like to draw  
High aspirations, settling into awe.

Last Pride and Luxury, wedded to decay,  
Conceal, in clouds, the ruins of her ray;  
Faint, and more faint, upon the dial falls  
That ray, long shadows creep o'er crumbling  
walls;

When that, her sunshine of renown expires,  
The sons forget the grandeur of their sires;  
Heroes are slunk to vasaals; deeds sublime  
Are scoffed; and Liberty becomes a crime;  
Scarcely known, through Slavery's gathering shadows flit,  
Like ghosts, the forms of Wisdom and of Wit;  
Taste breaks her pencil; Hope her charmed  
glass,—

Another age—and her descendants pass  
O'er altars rent, and sculptures given with grass;  
From gilded balls, the crouching tiger springs,  
And try create the Capitole of kings;  
Doubt on his moor, marbles sit, and spells  
Disputed names, and cancelled chronicles;  
And as the melancholy wind repines  
Through vacant temples, and deserted shrines,  
Sighs o'er the vigils which his fondness keeps,  
Or sickens at the solitude and weeps.

The following is also finely executed—

All is still but the wind on the wave,  
The minute-beat of the ocean's pulse!  
All is at rest but the hoarser roar  
Of rushing tides which the walls repulse,—  
That mighty voice, that hollow sound  
From all the mustering billows round,  
Heard in a mass from realm to realm,  
As if the floods which erst did whirl  
The universal earth, were yet  
Not all assuaged, nor could forget  
How, in their rushing night, went down,  
Temple on temple, tower on town,  
The lofty mountains wild and wide  
With all their snows upon them,—Pride  
In his communion with the stars,—  
Battle, with all his crests and cars,—  
All, all the omnipotent created,  
None were left of millions, none  
But Pyrrha and Deucalion,  
To watch the waves as they abated,  
And smile, amid their wilderness,  
When the first star of their new night  
Put forth from clouds, its lonely light,  
As Venus dimly does on this.

The author who could write thus, ought not to have given so much cause of complaint. We trust that when he again puts forth his light, he will not obscure its lustre with such shadows.

*Cornelii Nepotis de Vita excellentium Imperatorum, Editio nova; &c. &c. Studio Alexandri Stewart. Edinburgi, 1819.*

This is a recent Edinburgh edition of Cornelius Nepos, an author whose merits have been so feelingly made known to most of us, that it is only necessary to mention his name, in order to recall their memory. Therefore, too, it might be thought that he required no notice from a reviewer; and, in point of fact, we are not going to say a single syllable upon the excellence of his Lives, for catching the mind of the young scholar, nor the purity of his style, for the earlier purposes of classical education. What has attracted our attention and deserved our praise in this neat little publication, is the plan upon which it is constructed. Marginal notes are added to the text, admirably cal-

culated to help the Tyro to the full understanding of his task; and a Chronological Table completes this portion of useful information. There are also an Index of Proper Names, and instructive tables which explain and apply the Roman method of reckoning by calends, nones, and ides; but the great and peculiar recommendation to us is one of a typical kind, namely, the printing of the accents very accurately over the text. At the period when the boy reads Nepos, this affords a valuable assistance; and it seems to us, that in no part of his Latin education can it be so advantageously given to him. What he now learns will never be obliterated; and well-versed in this important and difficult branch in his first book, he will find the lesson of the utmost consequence when Horace, Virgil, Livy, Cicero and Tacitus, succeed Eutropius, Nepos, Cæsar, and Sallust. We have only to repeat our perfect approbation of this edition, for its ample intelligence, correctness, and form.

*The Delphin Classics, with the Variorum Notes, &c.*

March, April, May, and June, have furnished us with four more of the Parts of this classic treasure, which finish Sallust, and carry us to A. U. 815, in the admirable history of Tacitus. Into these volumes we have looked diligently; and in the double character of subscribers and reviewers, it is pleasing to us to express our entire satisfaction with them. There being now XVIII. Parts published, we consider it a proper time to say that the continuation of the design is equal to its promise; and to repeat a sentiment which we stated more near its commencement, viz. that the lovers of learning have, in this publication, the best opportunity ever offered of making a classical library at a cheap rate, in a very useful and beautiful form, and of the highest order in the scale of literature.

## ORIGINAL CORRESPONDENCE.

DEBRETT'S PEERAGE.

[Though unwilling to prolong the discussion on the errors in this useful publication, yet as we have admitted our correspondents (for we assure Mr. DebreTT there are few) to be replied to, and as their answers are not only amusing from their humor, but calculated to produce a very desirable improvement in the future editions of the work, we trust that by doing so in the present instance, we shall confer a double benefit upon our readers—give them a good laugh, and cause the correction of a book, whose popularity is evinced by the number of editions through which it has gone.]

*To the Editor of the Literary Gazette.*

SIR,—I have perused with mingled feelings of mirth and compassion, the delectable epistle of Mr. John DebreTT, Editor of the Peerage, Baronetage, and Imperial Calendar. Being a plain matter-of-fact-man, I cannot hope to compete with that droll personage, in either wit or erudition, and must resign the field to him in those respects, without

attempting to crack jokes or quote scraps of latin. Nor shall I take any notice of the personalities which that facetious chronicler has thought it necessary to have recourse to. Patient however of injuries as I am, I cannot consent to give up my personal identity. You, Mr. Editor, can assure Mr. Debrett that I, who glory in the signature of the triple P, am quite a different person from him of the bi-literal appellation of J. M. We are, I suspect, from different sides of the channel. Mr. Debrett has thus been affected in a contrary way to the votaries of Bacchus, who are said to see every object double in their cups, whereas he has blended two people into one while pouring forth his indignation.

Passing by all this buffoonery, let me call to Mr. Debrett's recollection the true state of the case. I pointed out in his account of the noble families of Howth and Clarina, errors of the most palpable and ridiculous description; and I added, that it was scandalously negligent to continue them in edition after edition, said to be carefully revised and corrected. In answer, he tells me, that it is very easy to rectify these errors (the existence of which he cannot deny), which, if true, renders his negligence in suffering them to remain unamended for so many years, still more inexcusable; and that I am a scandalously mean fellow, which, whether true or not, does not establish the correctness of his peagee.

I confess, however, such is my obtuseness, that I cannot see wherein I am so scandalous. I gave for Mr. Debrett's book, four and twenty shillings, under the impression that it was accurate. If not accurate, it is not worth as many pence: and every approach to inaccuracy, is a sensible, a calculable diminution of its value. And I re-assert, that it contains as many errors as articles; but I must also repeat, that to prove the assertion at length, would occupy all your columns. If Mr. Debrett have the honesty to return me my twenty-four shillings, which I can assure him I regret parting with for his peagee, I engage to forward him by return of post four and twenty blunders as ridiculous as any already mentioned; but as he seems to wish for a farther exposé in public, I shall, with your permission, oblige him with a dozen specimens of his correctness, which I have collected in less than half an hour.

1st. P. 54. We are told, that the late Duke of Dorset was killed at *Killarney* in Ireland. Now his grace met with the sad accident, that put an end to his life, above a hundred miles from *Killarney*, in a different province altogether. He might as well say, that a gentleman killed in Norfolk, was killed in Cornwall. I confess I do not lay much stress on such blunders as these, because they are not very material. If I did, I could glean a hundred of them by barely casting my eyes over his pages; but as we do not consult peerages for historical facts or anecdotes, I shall only notice errors in what we principally do consult them for, that is, in dates.

2d. P. 73. George Paulett of Amport,

twelfth Marquis of Winchester, married in 1812 Martha Ingoldslay, who died in 1796. In spite of this droll taste of marrying a woman sixteen years after her death, he had three children; and it is not the least wonderful circumstance, that he himself died in 1800, twelve years before his marriage. I have a dim recollection of reading in Mr. Lewis's *Tales of Wonder*, an account of a ghost-wedding; but I did not know till now that he had such authentic warrant for the circumstance. I must farther remark, that it is rather scandalous in Mr. Debrett to assert, that the noble lady of Sir Joseph Yorke was married twenty-seven years before her mother was united in the holy bonds of matrimony to her father; and that the late Marchioness of Winchester had a grandchild before she had a husband. I omit mentioning that he makes her son to be married a year after his mother. This is almost *scandalum negatum*.

3d. P. 231. Here is more scandal. Bennet, third Earl of Marlborough, married, according to this authentic register, in 1748, having had children by his lady in 1731, 1741, 1743, and 1744. What follows is almost as bad. This Earl had a daughter Frances, married to Colonel Morgan in 1776, six years after her father's death, which occurred in 1770; and yet we are told he left no surviving issue. What is the meaning of this? Does Mr. Debrett mean to insinuate that Lady Francis, though the Earl's daughter, was not his child?

4th. P. 986. Here we have scandal against a living lady. The Earl of Mexborough, he says, was married to his Countess, September 25th, 1782, and their daughter Eliza came into the world on the 20th of June preceding. Upon my word, Mr. Debrett, this is taking a shocking liberty with Lady Mexborough's character!

5th. P. 1248. Again to it! William Townsend, eldest son of Lord Ventry, marries Miss Jones in 1797; but her son by him was born in 1793. On the part of the Hon. Mrs. Mulesen, I must take upon me to contradict this calumny, and to expostulate warmly with Mr. Debrett for treating her in this manner, in his scandalous chronicle.

6th. P. 375. Catherine, wife of Edward Devereux, eleventh Viscount Hereford, dies Feb. 2d, 1741, yet has a son on the 19th of the same month, and a daughter in 1743!

7th. P. 1045. This fashion of *Lady Hereford's*, appears to have been adopted about the same time in Ireland; for we find that the mother of the first Viscount O'Neil died in 1742, and had her eldest son, the Viscount, in 1748, six years after. It appears to me, however, that he is rather unfairly counted her eldest son, as her second son is born in 1746, which, I submit, is an earlier date. But that is a bagatelle here.

8th. P. 980. We have another post-obit birth—a circumstance I suspect rather more frequent in this peagee, than in the *Lying-in-Hospital*—in the case of Catherine, wife of the second Earl of Arran, who dies in 1770, and, according to custom, has a son in 1774, and daughters in 1775 and 1776

This would have been a valuable woman in a new colony.

9th. P. 584. William Brabazon, Baron Ponsonby of Inokilly, was born in 1744, and married in 1728, only eighteen years before his birth. He had three children nevertheless, one of whom, Mr. Debrett makes Knight of the Shire for Cork in 1817, though the gentleman at that time was not in parliament at all; and I perceive that the error is repeated in the revised and corrected edition for 1820. If an edition be published in 1850, I suppose he will still figure as M. P.

10. P. 899. Robert Fitzgerald, nineteenth Earl of Kildare, marries in March 1708, Lady Mary O'Bryen, who died in the February preceding. As usual, this hopeful marriage produces eleven children!

11th. P. 966. Rev. Pierce Butler, third son of the second Earl of Carrick, dies in 1803, and as usual here, marries in 1806. His lady, I see, took a second husband. I hope her second match was more auspicious than her first. It must have been rather unpleasant to be married to a man who had been three years dead.

12th. P. 1271-2. In the former of these pages, we are told that Richard Handcock was member for Athlone in 1800, and in the latter, that William Handcock, first Lord Castlemaize, represented that town from 1783 to 1801. Now William represented it until 1801, and I believe Richard never at all. I should be obliged to Mr. Debrett, if he would tell me where he learned that the two Messrs. Handcock sat together for Athlone in 1800?

There is my dozen for you. It will be in vain for Mr. Debrett to shift these errors on his pressman. They arise from *scandalous negligence* somewhere; and it is little matter to the people who like me are out of pocket for Mr. Debrett's bundle of inaccuracies, whether it is master or man that is to blame for them. I could not help laughing at the suggestion of the worthy editor, that I ought rather to have sent my corrections to him in a private letter, when I recollected how carefully he adds in his advertisement, prefixed to his worthy work, that all correspondence to him on the subject of the *Peagee*, should be post paid. This is, I suppose, what he calls soliciting corrections; but the plain English of it is this—you have lost one pound four shillings by me, and now to enable me to make another edition more correct, you ought to throw away a few additional shillings in postage.

I believe I take leave of Mr. Debrett here. He refers me to his Baronetage: I have seen that book. Does he wish to have my opinion on it. If so, let him say the word, and I am ready for it, in public or private.

I remain, Sir,

Your humble Servant,

August 10, 1820.

P. P. P.

P. S. The pages refer to the edition of 1817; but the errors exist as well in the edition of 1820 as in the former one, *not a single inaccuracy being corrected*.

To the Editor of the Literary Gazette.

[Post-mark Glasgow] 10th Aug. 1820.  
Sir.—I am happy to learn that the letters of P. P. and myself have attracted the notice of Mr. Debrett, as I trust this will lead to the result desired by me, and doubtless by P. P. namely, greater accuracy in his future editions. I therefore willingly spare myself the irksome task of sending you a list of errors in his English Pezage, contenting myself with assuring Mr. Debrett, that the assertion of P. P. as to the number of errors contained in it is by no means exaggerated; and that, by turning over a few leaves, any one may easily satisfy himself of the truth of Mr. Debrett's assertion, that he "never aimed at perfection." I am sorry, however, to observe, that he considers it "idle to attempt perfection." As, although I agree with him that it cannot be expected, yet, I must take the liberty of telling him, that it is his duty "to aim at perfection," as the only way of ensuring tolerable accuracy.

I would here willingly take my leave of Mr. Debrett; but there are one or two points in his letter which I feel myself bound to notice, and I trust you will indulge me to the extent of a very few sentences.

In the first place, I can assure him that he is quite mistaken as to the identity of P. P. and J. M. nor has either the least idea of who the other is. Mr. Debrett flatters me by alleging a similarity of style. I can only say, that there was no intentional imitation.

Mr. Debrett charges me with "scandalous meanness." I do not complain of this, but I may be allowed to say, that the charge is unwarranted. My attack on Mr. Debrett's work was made openly, and supported by the best of all proofs—extracts from the work itself.

Mr. Debrett says, the errors I have brought to notice are "mere errors of the compositor, or dropping a letter at press." Some of them, (*not all*) appear to be of that nature, and would have been venial, had they not been copied faithfully year after year, into edition after edition. If this does not justify the term "scandalous negligence," I am at a loss to conceive what would.

I would humbly advise Mr. Debrett, when he does copy from Wood's admirable edition of Douglas's Pezage, to do so with greater accuracy. In an annual work the same correctness cannot reasonably be looked for; but the purchasers are entitled to expect at least careful copying; and, on comparing some of the passages I formerly mentioned, with the parallel ones in Wood, I find, in most cases, the errors arise from inaccuracy in transcribing.\*

Finally, when Mr. Debrett writes in a passion, he should not boast of his calmness. His letter brings to my mind the worthy knight Sir Anthony Absolute, who thought himself "cool, quite cool," but every one else in a rage. I ask pardon for

this intrusion, and beg to say, that, however provoked, I shall not offend in the same way again, having no ambition to prolong a controversy on so unimportant a subject.

I am, Mr. Editor,  
Your faithful and obedient servant,  
J. M. (Scotus.)

## LITERATURE & LEARNED SOCIETIES.

### FINLAND, AND ITS LITERATURE.

*Extract from a letter written by the celebrated Danish traveller, Mr. Rask.*

The Finns, since their union with Russia, which has in some manner raised them to the rank of an independent people, have waked from their slumber, and a new era of their literature has begun. It must be owed, that for a considerable time past, the treatment of the Finns does honor to the sovereign. If it should be alleged that policy is the motive, yet we may reasonably bless that policy, the effect of which is, the improvement of a generous nation; and this effect is evident, not only in the intellectual improvement, but in the welfare and character of the people. They are moral, sedate, laborious, frugal, serious, hospitable, and upright in the highest degree. The magnanimity of the present Russian government has especially had a great influence on the Finns, particularly in the union of what is called Old Finland, (the government of Wyborg) with New Finland, under one government, with the same (Swedish) laws, of which there is a very good translation into the native tongue. All the inhabitants of Finland, within a few miles of St. Petersburg, live in the enjoyment of the same civil liberty, and are treated in the same mild manner as under the Swedish government; nay, the Emperor Alexander has increased their liberty. This union of the whole country has the most advantageous consequences. Formerly the Gymnasium at Wyborg was subordinate to the University of Dorpat; hence the German language prevailed in the instruction of youth; the Swedish was adopted by the higher classes; the Finnish had remained the language of the people; and the Russian was introduced with the military organization; thus there were four rival languages, and all of them were spoken and written badly and without taste. Now the gymnasium and the schools of the government of Wyborg, are united with the University of Abo, and the Swedish language, which is employed by the government, again becomes general.

In Abo itself also, literature has made rapid advances. The University is extended, and has several learned and able professors; for instance, M. Gadolin. The learned G. Rennwall is composing (at the expense of the Count Romanzow, Chancellor of the Empire) a complete Finnish Dictionary, with a Latin and German translation; the half of which is already finished in MS. With the year 1819, a good and well printed journal began at Abo; it is called *Mnemosyne*; in the Swedish language, and edited

by some promising young literati, who seem not to confine themselves to any literary party in Sweden. It has already given us very interesting essays and criticisms relative to the language and literature of Finland. This is an agreeable phenomenon to those who were acquainted with the old Gazette of Abo, which was as bad as possible. The zealous cultivation of the Finnish language is favourable to the improvement of the people, to the honor of the government, and to the sciences. This language is one of the most peculiar, the most regular, the most polished and sonorous. It has the most beautiful proportion between the number and distribution of the vowels and consonants, and may be compared in this respect with the Italian; it has not the disagreeable hissing letters of the Slave and Lapland languages, and resembles in this particular the Danish; it has, like the Icelandic and French, a forced accent; it has twelve cases, but only two or three declensions, and very few irregularities: thus possessing greater advantages, and fewer imperfections and difficulties. Like the Greek and the German, it is infinitely rich in derivatives and compounds, and seems to combine in itself the chief excellencies of the other European languages.

## ARTS AND SCIENCES.

**SULPHUR FUMIGATION.**—The advantages of this species of bath in cutaneous, rheumatic, and various other chronic disorders, are gradually recommending it to popular use. Dr. Gales, a French physician, has written an essay upon it (which has been translated) and received a pension of 6000 fr. as well as exclusive privilege to practise in that way in Paris, as the reward of his discovery and labours. It is, however, of great antiquity, and Dr. G. has no claim to having originated the application, far less the invention, of this important remedy. The efficacy of the celebrated sulphur fumigating baths as on the celebrated lake of *Agnone*, near Naples, has been a matter of notoriety for ages. In those baths the sulphurous vapours rise spontaneously from the earth, probably from the bosom of some exhausted volcano. It is collected in apartments into which the patients enter, and the action of the vapour is similar to that described by Dr. Gales in the use of his artificial fumigations. But the value and application of sulphur fumigations to diseases of the skin, has been for many years, and antecedent to those of Dr. Gales, established near home. In the first edition of the very popular "Essay on Bathing," by Dr. Sir Arthur Clarke, we find it mentioned as a remedy of great practical value, and then in ordinary use; and he even mentions a case of leprosy of eight years' standing, cured by his *sulphurated vapour bath*, in 1812. We think it but justice, therefore, to state, that while those investigations were going on in Paris and on the Continent, the efficacy of the vapour arising from the combustion of sulphur as a curative means was established in Dublin.

\* e.g. The account of the family of Hugh, late Earl of Eglington; and of the issue of the late Hon. Henry Erskine, the latter under the article Earl of Buchan—*nam multis alibi*.

## NEW INVENTION.

Having mentioned in our last number the new invention of Baron Von Drais, we extract, from a foreign journal, the following article on the subject. "Baron Von Drais of Mannheim, the inventor of the velocipede, has now invented what he calls an Elevating Telescope, by means of which, looking through a tube about an inch and a half in diameter and three feet high, in the shape of a stick, you may command, not two and a half, but twenty-one and a half degrees of the horizon, in spite of intervening obstacles. These telescopes, it is affirmed, will be particularly useful:—1st. In popular assemblies, though you stand on level ground, to look over the heads of the people, even if they wear high hats or head dresses;—2dly. For a general to command a much more extensive view than by ascending a high ladder;—3dly. On board ships, to see to as great a distance over the sea, when down below, as you could from the mast head; 4thly. In houses, to be able, by means of a tube, (which may always be turned round) through the roof of the house, to have almost the same effect in the lower story, as if the eye was elevated far above the house. The inventor is induced to enter into partnerships, to obtain patents for this invention, if acceptable offers are made him !!!

## FINE ARTS.

## BRITISH INSTITUTION.

[Recollections suggested by the Exhibition of Portraits, continued.]

*Mirble Bust of Oliver Cromwell. — Marquis of Lansdowne.*

Those whose ardent curiosity tempts to deviate from the high road of common sense, into the labyrinth of speculative philosophy, to take a peep through the key-hole of the temple of mystery, would fancy themselves repaid for the rag-torn new suit, and the scratching and pricking of briars and thorns, by discovering this marvellous bust upon its altar. It cannot but be lamented, that we seek in vain to discover the name of the sculptor, whose skill could give life to a block of stone, with all those distinguishing characteristics of the extraordinary being, whose mental image is thus stamped, with more than mortal felicity. The physiognomist might here find a theme for a successful lecture on his disputed science; convert infidels to his faith, and make proselytes even of those who "have no speculation in the eye." In this countenance of Cromwell we read the written index to the mental history of a mighty man; wherein each page diversified, tells a stranger tale, yet not more strange than true. There hypocrisy and enthusiasm, cunning and zeal, bravery and meanness, firmness and suspicion, generosity and selfishness, cruelty and good nature, severity and weakness, villainy and justice;—a marvellous compound of consistent inconsistencies, forming a "wicked great man."

It was well observed by a contemporary Frenchman, who had formerly been at the

court of King Charles I. and who in common with other foreigners was astonished at the career of Oliver Cromwell, "That a man never goes so far as when he knows not whither he is going." This daring man, for all his *visions*, had not contemplated his future greatness, even after he had become the leader of a faction. So hopeless was he of a successful opposition to the crying sins of the court, that in his patriotic disgusts, he had realized the remnant of his paternal effects, and, together with Hampden, had taken his passage in a ship, to try his fortune in the new world. The evil genius of the king interposed authority, and stayed his expatriation. In fact, Cromwell, though confident to audacity, knew little of the extent of his own latent powers; for his *prophetic spirit*, like that of many a modern *pseudo prophet*, had not developed itself to his credulous followers, until after the events foretold were past. He was the chief of those who never put their superstitious heads out of window, but in the expectation of seeing the morning mists change to fiery dragons, or the evening clouds to armies drawn up in battle array; when, in short, in beasted England,

Truly, "the pleasure was as great  
In being cheated, as to cheat."

Cromwell too soon discovered the nature of the material he had to operate upon, and most sagaciously converted it to his ambitious purposes.

"More water glideth by the mill  
Than wots the Miller of"

Hampden alone appears to have had a presentiment of Cromwell's genius, though he lived not to see the consummation of his prophecy. Cromwell soon drew the attention of the House of Commons, by the pertinacity of his harangues on subjects of little apparent import. Lord Digby, on descending the stairs from the House, enquired of Hampden, "Pray, Sir, who is that man, for I see he is on our side by speaking so warmly to-day?" It should be noted, that although the three fates gossiped at Cromwell's birth, the three graces were not of the coterie. It was Cromwell's homely appearance that begot the inquiry. "That sloven," said Mr. Hampden, "whom you see before you hath no ornament in his speech; that sloven, I say, if we should ever come to a breach with the king, (which God forbid!) in such a case, I say, that sloven will be the greatest man in England." Lord Digby did not dream that he was asking the question of Cromwell's cousin.

If we are to give credit to the stories of his early life, the Lord Protector was a hopeful youth, and it might well move the calumnious gossippers of the sixteenth century to note, that in the chamber of his birth the devil stood behind the door. The apartment was hung with figured tapestry, and a portrait of the cloven-footed fiend happened to fall into the group just in that spot. Perhaps it was that dark image which possessed him when a boy—the incubus hidden under the heavy suppers of the age, which his *visions* might naturally enough magnify to a

devilish large giant devil, who drew his curtain and told him, he 'should live to be a king.'

There are some born the sport of the destinies, merely to be hunted wild,—others to ever changing adventures, who through life are objects of their special care. Oliver Cromwell, the marvel of adventure, everlastingly in danger, to the terror of his friends, always escaped.

The first chapter of his wondrous history opens with a hair-breadth 'scape. When quite a child, at his grandfather's, Sir Cromwell, at Hinchinbrook, there was a large monkey in the mansion; the baboon, as well as the buffoon were oft times found as part of the establishment of great houses, a great while ago. Jaco took an extraordinary liking to master Oliver,—the sagacious animal might, for ought we know, have had the faculty, as well as others, to read the "lines o' th' face,"—and therein mark the presage of some monkey tricks. He seized the darling, and scrambled with him up the wall upon the roof of the house. The family, all terror, hastened to surround the height with beds, to catch the unconscious babe. But their fears were needless; the monkey protected the embryo protector, and brought him back in safety.

Another escape is recorded of this adventurous wight, when a school-boy, and alone in deep water, shrieking for help. He would have been drowned, had not a clergyman, of the name of Johnson, saved him at the hazard of his own life. Many years afterwards, when the minion of fortune had become a general, and was marching through Huntington at the head of his army, he recognised his preserver in the person of an aged man. Honesty and loyalty were not the best qualifications for preferment—he was only curate of Cunnington. "Do you remember me, Sir?" said Cromwell, "I owed my life to you some years ago." "Remember you, yes," answered the curate; "but, had I supposed that you would have appeared in arms against your sovereign, I would have held you under water, rather than dragged you out."

The early history of Cromwell forms a series of mischievous pranks; and his ripper years were actively devoted to sensual and boisterous indulgences, to every immorality that constituted the probationary practice of a saint, who waited for a call.

The knights of old were educated in the school of virtue, and thought honour the only passport to fame;—but such were weak, and did not know—

"What free-born consciences may do."

The reformers of the sixteenth century had exploded these romantic modes, and, with regeneration, established a less self-denying code. This was the epoch of *new* light. Hence it was maintained, and stoutly too, that he could not become a saint militant, and bear a lance, who had not proved his qualifications as a miserable sinner.

It's not ridiculous and nonsense,  
A saint should be a slave to conscience—  
That ought to be above such fancies,  
As far as above ordinance?

Oliver was well qualified. He had been a grief to his widowed mother, a nuisance to his relations, and a scourge to his pot companions; the first to begin a brawl, and the last to turn his back, or cry, "hold, enough." No respecter of persons, whilst a boy he had given his prince a bloody nose; and, when a man, the "Boyster" he would get drunk with sturdy tinkers, and break heads with his quarter-staff. His exploits were not harmless among the gentler sex. When having proved

That "saints may do the same things by  
The spirit, in sincerity,  
Which other men are tempted to,  
And at the devil's instance do;  
And yet the actions be contrary,  
Just as the winds and wicked vary.  
For as on land there is no beast  
But in some fish at sea's express;  
So in the wicked there's no vice  
Of which the saints have not a spice.

Cromwell, when elected chief of the puritans, soon commenced the tragedy of Charles the First. The king had too much of the noble dignity of the knight, to descend to "calling of names;" yet he owed no small share of his evil fortune to the prevalence of this folly among the cavaliers.

Christian charity was not extinguished in the bosoms of the saints alone; the malicious and illiberal rage for reviling, disgraced even the dignitaries of the church, who, blinded by the fury of zeal, would not allow a solitary virtue to the roundheads. Indeed, all the Christian and the cardinal virtues were scared from the field, and vengeance blew the fire of civil war.

Archbishop Williams, a pernicious adviser of his sovereign, speaking of Cromwell to his royal master, says, "Every beast has some evil properties; but Cromwell has the properties of all evil beasts."

Dr. South thus described Cromwell, in a sermon preached at his church: the Protector then was gone to the grave. Such invectives were commonly delivered from the pulpit. "Who that have beheld," said the Doctor, "such a bankrupt, beggarly fellow as Cromwell, first entering the parliament-house, with a thread-bare torn cloak, and a greasy hat (and perhaps neither of them paid for), could have suspected, that in the space of some years, he should, by the murder of one king, and banishment of another, ascend the throne, be invested in the royal robes, and want nothing of the state of a king, but the changing of his hat into a crown?"

The Usurper is thus caricatured by a contemporary:—"But Cromwell wants neither wardrobe nor armour; his face was naturally buff, and his skin may furnish him with a rusty coat of mail: you would think he had been christened in a lime pit, tanned alive, and his countenance still remains mangy. We cry out against superstition, and yet worship a piece of wainscot; certainly it is no human visage, but the emblem of a mandrake—one scarce comely enough for the progeny of Hecuba, had she whelped

him when she was a bitch. His soul, too, is as ugly as his body, for who can expect a jewel in the head of a toad? Yet this basilisk would king it; and a brewer's horse must be a lion."

That he had good sense enough not to quarrel with Nature for the person she had ordained to him, is evident in the conversation he held with Lely, when he sat to that admired painter for his portrait—"I desire, Mr. Lely," said the Protector, "that you copy minutely those warts and excrescences which you perceive on my face; for if you do not produce a faithful resemblance, I would not give you a farthing for your work." He certainly did not bestow the honor of knighthood upon the painter for his flattery—for Lely has left us, in his fine portraits of Cromwell, sufficient proofs of the identity of his skill, not forgetting the red nose of his illustrious prototype. The pen of the wits seemed to derive fire from his blazing nose. This prominent feature was the unceasing subject for satire.

"Oliver, Oliver, take up thy crowns,  
For now thou hast made three kingdoms thy own;  
Call thee a conclave of thy own creation,  
To ride us to ruin who dare thee oppose,  
While we, thy good people, are at thy devotion,  
To fall down and worship thy terrible nose."

*Vide Verses on his expected coronation.*  
In the same spirit one writes, "This Cromwell should be a bird of prey by his bloody beak; his nose is able to try a young eagle, whether he be lawfully begotten." Another says, "Cromwell's nose is the dominical letter;" and again, "His nose looked as prodigiously upon you as a fiery comet." Notwithstanding these rilleries, and the picturesque colouring of his nose, there is so commanding a character in the visage of the Protector, that even in the diminutive portrait by Cooper, now exhibiting in the British Gallery, one perceives traits that mark him above the expression of ordinary men.

## ORIGINAL POETRY.

### A DAY-DREAM.

She must be fair whom I could love,  
But more in mind than form;  
She must be pure, whom I could love,  
And yet her heart be warm.

She must be piteous, soft, and kind,  
A sufferer with the sad;  
I could not love a maiden's mind,  
For ever idly glad.

She may be wild, she must be gay,  
In hours of youthful glee,  
When calmer thought gives welcome way  
To mirth and melody;

And she must nurse, with lofter zeal,  
That pure and deep delight,  
Which warms and softens all, who feel  
For Nature's works aright.

She may have foibles—nay, she must;  
From such what maid is free?  
Perfection, ill-combined with dust,  
Were sure no mate for me.

Yet must she nurse no bitterness,  
Nor aught imagine meanly;  
But ere through venal fond excess  
Of feelings edged too keenly.

Such foibles, like the dewy sleep  
That shuts the flowers at night,  
With renovating shade will keep  
Her bloom of feeling bright.

The form of such a maid would blend  
With every thought of mine;  
Each wish would own her for its end,  
Each hope on her recline.

To me she would be such, as spring  
To wintry field or wood;  
A glowing influence, prompt to bring  
Luxuriance of good.

IGNOTO SECONDO.

[By Correspondents.]

### FRAGMENT.

Is not this grove  
A scene of pensive loveliness—the gleam  
Of Dian's gentle ray falls on the trees,  
And piercing thro' the gloom, seems like the smile

That pity gives to cheer the brow of grief:  
The turf has caught a silvery hue of light  
Broken by shadows, where'er the branching oak  
Hears its dark shade, or where the aspen waves  
its trembling leaves. The breeze is murmuring  
by,

Fraught with sweet sighs of flowers and the song  
of sorrow, that the nightingale pours forth,  
Like the soft dirge of love.

There is oft told  
A melancholy record of this grove—  
It was time once the haunt of young affection—  
And now seems hallowed by the tender vows  
That erst were breathed here.

Sad is the tale  
That tells of blighted feelings, hopes destroyed;  
But love is like the rose, so many ills  
Assail it in the bud—the cankering blast,  
The frost of winter and the summer storm,  
All how it down; rarely the blossom comes  
To full maturity; but there is nought  
Sinks with so chill a breath as Faithlessness.—  
As she could tell whose loveliness yet lives  
in village legends. Often, at this hour  
Of lonely beauty, would she list the tale  
Of tenderness, and hearken to the vows  
Of one more dear than life unto her soul:  
He twined him round a heart which beat with all  
The deep devotee's of early love—  
Then left her, careless of the passion which  
He had awakened into wretchedness:  
The blight which withered all the blossoms love  
Had fondly cherish'd, wither'd to the heart  
Which gave them birth. Her sorrow had no  
voice,

Save in her faded beauty; for she looked  
A melancholy, broken-hearted girl.  
She was so changed, the soft carnation cloud  
Once mantling o'er her cheek like that which  
gave

Hangs o'er the sky, glowing with rosy hue  
Hath faded into paleness, broken by  
Bright burning blushes, torches of the tomb.  
There was such sadness, even in her smiles,  
And such a look of utter hopelessness  
Drearily in her soft blue eye—a form so frail,  
So delicate, scarce like a thing of earth—

'Twas sad to gaze upon a brow so fair,  
And see it traced with such a tale of woe—  
To think that one so young and beautiful  
Was wasting to the grave.

\* This we believe wants confirmation. En.

'Within yon bow,  
 'honey suckle and the snowy wreath  
 'mountain ash puts forth to welcome spring,  
 'or form was found reclined upon a bank,  
 'here nature's sweet unstar'd children bloom,  
 'or white arm lay beneath her drooping head,  
 'hile her bright tresses twin'd their sunny  
 'wreath  
 'ound the polish'd ivory; there was not  
 'tinge of colour mantling o'er her lovely face;  
 'was like to marble, where the sculptor's skill  
 'as traced each charm of beauty but the blush  
 'reality so sweet sat on her brow;  
 'soft a smile yet hover'd on her lips,  
 't first they thought 'twas sleep—and sleep it  
 'was—  
 'he cold long rest of death.

L.

On a Lady with a hooked Nose singing.

What in Florida's mouth can be,  
 Who sings like merry linnet?  
 'Tis something queer—for you may see  
 Her nose keeps peeping in it.

## BIOGRAPHY.

ALI PASHA.

Though there is a very ample biography of Ali Pasha in the Literary Gazette for 1817, (pages 295, 314, 327,) yet, at the present moment, when so much interest is excited by the war between him and the Porte, the following brief notice may be acceptable to our later subscribers. Ali Pasha of Jönina, who is now about sixty years of age, has invariably maintained a threatening attitude towards his neighbours, and has ever been dreaded by the Porte. He is by birth an *Arnaout*, and has numbers of his countrymen in his service, who are not deficient either in talent or education. From his earliest youth he evinced a strong taste for politics, and his secretaries daily translate to him the most striking articles from the English, French, Italian, and German Journals; he has likewise read the works of all the publicists of Europe.

His dominions are very extensive, comprehending ancient Epirus, Acarnania, Phocis, Thessaly, several districts of Ætolia, and Macedonia, as well as the passes of the Pindus. His army is well disciplined after the European manner, and amounts to about 30,000 men.

His treasures are variously estimated; it is impossible to state their exact amount; but it is well known, that his coffers contain vast sums of money, that he may be enabled to carry on war successfully for a long period.

Jönina, the capital of his dominions, is a regularly built city, containing about 40,000 inhabitants, among whom are a great number of Greeks. It is accounted the most ancient city in Greece, and is the centre of almost all the trade of the Levant. Its principal mercantile houses trade with every part of Europe, and have agents at Vienna, Venice, Constantinople, &c.

It has been remarked, that Ali Pasha greatly resembles the ancient chiefs of the

\* See Literary Gazette, No 185.

Huns, Bulgarians, and Vandals. Like them, he is at once ferocious and magnanimous. He conceives great projects, and sometimes loses all self-control, even in the most trivial circumstances: he is ambitious, yet he has no fixed and invariable object in his ambition; his subjects obey him, though he has not the art of winning their affections; he does not reign by proclamations and promises, but by the sabre and the bow-string.

## SKETCHES OF SOCIETY.

ANECDOTE TOWARDS THE HISTORY OF THE SPANISH INQUISITION.

When General Lasalle entered Toledo, he immediately visited the Palace of the Inquisition. The great number of the instruments of torture, especially the instrument to stretch the limbs, the drop baths (already known) which cause a lingering death, excited horror even in the minds of the soldiers hardened in the field of battle. Only one of these instruments, singular in its kind, for refined torture, disgraceful to reason and religion in the choice of its object, seems to deserve a particular description. In a subterranean vault adjoining the Secret Audience Chamber, stood, in a recess in the wall, a wooden statue made by the hands of Monks, representing—who would believe it?—the Virgin Mary. A gilded Glory beamed round her head, and she held a standard in her right hand. It immediately struck the spectator, notwithstanding the ample folds of the silk garment which fell from the shoulders on both sides, that she wore a breast plate. Upon a closer examination it appeared that the whole front of the body was covered with extremely sharp nails, and small blades of knives with the points projecting outwards. The arms and hands had joints, and their motions were directed by machinery placed behind the partition. One of the servants of the Inquisition, who was present, was ordered by the General to make the machine *manœuvrer*, as he expressed himself. As the statue extended its arms and gradually drew them back, as if she would affectionately press somebody to her heart, the well-filled knapsack of a Polish grenadier supplied for this time the place of the poor victim. The statue pressed it closer and closer, and when at the command of the General, the director of the machinery made it open its arms and return to its first position, the knapsack was pierced two or three inches deep, and remained hanging upon the nails and knife-blades. It is remarkable, that the barbarians had the wickedness to call this instrument of torture *Madre Dolorosa*,—not the deeply afflicted, pain-enduring; but, by a play on words, the pain-giving—Mother of God.

## THE DRAMA.

ENGLISH OPERA HOUSE.—*Patent Seasons*, a drama of mixed reproach and satire upon the management of Drury Lane, for the unseasonable opening of that theatre, under the plea of giving Mr. Keen an opportunity of exhibiting his characters previous to em-

barking for America, has been successfully got up at this summer house. It possesses fully as much point and humour as could be expected from a production so hastily elicited; and indeed, its merits are such as to prove, that when men write in earnest with their subject, they always write best! After a tolerably fair address (spoken by Miss Kelly, as Thalia), which ridicules the large dramatic temples, Harley appears, as Manager Drill, from the Manager's last Kick, and, with humorous pathos, laments the "downfall of his house," in consequence of the *winter* of the theatres lasting, not only all summer, but all the year. Various performers come in, and he describes to them their forlorn situation; and pun and parody amuse the audience. Miss Carew, as Polly from the Beggar's Opera, introduces very naturally a dinge upon the beggar Opera House. Wilkinson, a dry comedian, as the blue coat boy, Geoffrey Matfinap, relates his misfortune as a country player of light comedy, (i. e. carrying the torches, and illumining the candles) which led him to his present climax of misfortune in the Strand, where the treasury cannot pay him his shilling a week: and he steals off to pilfer the O. P. leg of the fowl which Miss Carew left from No Song No Supper last night. And a chorus of thieves chaunt a parody with the manager, beginning,

Har! I hear no sound of coaches;  
 The devil of a one approaches.

Exhausted by these exertions, Drill falls asleep, and a vision opens to him of Sir Joshua's fine picture of Garrick between the Tragic and Comic Muse. The figures are real, viz. Wrench as Garrick, Melpomene, Miss Love, and Thalia, Miss Kelly, who leaves her *canon* to make her *election* of this theatre. Garrick also descends from his frame, awakes the manager, and a very clever and biting dialogue ensues. Garrick, to whose portrait Wrench owes infinite credit, advises Drill how to act, and in this way lashes the manager of Drury most mercilessly. Drill, looking at Wrench as Garrick, observes that he is taller than the original, and clearly alluding to Keen, says, "he thought your tragic heroes were *short chaps*;" to which Garrick answers, "that they like to *run as long as they can*. He then imitates Mr. Elliston's addresses to the audience, to procure occasion to deliver which is ascribed to a check-taker sent to the gallery with instructions to be noisy; he tells Drill to print his bills with one great actor's name in great letters, and the rest like Hamlet's picture, "in little," to show the public how little there is worth seeing; he counsels managerial puff in the same bills denouncing puffing; and if deep, (Drill, by parenthesis, asks, "in little," to accuse the minor theatres of cunning; if poor, to twist them with poverty; and above all, to invite the tradesmen to send in their bills before they are due, in order that they may be examined and (paid says Drill?) put by. After a good deal of this, cleverly done, the serious mixed with jokes, there is a grand procession in which the leading actors of

this place of amusement appear in the costume of particular parts, carrying explanatory banners. They sing a round, and the curtain drops. We were entertained with the performances, and think the idea ably developed, and much in the manner of our livelier neighbours on the other side of the sea.

*Whang Fong*.—A farce, resembling in its construction the Agreeable Surprise, but, unluckily, without its Lingo, was produced on the same night with the preceding; but, though not destitute of some recommendatory qualities, it does not seem destined for longevity. We might select a few jests, as the salt of this piece; but the mass of the performance was so indifferent, that even if the author were better than he is, his success must have been rendered very problematical. Harley, certainly a prop to any theatre like this, and Wilkinson, a good, though limited *Drole*, exhibited the characters of an intriguing valet and male gossip to advantage; and a debutante, Mrs. Pindar, sustained the part of an abigail, in a way to establish herself fairly in that line. But the rest was "leather and prunella."

While we, by repeating to a certain degree, countenance the costigation of Drury Lane by the Lyceum for its unworthy quackery and absurdity, we ought in candour to notice, that the *little theatre* is not a whit behind-hand with the *big*, in the offences it reprehends. The bills of the English Opera House are as replete with false assertion and puff, as the bills of Drury Lane; and (no longer) to our surprise, we have repeatedly seen in both (and in short, in the bills of all the theatres, great and small) more wonderful transformations than ever Harlequin's wand accomplished—empty benches, into crowded houses—hisses, into rapturous shouts of applause—contempt, into enthusiastic admiration—and the most stoical apathy, into electrical approbation. Indeed, as far as the public is concerned, the dispute is between the *pot* and the *lettle*.

**HAYMARKET THEATRE.**—On Tuesday, Mr. Terry appeared as Falstaff, in the First part of Henry the Fourth. This performance had been promised for a considerable time, and much expectation had been raised upon it. The actor's habits were familiar to the public; and while he was known as among the most judicious of the Stage, it was not altogether conceived that he had the qualities suited for the round humour of Sir John. Notwithstanding prediction, he succeeded. We are not much in the habit of panegyric, as we are by no means sure that much of it is deserved in this world of moderate men and things. But Mr. Terry unquestionably gave us the strongest impression of Falstaff that we have hitherto received. We have not now space to detail the passages in which he exhibited his superiority. But his soliloquy on honour, his description of his ragged troop, and his acting in the scene with Percy's body, excited great applause. He has certainly added a character to the modern stage.

#### VARIETIES.

The Kaleidoscope applied to a moral pur-

pose.—Admiral Sir Sidney Smith, who has made so many efforts to release the Christian slaves in Africa, and to free Europe from the disgraceful yoke which the Barbary States impose on most of the maritime states, has made use of an ingenious modification of the kaleidoscope, for the attainment of his humane purpose. He has had kaleidoscopes made, where, among the infinitely various figures which the instrument produces, moral sentences of the Koran in Arabic characters are constantly presented to the eye; one of them is that which forbids the slave trade; others express thoughts such as the following: "No power but from God;" "All men are brethren," &c. &c. Sir Sidney, who has very extensive connections in the Levant, has sent kaleidoscopes of this kind to some Pashas, and also to several European Consuls, to circulate them by means of caravans, and thus to present in an agreeable manner to the attention of many ignorant people, these short and clear sentences, which are supported by the authority of their sacred books, and contain the first elements of civilization.

*An Irish tribute to General Falcany.*—The general was regarded by some of the *Milicians* of Ireland with enthusiastic affection, for his exertions in the cause of the ancient literature and history of that country. Many odd proofs were given of this feeling. Among the rest, the veteran used to tell with the utmost good humour, that a Kerry gentleman waited on him in Killarney with a knife of antique fashion, which he presented him with these words: "General, this knife has been in my family one hundred and fifty years, during which time it had only three blades and two handles; and though it is a family relic, it is perfectly at your service, for the zale you have shown in the cause of ould Ireland. I got the last blade in yesterday, and the last handle a month ago, that I might give you this rare antiquity as perfect as possible."

*Baron Smyth's Riddle.*—Some men of the greatest talents have taken delight in composing or endeavouring to unravel riddles. Dean Swift is a case in point. Sir William Smyth, the learned Irish Baron of the Exchequer, at one time spent two days and nights in considering the answer to this conundrum: Why is an egg underdone, like an egg overdone? He would not suffer any one to give him the answer, which he at last discovered. It is a tolerable pun enough. Because they are both *hardly* done.

*Irish Banks.*—There has been and havoc among the southern banks of Ireland within these few months, and of course their failures have furnished very constant topics of conversation, with respect to their presumed solvency. A dispute arose about the comparative merits of the banks of Cork and Clonmell, in one of these conversations. "I own, (said one of the company) I prefer Clonmell to Cork. In the former, the banks are always on the *Sure* side, and in the latter, as constantly on the *Lee* side." The *Sure* and *Lee* are the rivers on which these towns stand.

Whilst Madame Catalani remained at St.

Petersburgh, she gave several concerts, each of which produced receipts amounting to twenty thousand roubles. The latest accounts mention, that she had set out on a visit to the castles of Zarskoye and Pavloski, where she was to sing before the Emperor Alexander and his court. She will return to St. Petersburg to give her last concert, previous to her departure for Sweden and Denmark.

It has lately been the fashion in Paris, for gentlemen, as well as ladies, to sport fans in the theatres and all public places. A French poet says:

"L'entrain d'une belle est le sceptre du monde."

Perhaps the gentlemen have adopted the fan in the hope of ruling also.

#### METEOROLOGICAL JOURNAL.

AUGUST, 1820.

- Thursday*, 17.—Thermometer from 55 to 72.  
Barometer from 29.96 to 29.93.  
Wind S.W. 2, and W. b. S. 1.—Morning generally cloudy; afternoon and evening generally clear.
- Friday*, 18.—Thermometer from 48 to 71.  
Barometer from 30.01 to 29.96.  
Wind N. b. W. 1, and S. W. 1.—Cloudy till noon; the rest of the day generally clear.
- Saturday*, 19.—Thermometer from 45 to 63.  
Barometer from 29.89 to 29.96.  
Wind N. b. E. 3, and S.W. 2, and 1.—Clouds generally passing; sunshine at times. Heavy thunder, with rain, about 1 P.M. which continued for about an hour.
- Sunday*, 20.—Thermometer from 39 to 62.  
Barometer from 30.00 to 30.04.  
Wind N. 1, and E. S. E. 1.—Generally clear; clouds passing.  
Rain fallen .03 of an inch.
- Monday*, 21.—Thermometer from 41 to 61.  
Barometer from 30.00 to 29.96.  
Wind E. b. N. 1, and N. E. 2.—Generally raining.
- Tuesday*, 22.—Thermometer from 49 to 68.  
Barometer from 29.96 to 30.03.  
Wind N. E. 3 and 4.—Generally cloudy; in the evening it became clear.  
Rain fallen .2 of an inch.
- Wednesday*, 23.—Thermometer from 49 to 60.  
Barometer from 30.11 to 30.24.  
Wind N. E. 2, and 1.—Generally cloudy; sunshine at times in the morning.
- On Sunday 27th, at 24 minutes, 51 seconds after 10, the 3d Satellite of Jupiter will immerse into the shadow of his body, and emerge at 40 minutes, 18 seconds after 1 in the morning; and on the 4th of September, the 2nd Satellite will immerse at 21 minutes, 1 second after 8.

Edmonton, Middlesex. JOHN ADAMS.

#### TO CORRESPONDENTS.

We are requested by R. W. F. to solicit from our Correspondent signing "a Thief-Taker," (see our last Number) a correct reference to the volume on which his charge of plagiarism is founded. It is for a special reason, and R. W. F. has given us his address.

Elen Jackson's verses would open the door to an error. None of the same kind: we must therefore content ourselves with handing them to his publisher, for the gratification of the happy bard to whom they are addressed.

We purpose inserting another paper on the important subject of Insanity and the Treatment of the Insane, in our next Number.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

**Glass of the British Gallery, Pall Mall.**  
**THE GALLERY**, with an Exhibition of  
 PORTRAITS of distinguished Persons in the  
 History and Literature of the United Kingdom, is open  
 daily, from 10 in the Morning until 6 in the Evening;  
 and will be closed on Saturday next, the 26<sup>th</sup> of Sept.  
 (By order of) JOHN YOUNG, Keeper.  
 Admission 1s.—Catalogue 1s.—Historical ditto 2s.

**Tomkins's Picture Lottery.**  
**MR. TOMKINS** begs to announce his in-  
 tention to draw this Lottery as early as possible  
 in the Spring. By the Act of Parliament just passed  
 the time cannot be extended beyond July 1821; and in  
 order to remove all impediments respecting the drawing,  
 Parliament have provided for a Drawing, under the di-  
 rection of Commissioners, separately from the State  
 Lottery, should the Numbers not correspond. The  
 Public may therefore be assured, that no disappoint-  
 ment can take place, as neither care nor expense has  
 been spared to render the Prizes engaged to be given in  
 the Lottery of real value and excellence. Tickets,  
 price 2s. 6s. each, are on sale at the Exhibition of the  
 Specimens of Prizes, Nos. 53 and 54, New Bond Street;  
 and at all Lottery Offices, where Prospectuses may be  
 had. This Lottery consists of 10,500 Tickets—valued at  
 152,234 13s. The Purchasers of Two Tickets, one Red  
 and one Black, are sure to gain a prize, which may be  
 value 7,000, 5,700, 3,000, &c. &c. &c.

#### Fine Arts.

On the 1<sup>st</sup> of September will be published,  
**VIEWS IN GREECE**, from Drawings by E.  
 Dodwell, Esq. F. S. A. Part V. imperial folio.  
 H. PARIS, and J. E. Tassie; from a drawing by  
 Captain Tassie. No. 5, Imperial folio.  
 III. SWISS SCENERY, from drawings by Major  
 Cockburn. No. XI. imperial folio.  
 IV. VIEWS OF THE LAKE OF CUMBERLAND and  
 WESTMORELAND, drawn and designed by W. West-  
 all, R. A. No. III. complete Kingdom Lake.  
 V. VIEWS ON MOUNT CENES, engraved on stone,  
 from drawings by Major Cockburn, imperial folio, No. III.  
 Printed for Rodwell and Martin, Broad Street.

#### Dr. Rees's Cyclopaedia Complete.

**THE PROPRIETORS** beg to inform the Public that  
 the complete Sets of the valuable Work, which has  
 been completed in 43 volumes, including the Plates, may  
 now had of all the Booksellers. Of all the Encyclopaedias  
 to which the original and celebrated Dictionary of  
 Chambers has given birth, the Cyclopaedia of Dr. Rees  
 is the most comprehensive. The long life of the learn-  
 ed and indefatigable Editor has been unremittingly de-  
 voted to its improvement, aided by his numerous and  
 able Coadjutors. The elegant and accurate engravings  
 of Lowry, Milton, and Scott, which illustrate this  
 Publication, are in themselves of superior utility and value,  
 and render the Work unique in this popular Class of  
 Publications. In order, indeed, to insure every perfec-  
 tion in their power, and to fulfil their original promises,  
 the Proprietors have expended nearly Three Hundred  
 Thousand Pounds on the Work. The Subscribers to this  
 Work are requested to complete their Sets immediately,  
 as some of the Parts are scarce, and will shortly be  
 entirely out of print, when the Proprietors cannot engage  
 to complete them.

#### To Printers, Booksellers, Stationers, &c. &c.

**A MOST** desirable opportunity offers itself, on  
 moderate terms, to any wishing to be advantage-  
 ously placed in the above branches, in one of the  
 best situations in the kingdom: attached to the concerns  
 which have been established upwards of 40 years, is a  
 very extensive Circulating Library. The Stock may be  
 considerably reduced, at the option of the purchaser;  
 for particulars apply personally, or by letter, post paid,  
 to Mr. John Rackham, Angel Hill, Bury St. Edmund's,  
 or Proprietor (who is retiring from business).

This day is published, by John Rackham,  
 A CATALOGUE of a large Collection of PAM-  
 PHLETS, Ancient and Modern; consisting of above  
 five Thousand Five Hundred, in Divinity, Sermons,  
 History, Politics, Poetry, Plays, Arts and Sciences, Mis-

cellaneous, &c. which are now selling, at the prices af-  
 fixed to each article. Catalogues, price one shilling,  
 (showing the amount of 10s.) may be had  
 at the place of sale; or through the medium of any  
 bookseller, at No. 30, Strand, London.

#### BOOKS PUBLISHED THIS DAY.

*Mr. Dallas's New Novel.*  
 In 4 vols. 12mo. 11s. 6s. boards.  
**SIR FRANCIS DARRELL; or, the Vortex.**  
 A Novel. By R. C. DALLAS, Esq. author of  
 Percival, Aubrey, Morland, &c. Printed for Long-  
 man, Hurst, Rees, Orme, and Brown, London. Of  
 whom may be had, Mr. Dallas's other Novels and Mi-  
 cellaneous Works, in 7 vols. 12mo.

In 4 vols. 12mo. 11s. 6s. bds.  
**TALES OF THE HEART.** By Mrs. OPIE.  
 Printed for Longman, Hurst, Rees, Orme, and  
 Brown, London. Of whom may be had, by the same  
 Author.

1. NEW TALES, 4 vols. 12mo. 11s. 6s. boards.
2. FATHER AND DAUGHTER, 12mo. 4s. 6s. boards.
3. TALES OF REAL LIFE, in 3 vols. 18s. boards.
4. SIMPLE TALES, 4 vols. 12mo. 11s. 6s. boards.
5. TEMPER; or, Domestic Scenes, 3 vols. 11s. 6s.
6. VALENTINE'S EVE, 2 vols. 12mo. 11s. 6s.
7. PUSIN, Foolery, 8s. 6s. boards.

The 3d edition, enlarged, in 1 vol. 12mo. price 7s. 6d.  
 in 10s. 6d. boards.

**CONVERSATIONS ON BOTANY**, with  
 twenty-one Engravings. The object of this Work  
 is to enable young persons to acquire a knowledge of  
 the vegetable productions of their native country; for  
 this purpose the arrangement of Linnaeus is briefly ex-  
 plained, and a native plant of each class (with a few ex-  
 ceptions) is examined, and illustrated by an engraving;  
 as a short course is added of some of the principal  
 foreign Species. Printed for Longman, Hurst, Rees,  
 Orme, and Brown, London.

*Books of Travels, lately published by Longman,  
 Hurst, Rees, Orme, and Brown, London.*

**TRAVELS** in various COUNTRIES of the  
 EAST; being a Continuation of Memoirs relating  
 to European and Asiatic Turkey, &c. Edited by RO-  
 BERT WALPOLE, M. A. This volume contains the  
 last Travels of the late W. G. Brown, Esq.; — also  
 a Journey through the Desert to Mount Sinai; another  
 to Susa, in Persia; and various Communications relat-  
 ing to Persia of the late M. J. de Sade, and the late  
 Continent of Greece. In 4to, with plates, 5s. 6s. boards.

2. **MEMOIRS ON EUROPEAN AND ASIA-  
 TIC TURKEY**, from the Manuscript Journals of mo-  
 derate Travellers in those Countries. Edited by ROBERT  
 WALPOLE, A.M. 2d Edit. 4to, illustrated with Plates.  
 3s. 3s. 6d.

3. **HISTORICAL ACCOUNT OF DISCO-  
 VERIES AND TRAVELS IN ASIA**, from the earliest  
 Ages to the present Times. By HUGH MURRAY,  
 F.R.S.E. In three large volumes octavo, with three  
 sheet Maps, engraved by Hall, price 21s. 2s.

4. **THREE MONTHS passed in the MOUN-  
 TAINS EAST OF ROME**, during the Year 1819. By  
 MARIA GRAHAM, author of a Journal of a Residence  
 in India. In 8vo, with six Plates, 10s. 6s. bds.

5. **AN ACCOUNT OF TIMBUCTOO and  
 MOUSA, Territories in the Interior of Africa.** By EL-  
 HAGE and SALIM SHABEEN, a Native of Mar-  
 rocco, who personally visited and resided as a Merchant  
 in those interesting Countries. With NOTES, Critical  
 and Explanatory. To which are added, Letters, de-  
 scriptive of various JOURNEYS through West and  
 South Barbary, and across the Mountains of Atlas. By  
 JAMES GREY JACKSON, Esq. In 8vo, with two  
 Maps, price 10s.

6. **A SECOND JOURNEY through PERSIA

SATURDAY, SEPTEMBER 2, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

THE ABBOT.

[London and Edinburgh: 12mo. 3 vols. 1820.]

With this new novel, by the author of *Waverley*, the Edinburgh mail enables us to make our readers acquainted; while the packet-load of brethren-copies is tidling between Leith and London, for general circulation within a few days.

Assuming that Sir Walter Scott is responsible for all the effects of these remarkable productions, it seems to us that he has come under a heavy responsibility, which however, as far as we know, has not yet been pressed upon his conscience. We do not accuse him of having thrown a heavy shade over the works of Richardson, Fielding, and Smollett—the two latter, at least, will again reassert their rights, though for a while obscured by novelty and predominating talent, and ever present a distinguished niche in the temple of genius: but what shall we say of Sir Walter! his destruction, and almost total extirpation of a whole class of persons—the class of modern and (till he appeared) of *liege* novelists? Justice demands of him that he endow an hospital for those whom he has reduced to distress and beggary; and we trust, that speedy accounts from Scotland may announce to us that the foundation stone has been laid of this charity, somewhere near, or perhaps upon the ruins of Kennaquair. Sure we are, that Sir Walter's humanity would prompt him to this beneficent design, were a tythe known to him of the wretchedness of *which* he has been the occasion, and of which *we* are the constant witnesses. Not to mention the baffled hopes of boarding-school girls of becoming authoresses, and revelling in all the luxuries of woe and loves of their own invention; not to mention the mortal sickness of Minerva at her especial press; not to mention the fastidiousness with which publishers now eye the budding flowers of young genius, nor the clipping of every Icarus's wing, without allowing the chance of a flight; not to mention the millions of sheets, which he has caused a wet blanket to be thrown over—the literary pangs, the disappointments, which his encroaching of the public mind has caused,—there are at this moment, to our certain knowledge, forty-seven most respectable and ingenious Hack-writers reduced to absolute want by his merciless and overwhelming ambition. These, he is in reason bound to provide for; and as they were each equal to the furnishing of two novels or romances per annum, at the respective prices of 10*s*. and 15*s*. he will see (10 and 15 are 25: 25 times 47—1175) that even to begin with, the hospital ought to have a revenue of 1175*l*. a year. But we dare say our readers would rather have something of the Abbot, than our suggestions: they shall be gratified; but we hope, that the philanthropy of our motives, and the necessity of doing something promptly for a very oppressed order of our fellow creatures, would excuse in the breast of feeling, a much longer digression than that in which we have indulged.

A very short introductory epistle to Capt. Clutterbuck, alludes to the little encouragement which public taste now gives to those legendary superstitions, which formed alternately the delight and the terror of our predecessors. This being acknowledged, we proceed to the tale, without fear of meeting any of the inconsistencies which (in our judgment) detracted from the merits of the *White Maid of Avenel*; and are the more pleased as on opening the page we discover that some of the personages of the *Monastery* renew their existence here.

The work commences with a description of the married state of Sir Halbert Gleninning and the Lady of Avenel, at the end of ten years from the period of their union. They have no children, and during the frequent absences of the knight from his Lake Castle, in consequence of his intimate connection with the regent Murray, and active interference with the politics of these troubled times, his wife leads but a dull life among her domestics, and with Warden the reformed preacher. An accident relieves the monotony. Roland Graeme, a boy about ten years of age, is rescued from drowning, and dragged to the castle by a noble dog called Wolf. Having obtained the consent of his grandmother, and only relative, the lady adopts Roland for her page, and he becomes a spoiled favourite, with all the faults which indulgence creates, but still of a superior nature. His grandmother, Magdalen Graeme, is a powerfully drawn character—Meg Merrilies of a higher order. She is a devoted Catholic, and Roland in secret cherishes the faith of that church amid his Huguenot associates, Edward Gleninning (now Father Ambrose, and in the course of the 1st volume, last Abbot of Kennaquair) strengthening his young mind in that persuasion. The Graemes perform too important a part in the tale to be only thus generally introduced; and we therefore select a few passages, to unfold them more distinctly. Lady Avenel is walking on the battlements, and reflecting in a melancholy mood on the extinction of her name and race:—

"She sighed as these reflections arose, and looking towards the shore of the lake, her eye was attracted by a group of children of various ages, assembled to see a little ship constructed by some village artist, per-

form its first voyage on the water. It was launched amid the shouts of tiny voices and the clapping of little hands, and shot bravely forth on its voyage with a favouring wind, which promised to carry it to the other side of the lake. Some of the bigger boys ran round to receive and secure it on the farther shore, trying their speed against each other as they sprang like young fawns along the shingly verge of the lake. The rest, for whom such a journey seemed too arduous, remained watching the motions of the fairy vessel from the spot where it had been launched. The sight of their sports pressed on the mind of the childless Lady of Avenel.

"Why are none of these prattlers mine!" she continued, pursuing the tenor of her melancholy reflections. "Their parents can scarce find them in the coarsest food—and I, who could nurse them in plenty, I am doomed never to hear a child call me mother!"

"The thought sunk on her heart with a bitterness which resembled envy, so deeply is the desire of offspring implanted in the female breast. She pressed her hands together as if she was wringing them in the extremity of her desolate feeling, as one whom heaven had written childless. A large stag-hound of the grey-hound species, approached at this moment, and, attracted perhaps by the gesture, licked her hands and pressed his large head against them. He obtained the desired caress in return, but still the sad impression remained.

"Wolf," she said, as if the animal could have understood her complaints, "thou art a noble and beautiful animal; but alas! the love and affection that I long to bestow, is of a quality higher than can fall to thy share, though I love thee much."

"And as if she were apologizing to Wolf for withholding from him any part of her regard, she caressed his proud head and crest, while, looking in her eyes, he seemed to ask her what she wanted, or what he could do to show his attachment. At this moment a shriek of distress was heard on the shore, from the playful gronpe which had been lately so jovial. The Lady looked, and saw the cause with great agony.

"The little ship, the object of the children's delighted attention, had struck among some tufts of the plant which bears the water-lily, that marked a little shoal in the lake about an arrow-flight from the shore. A hardy little boy, who had taken the lead in the race round the margin of the lake, did not hesitate a moment to strip off his *wylie-coat*, plunge into the water, and swim towards the object of their common solicitude. The first movement of the Lady was to call for help; but she observed that the boy swam strongly and fearlessly, and as she saw that one or two villagers, who

were distant spectators of the incident, seemed to give themselves no uneasiness on his account, she supposed that he was accustomed to the exercise, and that there was no danger. But whether, in swimming, the boy had struck his breast against a sunken rock, or whether he was suddenly taken with the cramp, or whether he had over-calculated his own strength, it so happened, that when he had disembarassed the little plaything from the flag in which it was entangled, and sent it forward on its course, he had scarce swum a few yards in his way to the shore, than he raised himself suddenly from the water and screamed aloud, clapping his hands at the same time with an expression of fear and pain.

"The Lady of Avenel instantly taking the alarm, called hastily to the attendants to get the boat ready. But this was an affair of some time. The only boat permitted to be used on the lake was moored within the second cut which intersected the canal, and it was several minutes ere it could be unmoored and got under way. Meantime, the Lady of Avenel, with agonizing anxiety, saw that the efforts which the poor boy made to keep himself afloat, were now exchanged for a faint struggling, which would soon have been over, but for aid equally prompt and unhelpful for Wolf, who, like some of that large species of greyhound, was a practised water-dog, had marked the object of her anxiety, and, quitting his mistress's side, had sought the nearest point from which he could with safety plunge into the lake. With the wonderful instinct which these noble animals have so often displayed in the like circumstances, he swam straight to the spot where his assistance was so much wanted, and seizing the child's under-dress in his mouth, he not only kept him afloat, but towed him towards the causeway. The boat having put off with a couple of men, met the dog half-way, and relieved him of his burthen. They landed on the causeway, close by the entrance to the castle, with their yet lifeless burthen, and were met at the entrance of the gate by the Lady of Avenel, attended by one or two of her maids, eagerly waiting to administer assistance to the sufferer.

"He was borne into the castle, deposited upon a bed, and every mode of recovery resorted to, which the knowledge of the times, and the skill of Henry Warden, who professed some medical knowledge, could dictate. For some time it was all in vain, and the Lady watched with unspeakable earnestness the pallid countenance of the beautiful child. He seemed about ten years old. His dress was of the meanest sort, but his long curled hair, and the noble cast of his features, partook not of that poverty of appearance. The proudest noble in Scotland might have been yet prouder could he have called that child his heir. While, with breathless anxiety, the Lady of Avenel gazed on his well-formed and expressive features, a slight shade of colour returned gradually to his cheek; suspended animation became restored by degrees, the child sighed deeply, opened his eyes, which to the hu-

man countenance produces the effect of light upon the natural landscape, stretched his arms towards the Lady, and muttered the word 'Mother,' that epithet, of all others, which is dearest to the female ear.

"'God, ma'am,' said the preacher, 'has restored the child to your wishes; it must be yours so to bring him up, that he may not one day wish that he had perished in his innocence.'

"'It shall be my charge,' said the Lady; and again throwing her arms around the boy, she overwhelmed him with kisses and caresses, so much was she agitated by the terror arising from the danger in which he had been just placed, and by joy at his unexpected deliverance.

"'But you are not my mother,' said the boy, collecting his recollection, and endeavouring, though faintly, to escape from the caresses of the Lady of Avenel; 'you are not my mother—alas! I have no mother—only I have dreamt that I had one.'

"'I will read the dream for you, my love,' answered the Lady of Avenel; 'and I will be myself your mother. Surely God has heard my wishes, and, in his own marvellous manner, hath sent me an object on which my affections may expand themselves.' She looked towards Warden as she spoke. The preacher hesitated what he should reply to a burst of passionate feeling, which perhaps, seemed to him more enthusiastic than the occasion demanded. In the meanwhile, the large stag-hound, Wolf, dropping wet as he was, had followed his mistress into the apartment, and had sat by the bed-side a patient and quiet spectator of all the means used for the resuscitation of the being whom he had preserved, now became impatient of remaining any longer unnoticed, and began to whine and fawn upon the Lady with his great rough paws.

"'Yes,' she said, 'good Wolf, and you shall be remembered also for your day's work; and I will think the more of you for having preserved the life of a creature so beautiful.'

Warden condemned this so sudden, and violent affection: but when—

"He left the apartment, the Lady of Avenel gave way to the feelings of tenderness which the sight of the boy, his sudden danger, and his recent escape, had inspired; and no longer awed by the sternness, as she deemed it, of the preacher, heaped with caresses the lovely and interesting child. He was now, in some measure, recovered from the consequences of his accident, and received passively, though not without wonder, the tokens of kindness with which he was thus loaded. The face of the lady was strange to him, and her dress different and far more sumptuous than any he remembered. But the boy was naturally of an undaunted temper; and indeed children are generally acute physiognomists, and not only pleased by that which is beautiful in itself, but peculiarly acute in distinguishing and replying to the attentions of those who really love them. If they see a person in company, though a perfect stranger, who is by nature fond of children, the little lumps seem to dis-

cover it by a sort of free-masonry, while the awkward attempts of those who make advances to them for the purpose of recommending themselves to the parents, usually fail in attracting their reciprocal attention. The little boy, therefore, appeared in some degree sensible of the lady's caresses, and it was with difficulty she withdrew herself from his pillow, to afford him leisure for necessary repose.

"'To whom belongs our little rescued varlet?' was the first question which the Lady of Avenel put to her hand-maiden Lillias, when they had retired to the hall."

"'To an old woman in the hamlet,' said Lillias, who is even now come so far as the porter's lodge to enquire concerning his safety. Is it your pleasure that she be admitted? Is it my pleasure?' said the Lady of Avenel, 'echoing the question with a strong accent of displeasure and surprise; 'can you make any doubt of it? What woman but must pity the agony of the mother, whose heart is throbbing for the safety of a child so lovely!' 'Nay, but ma'am,' said Lillias, 'this woman is too old to be the mother of the child; I rather think she must be his grandmother, or some more distant relation.'

"'Be she who she will, Lillias,' replied the Lady, 'she must have a sore heart while the safety of a creature so lovely is uncertain. Go instantly and bring her hither. Besides, I would willingly learn something concerning his birth.'

"Lillias left the hall, and presently afterwards returned, ushering in a tall female very poorly dressed, yet with more pretension to decency and cleanliness than was usually combined with such coarse garments."

She is asked her name: "Magdalen Græme is my name," said the woman; 'I come of the Græmes of Heathergill, in Nicolfest, a people of ancient blood.'

"And what make you," continued the lady, 'so far distant from your home?'

"'I have no home,' said Magdalen Græme, 'it was burnt by your Border-riders—my husband and my son were slain—there is not a drop's blood left in the veins of any one which is of kin to mine.'

"That is no uncommon fate in these wild times, and in this unsettled land," said the lady; the English hands have been as deeply died in our blood as ever those of Scotsmen have been in yours.'

"You have right to say it, lady," answered Magdalen Græme; 'for men tell of a time when this Castle was not strong enough to save your father's life, or to afford your mother and her infant a place of refuge. And why ask ye me, then, wherefore I dwell not in mine own home, and with my own people?' 'It was indeed an idle question, where misery so often makes wanderers; but wherefore take refuge in a hostile country? My neighbours were Popish and mass-mongers,' said the old woman; 'it has pleased Heaven to give me a clearer sight of the gospel, and I have tarried here to enjoy the ministry of that worthy man Henry Warden, who, to the praise and comfort of many, teacheth the Evangel in truth and in sincerity.' 'Are you poor?' again demand-

ed the Lady of Avenel. 'You hear me ask alms of no one,' answered the Englishwoman.

'Here there was a pause. The manner of the woman was, if not disrespectful, at least much less than gracious; and she appeared to give no encouragement to farther communication. The Lady of Avenel renewed the conversation on a different topic.

'You have heard of the danger in which your boy has been placed?' 'I have, lady, and how by an especial providence he was rescued from death. May Heaven make him thankful, and me!' 'What relation do you bear to him?' 'I am his grandmother, lady, if it so please you; the only relation he hath left upon earth to take charge of him.' 'The burthen of his maintenance must necessarily be grievous to you in your deserted situation,' pursued the lady. 'I have complained of it to no one,' said Magdalen Graeme, with the same unmoved, dry, and unconcerned tone of voice in which she had answered all the former questions.

'If,' said the Lady of Avenel, 'your grandchild could be received into a noble family, would it not advantage both him and you?' 'Received into a noble family!' said the old woman, drawing herself up, and bending her brows until her forehead was wrinkled into a frown of unusual severity; 'and for what purpose, I pray you?—to be my lady's page, or my lord's jackman, to eat broken victuals and contend with other menials for the remnants of the master's meal? Would you have him to fan the flies from my lady's face while she sleeps, to carry her train while she walks, to band her trencher when she feeds, to ride before her on horseback, to walk after her on foot, to sing when she lists, and to be silent when she bids!—a very weathercock, which, though furnished in appearance with wings and plumage, cannot soar into the air—cannot fly from the spot where it is perched, but receives all its impulses, and performs all its revolutions, obedient to the changeful breath of a vain woman? When the eagle of Helvellyn perches on the tower of Lanercost, and turris and changes to show how the wind sits, Roland Graeme shall be what you would make him.'

'The woman spoke with a rapidity and vehemence which seemed to have in it a touch of insanity; and a sudden sense of the danger to which the child must necessarily be exposed in the charge of such a keeper, increased the lady's desire to keep him in the castle if possible.

'You mistake me, dame,' she said, addressing the old woman in a soothing manner; 'I do not wish your boy to be in attendance on myself, but upon the good knight, my husband. Were he himself the son of a belted earl, he could not better be trained to arms, and all that befits a gentleman, than by the instructions and discipline of Sir Halbert Glendinning.'

'Ay,' answered the old woman in the same style of bitter irony. 'I know the wages of that service;—a curse when the corslet is not sufficiently brightened,—a blow when the girth is not tightly drawn,—to be

beaten because the hounds are at fault,—to be reviled because the foray is unsuccessful,—to stain his hands, for the master's bidding, in the blood alike of beast and of man,—to be a butcher of harmless deer, a murderer and defacer of God's own image, not at his own pleasure, but at that of his lord; to live a brawling ruffian, and a common stabber,—exposed to heat, to cold, to want of food, to all the privations of an anchorite, not for the love of God, but for the service of Satan,—to die by the gibbet, or in some obscure skirmish,—to sleep out his life in carnal security, and to awake in the eternal fire, which is never quenched.'

'Nay,' said the Lady of Avenel, 'but to such unhalloved course of life your grandson will not be here exposed. My husband is just and kind to those who live under his banner; and you yourself well know, that you have here a strict as well as a good preceptor in the person of our chaplain.'

'The old woman appeared to pause.

'You have named,' she said, 'the only circumstance which can move me. I must soon onward, the vision has said it—I must not tarry in the same spot—I must on—I must on, it is my word.—Swear, then, that you will protect the boy as if he were your own, until I return hither and claim him, and I will consent for a space to part with him. But especially swear, he shall not lack the instruction of the godly man who hath placed the gospel-truth high above these idolatrous shavelings, the monks and friars.' 'Be satisfied, dame,' said the Lady of Avenel; 'the boy shall have as much care as if he were born of my own blood. Will you see him now?' 'No,' answered the old woman, sternly; 'to part is enough. I go forth on my own mission. I will not soften my heart by useless tears and wailings, as one that is not called to a duty.'

Roland's pride, impetuosity, presumption, and tyranny over the rest of the household, is very happily illustrated in the following extract.

'When Roland Graeme was a youth almost seventeen years of age, he chanced one summer morning to descend to the mew in which Sir Halbert Glendinning kept his hawks, in order to superintend the training of an eyass, or young hawk, which he himself, at the imminent risk of neck and limbs, had taken from a celebrated eyrie in the neighbourhood, called Gledersraig. As he was by no means satisfied with the attention which had been bestowed on his favourite bird, he was not slack in testifying his displeasure to the falconer's lad, whose duty it was to have attended upon it.

'What, ho! sir knave,' exclaimed Roland, 'is it thus you feed the eyasse with unwashed meat, as if you were gorging the foul brancher of a worthless hoodie-crow by the mass? and thou hast neglected its castings also for these two days. Thinkst thou I ventured my neck to bring the bird down from the craig that thou shouldst spoil him by thy neglect? And to add force to his remonstrances, he conferred a cuff or two on the negligent attendant of the hawks, who, shouting rather louder than was necessary

under all the circumstances, brought the master falconer to his assistance.

'Adam Woodcock, the falconer of Avenel, was an Englishman by birth, but so long in the service of Glendinning, that he had lost his national attachment in that which he had formed to his master. He was a favourite in his department, jealous and conceited of his skill, as masters of the game usually are; for the rest of his character, he was a jester and a parcel poet, (qualities which by no means abated his natural conceit) a jolly fellow, who loved a flagon of ale better than a long sermon, a stout man of his hands when need required, true to his master, and a little presuming on his interest with him.

'Adam Woodcock, such as we have described him, by no means relished the freedom used by young Graeme, in chastising his assistant. 'Hey, hey, my lady's page,' said he, stepping between his own boy and Roland, 'fair and softly, and it like your gift jacket—hands off is fair play—if my boy has done amiss, I can beat him myself, and then you may keep your hands soft.' 'I will beat him and thee too,' answered Roland, without hesitation, 'an you look not better after your business. See how the bird is cast away between you. I found the careless lurdane feeding him with unwashed flesh, and she an eyass.' 'Go to,' said the falconer, 'thou art but an eyass thyself, child Roland—What knowst thou of feeding? I say that the eyass should have her meat unwashed, until she becomes a brancher—twere the ready way to give her the frottee, to wash her meat sooner, and so knows every one who knows a gied from a falcon.' 'It is thine own laziness, thou false English blood, that doest nothing but drink and sleep,' retorted the page, 'and leaves that fither lad to do the work, that he minds as little as thou.' 'And am I so idle then,' said the falconer, 'that have three cast of hawks to look after, at perch and mew, and to fly them in the field to boot?—and is my lady's page so busy a man that he must take me up short?—and am I a false English blood?—I marvel what blood thou art—neither Engländer nor Scot—fish nor flesh—a bastard from the Debateable Land, without either kith, kin, or ally!—Marry, out upon thee, foul kute, that would fain be a tereel gentie!'

'The reply to this sarcasm was a box on the ear, so well applied, that it overthrew the falconer into the cistern in which water was kept for the benefit of the hawks. Up started Adam Woodcock, and seizing on a truncheon which stood by, would have soon requited the injury he had received, had not Roland laid his hand on his poniard, and sworn by all that was sacred, that if he offered a stroke towards him, he would sheath it in his bowels. The noise was now so great, that more than one of the household came in and amongst others the majordomo.'

'This will be no tree for my nest,' said 'There is a difference amongst authorities how long the nestling hawk should be fed with flesh which has previously been washed.

the falconer, 'if this cock-sparrow is to crow over us as he seems to do.'

'He struck me with his switch yesterday,' said one of the groins, 'because the tail of his worship's gelding was not trimmed altogether so as suited his humour.'

'And I promise you,' said the landress, 'my young master will stick nothing to call you slut and quean, if there be but a speck of soot upon his hand-collar.'

'If Master Wingate do not his errand to my lady,' was the general result, 'there will be no tarrying in the same house with Roland Greeme.'

'The master of the household heard them all for some time, and then, motioning for universal silence, he addressed them with all the dignity of Malvolio himself.—'My masters,—not forgetting you, my mistresses,—do not think the worse of me that I proceed with as much care as haste in this matter. Our master is a gallant knight, and will have his sway at home and abroad, in wood and field, in hall and bower, as the saying is. Our lady, my benison upon her, is also a noble person of long descent, and rightful heir of this place and barony, and she also loves her will; as for that matter, show me the woman who doth not. Now, she hath favoured, doth favour, and will favour, this jack-an-ape,—for what good part about him I know not, save that as one noble lady will love a messan dog, and another a screaming popinjay, and a third a Barbary ape, so doth it please our noble dame to set her affections upon this stray elf of a page, for nought that I can think of, save that she was the cause of his being saved (the more's the pity) from drowning.' And here Master Wingate made a pause.

'I would have been his caution for a grey goat against salt water or fresh,' said his adversary, the falconer, 'marry, if he crack not a rope for stabling or for snatching, I will be content never to hood hawk again.'

'Peace, Adam Woodcock,' said Wingate, waving his hand; 'I prithee, peace, man—Now, my lady liking this springall, as aforesaid, differs therein from my lord, who likes never a bone in his skin. Now, is it for me to stir up strife betwixt them, and put as 'twere my finger betwixt the bark and the tree, on account of a pragmatical youngster, whom, nevertheless, I would willingly see whipped for of the barony? Have patience, and this boll will break without our meddling. I have been in service since I wore a beard on my chin, till now that that beard has turned grey, and I have seldom known any one better themselves, even by taking the lady's part against the lord's; but never one who did not dirk himself, if he took the lord's against the lady's.'

'And so,' says Lilius, 'we are to be crowned over, every one of us, men and women, cock and hen, by this little upstart? I will try titles with him first, I promise you.—I fancy, Master Wingate, for as wise as you look, you will be pleased to tell what you have seen to-day, if my lady commands you.' 'To speak the truth when my lady

commands me,' answered the prudential major-domo, 'is in some measure my duty. Mistress Lilius; always providing for and excepting those cases in which it cannot be spoken without breeding mischief and inconvenience to myself or my fellow-servants; for the tongue of a tale-bearer breaketh bones as well as a Jeldart staff.' 'But this imp of Satan is none of your friends or fellow-servants,' said Lilius; 'and I trust you mean not to stand up for him against the whole family besides?' 'Credit me, Mrs. Lilius,' replied the senior, 'should I see the time fitting, I would with right good will give him a lick with the rough side of my tongue.'

'Enough said, Master Wingate,' answered Lilius; 'then trust me his song shall soon be laid. If my mistress does not ask me, what is the matter below stairs before she be ten minutes of time older, she is no born woman, and my name is not Lilius Bradbourne.'

'In pursuance of her plan, Mistress Lilius failed not to present herself before her mistress with all the exterior of one who is possessed of an important secret,—that is, she had the corner of her mouth turned down, her eyes raised up, her lips pressed as fast together as if they had been sewed up, to prevent her blabbing, and an air of prim mystical importance diffused over her whole person and demeanour, which seemed to intimate, 'I know something which I am resolved not to tell you.'

The arts of the envious servants ultimately produced the desired effect, and the insolent Roland was dismissed by his partial lady. He quits the castle indignantly, after a fine scene with his mistress, which, like the rest of this captivating book, is so natural as to put the idea of invention entirely out of the readers' heads, and they go on as if every syllable were truth, and every circumstance real. This indeed is the acme of art: to have nothing that deviates from common life, and yet the charm of the most extraordinary adventures. How delightfully the author can portray the every-day matter of the world, may be exemplified in the behaviour and conversation of the domestics, after the dismissal of the minion.

'Upon the morrow succeeding the scene we have described, the disgraced favourite left the Castle; and at breakfast-time the cautious old steward and Mrs. Lilius sat in the apartment of the latter personage, holding grave converse on the important event of the day, sweetened by a small treat of sweetmeats, to which the providence of Mr. Wingate had added a little flask of racy canary.'

'He is gone at last,' said the abigail, sipping her glass; 'and here is to his good journey.' 'Amen,' answered the steward, gravely; 'I wish the poor deserted lad no ill.' 'And he is gone like a wild-duck, as he came,' continued Mrs. Lilius; 'no lowering of drawbridges, or pacing along causeways for him. My master has pushed off in the boat which they call the little Herod, (more shame to them for giving the name of a Christian to wood and iron,) and has rowed himself by himself to the further side

of the loch, and off and away with himself, and left all his finery strewn about his room. I wonder who is to clean his truncheon out after him—though the things are worth lifting, too.'

'Doubtless, Mrs. Lilius,' answered the master of the household; 'in the which case, I am free to think, they will not long cumber the floor.' 'And now tell me, Mr. Wingate,' continued the daisel, 'do not the very corks of your heart rejoice at the house being rid of this upstart whelp, that flung us all into shadow?' 'Why, Mrs. Lilius,' replied Wingate, 'as to rejoicing—those who have lived as long in great families as has been my lot, will be in no hurry to rejoice at any thing. And for Roland Graeme, though he may be a good riddance in the main, yet what says the very sooth proverb, 'Seldom comes a better.' 'Seldom comes a better, indeed!' echoed Mrs. Lilius. 'I say, never can come a worse, or one half so bad. He might have been the ruin of our poor dear mistress, (here she used her kerchief,) body and soul, and estate too; for she spent more coin on his apparel than on any four servants about the house.'

'Mrs. Lilius,' said the sage steward, 'I do opine that our mistress requireth not this pity at our hands, being in all respects competent to take care of her own body, soul, and estate into the bargain.' 'You would not mayhap have said so,' answered the waiting-woman, 'had you seen how like Lot's wife she looked when young master took his leave. My mistress is a good lady, and a virtuous and a well-going lady, and a well spoken of—but I would not Sir Halbert had seen her this morning, for two and a plack.'

'Oh, foy! foy! foy!' reiterated the steward; 'servant! servant! hear and see, and say nothing. Besides that, my lady is utterly devoted to Sir Halbert, as well she may, being, as he is, the most renowned knight in these parts.'

'Well, well,' said the abigail, 'I mean no more harm; but they that seek least renown abroad, are most apt to find quiet at home, that's all; and my lady's lonesome situation is to be considered, that made her fain to take up with the first beggar's brat that a dog brought her out of the loch.' 'And, therefore,' said the steward, 'I say, rejoice not too much, or too hastily, Mrs. Lilius; for if your lady wished a favourite to pass away the time, depend upon it, the time will not pass lighter now that he is gone: since she will have another favourite to chuse for herself, and be assured she will not lack one.'

'And where should she chuse one, but among her own tried and faithful servants,' said Mrs. Lilius, 'who have broken her bread, and drank her drink for so many years? I have known many a lady as high as she, that never thought either of a friend or favourite beyond their own waiting-woman—always having a proper respect, at the same time, for their old and faithful master of the household, Mr. Wingate.'

'Truly, Mrs. Lilius,' replied the stew

ard, 'I do partly see the mark at which you shoot, but I doubt your bolt will fall short. Matters being with our lady as it likes you to suppose, it will neither be your cramped pinners, Mrs. Lilius, (speaking of them with due respect,) nor my silver hair, or golden chain, that will fill up the void which Roland Græme must needs leave in our lady's leisure. There will be a learned young divine with some new doctrine—a learned leech with some new drug—a bold cavalier who will not be refused the favour of wearing her colours at a running at the ring—a cunning harper that could harp the heart out of woman's breast, as they say; Signor David Rizzio did to our poor Queen; these are the sort of folks who supply the loss of a well-favoured favorite, and not an old steward, or a middle-aged waiting woman.'

'Well,' said Lilius, 'you have experience, Master Wingate, and truly I would my master would leave off his pricking lither and thither, and look better after the affairs of his household. There will be a papistrie among us next, for what should I see among master's clothes but a string of gold beads? I promise you, *aves* and *credos* both!—I seized on them like a falcon.'

'I doubt it not, I doubt it not,' said the steward, sagaciously nodding his head; 'I have often noticed that the boy had strange observances which savoured of popery, and that he was very jealous to conceal them. But you will find the Catholic under the Presbyterian cloak as often as the knave under the friar's hood—what then? we are all mortal—Right proper beads they are,' he added, looking attentively at them, 'and may weigh four ounces of fine gold.'

'And I will have them melted down presently,' she said, 'before they be the iniquifying of some poor blinded soul.'

'Very cautious, indeed, Mrs. Lilius,' said the steward, nodding his head in assent.

'I will have them made,' said Mrs. Lilius, 'into a pair of shoe-bucklers; I would not wear the Pope's trinkets, or whatever has once borne the shape of them, one inch above my in-step, were they diamonds, instead of gold—But this is what has come of Father Ambrose coming about the Castle, as demure as a cat that is about to steal cream.'

'Father Ambrose is our master's brother,' said the steward gravely. 'Very true, Master Wingate,' answered the dame; 'but is that a good reason why he should pervert the king's liege subjects to papistrie?' 'Heaven forbid, Mrs. Lilius,' answered the sententious major-domo; 'but yet there are worse folks than the papists.' 'I wonder where they are to be found,' said the waiting-woman, with some asperity; 'but I believe, Mr. Wingate, if one were to speak to you about the devil himself, you would say there were worse people than Satan.' 'Assuredly I might say so,' replied the steward, 'supposing that I saw Satan standing at my elbow.'

'The waiting-woman started, and having exclaimed, 'God bless us!' added, 'I wonder, Mr. Wingate, you can take pleasure in

frightening one thus.' 'Nay, Mrs. Lilius, I had no such purpose,' was the reply; 'but look you here—the papists are but put down for the present, but who knows how long this word *present* will last.'

While these worthies thus entertain themselves, poor Roland wanders abroad. He meets a peasant whose ingratitude stings him; and he also meets the honest Falconer, Adam Woodcock, who forces a loan of money upon his quondam adversary.

His first night's lodging is taken at St. Cuthbert's cell; where we have a fine picture of the sacrilegious outrages committed by the early Reformers.

After a highly wrought dialogue, in which the deep devotee is grandly contrasted with the giddy page, and fanaticism is relieved by the latest and strongest feelings of human affection, and the buoyant, though momentarily depressed spirits of youth, Magdalen consecrates her grandson, in blind obedience to some great and secret service of Rome.

As she spoke she bent her head towards the broken image, with a countenance in which strong resentment and zeal were mingled with an expression of ecstatic devotion; she raised her left hand aloft as in the act of making a vow, and thus proceeded: 'Bear witness for me, holy saint, with whose violated temple we stand, that as it is not for vengeance of my own that my hate pursues these people, so neither for any favour or earthly affection towards any amongst them, will I withdraw my hand from the plough, when it shall pass over the devoted furrow! Bear witness, holy saint, once thyself a wanderer and fugitive as we are now—bear witness, Mother of Mercy, Queen of Heaven—bear witness, saints and angels!'

In this high strain of enthusiasm, she stood, raising her eyes through the fractured roof of the vault, to the stars which now began to twinkle through the pale twilight, while the long grey tresses which hung down over her shoulders waved in the night breeze, and the chasm and fractured windows admitted freely.

Roland is rather silent than consenting, for he is too headstrong to surrender his actions to any dictation.

After a night passed among the ruins of St. Cuthbert's cell, its inmates journey to a dilapidated house or convent, occupied by an ex-abbess of the family of Seyton, and an ex-novice of the same noble race. The heroine is drawn with the touch of a Titian. On Roland's entry with the two elderly matrons, glancing her eyes towards him, she adjusted a veil which hung back over her shoulders, so as to bring it over her face; an operation which she performed with much modesty, but without either affected haste or embarrassed timidity.

During this manœuvre Roland had time to observe, that the face was that of a girl not much past sixteen apparently, and that the eyes were at once soft and brilliant. To these very favourable observations was added the certainty, that the fair object to whom they referred possessed an excellent shape, bordering perhaps on *embonpoint*,

and therefore rather that of a Hebe than of a Sylph, but beautifully formed, and shewn to great advantage by the close jacket and petticoat, which she wore after a foreign fashion, the last not quite long enough absolutely to conceal a very pretty foot, which rested on a bar of the table at which she sat; her round arms and taper fingers very busily employed in repairing the piece of tapestry which was spread on it, which exhibited several deplorable fissures, enough to demand the utmost skill of the most expert seamstress.

It is to be remarked, that it was by stolen glances that Roland Græme contrived to ascertain these interesting particulars; and he thought he could once or twice, notwithstanding the texture of the veil, detect the damsel in the act of taking similar cognizance of his own person. The matrons in the meanwhile continued their separate conversation, eyeing from time to time the young people, in a manner which left Roland in no doubt that they were the subject of their conversation. At length he distinctly heard Magdalen Græme say these words: 'Nay, my sister, we must give them opportunity to speak together, and to become acquainted; they must be personally known to each other.'

The commencement of this acquaintance is delightfully playful; and it is with regret we are obliged to exclude it from our critique.

When the house of St. Catherine of Sienna, to whom Catherine was about to be devoted was broken up by the Reformation, this damsel, so unfit for a nun, became what Roland found her; and these two gigglers were destined to a task for which, unlikely as they appeared, they possessed very essential requisites. Our author gives us some insight into it, in his most pleasing manner. Roland is exploring the old house, after being left to himself for the evening.

As he thus stalked from desolation to desolation, and began to think of returning from so uninteresting a research to the chamber which he had left, he was surprised to hear the low of a cow very close to him. The sound was so unexpected at the time and place, that Roland Græme started as if it had been the voice of a lion, and laid his hand on his dagger, while at the same moment the light and lovely form of Catherine Seyton presented itself at the door of the apartment from which the sound had issued.

'Good even to you, valiant champion!' said she; 'since the days of Guy of Warwick, never was one more worthy to encounter a dun cow.' 'Cow!' said Roland Græme, 'by my faith, I thought it had been the devil that roared so near me—who ever heard of a convent containing a cow-house.' 'Cow and calf may come hither now,' answered Catherine, 'for we have no means to keep out either. But I advise you, kind sir, to return to the place from whence you came.' 'Not till I see your charge, fair sister,' answered Roland, and made his way into the apartment in spite of the half serious half laughing remonstrances of the girl.

"The poor solitary cow, now the only severe recluse within the manery, was quartered in a spacious chamber, which had once been the refectory of the convent. The roof was graced with groin'd arches, and the wall with niches, from which the images had been pulled down. These remnants of architectural ornaments were strangely contrasted with the rude crib and manger constructed for the cow in one corner of the apartment, and the stack of fodder which was piled beside it for her food."

"By my faith," said the page, "Crombie is more lordly lodged than any one here." "You had best remain with her," said Catherine, "and supply by your filial attentions the offspring she has had the ill luck to lose." "I will remain, at least, to help you to prepare her night's lair, pretty Catherine," said Roland, seizing upon a pitchfork. "By no means," said Catherine, "for, besides that you know not in the least to do her that service, you will bring a childing my way, and I get enough of that in the regular course of things." "What! for accepting my assistance?" said the page, "for accepting my assistance, who am to be your confederate in some deep matter of import? That were altogether unreasonable—and, now I think on it, tell me if you can, what is this mighty emprise to which I am destined?" "Robbing a bird's nest, I should suppose," said Catherine, "considering the champion whom they have selected." "By my faith," said the youth, "and he that has taken a falcon's nest in the Scours of Polmoode, has done something to brag of, my fair sister.—But that is all over now—a murrain on the nest, and the cyvases and their food, washed or unwashed, for it was all anon of cramming these worthless kites that I was sent upon my present travels. Save that I have met with you, pretty sister, I could eat my dagger-bill for vexation at my own folly. But as we are to be fellow-travellers!" "Fellow-labourers! not fellow travellers!" answered the girl; "for to your comfort be it known, that the Lady Abbess and I set out earlier than you and your respected relative to-morrow, and that I partly endure your company at present, because it may be long ere we meet again." "By Saint Andrew, but it shall not though," answered Roland; "I will not hunt at all unless we are to hunt in couples." "I suspect, in that and in other points, we must do as we are bid.—But hark! I hear my aunt's voice."

In effect they are separated; and the Seytons proceed one way, and the Graemes towards the monastery of St. Mary. Here they arrive, just in time to witness the election of Edward Glendinning, to be the last abbot of that shrine, under the title of Ambrosius. The fallen estate of the rich and proud church is admirably painted, and contrasted with one of those saturnalia of ancient times, which flowed from the election of an *Abbot of Unreason*; and with this mockery the rabble now insulted and profaned the abbey. We cannot find room for much of this admirable picture of an olden custom; which is about to end in a fray, when Sir Halbert Glendinning happily arrives, and

puts an end to the frolic. We cannot, however, resist a few brief extracts. The crowd "was composed of men, women, and children, ludicrously disguised in various habits, and presencing groupes equally diversified and ludicrous. Here one fellow with a horse's head painted before him, and a tail behind, and the whole covered with a long foot-cloth, which was supposed to hide the body of the animal, ambled, caracolled, pranced, and plunged, as he performed the celebrated part of the hobbie-horse, so often alluded to in our ancient drama; and which still flourishes on the stage in the battle that concludes Bayes's tragedy. To rival the address and agility displayed by this character, another personage advanced, in the more formidable character of a huge dragon, with gilded wings, open jaws, and a scarlet tongue, cloven at the end, which made various efforts to overtake and devour a lad, dressed as the lovely Salora, daughter of the King of Egypt, who died before him; while a martial Saint George, grotesquely armed with a goblet for a helmet, and a spit for a lance, ever and anon interfered, and compelled the monster to relinquish his prey. A bear, a wolf, and one or two other wild animals, played their parts with the discretion of Snug the joiner; for the decided preference which they gave to the use of their hind legs, was sufficient, without any formal annunciation, to assure the most timorous spectators that they had to do with habitual bipeds. There was a group of outlaws, with Robin Hood and Little John at their head—the best representation exhibited at the time; and no great wonder, since most of the actors were, by profession, the banished men and thieves whom they presented. Other masqueraders there were, of a less marked description. Men were disguised as women, and women as men—children wore the dress of aged people, and tottered with crutch-sticks in their hands, furled gowns on their little backs, and caps on their round heads—while grandmothers assumed the infatuate tone as well as the dress of children. Besides these, many had their faces painted, and wore their shirts over the rest of their dress; while coloured pasteboard and ribbands furnished out decorations for others. These who wanted all these properties, blacked their faces, and turned their jackets inside out; and thus the transmutation of the whole assembly into a set of mad grotesque mummers, was at once completed."

The new Abbot addresses them in a tone which affects even the most hardy—"The morrice dancers stood still—the hobby-horse surceased his capering—pipe and tabor were mute, and 'silence, like a heavy cloud,' seemed to descend on the once noisy rabble. Several of the beasts were obviously moved to compunction; the bear could not restrain his sobs, and a huge fox was observed to wipe his eyes with his tail. But in especial the dragon, lately so formidably rampant, now relaxed the terror of his claws, uncoiled his tremendous rings, and grumbled out of his fiery throat in a repentant tone, 'By the mass, I thought no

harm in exercising our old pastime, but an I had thought the good Father would have taken it so to heart, I would as soon have played your devil as your dragon."

"In this munificent pause, the Abbot stood amongst the miscellaneous and grotesque forms by which he was surrounded, triumphant as Saint Anthony, in Callot's Temptations; but Howleglas, the mock Abbot would not so resign his purpose."

Magdalen interferes, "Unreason" orders her to be ducked, and Roland stays him to death but for his stuffing, to make a paunch. It is at this period that Sir Halbert's appearance prevents further mischief; and the more readily, as the revellers turn out to be Adam Woodcock, as Howleglas; Dan of the Hawlet-Hurst, the Dragon; and others, the retainers of Avenel.

Roland reclaimed by the knight, is willingly yielded by Magdalen (who sees in this the especial doing of providence) and sent under the guidance of Adam Woodcock, to the Regent Murray, at Holyrood House. The boy's character develops itself more and more—

"Now, he thought, now or never shall I become a man, and bear my part in those deeds which the simple inhabitants of our hamlets repeat to each other as if they were wrought by beings of a superior race to their own. I will know now, wherefore the Knight of Avenel carries his crest so much above those of the neighbouring baronage, and how it is that men, by valour and wisdom, work their way from the hodden gray coat to the coat of scarlet and gold. Men say I have not much wisdom to recommend me; and if that be true, courage must do it, for I will be a man amongst living men, or a dead corpse amongst the dead."

On reaching the capital, an immediate opportunity is afforded him, for he drops into the midst of a fray, between the Leslies and the Seytons, for the crown of the cause, (the centre of the road, which is like the wall in England, the path of honour) and immediately takes part with the latter.

Our author now enters upon that sort of field, of which he is so skilful a reaper. Hitherto the tale has led us through the mazes of private life; it now links itself to history, and to that period of history which is by far the most romantic and interesting in the annals of Scotland. The matchless skill with which he intertwines his thread of fiction with the melancholy fate of Mary Stuart, is truly admirable. We are so imposed upon by it, that we cannot direct ourselves of the reality; it seems as if the descriptions were penned, and the facts related, by an acute eye-witness. Take, for example, one of the views of Edinburgh at that unsettled era:—"The Regent's palace—"

"It was indeed no common sight to Roland, the vestibule of a palace, traversed by its various groups,—some radiant with gaiety—some pensive, and apparently weighed down by affairs concerning the state, or concerning themselves. Here the hoary statesman, with his cautious yet commanding look, his furrowed brow and sable pantofles; there the soldier in buff and steel, his

ong sword jarring against the pavement, and its whistled upper lip and frowning brow; here again passed my lord's serving-man, righ of heart, and bloody of hand, humble to his master and his master's equals, insolent to all others. To these might be added, the poor suitor, with his anxious look and depressed mien—the officer, full of his brief authority, elbowing his betters, and possibly his benefactors, out of the road—the proud priest, who sought a better benefice—the proud baron, who sought a grant of church lands—the rubicund chief, who came to solicit a pardon for the injuries he had inflicted on his neighbours—the plundered franklin, who came to seek vengeance for that which he had himself received. Besides, there was the mustering and disposition of guards and of soldiers—the dispatching of messengers, and the receiving them—the trampling and neighing of horses without the gate—the flashing of arms, and rustling of plumes, and jingling of spurs within it. In short, it was that gay and splendid confusion, in which the eye of youth sees all that is brave and brilliant, and that of experience much that is doubtful, deceitful, false, and hollow—hopes that will never be gratified—promises which will never be fulfilled—pride in the disguise of humility—and insolence in that of frank and generous bounty.”

We pass over a rencontre with Catherine, and a remarkable visit at the hostelry from a young chivalier, whom he takes to be that fair damsel in disguise, and who presents him with a sword, under an oath never to draw it until hidden by his lawful sovereign. It would not be fair to our readers to anticipate too much of the plot, though an author of such power over the mind, as we have here before us, needs to care little for that terrible drawback on common novelists. The object for which Roland was despatched to Edinburgh by Glendinning, was to be appointed page to Queen Mary, at Lochmaben castle, in the interest of the Regent Murray, her other attendants, Lady Mary Fleming and Catherine Seyton, being of her own selection. To Lochmaben, accordingly, our hero is sent, with the Lords Lyndesay and Ruthven, when the hapless queen is forced to sign her abdication of the throne.

The portraits of these noblemen, and those of Murray and Morton, are worthy of Van-dyke; nor is the latter less happy in the Lady of Lochmaben, the mother of the Regent, whose hatred of Mary is aggravated by her legitimate descent—a living reproach to her amour with James V.

But the highest effort is the character of Mary herself. After all that has been written upon that subject, it appears as fresh and original as if untouched by other hands—a powerful, natural, and exquisite performance. The traits, however, are so blended with the greater portion of the book, that it must be read to give an idea of their captivating nature. We shall only select what can be intelligibly separated.

“Her face, her form, have been so deeply impressed upon the imagination, that even at the distance of nearly three centuries, it is

unnecessary to remind the most ignorant and uninformed reader of the striking traits which characterize that remarkable countenance, which seems at once to combine our ideas of the majestic, the pleasing, and the brilliant, leaving us to doubt whether they express most happily the queen, the beauty, or the accomplished woman. Who is there, at the very mention of Mary Stuart's name, that has not her countenance before him, familiar as that of the mistress of his youth, or the favourite daughter of his advanced age? Even those who feel themselves compelled to believe all, or much of what her enemies laid to her charge, cannot think without a sigh upon a countenance expressive of any thing rather than the foul crimes with which she was charged when living, and which still continue to shade, if not to blacken her memory. That brow, so truly open and regal—those eye-lids, so regularly graceful, which yet were saved from the charge of regular insipidity by the beautiful effect of the hazel eyes which they overarched, and which seem to utter a thousand histories—the nose, with all its Grecian precision of outline—the mouth, so well proportioned, so sweetly formed, as if designed to speak nothing but what was delightful to hear—the dimpled chin—the stately swan-like neck, form a countenance, the like of which we know not to have existed in any other character moving in that high class of life, where the actresses as well as the actors command general and undivided attention. It is in vain to say that the portraits which exist of this remarkable woman are not like each other; for, amidst their discrepancy, each possesses general features which the eye at once acknowledges as peculiar to the vision which our imagination has raised while we read her history for the first time, and which has been impressed upon it by the numerous prints and pictures which we have seen. Indeed we cannot look on the worst of them, however deficient in point of execution, without saying that it is meant for Queen Mary; and no small instance it is of the power of beauty, that her charms should have remained the subject not merely of admiration, but of warm and chivalrous interest, after the lapse of such a length of time. We know that by far the most acute of those who, in latter days, have adopted the unfavourable view of Mary's character, longed, like the executioner before his dreadful task was performed, to kiss the fair hand of her on whom he was about to perform so horrible a duty.”

Perhaps we cannot portray her better than by copying a passage of the audience given to the adverse Lords. Lord R. reads the deed of renunciation:

“And, is this all my loving subjects require of me, my lord?” said Mary, in a tone of bitter irony. “Do they really stint themselves to the easy boon that I should yield up the crown, which is mine by birth-right, to an infant, which is scarcely more than a year old—fling down my sceptre, and take up a distaff—O no! it is too little for them to ask—That other roll of parch-

ment contains something harder to be complied with, and which may more highly tax my readiness to comply with the petitions of my lieges.”

“This parchment,” answered Ruthven, in the same tone of inflexible gravity, and unfolding the instrument as he spoke, “is one by which your Grace constitutes your nearest in blood, and the most honourable and trust-worthy of your subjects, James, Earl of Murray, Regent of the Kingdom during the minority of the young King. He already holds the appointment from the Secret Council.”

“The Queen gave a sort of shriek, and clapping her hands together, exclaimed, ‘Come the arrow out of his quiver?—out of my brother's bow? Alas! I looked for his return from France as my sole, at least my readiest chance of deliverance. And yet, when I heard that he had assumed the government, I guessed he would shame to wield it in my name.’

“I must pray your answer,” madam, said Lord Ruthven, ‘to the demand of the Council.’

“The demand of the Council!” said the Queen; ‘say rather the demand of a set of robbers, impatient to divide the spoil they have seized. To such a demand, and sent by the mouth of a traitor, whose scalp, but for my womanish merriness, should long since have stood on the city gates, Mary of Scotland has no answer.’

“I trust, madam,” said Lord Ruthven, ‘my being unacceptable to your presence will not add to your obduracy of resolution. It may become you to remember that the death of the minion, Rizzio, cost the house of Ruthven its head and leader. My father, more worthy than a whole province of such vile sycophants, died in exile, and broken-hearted.’

“The Queen clasped her hands on her face, and resting her arms on the table, stooped down her head and wept so bitterly that the tears were seen to find their way in streams between the white and slender fingers with which she endeavoured to conceal them.

“‘My lords,’ said Sir Robert Melville, ‘this is too much rigour. Under your lordships’ favour, we came hither, not to revive old griefs, but to find the mode of avoiding new ones.’ ‘Sir Robert Melville,’ said Ruthven, ‘we best know for what purpose we were delegated hither, and wherefore you were somewhat unnecessarily sent to attend us.’ ‘Nay, by my hand,’ said Lord Lyndesay, ‘I know not why we were cumbered with the good knight, unless he comes in place of the lump of sugar which pothecians put into their wholesome but bitter medications, to please a forward child—a needless labour, methinks, where men have the means to makethen swallow the physic otherwise.’ ‘Nay, my lords,’ said Melville, ‘ye best know your own secret instructions. I conceive I shall best obey mine in striving to mediate between her grace and you.’ ‘Be silent, Sir Robert Melville,’ said the Queen, arising, and her face still glowing with agitation as she spoke. ‘Make

chief, Fleming—! I shame that traitors should have power to move me thus.—Tell me, proud lords," she added, wiping away the tears as she spoke, "by what earthly warrant can liege subjects pretend to challenge the rights of an anointed Sovereign—to throw off the allegiance they have vowed, and to take away the crown from the head on which Divine warrant hath placed it?"

"Madam," said Ruthven, "I will deal plainly with you. Your reign, from the dismal field of Linkie-vench, when you were a babe in the cradle, till now, that ye stand a grown dame before us, hath been such a tragedy of losses, disasters, civil dissensions, and foreign wars, that the like is not to be found in our chronicles. The French and English have, of one consent, made Scotland the battle-field on which to fight out their own ancient quarrel. For ourselves, every man's hand hath been against his brother, nor hath a year passed over without rebellion and slaughter, exile of nobles, and oppressing of the commons. We may endure it no longer, and, therefore, as a prince, to whom God hath refused the gift of hearkening to wise counsel, and on whose dealings and projects no blessing hath ever descended, we pray you to give way to other rule and governance of the land, that a remnant may yet be saved to this distracted realm."

An incident connected with Roland's sword ultimately decides the queen, and she signs the documents.

"My lords," said Mary, with inexpressible grace and dignity, "the evils we cannot resist we must submit to—I will subscribe these parchments with such liberty of choice as my condition permits me. Were I on yonder shore, with a fleet jennet and ten good and loyal knights around me, I would subscribe my sentence of eternal condemnation, as soon as the resignation of my throne. But here, in the castle of Lochleven, with deep water around me—and you, my lords, beside me—I have no freedom of choice. Give me the pen, Melville, and bear witness to what I do, and why I do it." "It is our hope your Grace will not suppose yourself compelled, by any apprehensions from us," said the Lord Ruthven, "to execute what must be your own voluntary deed." The Queen had already stooped towards the table, and placed the parchment before her, with the pen between her fingers, ready for the important act of signature. But when Lord Ruthven had done speaking, she looked up, stopped short, and threw down the pen. "If," said she, "I am expected to declare I give away my crown of free will, or otherwise than because I am compelled to renounce it by the threat of worse evils to myself and my subjects, I will not put my name to such an untruth—not to gain full possession of England, France, and Scotland, all once my own, in possession or by right."

"Beware, madam," said Lindsey; and snatching hold of the Queen's arm with his own gauntleted hand, he pressed it, in the rudeness of his passion, more closely perhaps than he was himself aware of,—beware how you contend with those who are the stronger, and have the mastery of your

fate." He held his grasp on her arm, bending his eyes on her with a stern and intimidating look, till both Ruthven and Melville cried shame; and Douglas, who had hitherto remained in a state of apparent apathy, had made a stride from the door, as if to interfere. The rude Baron then quitted his hold, disguising the confusion which he really felt at having indulged his passion to such extent, under a sullen and contemptuous smile. The Queen immediately began, with an expression of pain, to bare the arm which he had grasped, by drawing up the sleeve of her gown, and it appeared that his grasp had left the purple marks of his iron fingers upon her flesh—"My lord," she said, "as a knight and gentleman, you might have spared my frail arm so severe a proof that you have the greater strength on your side, and are resolved to use it. But I thank you for it—it is the most decisive token of the terms on which this day's business is to rest.—I draw you to witness, both lords and ladies," she said, shewing the marks of the grasp on her arm, "that I subscribe these instruments in obedience to the sign manual of my Lord of Lindsey, which you may see imprinted on mine arm."

In this part of the story there are many passages which will suit the present times, and we doubt not soon to see them borrowed from Queen Mary, to be applied, by her friends, to Queen Caroline.\*

\* Not to interrupt our epitome we subjoin two or three for their use:—

Lady Mary Fleming says, "I trust it is impossible that we can, any of us, or in any circumstances, forget, that few as we are, we form the household of the Queen of Scotland; and that, in her calamity, all boyish mirth and childish jesting can only serve to give a great triumph to her enemies, who have already found their account in objecting to her the lightness of every idle folly, that the young and the gay practised in her court."

Roland exclaims, "But, for betraying this unhappy Queen, God knows I am guiltless of the thought. Did I believe worse of her, than as her servant I wish—as her subject I dare to do—I would not betray her—far from it—I would aid her in aught which could tend to a fair trial of her cause."

Again, "This poor Queen," says Roland, "I know she is unhappy—but, Catherine, do you hold her innocent? She is accused of murder." "Do I hold the lamb guilty, because it is assailed by the wolf?" answered Catherine; "do I hold yonder sun polluted, because an earth-damp sullies his beams?"

And perhaps the following, from Mary's own lips, will seem to the parties above alluded to the aptest saying of all; "Thou knowest, my friend, whether to make those who have served me happy, was not ever Mary's favourite pastime. When I have been rebuked by the stern preachers of the Calvinist heresy—when I have seen the fierce countenances of my nobles averted from me, has it not been because I mixed in the harmless pleasures of the young and gay, and rather for the sake of their happiness than my own, have mingled in the masque, the

Young George Douglas, whose exploit in delivering the Queen from imprisonment is well known, is now introduced; and the plans of the limited court of Mary to escape together with their doubts whether to trust Roland or treat him as an enemy, occupy a considerable space. Douglas's love and devotedness are as finely delineated as any other individual passions in the Abbot; praise beyond this it would not be easy to bestow upon their treatment.

Roland somehow finds grace in the sight of the Lady of Lochlainn, and is sent on a business of hers to Kinross, on the mainland. Here there is a fair and gala day, into the sports of which he enters with youthful alacrity, under the auspices of a whimsical personage, the Douglas's chamberlain, Dr. Luke Lumbin. But the most important matters connected with this mission are his meeting once more with the supposed Catherine in disguise, and with the Abbot Ambrosius; and with Margaret Grème, in the garb of a witch, and under the name of Mother Niceneven; in short with the Queen's partisans devising means for her flight, and in intelligence with the castle through the means of George Douglas.

The fair and its shows are in the usual style of our able reviver of ancient manners; but we have quoted too much to be able to give what of our space we wish to description, and must briefly hurry on to the close. On returning to the island, Roland is locked out of the castle by Dryfesdale the steward, his enemy, and a fanatical villain. Obligated to lie all night in the garden, he accidentally defeats a plot for releasing the Queen, and George Douglas, being thus betrayed, flies to the mainland. Roland is now the last hope of Mary, whom the Steward attempts to poison, but having purchased the drugs from Mother Niceneven, they prove to be innocuous. The catastrophe hurries on. Dryfesdale is sent off by the Lady, and stabbed in a quarrel by Henry Seyton, the brother of Catherine. His letters lead to the formation of a better plan for the escape of the captive Queen, which is finally effected, chiefly through the instrumentality of Roland. The Queen is almost overcome as the hour approaches, and Catherine exclaims:—

"For God's sake, madam, droop not now—sink not now." "Call upon Our Lady, my Liege," said the Lady Fleming—"call upon your tutelary saint." "Call the spirits of the hundred kings you are descended from," exclaimed the page; "in this hour of need, the resolution of a monarch were worth the aid of a hundred saints." "O! Roland Grème," said Mary, in a tone of deep despondency, "be true to me—many have been false to me. Alas! I have not always been true to myself. My mind misgives me that I shall die in bondage, and that this bold

song, or the dance, with the youth of my household. Well, I repent not of it—though Knox termed it sin, and Morton degradation—I was happy, because I saw happiness around me; and woe betide the wretched jealousy that can extract guilt out of the overflowings of an unguarded gaiety!"

attempt will cost all our lives. It was foretold me by a soothsayer in France, that I should die in prison, and by a violent death, and here comes the hour—O, would to God it found me prepared! 'Madian,' said Catherine Seyton, 'remember you are a Queen. Better we all died in bravely attempting to gain our freedom, than remained here to be poisoned, as men rid them of the noxious vermin that haunt old houses.' 'You are right, Catherine,' said the Queen; 'and Mary will bear her like herself. But, alas! your young and buoyant spirit can ill spell the causes which have broken mine. Forgive me, my children, and farewell for a while—I will prepare both mind and body for this awful venture.'"

But we are warned to wind up: Mary's evasion leads to the fatal battle in which her friends are defeated, and her flight into England. Young Seyton is slain, and so is George Douglas, in an affecting way, before the face of his much loved mistress. A melancholy interest is raised by making this happen at the castle of Crookston, where Mary passed her happy bridal days with Darnley. Roland is found to be the son of Julian Avenel and his wife, a Greeme (the child left by his dead parents in the field of strife, which concludes the Monastery), and of course the representative of the house of Avenel. A short addition informs us of his union with Catherine, who was compelled to leave her sovereign when her imprisonment in England was rendered more straight by the dissembling Elizabeth and her crafty counsellors. We can only subjoin the final exit of Magdalen.

"Seizing Roland's hand, she led him to the Queen's feet, kneeling herself upon one knee, and causing him to kneel on both. 'Mighty Princess,' she said, 'look on this flower—it was found by a kindly stranger on a bloody field of battle, and long it was ere my anxious eyes saw, and my arms pressed all that was left of my only daughter.' For your sake, and for that of the holy faith we both profess, I could leave this plant, while it was yet tender, to the nurture of strangers—ay, of enemies, to whom, perchance, his blood would have been as wine, had the heretic Glendinning known that he had in his house the heir of Julian Avenel.—Since then I have seen him only in a few hours of doubt and dread, and now I part with the child of my love—forever—forever.—O, for every weary step I have made in your rightful cause, in this and in foreign lands, give protection to the child whom I must no more call mine!' 'I swear to you, mother,' said the Queen, deeply affected, 'that, for your sake and his own, his happiness and fortunes shall be our charge!' 'I thank you, daughter of princes,' said Magdalen, and pressed her lips, first to the Queen's hand, then to the brow of her grandson. 'And now,' she said, drying her tears, and rising with dignity: 'Earth has had its own, and Heaven claims the rest. Lioness of Scotland, go forth and conquer, and if the prayers of a devoted votaress can avail thee, they will rise in many a land, and from many a distant shrine. I will glide like a ghost

from land to land, from temple to temple; and where the very name of my country is unknown, the priests shall ask who is the Queen of that distant northern land, for whom the aged pilgrim was so fervent in prayer—Farewell, honour be thine, and earthly prosperity, if it be the will of God—if not, may the penance thou shalt do here, ensure thee happiness hereafter.—Let no one speak or follow me—my resolution is taken—my vow cannot be cancelled."

"She glided from their presence as she spoke, and her last look was upon her beloved grandchild."

The battle tempts us to another extract, but we must forbear: and we lay down our pen, grateful to the author for one of the most varied and noble banquets he has yet presented to an admiring public. Had we inclination, we have no room for criticism; but we may, we think, safely presume, that what it evinces of insight into the springs of human action, wonderful skill in the delineation of character, and marvellous art in making a pleasing story, the vehicle for bringing into view a most interesting epoch of national history, with descriptions of the times and moving pictures of ancient manners,—the Abbot will vie even with Waverley and Ivanhoe.

## COLMAN'S POSTHUMOUS LETTERS.

(Concluded.)

We resume our extracts from Garrick's correspondence.—Venice, January 12, 1764.

"I am tir'd to death; tho' I have seen here such sights I had no Conception of but in Fairy land, & have seen the Visions of the Arabian Nights realiz'd by the Venetian Regate; This Show was given the 4th of this Month in honour of our King & to entertain the Duke. I shall be a week in telling you all I saw and felt that Day. Such Elegant luxury! which plainly shew'd, that the Contrivers were as little formidable in war & Politicks, as they were superior to all ye World as Managers of a Puppet-Show.—I have taken my Evening Walks of Meditation on the Rialto, & have fancy'd myself waiting for my friend Pierre, but the whole Idea has vanish'd at the Sight of a Venetian Noble, who can give you no Idea in look & in dress but that of an Apparitor to a Spiritual Court in the Country."

Paris Nov. 10, 1764.

"I am a little y<sup>e</sup> worse for wear, and was so alter'd a fortnight ago, that I was not known, till I spoke; but now, my Cheeks are swelling, my belly rounding, & I can pass for a tolerable looking French Man; but my Nerves, & my nerves—They are agitated at times; & the Duke of Devonshire's death had very near crack'd them—they kept his Death from me by the manage of the best of Women & Wives, till I was better able to struggle with such a Heart-breaking loss—He lov'd me to the greatest Confidence, & I deserv'd it by my gratitude, tho' not by my Merits—I must not dwell upon this subject, it shakes me from head to foot—I can't forget him—and the blow was as dreadful to me in my weak condition as it was unexpected—I heard

nothing of Hubert and Hogarth before your letter told me of their Deaths—I was much affected with your News, the loss of so many of my acquaintance in so short a time is a melancholy reflection: Churchill I hear, is at the point of death at Boulogne, This may be report only—he is certainly very ill—what a list of publishing has possess'd him for some time past—the greatest Genius no more than the greatest Beauty, can withstand such continu'd prostitution—I am sorry, very sorry for him—such Talents with prudence had commanded the Nation—I have seen some extracts I don't admire."

"You wish me in Southampton Street—and so do I wish myself there; but not for Acting or Managing, I'll see you, my Dr Colman, and other Friends—ye Doctors all have forbid me thinking of business—I have at present lost all taste for y<sup>e</sup> stage—it was once my greatest passion, & I labor'd for many years like a true Lover—but I am grown cold—should my desires return, I am the Town's humble servant again—tho' she is a great Coquette, & I want Youth, vigorous Youth, to bear up against her occasional Capriciousness—but more of this when I see you—Foutie has been here, I did not see him."

This pretended indifference to the stage may be contrasted with the paltry puffing which subsequent letters enforce as preparatory to Garrick's return and reappearance. In this respect he seems to have been a *Master of Arts*. *Ex. gr.*—In a letter dated Jan. 27, 1765, he says—

"Suppose there was an extract of a letter from Paris?—in which many things may be mention'd & y<sup>e</sup> friend among y<sup>e</sup> rest, that it may take off all suspicion from me: I should be glad that you would add, diminish, correct, and blow a little pepper into y<sup>e</sup> tail of y<sup>e</sup> following Nonsense.

—Extract of a letter from Paris—

—the great subject of Conversation here at present is the Hermaphrodite who has married a Girl at Lyons—they have annull'd y<sup>e</sup> marriage there, and in their sentence have condemn'd the Hermaphrodite to wear Woman's Apparel hereafter—from y<sup>e</sup> circumstances of this case (& very strange they are) the Sentence is thought unjust, and there is an appeal from it to y<sup>e</sup> Courts here, and the Curious wait with great impatience for the Consequences—the Philosophical Dictionary which has made so great a noise here, & thought to be Voltaire's, is absolutely disown'd by him, & for very good reasons, the parliament has taken it into consideration, & if the Author is known, He may have reason to repent both of his Wit & his Indecency—the Play house (the french one I mean) cannot stand against the comic Operas at the Italiani—the last which is taken from our George Barnwell, & call'd l'Ecole de la Jeunesse, is much admir'd—They have chang'd the Murder of the Uncle into an intention of robbing his Scrivener, where the Young Man finds his Uncle's Will, in which he is left Heir to all his Uncle's Estate—this occasions a new Catastrophe, by repentance &c. & it Ends happily & happily, " &c. &c. "I write (he adds) in cor-

fusion for y<sup>e</sup> Ambassador's Private Secretary has promis'd to send this for me in his packet & the man waits for it—I think you must leave me out as I have, or begin y<sup>e</sup> Paragraph about me; 'our little Stage Heroe looks better than he did &c'—if you think it right speak of me as you please, gravely, ludicrously, jokingly, or how you will, so that I am not suspected to write it—pray touch this matter up as I believe at times & in all humours—walking, trotting or Galloping

"Ever & Ever y<sup>s</sup> D. GARRICK."

In a letter about two month's later we find the following olla.

"But Munn—pray does Powell continue to visit you, and get a little Sense from you, or is he topsy turvey like y<sup>e</sup> rest & thinks like Rich<sup>d</sup> y<sup>e</sup> 34 that he is himself alone? I hope he is wiser—but I'll answer for Nothing or Nobody in a playhouse—the Devil has put his hoof into it, & he was a Deceiver from y<sup>e</sup> beginning of y<sup>e</sup> world—told me really what you think of him—I am told by several that he will bawl & roar—*Ross*, I hear, has got reputation in *Leam*—I don't doubt it—the Town is a factious Gentleman—What do you mean, my good friend, by my being oblig'd to appear, if I manage? upon looking over y<sup>e</sup> letter, I find your words are expected to appear—I must intreat you to be very sincere with me—do the Town in general really wish to see me on y<sup>e</sup> Stage? or are they (which I rather think y<sup>e</sup> truth) as cool about it as their humble Servant?—I have no new for it, at all, & yet something must be done to restore our credit: that I may be able to play, & as well as Ever, I will not deny, but that I am able to do as I have done, wear & tear, I neither must or can, or will—the Physicians here, Dr Gem among the rest, advise me, to a man, against appearing again."

We shall not dwell upon the little trickeries of business which transpire in pages 280, 281, &c.: the following extract is more agreeable to our tastes and purposes; and with it we conclude our quotation.

To George Colman.

Christmas day.

May Xmas give thee all her cheer,  
And lead thee to a happy year!  
'Tho' wicked Gout has come by stealth,  
And threats Encroachments on my health;  
Thou still my foes indolge their Spite,  
And, what their malice prompts, will write;  
Thou now to me the Stage is hateful,  
And He, who owes me most, ungrateful;  
Yet think not, George, my hours are sad,  
Oh no—my heart is more than glad;  
That Moment all my Cares were gone,  
When You & I again were One;  
This gives to CHRISTMAS all her cheer,  
And leads me to a HAPPY YEAR."

In one of his letters speaking of Cumberland, Garrick says, "It was impossible for you to satisfy Cumberland, had y<sup>e</sup> rack forc'd from you as much falsehood, as he has vanity—I am very glad you have prepar'd him for me; had you been as mischievous as you were sincere with him, You might have sent him so high Season'd, & stuff'd so full with conceit, that I should have had much ado to lower him; he has behav'd so dis-

agreeably with me, that I must have a pluck at his feathers, whether they belong to Terence, Shadwell, or are of his own growth." In another, he says, "I am very angry with Powell for playing that detestable part of Alexander—Every Genius must despise it, because that, & such fustian-like Stuff, is the bane of true merit—If a man can act it well, I mean to please y<sup>e</sup> People, he has something in him that a good actor sh<sup>d</sup> not have—he might serv'd Mr. Pritchard, & himself too, in some good natural character: I hate your Roarers."

Before we have done we shall just state that the Editor seems in his notes to be rather inclined to depreciate those of whom he speaks; he also treats Cumberland very slightly, as well as Murphy and others. Henderson the actor appears from his letters to have been a very superior being to the general run of performers; and Gentleman Smith, from his, to have been a quarrelsome fellow.

Upon looking back, we feel that we may safely mention this volume as a production that will afford much gratification to the public.

#### BRITISH FRUIT TREES.

[Extracts and Observations continued: Phillips' Pomarium, &c.]

*Gourd*.—"The hottle-gourd, (*lageneria*) grows in many parts of the world to near six feet long, and two feet thick. The rinds or shells are used by the negroes in the West India islands as bottles, holding from one pint to many gallons. Barham speaks of one that held nine gallons; and the Rev. Mr. Griffith Hughes mentions them, in his History of Barbadoes, as holding twenty-two gallons. Sloane mentions one of these gourds as large as the human body. • •

"The gourd, called Vegetable Marrow, is of a pale yellow colour. Those I have seen did not exceed from seven to nine inches in length. It has only been known a few years in this country; and, I believe, was not sold in the shops and markets before the summer of 1819; and although they are of so late an introduction, the accounts are very imperfect; but it seems most probable that the seeds were brought in some East India ships, and likely from Persia, where it is called *cicader*. It is cultivated in the same manner as cucumbers, and is said by those who have grown them to be very productive. This fruit is used for culinary purposes in every stage of its growth. When very young, it is good fried with butter; when half-grown, it is said to be excellent, either plainly boiled, and served up sliced on toasted bread, as asparagus; or steamed with rice sauce, for which purpose it is likewise sliced. It is often sent to table mashed like turnips: when full grown, it is used for pies. It has been highly recommended to me by many persons who have grown it, while others speak of it as but little superior to the pom-pion."

We observe, from Galiffe, that the pumpkin is the principal food of the lower orders in Valencia; and have no doubt but

that it might be very advantageously introduced into the meadows of this country, but for the prejudice against all innovations of this sort, and for purposes of economy, which Mr. Phillips has noticed. All along the Danube too the gourd and melon constitute, during their season, the daily meals of the labouring classes.

But we return to our extracts, which afford so much for consideration, and offer so many useful suggestions.

*Grape Vine*.—"The Duke of Portland has upwards of a hundred kinds of grape-vines at his seat at Welbeck; and in the year 1781, his grace made a present to the Marquis of Rockingham of a bunch of grapes that grew in his vinery, which weighed nineteen pounds and a half: it was nineteen inches and a half in the greatest diameter, four feet and a half in circumference, and twenty-one inches and three quarters in length. It was conveyed to Wentworth House, a distance of twenty miles, by four labourers, who carried it suspended on a staff, in pairs, by turns.

"The vine at Hampton-Court Palace, which was planted in the year 1769, has a stem of thirteen inches in girth, and a principal branch 114 feet in length, which, in one year, produced two thousand and two hundred bunches of grapes, each weighing, on an average, a pound. His late revered Majesty enjoyed the fruit of this vine half a century. Fruit was the only luxury in which he indulged himself, and that was cultivated in the Royal Gardens to the highest perfection, and served at table in great abundance.

"The first duty on wines was one penny per ton, which was in the year 1272, when wine gaugers were first appointed at London and the principal sea-ports. The new gauge duty at London alone amounted to fifteen pounds sixteen shillings and seven pence, which makes the quantity imported amount to 7,598 pipes. The principal customs for importation, at that period, seem to have been on wines chiefly French and Rhenish, as there is yet scarcely any mention of Spanish, or Portuguese, or Italian wine. (*Madox's History of the Exchequer*.)

"In the year 1409, the duty on wine was three shillings per ton.

"Grapes seem to have become rare about the year 1560. Strype, in his life of Grindall, Bishop of London, (who was one of the earliest encouragers of botany in this kingdom,) writes, that his grapes, at Fulham, were esteemed of that value, and a fruit Queen Elizabeth stood so well affected to, and so early ripe, that the bishop used every year to send her Majesty a present of them."

The following lines, of a poet of the fourth century, show what wines the Britons of those days had a knowledge of.

"Ye shall have rumney and malspine,  
Both yppocrase and vernalge wyne,  
Mountreie and wyne of Greke,  
Both algrude and despice eke;  
Antioche and Bastardie,  
Fymet also, and garnarde,  
Wyne of Greke, and Muscadell,  
Both clare, pymeat, and Rochell.

"Some of these liquors, as yperassae, pyment, and clare, were compounded of wine, honey, and spices."

*Juniper.*—"It has been said, that a coal of juniper wood, covered with ashes of the same kind, will keep on fire a whole year."

[Mr. Phillips, in a note, has been obliging enough to assure us, that the weight of the gooseberries, alluded to in this work, the account of which we quoted last Saturday, was three Guineas and a half, and not three Grains and a half, as we imagined. They were grown by Mr. Lee of Hammersmith, by whom they were weighed.]

(To be concluded in our next.)

## ORIGINAL CORRESPONDENCE.

### SURPRISING PROPHECIES!!

#### MOORE'S ALMANAC.

SIR.—Last night, immediately on my return from a month's trip to the Continent, went to pay my respects to my grandmother, and had scarcely acknowledged her affectionate gratulations, with her pious "Blessed be God," when I perceived her venerable countenance assume a playful air of triumph, which prepared me to expect some new conviction, "setting me to rights" for a former error, on the score of incredulity. For, be it known, the good old lady has a little taint of ancient superstition, which being so unfitting with her good sense and real piety, somehow conveys an indescribable interest to the minds of all her grandchildren, having begotten a thousand little disputations which show her weak side, and which will be treasured up by our family circle who may survive her, with fond recollection.

Well, then, Mr. Editor, I saw the secret triumph playing on her benignant brow—and inwardly began to cry "peccavi." "Now Sir," said she, with that mock gravity, which she affects so well, and holding her admonishing finger to my face, "Now, Sir, will you henceforth have the presumption to laugh at my credulity? Thou saucy boy!" And very coolly putting on her spectacles, took from her favourite work-basket, what you may guess for a long time before you hit upon: and pointing to a passage, already marked with her pencil, to my confusion, said, "read you that, and that."

"Well, dear Granny," said I, "this certainly is strange enough." She took the book from me, and smiling with conscious victory, said, "Aye master Phil. I knew I should have you some day;" and with her accustomed mildness returned MOORE'S ALMANAC carefully back into the conservatory basket.

Now be it known, my grandmother has been a constant subscriber to Moore's Almanac, from the year of our Lord, being bissextile or leap year, 1760, up to this time, speaking from the recollection of my grandfather's chronology of this event; who, good man, (venerated be his memory,) I

verily believe first taught me my *unbelief* in this mystic book.

The passages so carefully treasured up, and identically marked for the conversion of the *sceptic* Phil., I have by granny's permission copied out, and send them for the contemplation of your readers, whether seasoned like my grandmother, with a spice of superstition, or far gone in calisthenic reverie, or like him that overthrew old Sirophiel and kicked the impertinent Thracium, who held no allegiance to the stars at all, knowing that among the multitude of readers "now a-days," there are some—

"Of those *Athenian sceptic* owls,  
That will not credit their own souls,  
Or any science understand  
Beyond the reach of eye or hand:  
But measuring all things by their own  
Knowledge, hold nothing's to be known:  
'Those wholesale critics, that in *CORRÈ*  
*HOUZES* cry down all philosophy."

Mister Editor, this is a sad business. "There is no moral speculation in the land." I see it, to our shame be it spoken. The news-paper rooms are crowded, and gentlemen who tell you, who provide a literary feast, that they have no *stomach* for it—Yes, tell you, and some worthy confidants who would tempt this *SPRIT* of *ILLUMINOR* to recreate in the cheerful regions of poetic imagination, or wander awhile amidst the delightful scenes of nature, where the sickening soul might breathe the pure air, untainted with the pestilence of politics—that they have no time for "such things," no leisure for reading;—God help them, elbowing each other as they do, feasting upon the diurnal catalogue of human woes and human iniquity, for three hours at a time in dull succession. Such are seen scrambling for a newspaper and a seat, at the Institution in the East, and the Institution in the West; that too in the South, and the same within the smoky walls of Jermyn Street, where the uncounteous politician, surly hux! snatching the half-shut snuffers from a neighbour's hand, snuffs no one's candle but his own. Meanwhile the library, well stored with wisdom's interesting lore, is left alone for "rats and mice, and such small deer" to *quadrille* it, morning, noon, and night, upon the deserted floor, to colonize behind the folios, and turn the silent shelves to unloasted nurseries.

Yes, this is the AGE OF SLANDER. The stars have told us so; vide old DOCTOR MOORE, and you shall see it, Sir. And were your "gentle readers," addicted to reading, like my grandmother, this foreknowing of the long since deceased almanac maker, would long ago have found its way into the *Literary Gazette*, or some like "topping" work.

But before I give you the prophetic sentences, be it known there were two Mr. Moores, the one, as Jeremy Collier says, of evil report, belonging to the profaneness of the Drama, of whom it was said,—

"O! Mr. Moore, you son of—  
I wish I'd known your tricks before,"—  
*Vide Dragon of Wantley.*

Whereas, my grandmother's Mr. Moore was a physician and a pious man, who died many years ago; but who foretold what is acting on the great stage of life at this very hour!

"Quoth Hudibras, make that appear,  
And I shall credit whatsoever  
You tell me after on your word,  
How'er unlikely or absurd."

Then, Sir, without further digression, read this, and compare notes, with my grandmother—

"MOORE, August 1820. Monthly Observations."

Marked page 17, immediately beneath the red ink. "NEW MOON 8 day, at 10 night. 'Now let the Farmer attend to his *Wenther Glass*, if he has got a good one."

"SCURRILOUS PAMPHLETS SPRING FROM THE PRESS, VILLIFYING AND AFFRONTING EVEN MAJESTY ITSELF."

"There is a Lust in Man no Charm can tame,

Of loudly publishing his neighbor's  
First Quar. 17\* day, at 2 morn. (Day\* of the Trial.)

Shame;  
On eagles' wings immortal Scandals fly,  
While virtuous Actions are but born and die."

Full Moon, 23 day, at 10 night.

Matters of weight are now upon the carpet, I wish them a happy issue."

What will the *LUNATICS* say of this? Is it not a true, a lamentably true, prediction? But this is not all. In September, it is prophetically said, "there are too many amongst us that despise and contemn the honourable and learned clergy; such persons we shall find, will be sufficiently active this month." Lo, the whole bench of bishops are not only vilified by factious writers, but daily exposed to the hissing and hooting of the mob, in their way from the House of Peers. October (I have no doubt truly) foretells that "matters very formidable begin to appear in Italy;" but the most astounding of all appears in November.

"The aspects of this month (says the gifted MOORE) are most of them of a very turbulent nature; broils and uneasiness now appear very barefaced."

Full moon, 20 day, at 3 morn.

"Towards the end, one of the LONG ROBE meets disgrace, or at least some great disappointment."

And the very next article—"Also a FEMALE of note meets sorrow and affliction."

And the following, with nothing but the moon in red intervening—"A sly intrigue about this time comes to light."

Why, Mr. Editor, men are not stocks and stones,—if they do not believe this, as Lord Peter says, let them die and be damned.

I confess to you that these things have produced an effect upon me, more or less; and I anticipate that they will likewise astonish the world, if not the day before, the day after your publication, as the heavens do walk in a constant course of circular motion. Indeed I begin to think with Hamlet, that

\* N.B. I am on the wrong side of 40; for my female progenitors showed a good example to their sex, by marrying young.

There are more things in Heaven and Earth Than are dreamt of in our philosophy. But enough of this game, which I fear may be so long as to tire you with

PHILIP-MOORE.

#### ANCIENT SUPERSTITIONS.—NO. I.

To the Editor of the Literary Gazette.

Sir,—To investigate the absurd and fanciful customs of past ages, is not only curious and instructive, but at the same time highly interesting, as such an investigation clearly shows the vast improvement effected in the mind of man on his emerging from his former state of ignorance and superstition. Among the many extravagant hypotheses entertained by the ancients, none appear to have been carried to a greater or more absurd height than the doctrine of numbers; for, without mentioning authors of an inferior class, it is sufficient to remark, that the mysteries of the ternary, septenary, and novenary, have severally employed the pens of an Aristotle, a Plutarch, a Macrobius, and a Censorinus. Porphyry, in his Treatise de Sacrificiis, tells us, they were bestowed by the Gods, and that the use of them is essential to the well being of mankind; and this doctrine was so admired by the Pythagoreans, that they even called their deities by them, assigning one number to *Pallas*, a second to *Dianna*, a third to *Apollo*, &c.; affirming, that by numbers alone, the natures of all things were preserved.\* Odd numbers were those most regarded, and Virgil gives us the following reason, because—*Numero Deus impar gaudet*;† and Censorinus and Pliny notice the same thing; for the former, alluding to the odd day of the year, says—“*Sed ut unus dies abundaret, aut per imprudentiam accidit, aut quod magis credo est superstitione quod impar numerus plenus est magis faustus habebatur.*”‡ The latter believes, in enumerating the various silly beliefs that influenced his countrymen, asks, “*Cur impares numeros ad omnia vehementiores credimus?*”§ Of all the unequal numbers, three was considered the chief; or, as Macrobius terms it, *primus omnium numerorum impar*, and was supposed to contain, in itself, a beginning, middle, and end; the adoption of this particular number arose not improbably from the faint and imperfect notion of a Trinity, that existed among many nations; from this circumstance, it borrowed much of its attributive power, to which it owes its

frequent and almost particular use in all charms, ceremonies, sacrifices, remedies, &c. &c.—thus,

“*Terni tibi hinc primum triplices diversa colores  
Lilis circumdo, terque hinc altaria circum  
Efficiam duco.*”—*Virg. Ecl. 8. v. 73.*

“*Necte tribus nodis ternos Amarilli colores.*”

*Id. Ib. v. 77.*

“*Hec mihi composuit cantus, quies fallere possit,*

*Ter rano, ter dictis despus carminibus.*”

*Tibul. Eleg. 2.*

“*Et digitis tria thura tribus sub limine ponit.*”

*Ovid. Fast. lib. 2.*

“*Terque senem flammis, ter aqua, ter sulphure  
lustrat.*”

*Ovid. Met. v. 261.*

“*Ter si resurgat murus ahenicus  
Auctore Phœbe; ter pereat moies*

*Excisus Argivis; ter uxor*

*Capta virum proseroque ploret.*”

*Hor. Carm. lib. iii. Od. 3.*

As quotations from the classics on this subject may be carried on to a considerable length, I shall merely observe, that, in medicine, if the eyes were sore, they washed them three times; if a potion was administered, it was to be taken in three cups; in sacrifices the people were sprinkled by the priest three times; in the Salian dance they beat the ground three times; women in childbirth called on *Juno Lucina* thrice; in exorcisms they spat three times on the ground, &c.—In religion, likewise, the ancients paid particular regard to this number: Jupiter's thunder had three forks; the sceptre of Neptune three prongs; the dog of Pluto three heads; the Pythian priestess sat on a tripod, the three legs of which, as we are informed by the Scholast on *Aristophanes*, signified the knowledge of the God, as distinguished by the three parts of time, viz. the present, the past, and the future. There were likewise three *Parce*, three *furies*, and three several capacities to the sun, as *Sol*, *Apollo*, and *Liber*; and a similar number to Proserpine, as *Hecate*, *Dianna*, and *Luna*, &c. With respect to other nations, the Hindoos make three suppressions of the breath when meditating on the trilateral syllable OM: the Sabians prayed three times a day; and acts of adoration are performed among many nations by bowing the head three times, or by three prostrations. In our own country, people were dipped in holy wells three times; diseases were cured by three circumvolutions, &c.; and Shakespeare, in his *Macbeth*, makes his witches say,

“*Thus go about, about*

*Thrice to thine, and thrice to mine,*

*And thrice again to make up incense.*

Peace! the charm's wound up.”

*Act 2, Sc. 3.*

Mr. Gay also alludes to this number, in his 4th pastoral.

#### ARTS AND SCIENCES.

##### HERCULANEUM MSS.

On Sir Humphrey Davy's attempts to unroll the Herculanæan Manuscripts.

The above is the superscription of a letter to the Editor of the *Bibliothèque Italiana*, in the Number for April 1820. It contains

corrections of the reports of entirely successful experiments, first inserted in the *Giornale Enciclopedico* de Napoli 1820, Number 2, and thence rapidly circulated by many German (and other) journals; but which reports, according to the assurance of the writer, are entirely founded on what one has related to another; and by no means on an accurate knowledge of what really happened.

The first part of the letter relating merely to previous circumstances, with which we have been already made acquainted by Sickler and others, need not be repeated here; and we proceed immediately to that part which alone is new; namely, what relates to Sir Humphrey Davy's latest experiments, and their results.

Davy's attempts are here said to have been led by those of Sickler, which failed; and by which seven MSS. were nearly ruined; for which reason the English Government would not allow the remaining ones to be subjected to any new experiments. The Prince Regent (now King) commissioned Sir Humphrey Davy to go to Naples, to make a trial of his method on the MSS. there, the Court being induced to communicate them by an official application of the English Government. By an order from the King of Naples to the chief director of the process of unrolling, a part of a MS. was in fact delivered to Sir Humphrey Davy. It contained a Greek fragment, and was unrolled very easily.

Davy (says the writer) brought a small phial with him, containing a substance which he did not show; and also a glass tube open at both ends, into which he put the roll. He put the whole into a copper tube which was carefully closed. This was placed near a gentle fire, which was gradually increased, and at the expiration of an hour and a half as gradually diminished, in order to prevent all possible damage from the expansion of the gas. It was remarked on opening the apparatus, that the gas penetrated into the leaves of the papyrus, and that they began to separate; and also that its operation, partly removing the dust from the surface, made the Greek characters appear the more legible. As this excited some hope, it was wished to try what success would be obtained with a harder piece of papyrus, which was treated in the same manner. But as Sir Humphrey Davy could not stop more than half an hour, very little was done. He promised to come back in six weeks, but did not return till December 1819, and petitioned the King for permission to make the chemical experiments on five or six spoil rolls of papyrus, and to unroll five or six good ones. All that he wished was granted him.

Sir Humphrey Davy made his experiments on the fragments which were given up as useless; and convinced himself that many of them contained, besides the coal, earth also, namely tuffa. It appeared likewise, that the ink of the ancients contained no metallic or mineral parts, but was merely a mixture of very fine charcoal, or properly soot, with a vegetable substance, as Pliny describes it.

At the same time, or to speak more pre-

\* Vid. Plutarch. Comment. in Anim. procreant. parvum.

† Eclog. viii. v. 75.—In Ravenscroft's Comedy of “Mamamouchi, or the Citizen turned Gentleman,” London, 1675. p. 52. Tizicknorne, habited as a physician, says: “let the number of his bleedings be odd, Numero Deus impar gaudet.”

‡ Censorinus de die Natali, c. 20.

§ Plin. Hist. Nat. tom. iii. lib. 28, c. 2.

¶ The Brahmins have their *Brahmah*, *Vishnoo*, and *Siva*; the Persians their *Oromasde*, *Mithra*, and *Arathra*; the Egyptians their *Amset*, *Imset*, and *Orus*; the Arabians their *Adit*, *At*, *Uzza*, and *Manah*; the Phœnicians and Tyrians their *Belus*, *Cronus*, and *Adonis*, &c. &c. *Vid. Holwel's Events, Part 3d, § 43. p. 33.*

ciously, on the 27th of December last, Sir Humphrey Davy desired to leave the process of unrolling continued upon two MSS., which he found on the well known machines, according to the usual mode. He observed, that the leaves did not easily separate, and consequently disturbed the uniformity of the proceeding.

He therefore wetted the surface of the MS. with a pencil dipped in sulphuric ether, and suffered this liquid to dry on it. As this composition is extremely corrosive and expansive, it indeed quickly penetrated into the internal part of the roll, and really separated the leaves; but it detached several leaves at once, and consequently hindered that from being done with the MS. which must be done, to obtain a knowledge of its contents. Hence, conceiving the idea that the Latin rolls were composed of a double leaf, and that consequently, in order to separate them entirely and completely to unroll them, a stronger glue should be applied than that used here, and which might effect a better union of the papyrus with the gold-beater's skin, he determined to substitute for the isinglass used at Naples, a solution of resin, namely, gum of the olive tree; but unfortunately this cement could not unite the papyrus and the skin: this attempt was therefore soon given up. He then had recourse to a solution of *cloruro di jodio* in alcohol, and wetted with this the surface of the roll; he then quickly laid on the gold-beater's skin in the usual manner, and contrived a mode of accelerating the unrolling of the leaves by a warmer current of air, of which we shall speak below. How little this answered, appeared from its having been attempted only once or twice, without any success. For some of the MSS. appear to be rather stone than carbonised papyrus, so much are they covered with the finest particles of tuffa.

Sir Humphrey put one manuscript into a copper tube closed at both sides, and connected on one side with the mouth of an alembic. In it he mixed, in certain proportions, lime and hydrochlorate of ammonia, and brought this near to the flame of a lamp. The roll, which by these fumigations had become almost unfit for unrolling, was taken out of the tube, and exposed to the air. The following day it was found split into many pieces, like shavings. Sir Humphrey attempted to soften these by a solution of gum elastic in sulphuric ether. He then had them lined with gold-beater's skin, and dried them by directing upon them a warmer current of air. But all was in vain; not a line was legible.

Other rolls, which appeared not sufficiently carbonised, and consequently not adapted for the usual process, Davy resolved (in order to carbonise them still more) to put into a copper tube which was open on one side and closed on the other. He poured a few drops of muriatic ether upon it, and heated it to a very high temperature. This was the cause of the failure; for the experiment being repeated more slowly and cautiously, it was observed to be attended with some success; not indeed in rendering the

reading easier, but facilitating the unrolling of the imperfectly carbonised papyrus leaves.

The greater part of the rolls on which Sir Humphrey tried his experiments shewed no traces of writing, even when he could get to the inner side of the leaf. The reason appeared to be, that the ink which the ancients used had been entirely dissolved or destroyed by time, or by the effect of the fire. Sir Humphrey still flattering himself with the hope that the characters would appear more plainly if the leaf were tinged with yellow, he mixed *cloruro di jodio* with sulphuric ether, and moistened the surface with it. But this experiment had no influence on the colour, and did not bring to view the much wished for characters. A more favourable result appeared to attend the *gas cloro*, to the effects of which a small piece of a roll was subjected, for the letters appeared rather clearer through it; but it was soon found that this process was not applicable on a large scale, and did not seem to produce any considerable effect.

After all this Sir Humphrey Davy returned to the old method, and abided by it to the last day of his stay at Naples. Only sometimes, instead of adding water to the isinglass, he poured in some drops of alcohol, which accelerated the separation of the leaves even when they seemed to be stiff and unmanageable.

Recourse was again had to the experiment of directing upon the surface of the MS. a warmer current of air, *i. e.* atmospheric air which passed through a bladder that had been warmed by a metal pipe; but it was found that great care was necessary in this process, because otherwise it blew away the very delicate substance of the papyrus, and wrinkled and displaced the skin (the gold-beater's skin we presume); this method was, however, good to soften the glue when it had become too hard. This is the sum of the gain of these and of some other experiments, the inapplicability of which was recognized at the first moment. The narrator therefore does not detail them particularly: he mentions only that it was the resin of the *Ligno Santo* (gum guaiacum) and mastic dissolved in alcohol, gummi elasticum dissolved in sulphuric ether, the solution in alcohol of pure potash mixed with the solution of gummi elasticum, ammoniacal gas, &c. with which experiments were made on no less than twenty-six MSS. which Sir Humphrey Davy himself selected. He left two and twenty behind half finished, without having accomplished the unrolling of them, entrusting the continuation of the process to the persons appointed in Naples. After so much good will and perseverance (probably on the part of the Neapolitans, for the expression of the narrator is equivocal) Sir Humphrey Davy departed not a little dissatisfied, and complained that rolls had been given him in which there was no writing. Only very inconsiderable and absolutely useless fragments were obtained through him of Greek as well as Latin MSS. Sixty-seven such fragments have been drawn (or designed), of which only thirty-one have come into the possession of the institution for unrolling

the MSS.; and though Sir Humphrey Davy promised to leave them all there, he took the rest with him, after having united the copies of them, with a pen, in a book which he proposed to shew at London.

If the chemist, as appears pretty plainly, was not fortunate, the Hellenist whom he had with him was proportionally lucky. He, when he had read only a couple of words, knew immediately what was the subject of the MS. Thus, in a fragment of a Latin MS. he had read the word *dirit*, and now it was evident that it contained an historical work. In a Greek MS. he succeeded in making out the words *ἑστὸς ἄνθρωπος*, and he was convinced it was a philosophical work; in another he found a few words which might be formed into pieces of impure iambics, and our Hellenist now affirmed it was a drama, though, from the continuation of the lines, there was much more reason to suppose it was prose. In another he read *ἡ ἀρχή*, and insisted that it must be academy; and could not be persuaded of the contrary when it was observed to him that the letter which followed *aka* was certainly not a *d*. This learned man wished to have a column of every one of the MSS. which he already unrolled in the establishment, in order to make a list of their contents; but the Neapolitans kept back those elucidations from the learned world, under the vain pretext, that the persons appointed to explain had read them more at leisure, and would not fail, in due time, to give an account of them. But what might we not have promised ourselves from the acuteness of an Hellenist, who was able to distinguish not only the lion by his claw, but even the skin by a single hair!

However this be, concludes the narrator, we must commend the great chemist for having exerted himself to the utmost to restore to the learned world the works, the loss of which we deplore. If the process of unrolling hitherto used has received from him only inconsiderable improvements, and if he had not succeeded in rendering even a single page legible, this is by no means to be ascribed to a deficiency in zeal, but solely, as we believe, to the unfortunate condition of the manuscripts.

As some of our readers may be unacquainted with the condition of these MSS, we copy from Galiffi's Italy (of which a review has been taken in our immediately preceding Numbers) a brief notice of the subject, which will serve to explain parts of those remarks.

"One of the most interesting things at the *Studiis*, is the unrolling of the ancient and carbonized manuscripts, found in the subterraneous ruins of Herculaneum. It is performed in a manner at once very simple and very ingenious (qualities which are usually found combined in the most useful inventions). Every manuscript looks exactly like a piece of charcoal cut into the shape of an ancient *calamus*, and it requires the greatest care to prevent it from crumbling into mere coal-dust. For this purpose, the outer part is covered with very small pieces of skin applied to it with a light glue or liquid gum. The roll is suspended on two ribbons, fastened to an upper board, which, with two parallel supporters, forms a sort of frame, of the shape of a Greek *pi* (Π). The

roll is, moreover, tied with two small threads to two pegs, which, being gently turned, unfold it by very slow degrees. As for as the whole of what was seen outside has been covered with skin, and glued together, to prevent its falling to pieces. The pegs are of course fastened on the upper board also, and the beginning of the volume is drawn upwards by them, so as always to leave the unexpended part of it resting on the ribbons by means of its own weight. The side boards have no other use than that of supporting the upper one. I wish I could make this description quite clear to those who have not seen the thing itself, but the simplest machinery is often very difficult to be described.

"It is impossible to avoid the loss of some parts of the manuscripts, which the violent action of the heat, combined with other accidents, has either melted together, or so completely fastened that they cannot be drawn asunder entire; but these blanks are not nearly so numerous as might be expected. The writing of the Grecian manuscripts is so uncommonly beautiful, that it makes the task of deciphering them, as fast as they are unrolled, comparatively easy: the Latin ones are much more difficult. The whole of the inside of the rolls is black; but a slight difference of shade renders the ink sufficiently perceptible. The invention does the highest honour to the man who first conceived the possibility of unrolling a piece of charcoal. Millions of well-informed men would have thought it absurd to undertake it."

There are in all seventeen hundred manuscripts in the studio, of which three hundred are already unrolled. The eyes of all the amateurs of classics are anxiously turned to the discoveries which may be made by these means, and they are justly impatient to see the result. Hitherto, the most valuable of the works which have been unrolled, are a treatise by Epicurus, and several others by his disciple Philodemus, on music, rhetoric, virtue and vice."

#### LITERATURE & LEARNED SOCIETIES.

*Another discovery of Fragments of Cicero's Orations.*—The Abbé Amadeus Peyron, professor of Oriental languages, in the University of Turin, has discovered some fragments of Cicero in a MS. from the Monastery of St. Columban di Bubio, a town on the Trellina, in the King of Sardinia's dominions. This MS. contains important new readings of orations already known, and confirms the identity of several texts, which have been cruelly tortured by indiscreet critics. It contains, besides, fragments of the orations, Pro Scauro, pro M. Tullio, in Clodium, orations which are unfortunately lost. Some of these fragments had been already published by M. Mai, after a MS. of the same library of St. Columban, preserved in the Ambrosian Library at Milan; so that, at the first sight, those two MSS. would appear to have made originally but one. But the difference of the writing, that of the parchment, the circumstance that one of these

MS. is written in three columns and the other in two, as well as that several deficiencies in the Ambrosian MS. are supplied by that of Turin, leave no room to doubt of their being copies essentially different.

#### FINE ARTS.

##### BRITISH GALLERY.

It is rumoured among the connoisseurs, that His Majesty, and the noble Directors of the British Institution, with their accustomed liberality, intend to leave most of the finest pictures, particularly those by Vandyck, in the Gallery for some weeks, as examples of excellence in *portrait*, to be copied for the improvement of the students—properly the protégés of these illustrious patrons.

This most interesting Exhibition closes this evening; and those of our London readers who miss seeing it will have missed an extraordinary treat.

Among the most curious portraits are 72, Sir George Jeffreys by Riley (belonging to the Earl of Winchelsea), and one of the most benign countenances that ever disciple of Lavater studied. One would say it was impossible, with this stamp of nature, he could be the cruel monster he is represented to have been: 136, Killgrew painted when Minister at Venice, by Shepherd (belonging to G. Watson Taylor, Esq.). It was on his return thence it was said—

Our Killgrew Tom, from Venice is come,

And left the gay statesman behind him;

Just as wise, just as rich, just at the same pitch,

And just as we left him we find him.

161, Sir Nathaniel Bacon, by himself (the Earl of Verulam's), and a proof that he was no mean artist: 116, Dobson the painter, an admirable portrait, by himself: 162, Sir Thomas Gresham, by Sir Antonio More, (Mr. Taylor's), a work which raises the painter exceedingly in the scale of talent: and others which we cannot particularize.

##### CANOVA'S HORSES.

The celebrated Canova, who, by the admirable work of two lions which adorn the Mausoleum of Pope Clement XIII. in St. Peter's Church, had proved that he was no less skillful in representing animals than in producing the finest forms of the human body, has just given a new specimen of his ability in this branch of his art. It is now some years since he made the model of a horse of colossal size, it being the largest in Europe. This work excited the admiration of all the judges of the art, and of all those who have particularly studied this noble and spirited quadruped. This model has been cast in bronze at Naples, with complete success. Meantime Canova has been employed on another model of the same animal, but in an attitude different from the first; and though it seemed impossible that the artist should excel himself, he has found means to introduce into this new work so many new beauties, that one is never tired of admiring this *chef-d'œuvre*. Every part is finished—every part is worthy a sculptor, all whose designs are at once pleasing and learned, accompanied with per-

fection in the execution. The limbs of the courser are full of life and motion; but the head, in particular, seems to move, to breathe, and to neigh. This model is to serve as a companion to that of which we have spoken above; and both will adorn the grand square of the magnificent temple of Saint Francis de Paule, which is at this moment building at Naples, with truly royal splendour, after the designs of the architect Bianchi.—(From the *Diario di Roma*.)

#### ORIGINAL POETRY.

##### THE BATTLE OF TOPLITZ.

[One of the most brilliant affairs of the late war was the attack on Vandamme's army, after the failure of the march against Dresden. The chief allied corps was commanded by Count Osterman; and in command of his cavalry was Prince Leopold, who was subsequently distinguished by the allied Sovereigns for his gallantry in the engagement.]

From morn to eve the shell and ball  
Thunder'd on Pirna's shatter'd wall.  
From morn to eve the blood, like rain,  
Ran round the foot of Konigsstein.  
But, Toplitz, from thy granite brow  
Did that day's fiercest battle glow.  
Before the dawn, the musquet blaze  
Rust thro' the mountain's icy haze;  
And shouts and shrieks were on the air—  
The work of death was doing there.  
Day rose—and vast and wild the fight  
Broke from the bosom of the night.  
Still on the summit-crown a cloud  
Hung glowing like a sulphur shroud:  
There on his rock stood Osterman,  
Mowing the Franks' exhaustless van:  
War had no art that day untried  
Along that mountain's mighty side.  
Where stretch'd its brief and broken plain  
The squadron gave the spur, and rein:  
Where from the dell the rivulet stray'd,  
Perch'd o'er its bank the mortar play'd;  
Thick ramparted in groves of pine,  
The yagier tore the naked line;  
The cottage was a fortress wall,  
Mill, steeple, farm, were fought for all;  
Even where the mountain vapours fell  
Like twilight on the vicissitudes fell.  
There war was seen;—the yellow flash,  
The trumpet's blare, the cannon's crash,  
The volley thicket and sudden roll'd,  
Shew'd where the bold had met the bold.

'Twas evening. On the ridge of gray,  
In farewell to that dreadful day,  
Ours beat'd the sun: the mighty glare  
Laid the whole sweep of battle bare.  
Still front to front, thro' hills and dells,  
Down stretch'd the mighty parallels,  
Exploding flame—a lava tide  
Down the volcano's shatter'd side.  
The lines of horse along the plain,  
Like a huge serpent's doubled train,  
In wave for wave and fold for fold,  
Watching each other restless roll'd.

The final struggle was at hand—  
Swift as the desert's whirling sand,  
Condensing deep from flank to flank,  
On rush'd the squadrons of the Frank—  
The battle on the mountain's brow  
Was hush'd at once; all gazed below,  
And all was silence, hope, and fear.  
But oh! the shout that smote the ear,

\* See recent Numbers of the Literary Gazette, for accounts and specimens of these most interesting classical discoveries.

† Viz. pro Cluentio, pro Cæcina, pro Clodio, in Pisonem, &c.

When, like a mighty vulture's wing,  
Covering the land with gloomy swing,  
Upbeard'd the Russian cuirassier,  
The rank was check'd in full career.  
Each paused for a moment's sullen glance—  
What thoughts the heart in such moments  
shrouds!  
But the trumpet soon startled them from their  
trance—  
Out flash'd the sabre, and down couch'd the  
lance.  
And with tossing standards, and plunge and  
prance,  
They met.—'Twas the meeting of thunder-  
clouds!  
Bloody the charge: they mingle, reel,  
Fierce rings the clash of steel on steel;  
Helmet and head on high are flung.  
And riders by the stirrup swung,  
And standards torn and drench'd in blood,  
Are whirled along the fighting flood.  
Till pierced by lance, and crush'd by heel,  
Like parted flame the Frenchmen wheel.  
Still faintly up the riders bore  
Their flag of death, the tricolor;  
One fearful moment stood at bay;  
From the mountain roll'd the Russ hurrah—  
Rous'd by the roar, the cuirassier  
Struck in the spur, and stoop'd the spear—  
Thro' the weak ranks in thunder tore,  
And, Toplit, thy wild day was o'er!

TRISSINO.

## IMPROMPTU,

To a Literary Friend, on his Marriage.

Really, P—, I am sorry you thought of this  
thing—

The pleasures of both it will cramp;  
For your poor wife will feel she's *The Slave of the  
Ring*,

While you are *The Slave of the Lamp*.

ALADIN.

## SKETCHES OF SOCIETY.

## THE SHADOW.

A series of Essays under this title is about to  
be commenced in the Literary Gazette. They  
will be devoted to the delineation of men and  
manners; and it is hoped, will not present less  
claims to popularity than the most favored  
Sketches of Society, which have recently ap-  
peared. Notwithstanding the preparations  
made for carrying this design into effect, the  
Editor is solicitous to give additional spirit and  
variety to these periodical papers; and he begs  
leave to invite communications from Wits  
and men of talent. Those to whom remunera-  
tion is expedient shall have no ground of  
complaint; and those who honour us by mak-  
ing this journal the vehicle for their gratuitous  
incubations, shall be gratefully welcomed.

## THE DRAMA.

**HAY MARKET THEATRE.**—The comedy  
of Suicide was revived from a sleep of a quar-  
ter of a century, on Tuesday. C. Kemble  
and Terry were its chief props; but we are  
this week shut out from details.  
On Thursday, a comedy, entitled 'Dogdays  
in Bond Street,' was presented, with consid-

able applause. It is, we might say of course, a  
translation from a French Farce, improved  
according to the true *procrustean* method;  
racked out into three times its native di-  
mension. Its story is the old French an-  
ecdote of two young men, who in their  
distress for money, tried the expedient of  
giving out a report of the death of one of  
them, and thus extorting a remittance from  
his relations as funeral expences. In the  
Farce, the remittance is unluckily followed  
by the old uncle, who comes to enquire into  
the affairs of his deceased nephew, and who  
takes up his residence in the very hotel  
where the dead man is hiding from his  
creditors. This occasions the usual obvious  
tumult of escapes, discoveries, distresses,  
and disguises. The burthen of the play fell  
on Terry, as the old man; on Jones, as the  
surviving swindler; and on Liston, as the in-  
triguing valet. Mrs. Mardyn was the he-  
roine, and actually looked feminine; and a  
landlady new to the theatre, acquitted her-  
self with meritorious giddiness and garrulity.

## EXHIBITIONS

Her Majesty's Entrance into Jerusalem  
continues to attract multitudes to Pall-Mall,  
and is essentially beneficial to the other  
shows in that vicinity. Being in the way  
of temptation, and having seen the Spanish  
Imposition (Inquisition we believe the pla-  
cards call it) before, we paid our shilling for  
a bit of horse-flesh, and went to look at the  
beautiful Little Mare from Bengal, only 33  
inches high, and acknowledged by the *nobility*,  
and others who have seen it, to be the  
smallest horse in the kingdom! It always  
gives us pain to differ in opinion from the  
*peers* of the realm, and especially so when  
their judgement on flesh of another sort is  
creating such *disputations* ferment through-  
out the land. But we cannot in truth agree  
with the nobility, that this is the smallest  
horse in the kingdom. It is a pretty creature,  
docile, and deerlike; but we have not  
only seen, but have had in our possession, a  
smaller horse from Shetland, where hundreds  
of his family remain of the same diminutive  
stature, and even of smaller dimensions.  
Our perfect Hounym came in a Hackney  
Coach from the wharf at Wapping; and  
though thicker than the Bengal Mare, was  
several inches lower. It may be worth stat-  
ing, that these are the aboriginal horses of  
Shetland, and strong enough to carry a man  
nimbly and surely over the hills. They are  
not shod, and their sagacity is extraordinary,  
as is particularly shown by their travelling in  
the darkest nights over a country where roads  
are unknown, and where the slightest deviation  
would generally be to perish.

## VARIETIES.

To an admirable description of the mar-  
bles and statues, M. Clarac has added the  
following curious articles:—*A notice on the  
various substances, and different kinds of  
marbles, used by the ancient sculptors.*—*A  
table of the abbreviations in the latin in-  
scriptions and consular family names, which*

*appear on medals; and a minute description  
of the costume, arms, and attributes of every  
monument in the French Museum.*

A German journal relates the following  
curious fact:—A young man was lately ex-  
ecuted at Weimar, for the murder of his mis-  
tress, by throwing her into a well. The  
proof on which the criminal was convicted,  
is perhaps unparalleled in judicial annals.  
The unfortunate victim, finding all her sup-  
plications were vain, in a fit of despair,  
bit the arm of her murderer. When the  
body was drawn out of the well, there was  
found between the teeth a piece of cloth,  
which exactly fitted a hole in the sleeve of the  
criminal. Confounded by this unexpected  
testimony, the murderer confessed his guilt.

\**Northern Expedition.*—Accounts have  
been received in Edinburgh from the Arctic  
Land Expedition, which represent the party  
as being in good winter quarters, though the  
thermometer was 30° below zero, at Um-  
berland's Cove, in January last. The atmo-  
sphere was dry, the rivers and lakes abounding  
in fish \* of various kinds, particularly  
large trout; and the hunters brought plenty  
of Moose deer and buffaloes from the woods.  
As soon as the weather permitted, they were  
to set forward for the Northern shores.

## Daily Papers.

M. de Clarac, successor to the M. Vicenti  
in the office of Keeper of the Antiques of the  
Royal Museum of Paris, has just published an  
interesting catalogue of the Museum,  
much more extensive than any that has hith-  
erto appeared.

A violent shock of an earthquake was felt  
at Schivatz in the Tyrol, on the 17th ult.  
It moved in a direction from North to South,  
and did not last above a second. Almost  
every house in the place has been more or  
less damaged, and several walls have fallen  
down. The same shock was felt near the  
mountain of St. George, where several huge  
pieces of rock were detached, and hurled  
into the neighbouring valley. It is singular,  
that a phenomenon of the same kind, though  
attended by much more fatal consequences,  
took place in the Tyrol on the 17th of July  
1670.

• Were they not frozen up? Ed.

*Many articles of criticism, &c. are unavoidably  
postponed, to make room for The Abbot—cedunt  
arma togæ.*

Nothing in our next Number.

•• The bust of Cromwell, noticed in our last as  
one by an unknown hand, is mentioned to us to be  
the work of an artist of the name of Wilton. We  
do not recollect a sculptor of that name of the age  
of Cromwell. If *Alpold* does not record him;  
and Bryan, in his excellent Dictionary, speaks  
only of an Engraver Wilton in 1670. With re-  
gard to the anecdote of Cromwell's giving Prince  
Charles a bloody nose in 1654, we expressed our  
doubt of its accuracy on the authority of the  
memoirs of Oliver Cromwell, published a few months  
ago by his descendant Oliver Cromwell, and re-  
vised by his descendant Oliver Cromwell, Number 155, 8th  
January last, where R. B. P. will find the rea-  
sons for our disbelief stated.

Page 555, Col. 3, of this article, line 12 from the  
bottom, for sixteenth read seventeenth.

## BOOKS PUBLISHED THIS DAY.

Sir Henry Torrens.

**THE NEW MONTHLY MAGAZINE** for Sept. 1, embellished with a fine Portrait, (accompanying by a Memoir) of **SIR HENRY TORRENS**, and containing among other interesting articles—1. Letters to Mr. Malthus on several subjects of Political Economy, and on the present causes of the stagnation of Commerce, by Mr. Kay. 2. On the present state of Periodical Literature. 3. Lania and other Poems, by John Keble. 4. Reviews in a Garret, containing short and original Remarks on Men and Books, by Paul Pindar, Gent. 5. Anecdotes of George III. and the late Queen, by Mrs. Delany. 6. On Angling, by an Amateur, Letters 5 and 6. 7. On the supposed habitations of Columbus, Petrarch, and Judas Iscariot, by Baron Zach. 8. Historical Anecdotes of the Japanese. 9. Comparative Psychology. 10. On the Origin and Language of Ancient Rome, by M. Gallico. 11. Memoir of Jannina, King of the Sandwich Islands. 12. On the Manners, Customs, and Character of the Celts. 13. Journal of a Voyage from Paris to St. Cloud. 14. The Book of Four Columns, by M. Bon Ton. 15. Intelligible Tales, Cheerful Eclogues, Gay Sonnets, and Tales of no Wonder. 16. Fine Art. 17. Dramatic Notices—Mr. Kem's re-appearance. 18. Varieties, Literary and Scientific. 19. Rural Economy. 20. New Publications, with Critical Remarks. 21. New Inventions and Discoveries. 22. Reports, Literary, Agricultural, and Commercial. 23. Historical digest of Political Events. 24. Interesting Occurrences, Promotions, Births, Marriages, and Deaths; with Biographical particulars of the most celebrated Persons. Printed for Henry Colburn and Co. Conduit Street.

## National Medals.

In 4to. with plates, 11s. 6d.

**AN HISTORICAL & CRITICAL ACCOUNT** of a GRAND SERIES of NATIONAL MEDALS, published under the direction of JAMES MUIR, Esq. Embellished with Outlines of the entire Series; and dedicated by permission to the King. London: Printed for Henry Colburn and Co. Conduit Street.

## NOS. XVII. and XVIII. of the DELPHIN CLASSICS; with Variorum Notes.

Intituled This Regent's Edition. Edited and Printed by A. J. VALPY, late Fellow of Pemb. College.

N. B. The price to Subscribers is 11s. each Part. Large paper double; and as very few copies remain on hand, the prices will hereafter be increased. Subscribers always remain at the Price at which they originally enter; and are at liberty, for double that sum, to exchange their *smell* for the large paper copy.

The best Text will be used, and the Delphin, as has been erroneously stated in one of the Reviews. The Delphin Notes, *Interpretatio*, and the *Variorum Readings*, will be placed under the Text; and the Notes in the best Variorum Edition will be printed at the end of each author. The best Indices will be adopted, and carefully collated with the Text, to remove the present numerous faults in the references. The reference will be to the Book and Chapter, and not to the page, by which means the same Index will apply to all other Editions. The *Literarie Notitia* from the Bipont Editions, continued to the present time, will be added. Thus will be incorporated, as it were, the Delphin, Bipont, and Variorum Editions, the substance of the three being printed in this Edition. A finely engraved head will be given of each author as can be procured from authentic sources. The Maps will be beautifully executed, and illustrative Wood-Cuts are inserted. The whole will be printed uniformly in octavo—each Part will average 62 pages, without reference to the conclusion of any author, so that Subscribers may bind and arrange them alphabetically or chronologically. The whole will make about 120 to 130 Parts—and twice will be printed in the year. To be paid for on delivery. The work cannot be subscribed for in separate Parts or Authors, but as a whole collection. As some Gentlemen have not yet sent their names as Subscribers, on the supposition that the Work will hereafter be offered for sale at a lower price, Mr. Valpy begs to state, that to prevent depreciation, he has purposely printed but very few copies over the present subscription (21 large and small).

## Delphin School Editions, on a New Plan.

8s. bound.

1. **JUVENAL** and **PERSIUS**; containing Ruperis's and Kennig's Text, Delphin Notes, and without the Orio.

2. **VIRGIL**, Heyne's Text, do. 10s. 6d.

3. **CÆSAR**, Obsequii Text, do. 10s. 6d.

4. **SALLUST**, do. do. 8s.

5. **HOMER** ILLIAS: a new edition, with English Notes, 12s. 6d. bound.

This is a very compact and useful edition of the Iliad, for the use of Schools. The force of the Particles, a distinguishing beauty of the Iliadic language, is well pointed out. It will be found, beyond all comparison, the best edition for the use of Schools, at present extant.—*Anglo-Greek Review*, Sept. 1819.

This is, perhaps, the most useful edition of the *Mæonian* bard, that has yet made its appearance. It is also critical in an eminent degree, and contains a judicious and well written account of the *diagramma*; together with a dissertation upon the Homeric metre, principally selected from the writings of Professor Daiter and Mr. R. P. Knight. The notes are partly original, and partly taken from Heyne, Clarke, and Knight. The author has judiciously connected the best critical matter of his work by quotations from Pope's admirable translation, and adorned it with a few parallel passages from the Roman Poets, and from our illustrious countryman Milton.—*New Monthly Mag.* Oct. 1819.

Printed by A. J. Valpy; and sold by G. and W. B. Whitaker; Longman and Co.; Baldwin and Co.; Lockington and Co.; F. C. and J. Rivington, London; Macreid and Co. Edinburgh; Cumming and Co. Dublin; and all other booksellers. Of the same may be had, bound.

Horace, with English Notes to the Odes, 8s. 6d. Horace, no Notes, 3s. 6d. A new edition of Virgil, 18mo. 3d edition, 4s. The same, with English Notes, from Delphin, 4s. no *Interpretatio*, 7s. 6d. Gradus, without Verses or Phrases, 7s. 6d. Homer's Iliad, from the Text of Heyne, 7s. *Elegantia Latine*, 4s. 6d. Greek Grammar, 6s. 6d. Greek Declension, 4s. 6d. Latin Grammar, 2s. 6d. Latin Declension, 2s. 6d. Amphipry, Anulus, Capivina, and Rodens, of Plantas, 2s. 6d. Latin Vocabulary, 2s. 6d. First Exercises, 1s. 6d. Latin Dialogues, 2s. 6d. Cicero de Amicitia et de Senectute, with Ernesti's Notes, 4s. 6d. Barker, 3d edition, 4s. 6d. Principia Officiorum, Historiarum et Geographiæ, 3s. 6d. Poetical Chronology of Ancient English History, 2s. Mythology, 4th edition, 2s. Cicero de Officiis, with English Notes, 6s. Epistolæ M. T. Cicero, 3d edition, 2s. The German and Agricultural of Tacitus, from Broter, with all his Notes, 4s. Barker, 2d edition, 4s. 6d. C. Nepos, with English Notes and Quotations, by Hindley, 2s. 6d. *Enotropy*, with ditto by ditto, 2d edition, 2s. 6d. Latin Prosody, by ditto, 4s. Greek Testament, 3 vols. 8vo. By the Rev. E. Valpy, 2s. 12s. 6d. Large Paper, 4s. Greek Septuagint, with the Apocrypha, 1 vol. 8vo. 14s. Epitome Sacre Historiæ, with English Notes, 3d Ed. 2s.

\* \* \* Please to ask for Valpy's Editions of the above works.

Fifth edition, price 4s. 6d. boards, 8vo.

## AN ADDRESS from a CLERGYMAN to his PARISHIONERS.

With Morning and Evening Prayers. By R. VALPY, D.D. F.A.S. The Subjects treated in it are—Of God. The Son of God. The Holy Ghost. The Trinity. Read the Scriptures. Incarnation of Jesus Christ. Doctrines of Jesus Christ. Resurrection. Redemption. Justification. Faith. Works. Works without Faith. Faith without Works. Union of Faith and Works. Merit and Reward. Humility. Influence of the Holy Spirit. Repentance. Regeneration. Conversion. Delay of Conversion. Our Endeavour. Predestination. Free will. Prayer. Public Worship. Family Prayer. Sacrament. Forgiveness of Injuries. Veneration to the Name of God. Relative Duties. Exhortation to Piety. Prospect in Life. Use of Time. Death. Printed by A. J. Valpy; and sold by Longman and Co.; Whitakers; Rivingtons; London; and all Booksellers. Of whom may also be had, by the same author.

SEMONS, in 2 volumes, 8vo. price 10s. And all the author's other Works.

In 8vo. 12s.

**A SECOND VOLUME of the SKETCH BOOK of GEOFFREY CRAYON**, Gent. Part 4, by John Murray, Albemarle Street, W. Who may also have a new Edition of the First Volume, 12s.

In 8vo. price 7s. 6d. with a Portrait and Map.

**MEMOIRS of the LIFE of ANDREW FRANKLIN**, containing an Account of the Transactions in the Tyrol, during the year 1800. Told by a German. By CHARLES HENRY HALL, Esq. Published for John Murray, Albemarle Street.

The 3d edition, enlarged, in 1 vol. 12mo. price 10s. 6d. plain, or 10s. 6d. colored.

**CONVERSATIONS on BOTANY**, of twenty-one Engravings. The object of this Work is to enable young persons to acquire a knowledge of the vegetable productions of their native country, to purpose the arrangement of Linnaeus is both explained, and a native plant of each class (with a few exceptions) is examined, and illustrated by an engraving and a short account is added of some of the most foreign Species. Printed for Longman, Hurst, and Orme, and Brown, London.

A Second Edition, in 12mo. price 6s. 6d. bound with 22 Engravings by Lory.

**CONVERSATIONS on NATURAL PHILOSOPHY**, in which the Elements of this Science are familiarly explained, and adapted to the Comprehension of Young Pupils. By the author of "Conversations on Chemistry," and "Conversations on Political Economy." Printed for Longman, Hurst, and Orme, and Brown, London. Of whom may be had.

**CONVERSATIONS on CHEMISTRY**, *Elementary Experiments*. In 2 vols. 12mo. with Plates by Henry The 6th edition enlarged, 14s. boards.

**CONVERSATIONS on POLITICAL ECONOMY**. Third edition, improved, in 1 large vol. 12mo. price 10s. boards.

## THE LONDON MAGAZINE, No. 3.

September, published by Baldwin, Colnash, and Joy, containing the following articles—1st. Head. 2. Old Stories, No. 1. The Lying Servant. 3. Castle Goblin. 3. Note from Mr. Bowles on the Table Talk, No. 111, on the Conversation of Lord 5. Shogor, the Dalmatian Brigand. 6. The Traveller's Book, No. 11. 7. Italy, Sonnet from Filippi. 8. By B. B. German Descriptions of English by No. 1. Harlot's Progress, Part 1. 10. On Italian Comedy, introductory to remarks on Mamma's Comedy Carmagnola. 11. Drab Bonnets. 12. Sketch of Progress of Social Science in England, with Notices of the principal Performers and Composers. 13. The theocratic Private Correspondence, introduced to Public Eyes. 14. Sonnet to the author of Poems of the name of Harry Cornwall. 15. A Poet's Love. 16. Visit to the Republic of San Marino in May 1800. 17. Critical Notices of *Scenes*—1. Mr. Graham's Residence near Dover. 2. Brothers, a Monody; 3. Keats's Volume of Poems. 4. The Drama. 10. Reports of Music. 20. Letters of Scientific Intelligence. 21. Historical and General Summary of Public Events. 22. Agricultural and Commercial Report—also the usual Latin Notice, &c. &c.

Next week will be published, in 3 vols. 8vo. **THE ABBOT**, a Romance. By the Author of "The Waterbury," &c. &c. Printed for Longman, Hurst, and Orme, and Brown, London; and by A. Currier, &c. Co., and J. Ballantyne, bookseller to the King, Edinburgh.

August 30, 1820.

London: Printed for the Proprietors, by W. P. Giff, Chancery Lane: Published every Saturday by W. A. SCRIPPS, at the Literary Office (No. 10) (Exeter Chamber) Strand, where Communications and orders; are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 190.

SATURDAY, SEPTEMBER 9, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Recollections and Reflections, Personal and Political, as connected with Public Affairs during the Reign of George III.* By John Nichols, Esq. London, 1820. 8vo. pp. 408.

This is one of those publications which may be expected when

—Old age looks out

And garrulous, recounts the feats of youth.

The author is an ancient gentleman of seventy-six, resident at Thoulouse; his father was a physician at the court of George II. and, having himself sat in three Parliaments, he imagined that he had materials enough for a volume, to enlighten the present generation, respecting the doings of the last. His claim is, however, rather moderately supported; for though there will be found some intelligence, and some sound views, in his lucubrations, he broaches so many wild theories, repeats the same things so very often, contradicts himself so frequently, and is so lavish of imputations on every unfortunate individual honoured by his notice, that he presents us, upon the whole, but a crude mass of inconsistencies, and a sweeping libel upon humanity. Not only every monarch and minister, but every man and woman, whom he recognizes, for three quarters of a century, appear in the vizards of rogues, or the caps of fools. There is nevertheless some curious information in these pages, and several facts (if they can be depended upon) of considerable importance. For example, it is asserted, by this zealous Foxite, that Mr. Pitt was unwillingly forced into the war against the French Revolution, by the great Whig families, instigated by Burke; and, indeed, very cogent reasons are given in corroboration of this statement. But we will leave Mr. Nichols' political reflections on French, Spanish, and American revolutions, on agriculture and commerce, on the Pope and parties, on German Governments and Indian affairs, to those who love that species of speculation, contenting ourselves with extracting half a dozen of his anecdotes, which possess the more agreeable property of being likely to amuse our readers. We shall just premise, in order to mark our reprehension of it, that the terms in which he speaks of our late king, are very unbecoming, as well as foolishly at war with his own expressed opinions. He seems also to attach more consequence to Burke than ever Burke in reality possessed;—in short, his free language is hardly one remove from the slander of the dead, from the throne to the fustool. The following is his story of the origin of an influence of which we have all heard a great

deal, under the names of Back-stairs, and Behind-the-throne authority.

"The Princess Dowager of Wales wished her son to be a king, such as she had been educated to believe a king ought to be; viz. a king after the model of a Duke of Saxo Gotha; and this was the object of that lesson which she was continually inculcating to him, 'George, be King.' But I do not see any reason for believing that there was any original intention of forming an interior Cabinet. I believe that the plan of the interior Cabinet grew out of circumstances which afterwards arose. The first wish was, that the Earl of Bute should be advanced to be Prime Minister; and while he was Minister, there was certainly no desire to form an interior Cabinet. Most probably the interior Cabinet arose on his retirement from office. When the Earl of Bute was made Secretary of State for the Northern Department, he found in that office Mr. Charles Jenkinson a man of family, though in the inferior situation of a volunteer clerk. The Earl of Bute discovered this gentleman's abilities; and when he was made first Lord of the Treasury, removed Mr. Jenkinson with him to his new office, and made him Secretary of the Treasury. When the Earl of Bute resigned, Mr. Jenkinson was the channel through which confidential communications were conveyed from the King to the Princess Dowager and the Earl of Bute; and this was most probably the origin of the interior Cabinet."

We quote a passage relating to the celebrated Edmund Burke, whom Mr. N. seems to love but little.

"At the time when Burke was selected to be the private Secretary to the Marquis of Rockingham, he was an author in the service of Mr. Doddsley, the bookseller; he had conducted for that gentleman the Annual Register, a work of considerable reputation and merit, first established in the year 1758; and I believe that it was conducted under the direction of Mr. Burke to a very late period of his life. The political knowledge of Mr. Burke might be considered almost as an Encyclopedia: every man who approached him received instruction from his stores; and his failings (for failings he had) were not visible at that time; perhaps they did not then exist; perhaps they grew up in the progress of his political life. When Mr. Burke entered into the service of the Marquis of Rockingham he was not rich, but the munificent generosity of that Nobleman immediately placed him in an affluent situation. Mr. Burke purchased a beautiful villa, at Boscawen, which was paid for by the Marquis of Rockingham. When Dr. Johnson, who, like Mr. Burke, had subsisted by his labours as an author, visited his friend at

his new purchase, he could not help exclaiming with the shepherd in Virgil's Eclogue,

"Non equidem invidio, miror magia." \*\*\*

"Soon after Mr. Edmund Burke became a political character, he, and his cousin William Burke, embarked in a speculation in India Stock. They prevailed on many of their friends to join them, among others, on Earl Verney, who fell a victim to this connexion. They used much solicitation with Sir Joshua Reynolds to join them, but he was dissuaded from it by Anthony Chamer, for which Anthony Chamer, he told me himself, was never forgiven by the Burkes. This speculation was at first extremely successful, but at last it failed. William Burke, and Lord Verney, were announced as the defaulters; and Edward Burke's name was concealed. William Burke was sent to India, and a situation at the Court of the Rajah of Tanjore obtained for him. Other advantages in India were also obtained for this gentleman.

"When the Coalition came into power, Mr. Burke saw that much strength might be acquired for his party, by the seizure of India patronage. With this view Charles Fox was employed to bring in the India Bill, generally known by the name of Fox's India Bill. But I am firmly persuaded that Mr. Fox had nothing to do with the formation of this Bill. It was prepared by Mr. Edmund Burke, whose only assistant in it was Mr. Pigot, afterwards Sir Arthur Pigot. Mr. Lee, at that time Attorney General, and Sir James Mansfield, at that time Solicitor General, both assured me, that they never saw the Bill, until it was printed for the use of the House of Commons. They doubted whether Charles Fox himself had seen the Bill, before the essential parts of it had been completely arranged by Mr. Burke. Lord North certainly did not see it until the Bill was completed; and when it was shown him, he said with his usual pleasantry and sagacity, 'that he thought it a good receipt to knock up an administration.'"

The subjoined is a pleasant story, to account for Mr. Francis's hostility to Warren Hastings and his friends.

"Mr. Francis was a man of considerable abilities. He was a very superior classical scholar; and he was capable of laborious application. Strong resentment was a leading feature in his character. I have heard him avow this sentiment more openly and more explicitly than I ever heard any other man avow it in the whole course of my life. I have heard him say publicly in the House of Commons, 'Sir Elijah Impey is not fit to sit in judgment on any matter where I am interested, nor am I fit to sit in judgment on

him.' A relation of the ground of this ill will may be amusing. Mrs. Le Grand, the wife of a gentleman in the Civil Service in Bengal, was admired for her beauty, for the sweetness of her temper, and for her fascinating accomplishments. She attracted the attention of Mr. Francis. This gentleman, by means of a rope-ladder, got into her apartment in the night. After he had remained there about three-quarters of an hour, there was an alarm; and Mr. Francis came down from the lady's apartment by the rope-ladder, at the foot of which he was seized by Mr. Le Grand's servants. An action was brought by Mr. Le Grand against Mr. Francis, in the Supreme Court of Justice in Calcutta. The judges in that court assess the damages in civil actions, without the intervention of a jury. The gentlemen who at that time filled this situation, were Sir Elijah Impey, Chief Justice, Sir Robert Chambers, and Mr. Justice Hyde. I was intimate with the first and the third from early life; having lived with them on the Western Circuit. On the trial of this cause, Sir Robert Chambers thought, that as no criminality had been proved, no damages should be given. But he afterwards proposed to give thirty thousand Rupees, which are worth about three thousand pounds sterling. Mr. Justice Hyde was for giving a hundred thousand rupees. I believe, that Mr. Justice Hyde was as upright a judge as ever sat on any bench; but he had an implacable hatred to those, who indulged in the crime imputed to Mr. Francis. Sir Elijah Impey was of opinion, that although no criminal intercourse had been proved, yet that the wrong done by Mr. Francis to Mr. Le Grand in entering his wife's apartment in the night, and thereby destroying her reputation, ought to be compensated with liberal damages. He thought the sum of thirty thousand rupees, proposed by Sir Robert Chambers, too small; and that proposed by Mr. Hyde, of a hundred thousand, too large. He therefore suggested a middle course, of fifty thousand rupees. This proposal was acquiesced in by his two colleagues. When Sir Elijah Impey was delivering the judgment of the Court, my late friend, Mr. Justice Hyde, could not conceal his eager zeal on the subject; and when Sir Elijah named the sum of fifty thousand rupees, Mr. Justice Hyde, to the amusement of the bystanders, called out, 'Siccas, brother Impey!' which are worth eleven per cent. more than the current rupees. Perhaps this story may not be thought worthy of relation; but it gave occasion to that animosity, which Mr. Francis publicly avowed against Sir Elijah Impey; and the criminal charge afterwards brought against him in the House of Commons, was the offspring of that animosity. I will follow up this anecdote by mentioning the consequences of the action brought by Mr. Le Grand. The lady was divorced: she was obliged to throw herself under the protection of Mr. Francis for subsistence. After a short time she left him, and went to England. In London she fell into the company of M. Talleyrand Perigord. Captivated by her charms, he prevailed on her to accompany

him to Paris, where he married her; and thus the insult, which this lady received from Mr. Francis, and the loss of reputation, which was, perhaps unjustly, the consequence of that insult, eventually elevated her to the rank of Princess of Benevento.

The following are also curious—

"George II. had always publicly kept a mistress; most certainly with the knowledge of the Queen; and it was generally believed that his mistresses were chosen by the Queen. I believe Mr. Walpole is right when he says, that the Queen was the woman who had the strongest hold of his affections. I recollect a circumstance mentioned to me by my father, which is a proof of this assertion. The morning after the King's death, my father and Sir Edward Wilmot, who were the only two King's physicians then in town, received an order to be present at the opening of the body, and to report their opinion as to the causes of his Majesty's death.

A paper of directions left by the King, as to the manner in which his body should be treated, &c., was produced; and in that paper he had directed, that the coffin should be so constructed, that one side of it might be drawn out. The coffin in which the body of Queen Caroline was placed had been constructed in a similar manner; and his Majesty directed, that one side of each coffin should be drawn out, so that the two bodies might be in one coffin. I believe these directions were very exactly observed.

"George II., while Electoral Prince of Hanover, had served in the Duke of Marlborough's army, and had given distinguished proofs of personal courage: but I believe that this was the only military qualification which he possessed. He had neither literature nor taste, but a strong sense of decorum. I will mention a little anecdote as a proof of this. The Duke of Richmond of that day was one of the King's chief companions. A Doctor of Divinity of the Duke's acquaintance, eminently learned, had acquired a knack of imitating the caterwaulings of a cat. The Duke had no taste for his friend's learning; but he took great pleasure in hearing him imitate the cat. He had often talked to the King of this uncommon talent which his friend possessed, and had pressed his Majesty to allow him to place this gentleman behind his chair, one day at dinner, that he might himself judge of his extraordinary power of imitation. The King at last consented; and this learned man was one day placed behind the King's chair, while he was at dinner. The King was for some time amused with his various imitations; he at last turned round to see the gentleman, when he received a blow from a gentleman full dressed in canonicals. The King was so shocked at the sight, that he could not refrain from saying to the Duke of Richmond, 'Do take him away: I cannot bear buffoonery from a man in such a dress.' If this may not be mentioned as a proof of the King's good taste, it may at least serve to show that he had a strong sense of decorum."

We annex but one paragraph more; and, as it contains a reference to the author, our readers may apply to him (post-paid) for any

information which we may have omitted to lay before them.

"This is my opinion (no matter what it is about) while resident in France, on the 7th of March, 1820. In the town which I now inhabit, the house formerly occupied by the Inquisition has been purchased for the use of the Missionaries; and it is well known, that a body of men, under the name of *severits*, are still kept in the same town and its neighbourhood. Probably they are not so numerous as they were in 1815. They were then uncontrollable. They openly murdered General Rameau, the Commander of the King's forces in this town. I believe other Generals in the service of Louis XVIII. experienced the same fate in other parts of France."

We must recommend a good chapter on the decline of talent in our law-courts; it is the cleverest part of the work, and, we are sorry to say, much to the disadvantage both of the present bench and bar.

*Portraits of Illustrious Personages of Great Britain, with Biographical and Historical Memoirs of their Lives and Actions.* By Edmund Lodge, Esq., Lancaster Herald, F. S. A. Medium and Super-royal Folio. Parts 1 to 19. London 1814 to 1820.

Since the illustrious portraits of Houbraken, we are not aware of any similar work of equal magnitude and importance with the present; and excellent as many of the heads in the former magnificent publication were, there was an inequality in the general execution, which certainly does not exist to the detriment of this undertaking. The uniformity of style in the engravings before us, and the care and correctness observable in their finish, render them peculiarly worthy of public regard and of the attention of men of taste. The mode, a mixture of the chalk and line, excellent in itself for the purposes of characteristic expression in the countenances and perfect representation of costume and draperies, has been as judiciously employed as admirably performed; and the result is, the production of the most brilliant and striking effect, in clearness, tone, and depth of colour.

As however we shall have many occasions to introduce our opinions respecting the graphic merits of this superb collection, as we proceed with those local details which it is our intention to submit to our readers, we shall now rather look to the grand outline than to particular parts. After laying a foundation of this kind, we shall find much, both in the letter press and in the plates, worthy of more particular notice.

The exhibition just closed at the British

Gallery, has familiarized us with a considerable number of the paintings, whence Mr. Lodge has taken his copies; and it would have been desirable to bring his volumes under review, at the period when the comparison between their ornaments and the originals might so readily have been instituted. But besides that our weekly sheet was too limited to admit of two Essays of any length upon the Arts in the same numbers, (consistently with our plan of giving as much variety as we can to each,) we postponed our determination, in the hope that the last part (XX.) would have appeared, and put it in our power to take the complete series into view at once.

These reasons for and against having respectively lost and gained force, we deem it advisable to delay our remarks on Mr. Lodge no longer; and the fresh recollection of the splendid Exhibition to which we have alluded,\* and to which, we believe, this publication led the way, will materially assist and improve the spirit of our criticism.

The title of the work sufficiently indicates its plan; which is, to give an exact copy of the portraits of the most illustrious personages of British History, engraved with the strictest attention to excellence of execution and faithfulness of similitude, from the finest and most authentic pictures which are extant of them. To obtain this distinction, one course alone seems to have been adopted throughout; for, as portraits of the illustrious personages of our country, have in general descended with titles and estates to their posterity, and are consequently to be found principally in the galleries of the ancient nobility, or in the national collections; we find every portrait to have been executed from authorities of this nature, which are at once sources of the highest authenticity, and productions of the most exquisite art. Thus, we perceive portraits of the Howards, to have been contributed from the Norfolk Gallery; those of the Russels, by the Duke of Bedford; of the Hamiltons, whose loyalty so long upheld the royal cause in Scotland at the period of the Rebellion, from the palace of their noble descendants, at Hamilton; and of the historians of this turbulent period and companion in exile of our second Charles, from the collection of his descendant, the present Earl of Clarendon. The episcopal palace at Lambeth and the British Museum, have contributed portraits of three of the most distinguished primates that ever upheld the Protestant faith—Archbishops Warham, Cranmer, and Laud. From Oxford we find portraits of Thomas Bodley and of Cardinal Wolsey, engraved from the original pictures, which are preserved in the insignificant establishments of which they were the respective founders: in short, this work is a costly proof of the extent to which private enterprise may be carried in this country, when it depends upon,

\* We observe 23 of Lodge's portraits, are from pictures in this exhibition; and several of the same individuals, but from portraits by other hands.

and is deserving of, public patronage for support; for the most valuable collections of pictures throughout the empire, appear to have been visited; and thence, the portraits of illustrious characters have been selected, for the enrichment of this gallery of British worthies.

The bounds allotted for this design are 20 parts, each containing 6 portraits of distinguished individuals, of British birth, who died previous to the year 1700; and it is but justice to state, that all the impressions which could be anticipated from an admirable union of literary biography and engraved portrait, has been achieved to the full extent of the author's promise. He has indeed acquitted himself most ably and satisfactorily in both branches; and we are sure it will be felt, that his exertions have raised a splendid monument to departed greatness—a tribute to the dead, a stimulus to the living, and an honour to the arts of England.

We have perused the biographies with as much interest as we have looked at the plates with admiration; and we know not when we have experienced a stronger influence than their combination has exercised over our minds.

Part I. which was published in April 1814, contains Sir Philip Sidney, (by Sir Antonio More,) William first Lord Paget, (by Holbein,) Queen Catherine Par, (by the same,) Henry Howard Earl of Northampton, (by Zuechero,) Thomas Radclyffe, 3d Earl of Sussex, (by Sir A. More,) and Sir Thomas Bodley, (by Cornelius Jansen). Of these personages, the lives are generally too well known to sanction our devoting much space to extract; we shall therefore say nothing of the renowned Sidney, of the sixth wife of the uxorious blue-beard Henry, of the able statesman Radclyffe, or of the celebrated founder of the Bodleian Library. Nor indeed shall we repeat more of the founder of the Uxbridge and Anglesley peerage, than that he was born in London in 1506; where his father was Serjeant at Mace to the Corporation. The young William was noticed by Gardiner, Bishop of Winchester, and by him educated and recommended to public employment, at a court where merit was more sure of advancement, than perhaps it ever was at a court before, or has been since.

The Earl of Northampton is vindicated by Mr. Lodge, from the charge of being privy to Sir Thomas Overbury's murder. He was the builder of Northampton House, Charing Cross, afterwards Suffolk, and now Northumberland House, where he died in 1563.

Among the writings of this acute man, besides those which he published, are "two Treatises to justify Female Government;" the one in the Harleian, the other in the Bodleian collection: "An abstract of the Franks of the Officers of the Navy," among the King's MSS. "A defence of the French Monsieur's desiring Queen Elizabeth in Marriage," also in the Harleian; and some devotional pieces in other departments of the library of the Museum. But the great treasure of his remains is a volume of 1,200 pages, in the Cotton MSS, marked Ti-

tus C, consisting of private letters, speeches in parliament, small treatises, prayers, detached maxims and observations, poems, &c., written at all times of his life, and here transcribed, almost wholly with his own hand. "In the authorities which I have consulted for the present purpose, (Mr. Lodge tells us,) I find no notice taken of this very curious collection, which, even from the very cursory inspection which I have been able to bestow on it, appears to contain matters of inestimable importance to the history of his time."

Part II, contains Charles Brandon, Duke of Suffolk, Walter Devereux, Earl of Essex, Thomas Howard, Earl of Suffolk, Sir Kneelm Digby, Queen Jane Seymour, and Cardinal Allen; the first two and the last painted by unknown artists, and the three others by Zuechero, Vandike, and Holbein.

From this part we shall select only one passage, a letter of the Earl of Essex to the Lord Treasurer Burghley, previous to his setting out on his expedition to Ireland. It possesses considerable interest, and is a fair specimen of the manners at the Court of Elizabeth, as well as of the style of the times.

"May it please your L.

"Yesterday I was at the Courte, and dyd take my leave of Her Ma<sup>tie</sup>. She hath signed all my books, and I am departed from her Ma<sup>tie</sup> w<sup>th</sup> verie good words, and promyse of her favour and furtherance of this enterprise. Upon the taking of my leave, she told me that she had two speciall things to advise me of; the one, that I should have consideracon of the Irish there, whiche she thought had become her disobedient subjects, rather because they have not byn defended from the force of the Scotts then for any other cause. Her Ma<sup>tie</sup>'s opinion was, that upon my comyng, they wold yield themselves good subjects, and therefore wysshed them to be well used. To this, my L. I answered, that I determyned to deale so w<sup>th</sup> them, as I should fynde best for her service when I came there; and, for the present, I could not saye what is beste to be done; but this her Ma<sup>tie</sup> should be sure of, that I wold not imbrue my hands w<sup>th</sup> more blud then the necessitie of the cause requirthe. The other speciall matter was, that I should not seeke too hastily to bring people that hathe byn trayned in another religion from that w<sup>ch</sup> they have been brought uppe in. To this, I answered, that, for the present, I thought it was best to letme them to know their allegiance to her Ma<sup>tie</sup>, and to yeld her their due obedience; and after they had lerned that, they wold be easily brought to be of good religion. Muche more speeches beids passed betweene her Ma<sup>tie</sup> and mr, whiche were of no grante importance, and therefore I wryte them not to yo<sup>r</sup> L.

"I am, my L. desptel from the court, w<sup>th</sup> many good and fayre promises of dyvers, but of the p<sup>er</sup>formance of them I knowe what assurance I may make. I repose my o<sup>u</sup>ltruste upon your L. Your honourable dealing w<sup>th</sup> me, both in this, and at all times before, hathe byn such as hath bound me

ever to be at your L<sup>d</sup>. commandment. And so I rest, and humbly take my leave of you L<sup>d</sup>. From Duresme House, this xxth of Julie, 1573. At your L<sup>d</sup>. commandment.

"W. Esser."

The Earl of Suffolk here is the discoverer of the memorable gun-powder treason. His portrait is remarkable for its small hat and feathers, resembling the highland bonnet.

Cardinal Allen, was the zealous defender of the Roman faith during the reign of Elizabeth. About 1563, when driven out of England in consequence of his writings and success in converting proselytes, he went to Douay, where, on an academy recently established, he raised the college since so celebrated for the education of British Romanists, and which subsisted till the French Revolution dispersed its inmates, and converted their academic retreat into a military hospital. It is now, we believe, a manufactory.

[Sequent Parts in our following Nos.]

*Prometheus Unbound; a Lyrical Drama, in four acts, with other Poems.* By Percy Bysshe Shelley. London, 1820, 8vo, pp. 222.

It has been said, that none ought to attempt to criticise that which they do not understand; and we beg to be considered as the acknowledged transgressors of this rule, in the observations which we venture to offer on *Prometheus Unbound*. After a very diligent and careful perusal, reading many passages over and over again, in the hopes that the reward of our perseverance would be to comprehend what the writer meant, we are compelled to confess, that they remained to us inflexibly unintelligible, and are so to the present hour, when it is our duty to explain them *pro bono publico*. This is a perplexing state for reviewers to be placed in; and all we can do is to extract some of these refractory combinations of words, the most of which are known to the English language, and submit them to the ingenuity of our readers, especially of such as are conversant with those interesting compositions which grace certain periodicals, under the titles of enigmas, rebuses, charades, and riddles. To them Mr. Shelley's poem may be what it is not to us (*Dævus sum non Œdipus*)—explicable; and their solutions shall, as is usual, be thankfully received. To our apprehensions, *Prometheus* is little else but absolute raving; and were we not assured to the contrary, we should take it for granted that the author was lunatic—as his principles are ludicrously wicked, and his poetry a mélange of nonsense, cockneyism, poverty, and pedantry.

These may seem harsh terms; but it is our bounden duty rather to stem such a tide of literary folly and corruption, than to promote its flooding over the country. It is for the advantage of sterling productions, to discountenance counterfeits; and moral feeling, as well as taste, inexorably condemns the stupid trash of this delirious dreamer. But, in justice to him, and to ourselves, we shall cite his performance.

There is a preface, nearly as mystical and mysterious as the drama, which states Mr. Shelley's ideas in bad prose, and prepares us, by its unintelligibility, for the aggravated absurdity which follows. Speaking of his obligation to contemporary writings, he says, "It is impossible that any one who *inhabits* the same *age*, with such writers as those who stand in the foremost ranks of our own, can conscientiously assure himself, that his language and tone of thought may not have been modified by the study of the productions of those extraordinary intellects." [Mr. S. may rest assured, that neither his language, nor tone of thought, is modified by the study of productions of extraordinary intellects, in the *age* which he *inhabits*, or in any other.] He adds, "It is true, that, not the spirit of their genius, but the forms in which it has manifested itself, are due less to the peculiarities of their own minds, than to the peculiarity of the moral and intellectual condition of the minds among which they have been produced. Thus, a number of writers possess the form, whilst they want the spirit of those whom, it is alleged, they imitate; because the former is the endowment of the age in which they live, and the latter must be the uncommunicated lightning of their own mind." We have, upon honour, quoted verbatim: and though we have tried to construe these two periods at least seven times, we avow that we cannot discern their drift. Neither can we collect the import of the following general axiom, or paradox.—"As to imitation, poetry is a mimetic art. It creates, but it *creates* by combination and representation." What kind of creation the creation by representation is, puzzles us grievously. But Mr. Shelley, no doubt, knows his own meaning; and, according to honest Sancho Panza, "that is enough." In his next edition, therefore, we shall be glad of a more distinct definition than this—"A poet is the combined product of such internal powers as modify the nature of others; and of such external influences as excite and sustain these powers; he is not one but both." We fear our readers will imagine we are vulgarly quizzing; but we assure them, that these identical words are to be found at page xiii. In the next page, Mr. S. speaks more plainly of himself; and plumply, though profanely, declares, "For my part, I had rather be damned with Plato and Lord Bacon, than go to heaven with Paley and Malthus.—Poor man! how he moves concern and pity, to supersede the feelings of contempt and disgust. But such as he is, his 'object has hitherto

been simply to familiarise the highly refined imagination of the more select classes of poetical readers with beautiful idealisms of moral excellence"—such, to wit, as the preference of damnation with certain beings, to beatitude with others!

But of this preface, more than enough—we turn to *Prometheus Unbound*; humbly conceiving that this punning title-page is the sweetest in the book—as no one can ever think him worth binding.

The *dramatis impersonæ* are Prometheus, Jupiter, Demogorgon, the Earth, the Ocean, Apollo, Mercury, Hercules, Asia, Panthea, Ione, the phantasm of Jupiter, the Spirit of the Earth, Spirits of the Hours, other Spirits of all sorts and sizes, Echoes, substantial and spiritual, Fawns, Furies, Voices, and other monstrous personifications. The plot is, that Prometheus, after being three thousand years tormented by Jupiter, obtains the ascendancy, and restores happiness to the earth—*revelant Saturnia regna*. We shall not follow the long accounts of the hero's tortures, nor the longer rhapsodies about the blissful effects of his restoration; but produce a few of the brilliant emanations of the mind modified on the study of extraordinary intellects. The play opens with a speech of several pages, very argutely delivered by Signior Prometheus, from an icy rock in the Indian Caucasus, to which he is "nailed" by chains of "burning cold." He invokes all the elements, *seriatim*, to inform him what it was he originally said against Jupiter to provoke his ire; and, among the rest—

Ye icy Springs, stagnant with wrinking frost,  
Which vibrated to hear me: and then crept  
Shuddering through India.  
And ye, swift Whirlwinds, who, on poised wings  
Hung mute and motionless o'er your hushed abyss,  
As thunder, louder than your own, made rock  
The orb'd world.

This first extract will let our readers into the chief secret of Mr. Shelley's poetry; which is merely opposition of words, phrases, and sentiments, so violent as to be utter nonsense: *ex. gr.* the vibration of stagnant springs, and their creeping shuddering; the swift motionless (*i. e.* motionless) whirlwinds, on poised wings, which hung mute over a hushed abyss as thunder louder than their own! In the same strain, Prometheus, who ought to have been called Sphynx, when answered in a whisper, says,  
Thy scarce like sound: it tingles thro' the frame  
As lightning tingles, hovering ere it strike.

Common bards would have thought the tingling was felt when it struck, and not before,—when it was hovering too, of all things for lightning to be guilty of! A "melancholy voice" now enters into the dialogue, and turns out to be "the Earth." "Melancholy Voice" tells a melancholy story, about the time—

When plague had fallen on man, and beast, and worm  
And Famine;

She also advises her son Prometheus to use a spell,—

— So the revenge

Of the Supreme may sweep thro' vacant shades,  
As rainy wind thro' the abandoned gate  
Of a fallen palace.

Mr. Shelley's fallen buildings, having still gates to them! Then the Furies are sent to give the sturdy Titan a cast of their office; and they hold as odd a colloquy with him, as ever we read.

The first tells him,  
Thou thinkest we will rend thee bone from bone,  
And nerve from nerve, working like fire within;

The second,

Dost imagine  
We will but laugh into thy lidless eyes?  
And the third, more funnily inclined than her worthy sisters—

Thou think'st we will live thro' thee  
Like animal life, and though we can obscure  
The soul which burns within, that we will dwell  
Beside it, like a vain loud multitude  
Vexing the self-content of wisest men—

This is a poser! and only paralleled by the speech of the "Sixth Spirit," of a lot of these beings, which arrive after the Furies. She, for these spirits are feminine, says,  
Ah, sister! desolation is a delicate thing:  
It walks not on the earth, it floats not on the air,

But treads with silent footsteps, and fans with silent wing  
The tender hopes which in their hearts the best and gentlest bear;

Who, soothed to false repose by the fanning plumes above,  
And the music-stirring motion of its soft and busy feet,

Dream visions of aerial joy, and call the monster Love,  
And wake, and find the shadow pain.

The glimpses of meaning which we have here, are soon smothered by contradictory terms and metaphor carried to excess. There is another part of Mr. Shelley's art of poetry, that deserves notice; it is his fancy, that by bestowing colouring epithets on every thing he mentions, he thereby renders his diction and descriptions vividly poetical. Some of this will appear hereafter; but we shall select one passage, as illustrative of the ridiculous extent to which the folly is wrought.

Asia is longing for her sister's annual visit; and after talking of Spring clothing with golden clouds the desert of life, she goes on:

This is the season, this the day, the hour;  
At sunrise thou shouldst come, sweet sister mine,

Too long desired, too long delaying, come!  
How like death-worms the wingless moments crawl!

The point of one white star is quivering still  
Deep in the orange light of widening morn  
Beyond the purple mountains: thro' a chasm  
Of wind-divided mist the darker lake  
Reflects it: now it wanes: it gleams again  
As the waves fade, and as the burning threads  
Of woven cloud unravel in pale air:

'Tis lost, and thro' yon peaks of cloudlike snow  
The roseate sun-light quivers: hear I not  
The Eolian music of her sea-green plumes  
Winnowing the crimson dawn?

Here in seventeen lines, we have no fewer than seven positive colours, and nearly as many shades; not to insist upon the everlasting confusion of this rainbow landscape, with white stars quivering in the orange light, beyond purple mountains; of fading waves, and clouds made of burning threads, which unravel in the pale air; of cloudlike snow through which roseate sun-light also quivers, and sea-green plumes winnowing crimson dawn. Surely, the author looks at nature through a prism instead of spectacles. Next to his colorific powers, we may rank the author's talent for manufacturing "villanous compounds." *Ecce signum*, of a Mist.

Beneath is a wide plain of hilly mist,  
As a lake, paving in the morning sky,  
With azure waves which burst in silver light,  
Some Indian vale. Behold it, rolling on  
Under the curdling winds, and island  
The peak whereon we stand, midway, grand,  
Embraced by the dark and blooming forests,  
Dim twilight-lanes, and stream-illumined caves,  
And weird enchanted shapes of wandering mist;  
And far on high the keen sky-clearing mountains  
From icy spires of sun-like radiance fling  
The dawn, as lifted Ocean's dazzling spray,  
From some Atlantic islet scattered up;  
Spangles the wind with lamp-like water-drops.  
The vale is girdled with their walls, a howl  
Of catarracts from their thousand-ravines  
Satiates the listening wind, continuous, vast,  
Awful as silence.

This is really like Sir Sidney Smith's plan to teach morality to Musselmans by scraps of the Koran in Kaleidoscopes—only that each scrap has a meaning; Mr. Shelley's lines none.

We now come to a part which quite throws Milton into the shade, with his "darkness visible;" and as Mr. Shelley professes to admire that poet, we cannot but suspect that he hides himself on having out-done him. Only listen to Panthea's description of Demogorgon. This lady, whose mind is evidently unsettled, exclaims,

I see a mighty darkness  
Filling the seat of power, and rays of gloom  
Dark round, as light from the meridian sun,  
Ungrated upon and sheathed—

We yield ourselves, miserable hum-drum devils that we are, to this high imaginative faculty of the modern muse. We acknowledge that hyperbole, extravagance, and irreconcilable terms, may be poetry. We admit that common sense has nothing to do with "the beautiful idealisms" of Mr. Shelley. And we only add, that if this be genuine inspiration, and not the grossest absurdity, then is force sublime, and inhuman raving the perfection of reasoning: then were all the bards of other times, Homer, Virgil, Horace, drivellers; for their foundations were laid no lower than the capacities of the herd of mankind; and even their noblest elevations were susceptible of appreciation by the very multitude among the Greeks and Romans.

We shall be very concise with what remains: Prometheus, according to Mr. Percy Bysshe Shelley—

Gave man speech, and speech created thought—

which is exactly, in our opinion, the cart creating the horse; the sign creating the inn; the effect creating the cause. No wonder that when such a master gave lessons in astronomy, he did it thus—

He taught the implicated orbits woven  
Of the wide-wandering stars; and how the sun  
Changes his hair, and by what secret spell  
The pale moon is transformed, when her broad eye

Gazes not on the interlunar sea.

This, Promethean, beats all the systems of astronomy with which we are acquainted: Shakespeare, it was said, "exhausted worlds and then imagined new;" but he never imagined aught so new as this. Newton was a wonderful philosopher; but, for the view of the heavenly bodies, Shelley double distances him. And not merely in the preceding, but in the following improved edition of his astronomical notions, he describes—

A sphere, which is as many thousand spheres,  
Solid as crystal, yet through all its mass  
Flow, as through empty space, music and light:  
Ten thousand orbs involving and involved,  
Purple and azure, white, green, and golden,  
Sphere within sphere; and every space between  
Peopled with unimaginable shapes,  
Such as ghosts dream dwell in the lamplight deep,  
Yet each inter-transpicuous, and they whirl  
Over each other with a thousand motions,  
Upon a thousand selfless axes spinning,  
And with the force of self-destroying swiftness,  
Intensely, slowly, solemnly roll on,  
Kidding with mingled sounds, and many tones,  
Intelligible words and music wild.  
With mighty whirl the multitudinous orb  
Grinds the bright brook into an azure mist  
Of elemental subtlety, like light;  
And the wild odour of the forest flowers,  
The music of the living grass and air,  
The emerald light of leaf-enframing beams  
Round its intense yet self-conflicting speed,  
Seem wreathed into one aerial mass  
Which drowns the sense.

Did ever the walls of Bedlam display more insane stuff than this?

When our worthy old pagan acquaintance, Jupiter, is disposed of, his sinking to the "void abyss," is thus portrayed by his son Apollo—

An eagle so caught in some bursting cloud  
On Caucasus, his thunder-buffed wings  
Entangled in the whirlwind! &c.

An' these extracts do not entitle the author to a cell, clean straw, bread and water, a strait waistcoat, and phlebotomy, there is no madness in scribbling. It is hardly requisite to adduce a sample of the adjectives in this poem to prove the writer's condign abhorrence of any relation between that part of speech and substantives: sleep-unsheltered hours; gentle darkness; horny eyes; keen faint eyes; faint wings; fading waves; crawling glaciers, toads, agony, time, &c.; belated and noontide plumes; milky arms; many-folded mountains; a lake-surrounding bote; veiled lightning asleep (as well as hovering); unbewildering flowers; odour-faded blooms; semi-vital worms; windless pools, windless abodes, and windless air; unermating waves; unpavilioned skies; rivetted wounds; and void abysses, are parcel of the Babylonish jargon which

is found in every wearisome page of this tissue of insufferable buffoonery. After our quotations, we need not say that the verse is without measure, proportions, or elegance; that the similes are numberless and utterly inapplicable; and that the instances of ludicrous nonsense are not fewer than the pages of the Drama. Should examples be demanded, the following, additional, are brief. Of the heroic line:—

Ah me! alas, pain, pain ever, for ever—

Of the simile:—

We will entangle buds and flowers and beams  
Which twinkle on the fountain's brim, and make  
Strange combinations out of common things,  
Like human labes in their brief innocence. —

Of the pure nonsensical:—

Our feet now, every poem,  
Are saddled with calm,  
And the dew of our wings is a rain of balm;  
And beyond our eyes,  
The human love lies  
Which makes all it gazes on paradise.

We'll pass the eyes  
Of the starry skies  
Into the loar deep to explore;  
Death, Chaos, and Night,  
From the sound of our flight,  
Shall flee, like mist from a tempest's might.

And Earth, Air, and Light,  
And the Spirit of Night,  
Which drives round the stars in their fiery flight;  
And Love, Thought, and Breath,  
The powers that quell Death,  
Wherever we soar shall assemble beneath.

And our singing shall build  
In the void's bow-feld,  
A world for the Spirit of Wisdom to wield;  
We will take our plan  
From the new world of man.

And our work shall be called the Promethean.  
Alas, gentle reader! for poor Tom, whom the foul foul bath (thus) led o'er bog and quagmire, and bliss thee from whirlwinds, starre-blasting, and taking. Would that Mr. Shelley made it his study, like this his prototype.

How to prevent the fiend, and to kill vermin.

Poor Tom's affected want of wits is inferior to Shelley's genuine wandering with his "father of the hours" and "mother of the mouths" and his dialogue of ten pages between *The Earth* and *The Moon*, assuredly the most arrant and gravest burlesque that it ever entered into the heart of man to conceive. We cannot resist its opening

*The Earth.* The joy, the triumph, the delight,  
The madness!

The boundless, overflowing, bursting gladness,  
The vaporous exultation not to be confined!

Ha! ha! the animation of delight  
Which wraps me, like an atmosphere of light,  
And bears me as a cloud is borne by its own wind.

*The Moon.* Brother mine, calm wanderer,  
Happy globe of land and air,

Some Spirit is darted like a beam from thee,  
Which penetrates my frozen frame,  
And passes with the warmth of flame,  
With love, and odour, and deep melody  
Through me, through me!

*The Earth.* Ha! ha! the caverns of my hollow  
mountains,

My cloven life crags, sound exulting fountains

Laugh with a vast and inextinguishable laughter.  
The oceans, and the deserts, and the abysses,  
And the deep air's unmeasured wildernesses,  
Answer from all their clouds and billows, echoing  
after.

This is but the first of the ten pages: the sequel, though it may seem impossible to sustain such "exquisite fooling," does not fall off. But we shall waste our own and our readers' time no longer. We have but to repeat, that when the finest specimens of inspired composition may be derived from the white-washed walls of St. Luke's or Hoxton, the author of *Prometheus Unbound*, being himself among these bound writers, and chained like his subject, will have a chance of classing with the foremost poets of the place.

*English Stories, (Second Series); including the period between the Accession of Henry III. and the Death of Henry VI.*  
By Maria Hack. London, 1820.  
12mo. pp. 311.

We are not acquainted with, or do not remember, the first series of this very useful and well managed publication; but if it resembles the volume now before us, it is entitled to the approbation of every friend of youth. The plan is formed to delineate the most striking facts in our national history, and at the same time to make sensible remarks on the conduct of the principal actors, and draw valuable inferences from the incidents. With this design, Harry and Lucy, the children of Mrs. B. and their mother, are introduced; the two former read the history, and the latter comments on its prominent features. It appears to us, that the most authentic historians have been consulted, and that the opinions put into the mouth of the elder character, while they are ingenious and acute, invariably tend to inculcate sound principles, and incite to virtuous actions. The work needs no higher praise.

PHILLIPS ON BRITISH FRUIT TREES.  
[Concluding Notice.]

*Mulberry.*—"Should a few spirited land-proprietors make the experiment of grubbing up their hedge-rows, and planting fences of mulberry-trees, I have no doubt but that in a few years they would reap as great a profit from their hedges as from their corn. It would find immediate employ for many labourers, and would in time require the assistance of thousands of the lower classes to gather the leaves and attend to the breeding and feeding of the silk-worms, the winding of the silk, &c.; indeed, the whole process is calculated as an employ for the aged and the infirm, who, being unable to do laborious work, must now, of necessity, add to the weight of the parochial taxes. I am fully of opinion that it would be the foundation of a permanent reduction in the poor-rates, which must continue to augment, unless employ be found equal to the increase of the population. It is worthy of notice that the trees, which are planted for the feeding of the

silk-worms, are seldom suffered to grow to a height to injure the land; but they are kept as shrubs or espaliers. The great nurseries of mulberry plants, in the plains of Valencia, in Spain, are produced from seeds, obtained by rubbing a rope of cypress with ripe mulberries, and then burying the rope two inches under ground. As the young plants come up they are drawn and transplanted; the trees are afterwards set out in rows in the fields, and pruned once in two years.

"The mulberry-tree's seldom producing fruit until it has arrived at a considerable age, has been much against its cultivation; but it is now discovered, that by grafting it from the aged trees, or, to use a common phrase, putting an old head on young shoulders, it soon becomes fruitful."

*Orange.*—"Oranges were first brought into Europe by Jean de Castro, a celebrated Portuguese warrior, who made them a present to the Conde Mellor, the king of Portugal's prime minister, who was only able to raise one plant from a great number that were brought to Europe. This tree, which was planted in 1548, and from which all the European orange-trees of this sort were produced, is said to be now alive at Lisbon, in the garden of Count S. Laurent.

"In the Philosophical Transactions, No. 114, there is a very remarkable account of a tree standing in a grove near Florence, having an orange stock, which had been so grafted on, that it became in its branches, leaves, flowers, and fruit, three-formed; some emulating the orange, some the lemon or citron, and some partaking of both forms in one. These mixed fruits never produce any perfect seeds: sometimes there are no seeds at all in them, and sometimes only a few empty ones.

"The Maltese graft their orange-trees on the pomegranate-stock, which causes the juice to be of a red colour, and the flavour to be more esteemed. The Rev. Mr. Hughes, in his Natural History of Barbadoes, mentions the golden orange as growing in that island. He describes the fruit as a large fine orange, of a deep colour within, from whence it derives the name Golden Orange. He adds, 'This fruit is neither of the Seville or China kind, though it partakes of both, having the sweetness of the China mixed with the agreeable bitterness and flavour of the Seville orange.'"

*Pear.*—"Miller mentions eighty varieties of the pear in his day; and, at the present time, they are so much increased, that Mr. Lee, of Hammersmith, assured me that he possessed 213 kinds of pear-trees. We trust that, while the Horticultural Society are seeking for new varieties, those of established fame will not be neglected. It is desirable to have our orchards planted with a variety, that we may have some for all seasons and for various purposes; but it is equally to be wished, that the best of each sort should be selected, not only of the dessert kinds, but those for baking and preserving, as well as those for making perry, which is one of the justly admired British beverages."

*Plum.*—"The Orleans plum takes in

name from the part of France so called. This is a handsome but an indifferent fruit, and not equal to the common Muscle plum in flavour, although it is more cultivated than even the Green Gage, which is not only the most agreeable, but also the most wholesome of all the plums. This latter plum was called the Reine Claude, from having been introduced into France by Queen Claude, wife to Francis the first of that country, but it bears various names in different parts of France. It is often called *dama verd*; at Tours it is named *abricot verd*; at Rouen, where it grows abundantly, they call it *la cerise bonne*. This plum received the name of Green Gage from the following accident. The Gage family, in the last century, procured from the monastery of the Chartreuse at Paris, a collection of fruit-trees. When these trees arrived at the mansion of Hengrave Hall, the tickets were safely affixed to all of them, excepting only to the Reine Claude, which was either omitted to have been put on, or was rubbed off in the package. The gardener, therefore, being ignorant of the name, called it, when it first bore fruit, the Green Gage. The compliment was justly due to the family for the introduction of this excellent plum, which is more acceptable to the country at large, than the trifling respect can be to the family of Gage. Lord Cromwell brought several sorts of plums from Italy into this country, in the reign of Henry VII.: among them was the Ferrignon.

"The Bonum Magnum is our largest plum, and greatly esteemed for preserves and culinary purposes. A plum of the same size and shape, but of a yellower hue, has lately been introduced by Mr. Coe, of Brompton, and is called Coe's Golden Drop. In flavour it partakes both of the Green Gage and the Apricot. I have several standard trees in my garden at Bayswater, which are very productive; and the fruit has the quality of keeping perfectly sound and good until near Christmas, if it be gathered with the stalk or a part of the branch, and suspended in a dry room."

**Raspberry.**—"The yellow or white raspberry is most admired at dessert: indeed all the white fruits of the berry kind, are sweeter than the coloured, but other fruits that are coloured are generally sweeter than the white."

"The red raspberry is considered the finest for flavouring ices, jams, &c. A third kind is cultivated, which produces two crops a year, but I have seldom met with the October raspberry, possessing much flavour."

"Raspberries are much cultivated in the neighbourhood of Isleworth and Brentford; from whence those are sent to London in swing carts, which are used by the distillers for making raspberry brandy, raspberry vinegar, &c. as also those used by confectioners and pastry-cooks: but the raspberries which are intended for the table are brought by women on their heads: their load consists of a round, or basket, containing twelve gallons, of three pints to a gallon; and, although the distance is ten miles from Isleworth to Covent Garden market, they regularly perform

the journey in two hours: for which they are paid three shillings and sixpence. From Hammersmith these industrious women will take a load three times a day, for which they receive eighteen-pence per load. These female fruit porters come to the vicinity of London for the season, from Wiltshire, Shropshire, and Wales: in their long journeys they seldom walk at a less pace than five miles per hour."

**Strawberry.**—"The varieties of the strawberry, like those of other fruits, been so increased, that, to describe them distinctly, would be almost impossible, even with the assistance of coloured drawings. The President of the Horticultural Society, Thomas Andrew Knight, Esq., states, that he has at this time not less than 400 varieties of this fruit in his garden. Among those which he has raised, is one from the white Chili strawberry and the pollen of the black strawberry."

**Service Tree.**—"This fruit, which is a native of England, is now a little known, and as rare in the London market, as the fruits of the most distant parts of the world; and the service-berry-tree is now so thinly scattered over the country, that many farmers do not even know its existence." \*

"The service-tree is still occasionally to be met with in the hedge-rows in Kent, and in the Wealds of Sussex, of the size of a moderate oak-tree; as also in the north of England and Wales."

"I know many noblemen and gentlemen object to fruit-bearing trees being planted on their estates, on the principle that it encourages depredations to injure their plantations; but this seems but a poor excuse for depriving themselves and the public of the beauty and variety which the blossoms give at one season of the year, and the fruit at another, particularly to those who have park-keepers, or bailiffs, on the premises."

The selfish principle noticed in this paragraph deserves the deepest attention. We are convinced that it is the cause of most of the destructive inclination observable in the inferior ranks of the people. Were they less excluded from enjoyments, they would have other feelings towards their sources; and were half the pains taken to furnish the poor with harmless recreations and allowable comforts, that are taken to deter from the one and deprive them of the other, we are assured, in our own minds, that it would produce the happiest effects in the country. Instead of proscribing rustic sports and innocent pleasures in towns, they ought to be invented and encouraged, in moderation, for the labouring classes; instead of thorns and brambles, it would be wisdom to plant flowers and fruits. Then envy and hatred would not be felt towards pleasures which were participated instead of being forbidden: then would abundance and the liberty of slight gratification convert the malicious destroyers and pilferers into the grateful admirers and protectors of things in which they were allowed to have ever so little of a common interest."

**Walnut.**—"Pliny tells us, that the Romans honoured walnuts with the name of

'Juglandes, viz. Jupiter's nuts.' They were much used at weddings by this people."

"This author has written much on their medical virtues, book 23, chap. 18, wherein he says, that 'the more walnuts one eats, with more ease will he drive worms out of his stomach; and that, eaten before meals, they lessen the effects of any poisonous food: eaten after onions,' he states, 'they keep them from rising, and prevent the disagreeable smell.'"

"Walnuts are considered stomachic: their oil is a good medicine for the stone and gravel. The bark of the tree is a strong emetic, either green or dried and powdered. The unripe fruit is used in medicine for the destruction of worms, and is administered in the form of an extract. I find, if the water in which the outside covering of walnuts has been steeped, be thrown on the ground, the worms will immediately come out of the earth: anglers often use this means to obtain bait for fishing." [But with no effect; we have often tried it, and pronounce it a quack expedient.]

"The walnut-tree was formerly cultivated in England for the sake of the wood, which was in great esteem for cabinet goods, before mahogany and other curious woods were imported from America into this kingdom, which was about the beginning of the eighteenth century, when the use of mahogany was discovered by the following chance:—Dr. Gibbons, an eminent physician, was building a house in King Street, Covent Garden. His brother, who was a West-India captain, brought over some planks of this wood as ballast, which he thought might be of service in his brother's building; but the carpenters finding the wood too hard for their tools, it was laid aside as useless. Soon after, Mr. Gibbons wanting a candle-box, the doctor called on his cabinet-maker (Wollaston, in Long Acre) to make him one of some wood that lay in his garden. Wollaston also complained that it was too hard; but the Doctor insisted on having it done; and, when finished, it was so much liked, that the doctor ordered a bureau to be made of the same wood, which was accordingly done; and the fine colour, polish, &c. were so pleasing, that he invited all his friends to see it. Among them was the Duchess of Buckingham: Her Grace begged some of the same wood of Dr. Gibbons, and employed Wollaston to make her a bureau also. On this the fame of mahogany and Mr. Wollaston was much raised; and furniture made of this wood became general."

We have now approached the close of our selections from Mr. Phillips's book; and when we look back on their variety, importance in many respects, and interesting mélange of intelligence and anecdote, we feel assured, that they must have been acceptable to the public. But it would be doing gross injustice to the author, not to add, that they are but meagre samples of that mass of curious matter which he has laid before us. His work is susceptible of some literary improvement; but for extent of information, utility, and most of the other good qualities which can be desired in a pro-

duction of its kind, it is really deserving of the warmest eulogy. Pleased with his labours, we conclude with an extract in favour of that branch of science of which he is so ardent a professor and so able a cultivator.

"The following anecdote, as related by Ray, will prove how necessary it is for all classes of men to be in some measure acquainted with botany: the counsellor who would be a judge, the student who would be a pleader, the jurymen who would give an honest verdict, and the defendant who would gain his cause, will, in this instance, see the importance of botanical information."

"Baal, who was a gardener at Brentford, in Middlesex, having cultivated a remarkably fine cabbage, sold a large quantity of the seeds to several gardeners about the suburbs of London. They committed them to the ground after the usual manner; but instead of the sort Baal had made them believe would spring up, they proved to be chiefly the *brassica longifolia*, instead of the *florid*. His incensed customers, in a body, instantly commenced, in Westminster Hall, a prosecution against him. The unfortunate man being unable to prove his innocence before the judges, the court found him guilty of fraud; and he was condemned, not only to restore the price given for the seeds, but was likewise obliged to pay each gardener for the loss of time, and for the ground that had been uselessly occupied. His character and circumstances were consequently ruined; which impaired his health, and caused him to pay an untimely debt to nature. Had the judges been at all apprised of the sexual hypothesis, or had this honest man known, from careful observation, the use of the farina in rendering the pistillum productive, Baal would not have been found guilty of a crime, but the accident would have been attributed to the true cause, the fortuitous impregnation of the *brassica florid* by the farina of the *brassica longifolia* growing in the neighbourhood." *Finis.*

CURIOUS LETTER from Dr. Matthew Guthrie to the *Editor*, in which it is justly remarked by the *Editor* of the posthumous correspondence, lately published, contains much learning, antiquarian research, pleasantness, and good sense, as bad spelling and punctuation.

St Petersburg, Sept. 12<sup>th</sup> O. S. 1775.

Dr Sir,

"A man from the frigid Zone, in consequence of having read your Elegant translation of Terence with your commentations, has taken the Liberty of sending you a Small present of little Value but some curiosity. It consists of some rude Musical Instruments in common use in the interior parts of this Empire (Russia) where no foreign custom has found an Entrance for many centuries, and where modern improvements in Music and almost every thing Else, have never been heard of. I mean to be understood as speaking of the interior parts of the Empire far removed from the State of Government, for certainly in the place of my ordinary residence St Petersburg there are few of the fine arts that have not found their way. Some of the

Instruments I send you I think resemble those that we are told were introduced upon the Grecian Stage whilst in its rude, Simple, confined State, and probably you may find with me a resemblance between the unequal flutes which I send you, and those so often mentioned as accompaniments to the Ancient Drama at its first appearance, they are piped upon by our Russian Shepherds and I think answer to Horace's description,

*Tibia non ut tunc, orichalcio vineta, tubaque  
A'mula; sed tenuis, simplexq; foramine paucis  
&c.*

The Learned Montfaucon was at a loss to conceive how a double flute could create an agreeable harmony yet supposed that it was even more in use with the Ancients than the single; but I am of opinion if he had heard one of those rustics mentioned above play upon it his infidelity would have been removed, at least it pleases my untaught Ear, he also supposes that the two Flutes were in fact separated, but that the several Pipes of each join in the mouth of the Player; this opinion seems to be confirmed by those sent both with regard to construction and manner of playing upon them. he also says "that the flute at first had but three holes and that they were afterwards multiply'd to seven and even ten." certainly these strengthen this assertion and are good Samples of the flute whilst in its rude unimproved state with only three holes.—I shall make one observation more upon them, that I think they are not unlike the unequal flutes in the Mouth of Francisco Ficaroris female Minstrel whom you have given us a plate of, and those She is playing on seem by the application of her fingers to have also but three Holes. As to the Flutes that were termed by the Ancients Right and Left handed I can pick up nothing in this part of the World that throws any light upon the Subject (alho I have met with another of their instruments in common use as I shall mention after I have given Some description of those I Send) for I suppose there must have been something in their construction that made the name applicable. You will find in the Case another rustick Shepherd's Pipe made of Wood and the Bark of a Tree that I think is as well intitled from its appearance to the Honor of the Original Bucolic Pipe as any thing I have seen, alho I must confess that the captivating Pipe of Theoricus must have had a little more sweetness in it or he would have found some difficulty to have charmed Lycidas the Goatherd out of his Crook. It has Six Stops and is used here to swell the Chorus of a Rustick Song similar perhaps to that which was the father of Drama, it is sung by one voice but a number of Boors join the Chorus and sing in parts, I wish from my heart I had the learn'd Dr Burney's Technical Pen to give you a description of both the Vocal and instrumental parts Secund. Art. but I am a judge of no composition but a Bolus or Pill, so you must take the will for the deed, however thus much I can inform you of that it has a deep harsh Note and serves to swell the Chorus alho it does not add much to the Melody. Besides this Pipe they accompany the Chorus

with a stranger sort of an instrument consisting of two Bunches of hollow, oval, Brass Grapes I believe I must call them, for they resemble very much Clusters of Grapes when suspended over the Players Head one in each hand, which he shakes and occasionally strikes together so as to keep time to the Music, this Performer throws himself into a Number of Barchick postures and has much the appearance of one half mad with Liquor. I am almost tempted to hazard an opinion that this very figure has made its appearance in Antique Musical Groups but from the great resemblance his instrument bears to grapes he has always been taken by the Moderns for a mad Bacchanalian, I wish Sir you that are so founded in these Subjects would pursue this hint and see if there is any thing to confirm it. They are commonly strung like these sent, upon wooden Spoons for the advantage of striking the convex sides of their mouths together which I suppose they find answer better than common sticks.

The next instrument you'll find in the Case I don't know what name to give it but take it to be the Mother of your Guitarrer, Lutes, &c. and certainly has the most rude Simple appearance that ever stringed instrument bore, it is certainly in its first State of invention from both its Shape Materials and Number of Strings being only two, and the whole formed by the hand of the Shepherd himself, as indeed are all the rest, but the Brass Grapes—It is surprising what execution the Russ Boors have upon these instruments considering their Simplicity, and what I admire most is the Ease with which they fill for a leuth of time the pipe cover'd with Bark which you need only try to be a judge of—

upon the whole I take all these to have been the musical instruments of the Ancient Slavonians or Slavi that possessed the tract of Country afterwards called Russia and that escaped Rurick and the Waragians or Rossians who over ran and took possession of the Country as I find non of them in those parts where the invaders came from

I have also visited our new conquered Provinces Moldavia and seen part of Walachia inhabited by Greeks who are certainly not descended from the Heras that bore the same name in the Ancient World, for a race of more ignorant lazy dastardly People I never saw however what makes me mention this part of my travels is to take notice to you of finding the Pipe of Pan consisting of Seven unequal reeds in common use in Moldavia, The performer upon it always accompanies a Group of itinerant Minstrels who are the only musicians they have in those Parts which I had the clearest proof of at a Ball which the Nobility of the province gave to Prince Orlof Ambassador plenat at the Congress, the Field Marshal Romanoff, Sir Charles Knowles &c. they could muster no other music and we danced Greek dances to Pans Pipe, another instrument resembling a Violin, a sort of Tabor, and the Voire of a Barl who was perhaps singing Homer in Modern Greek, or might be celebrating our activity in the Whirling Ring, with extem-

pory Song like Mr. Barretti's Spaniards for any thing I knew to the contrary.

If I remember right it has been a matter of inquiry amongst the moderns, in what manner the Ancient Greeks join'd their Winding dance, which they threw into so many gracefull figures; whether by joining hands or laying hold of a string. It is danced to this day by the modern Greek Ladies exactly in the same manner that I have seen it painted, they form a long Single file by each Lady laying hold with one hand of the end of a handkerchief, and they twist this line into a great many gracefull figures, according to the fancy of the first or leading Nymph, in a sort of gracefull flowing minuet Step. however these people seem to think Activity in every shape as much below them, and seem to adhere as religiously to the Graces as my Lord Chesterfield. There is a considerable resemblance between this last mentioned Dance and a Polonoise only with the difference of a Single instead of a double line, and I make no doubt but the Poles have taken it from the Greek one as the country borders one another, but they seem to have thought a Line of males no bad addition and a hand sufficient without a Kerchief.

When upon this Musical Subject, I must take notice to you also of a Company of Buccarin Tartars who have travel'd from their own country down here to show their dexterity upon the Rope, and given me an opportunity of seeing the Drum I really believe in its first state of invention. It consists of an Earthen Pot that Bellys towards the top and covered with a piece of dried Lambskin which they beat with two round Sticks without Nobs at the Ends, which would be unnecessary as they apply the whole surface of the Stick to the parchment.

A pair of these Pot Drums, a Sort of Tabor coverd only of one side and hung with Iron rings, and a screaming Pipe; is the music with which they exhilarate the Spectators during the performance, and I make no doubt but that it has the proper effect in Buccaria altho the four instruments dont produce Six different Sounds.

One would be almost tempted to suppose that those People derived their name from BUCCA as their face is almost all Cheek. I cant help making an observation upon the performance of those Eastern Neurobati, that altho they perform some difficult feats upon the rope (which is a thick Hare one and they dance it barefooted) yet there is that Asiatic Lector attends them which I have observed every where in the East that I have visited; they have nothing of that activity which accompanies European Performance. One thing more offers it self before I take my leave The Finnas or Finns the ancient inhabitants of these countries bordering the Gulph where we now dwell, have the Bagpipe in a very rude State and from its venerable Simple appearance I strongly suspect it to be the Parent of our Scotch one (as I am resolved to Send you no Orphan) for considering that its principle residence is in the Highlands, and that the Western Islands were often visited by the Baltic Gen- tery it seems very probable that they had

the Honor of introducing that war-breathing Bulga. but at the same time I dont mean even to hint that they have most distant claim to the Fibrogh, the Cronough, or any of these Noble Strains which the Highlanders have taught it, on the contrary, I have the best opportunity of judging of their merit by hearing the mean Original—

I think Sir I have now exacted a sufficient Share of your patience in return for my present, so will now quit Scores; and assure you that I am your

admirer and obedient Humble Servant  
MATHEW GUTHRIE M. D.

## ORIGINAL CORRESPONDENCE.

## ANCIENT SUPERSTITIONS.—NO. I.

(Concluded.)

The Funerals of the Ancients were likewise celebrated on the third day; thus the author of the Argonautics,

At vero orantes supremo funus honore,  
Trea totos conduit lugubri marmore soles,  
Magnificè tumulant quarto.

Vat. Mar. lib. ii.

Also in Book 3d.

Inde ter armatos Minys referentibus orbes  
Concussu tremuere rogi, ter inhorruit æther  
Lactificum clangente tubæ, jectæ supremo  
Tum clamore facies.

As the ancients believed that the ghosts of unburied men were incapable of obtaining admittance into the realms of bliss, but were compelled to wander, for a certain number of years, on the banks of the river Styx, so they entertained the idea that this unhappy fate could be avoided by erecting a sepulchre for their bodies, and repeating their names thrice, in order to call their ghosts to the habitation prepared for them: thus *Æneas*, in *Virgil*, performs this office for *Deiphobus*;

Tunc egomet tumulum Rhætoe in littore inæm  
Constitui, et magnâ Manes ter voce vocavi.

Æneid. 6, v. 506.

And *Antonine* has described this superstitious custom in the following elegant lines:

Hoc satis et tumulis, satis et telluris ægæis;  
Vocæ cicer amicus fueris instar habet:  
Gaudet compositi cicerus nam nomina dici;  
Frontibus hoc scriptis et monumenta jubent:  
Ille etiam mortui cui definit una sepulchri,  
Nominis ter dicto penè sepulchro erit.

Præfat. Parnal.

They likewise purified themselves thrice after a funeral, which ceremony *Virgil* thus alludes to:

Idem ter socios purâ circumtulit undâ,  
Spergens rore levi, et ranno felicia viros:  
Lastravitque viros.—

Æneid. 6, v. 229.

The names of such who died in foreign countries were also called over three times; and *Homer* informs us that *Ulysses* did so, when he lost some of his men in a battle with the Cicones:

Οὐδ' ἄρα μοι προτίειπ' ἦτος κίον ἀμύδιλασαι,  
Πέντε τ' αὖτις διδόν' ἵππεσσι ΤΡΩΕ ἱεράς ὄσας,  
Οἱ δ' αὖτος ἐν νηὶ Κικόνων ὕπο δαΐδ' ἔειπεν.

And *Hercules*, in *Theocritus*, calls on *Hylas* three times:

ΤΡΙΣ μὲν Ταν' αἶψα ἴδον βαδὺν ἄρρηκ' λαμπρῶς.  
The Eucharist in like manner, in *Theocritus*, is extremely exact in the number of her libations:

Ἐς ΤΡΙΕ ἀποσπίνδα, καὶ ΤΡΙΕ ταδὶ νότῃνα, φῶνδ.

Traces of this superstition adherence to odd numbers present themselves in every part of the globe:—the Mexicans look upon *five* as a sacred figure; the Persis pray at *five* stated times every day; the Chinese, in performing the abject ceremony of the *Koutou*, knock their heads *nine* times on the ground; the Sabians make their fasts to consist of *nine* or *seven* days; the Mahometans divide Hell into *seven* regions,—on their pilgrimage to Mecca, they surround the *Cadba seven* times,—kiss the black stone at the corner *seven* times,—run between the mountains of *Safâ* and *Mercaa seven* times,—and fling *seven* stones at the devil in the Valley of *Mîna*! But notwithstanding all these authorities in favour of *odd numbers*, yet the number *thirteen* was considered excessively ominous, and it was supposed that when thirteen persons met together in a room, one of them would die within the year: this Pliny mentions, "Quin et repente conticescere convivium adnotatum est, non nisi in pari præsentium numero." *Nat. Hist. lib. 28, c. 2.*

Even numbers, on the other hand, were always considered as unlucky; thus in the "Honest Lawyer," by S. S., in 1616.—"Sure 'tis not a lucky time: the first crow I heard this morning cried *twice*. This *even*, Sir, is no good number." This passage evidently alluding to the old vulgar saying of

One crow good luck,  
Two crows bad luck;  
Three crows a wedding,  
Four crows a burying.

I shall close my present paper and this subject, with a few remarks on the attention which the *Jews* paid to numbers. In the perusal of the sacred writings it will appear evident that great regard was had to numbers: thus we have the following particulars respecting the number *three*;—He shall purify himself on the *third* day,—shall sprinkle upon the unclean on the *third* day,—called Samuel the *third* time—in the *third* day he will raise us up—he went out about the *third* hour, and prayed the *third* time—the *third* time that Jesus shewed himself to his disciples, after that he was risen from the dead—and the *third* part of the sea became blood—and a *third* part of the creatures which were in the sea died—and the *third* part of the ships were destroyed—and the *third* part of the sun was smitten, and the *third* part of the moon, and the *third* part

• "Si in Convivio sicut *tridectum* Convive, creditur intra Annum aliquem de istis moriturum; totidem enim personæ accumbentibus mensæ, quando *Christus* celebravit Eucharistiam pridie quam mortuus est. Sic inter superstitiones triginta unus numerus ominousus est, quia *Christus* triginta denarius venditus est." *Peir. Moll. var. Vales. c. 219.*

of the stars, so, as the *third* part of them was darkened, and the day shone not for the *third* part of it, &c. &c. Of the number *seven*:—Went up by *seven* steps—shall purify *seven* days—least of *seven* days—*seven* priests shall blow before the altar *seven* trumpets—compounded the city *seven* times—*seven* spirits which are about the throne—mystery of the *seven* stars—*seven* lamps of fire burning before the throne, which are the *seven* spirits of God—the *seventh* day is the Sabbath—the *seventh* year shall be a Sabbath—purify yourselves on the *seventh* day—Enoch the *seventh* from Adam—the *seventh* Angel sounded, &c. &c.

Of the number *forty*:—It rained *forty* days and *forty* nights—Moses was *forty* years in Egypt, *forty* years he fled from the face of Pharaoh, *forty* years he led the *Israelites* in the desert, and was in the Mount *forty* days and *forty* nights—the spies searched the land *forty* days—*forty* days, and *Nineveh* shall be destroyed—when he had fasted *forty* days—being seen of them *forty* days, &c. &c. The Jews had moreover a secret and significant meaning in their Hebrew names of men, the letters of which signified numbers; but which I shall for the present pass over, for the purpose of bringing this paper to a close.

CAUS.

## ARTS AND SCIENCES.

## STEEL ENGRAVING.

To the Editor of the Literary Gazette.

Sir,—As you have more than once mentioned in your Journal the inventions of Messrs. Perkins and Fairman, your readers may perhaps be interested by the following article translated from the *Bibliothèque Universelle* of Geneva for July 1820.

*Claim to the priority of the invention of engraving in relief on copper, by the pressure of a plate engraved by incision (encreux) on steel.*

Paris, 25 July 1820.

Gentlemen,—In your valuable collection, you give the translation of some details respecting the inventions of Messrs. Perkins and Fairman relating to the art of engraving.

The editor of the Journal of the Royal Institution of London, from which the article is extracted, assigns to his countrymen the honour of the discovery which he lays before the public, and enriches with it the century we live in, which, though in its infancy, is already so opulent.

Permit me, gentlemen, to protest against these two assertions, and to claim for the eighteenth century, and especially for the French artists, the priority of the invention and discovery attributed to Messrs. Perkins and Fairman.

I owe it to the distinguished artists with whose labours my functions associated me during three years, not to permit them to be deprived in silence of one of their fairest claims—the gratitude of the friends of the arts.

\* The writer seems unaware that Messrs. Perkins and Fairman are not Englishmen, but Americans.—Ed.

M. A. G. Camus, Member of the French Institute, read to that society, on the 17th of March and 27th of May 1798, a memoir, the title of which was "*Histoire et Procédés du Poly-type et de la Stérotypie.*" This work was printed at Paris, and published by Baudouin in November 1801.

I had communicated to M. Camus the original memoirs, and the copies of the writings which my office had enabled me to collect respecting all the parts of the manufacture of assignats, the direction of which was confided to me from 1792 to 1795.

As the room which you can allow to a mere notice does not permit me to enter into long developments, I content myself with quoting the work of M. Camus.

Page 77. The plate of copper being laid upon the plate of engraved steel, was subjected to the action of a screw-press, and he (Gingembre) obtained in relief upon the copper the lines engraved by incision (encreux) upon the steel. He disposed plates of Rose Copper, well annealed, and after having laid them on the plate of hard copper, he caused the two plates together to pass under the rollers of the flattening mill, and this pressure gave him as many plates, in relief, or *encreux*, as he could desire.

Page 87. Fiezingher made some essays in engraving on steel; and by the processes mentioned in page 77, identical plates were obtained.

Pages 93 and 94. Herhan being charged with the polypage of the etching of the assignats of 400 and of 50 livres, polypayed for those of 400 livres, 897 primary stamps or coins, *poings mères* (i. e. in relief), 488 secondary ditto (in hollow); 190 stamps over this number were found to be defective. For the assignats of 50 livres, Herhan polypayed 4,760 *poings mères* (in relief) and 7,684 secondary ditto; 1,140 stamps above this number were found to be defective.

These extracts suffice, I think, to prove, 1. That a French artist (Gingembre) was the first who conceived the idea of transferring to copper the engraving in very low relief executed on steel.

2. That a French artist (Fiezingher) subsequently executed on steel, an engraving which was polypayed on copper.

3. That subsequently to this, Herhan was charged to polypage on copper, after the original engraved on steel, the eagle and the figure of liberty printed on the assignats of 400 livres and of 50 livres.

I must add, that at a late period I made Tardieu retouch the head of Ceres engraved by him on steel two years before, and that copper impressions were taken from it, not under the stamp or the flattening mill, but under a screw-press, (*d'un pas serré*) turning in its nut (*écrou*) of copper; on the head of the screw is placed an iron handle, each part being four or five feet long, which two men, one at each extremity of the handle, cause to descend on the engraved steel plate, which is covered with a plate of annealed copper.

At the instant when the plate fastened to the end of the screw touches the copper, the two men push the bar with an equable motion, and by a slow and successive pressure,

a pure and perfect impression is obtained of the steel upon the copper.

M. Camus has not fixed the year in which Gingembre made his first essays to obtain an impression on copper from an engraving on steel: the authentic documents in my possession prove that these first trials were made about April 1791; that the multiplication of the two medallions etched by Fiezingher, were executed under the stamp, by Diox, from June to September 1792; lastly, that the polypage by Herhan, from steel on copper, and from copper upon copper, was executed in 1793 and 1794.

Experience has discovered in the use of the various processes described by M. Camus, such defects, that the plates (*pièces*) being no longer identically the same, the employment of engraving in the composition of assignats has been entirely renounced, unless the thing to be printed required only one single press.

4. Copper, when strongly pressed, experiences in all its parts an extension proportioned to its degree of annealing and to its thickness. The difference between two impressions in copper has been found to amount in the eagle and in the figure of liberty to two centimetres 25-100ths (a line); hence the identity is destroyed.

If such a difference has been discovered on so small a surface as that of these two engravings of 30 and 66 square centimetres (4 square inches and 9 square inches), it is easy to foresee the enormous difference which will result from the multiplication of engraving on any large copper plates, especially when this multiplication shall be effected under a cylinder acting as a flattening mill.

If you think these observations, hastily drawn up, worthy of attention, please to make such use of them as you shall think proper; my sole object has been to prove that we owe the invention to French artists at the close of the eighteenth century.

Please to accept, Sir, &amp;c.

F. E. GUILLOT,

Ex-director of Assignats,  
Paris, Rue Duphot, No. 16.

## LITERATURE &amp; LEARNED SOCIETIES.

## OXFORD, AUG. 19.

The anniversary meeting of the Cambro-British Members of Jesus College, in this University, was held at Aberystwyth, a few days since. At three o'clock in the afternoon those productions to which the prizes had been awarded were read by the Rev. Daniel Evans, Fellow of the above-mentioned College. The premiums of 20*l.* for the best Welsh Essay on the words of Taliesin, "*Eu Hiaith a gadwant*;" and that of 2*l.* for the best six Englynion (Stanzas) on the following subject:—"LWYDDIAST I GOLIC JEST," were given in favour of the Rev. John Jones, B. A. (Joan Tegyd) of Jesus College. Mr. Thos. Davies, of the same College, was pronounced entitled to the prize 10*l.* for the best translation of a sermon in the Welsh language.

The verse from which the above subject was taken runs thus:—

Eu Ner a folant,  
Eu hialh a gadwant,  
Eu tir a gollant,

Ond Gwyllt Wallis.

Thus translated into Latin by Dr. Davies of Mallywyd, in North Wales.

Uque laudabant Dominum creatum,

Uque servabant idioma linguae

Arraque amittent sua cuncta, praeter

Wallacia rura.

And thus paraphrastically in English by J. W.

Still shall they chant their great Creator's praise;  
Still, still retain their language and their lays;

Not thought preserve of all their wide domains,  
Save Wallia's wild, uncultivated plains.

(Oxford Herald.)

#### ENGLISH LITERATURE ON THE CONTINENT.

Among the new circumstances of these times of international peace which come under this denomination, we have to notice the curious fact of a course of lectures on English literature being delivered at Geneva! We observe by the prospectus, syllabus, and letters which have reached us from Switzerland, that the lecturer, Thomas Mulock, Esq. (late of Magdalen Hall, and known to the British public by several political and theological works, as well as by his taste in the belles-lettres), commenced this course on the 7th ult. and that the Genevese are so earnest in the cultivation of our literature, that his success has been very great. The audience of the five lectures up to the 17th consisted of Germans, Italians, Genevese, and English; and nine discourses yet remained to be delivered of the proposed series, which was divided into four chronological eras, and embraced a comprehensive view of the subject, interspersed with criticisms, from the dawning of letters in Britain, to the close of the last reign. Independent of the novelty of the circumstance of hearing the English language propagating English Letters in the midst of so many tongues, we may fairly reckon it a matter of national concern, that so able an apostle as Mr. Mulock has assumed the literary cross.

#### EDINBURGH UNIVERSITY.

On the 1st of August, the *Senatus Academicus* of this University conferred the degree of Doctor of Medicine on 121 gentlemen; viz. 31 of Scotland, 34 of England, 41 of Ireland, 1 of Geneva, 1 of Petersburg, 1 of Canada, 2 of America, 1 of the West Indies, 2 of Jamaica, 3 of Barbadoes, 1 of Antigua, 1 of Honduras, and 2 of the East Indies. This large number proves the continued fame of this noble School for medical education; even though a considerable proportion consisted of graduates who had previously served in the army and navy.

#### FINE ARTS.

*Reflections on the close of the British Gallery Exhibition of Portraits.*

The numerous works of the old masters, which of late years have been in succession exhibited on the walls of the *British Institution*, have effected the patriotic object fore-

seen by the sagacious spirit of its liberal projectors, by diffusing through the whole nation a regard for the *Fine Arts*, and planting the seeds of taste in the bosoms of thousands, who but for this generous zeal in the cause of genius, would have passed away like their progenitors, totally regardless of such object:—thus opening a channel of delight to many persons of leisure and fortune, who, stimulated by these rare examples, have taken up the interests of art with such a growing ardour as to find in the pursuit the richest source of rational enjoyment.

We have been attentive observers of the progress of this establishment from its beginning; and animated by the same spirit which raised the structure, the love of our country, offer our humble tribute of congratulation and respect, at the shrine of its success.

That mind cannot be envied that is indifferent to posthumous honours. Who could visit the British Gallery, and contemplate the many almost living images of these our illustrious countrymen, without feeling emotions of love and veneration for their memory. The sons of those yet unborn, may contemplate in a future gallery the portraits of the founders of the British Institution. Time marshals merit and worth with unerring impartiality—hence future generations may behold a Gower occupying the next space to a Pembroke; a Long by the side of an Addison; a Baring with a Gresham; and the munificent Sir Joseph Banks seated by the benevolent John Evelyn!

No single head in the collection, perhaps, combines more of what is the object of research than that by Vandyke of the British *Mæcenas* of the seventeenth century. It exhibits great freedom of execution, being wrought with thinness, purity, and transparency; qualities in which the English school are most deficient. It is not so florid as Rubens, nor so artificial as Rembrandt, nor so inexplicable as the style of Titian. It has the very tone and texture of life, and displays the masterly finishing of a hand, held in prompt obedience to an eye,—a painter's acute eye, which reads nature at a glance.

Comparisons of the works of the living with the dead, are too often made to the wilful disparagement of the former, prompted by the spirit of vanity or ill-nature. The dead are no rivals, and the living are thus brought down, whatever their excellence, to a nearer mental standard with the multitude who eat and drink, until "gathered to their fathers" by the fleeting ministers of oblivion. Our contemporaries' artists, will not feel angry with us for according to Vandyke these honours; for the painters of our day, we observe, at all collections of the works of the old schools, are the first to point out these, and other excellences in this great Flemish master. They all admit he drew more correctly, and painted with greater purity. It is these qualities then, so difficult of attainment, but when attained so easy of application (for Vandyke executed with mighty facility), that we strenuously recommend to the observations

of the students, who will now have a fair opportunity afforded them to accomplish a much desired object.

It is scarcely necessary to observe, even to the youthful essayist in this delightful art, that the process used by the generality of our painters is not the same as the process either of Italian, Venetian, Dutch, or Flemish schools. Every great master of former ages had his disciples, under whose auspices the executive principles of the art were taught, by systems as comprehensible as the rules of rhetoric at our public academies. Hence the student acquired a knowledge of the materials; all the *handicraft* by which he was to realize his own views of the prototype he sought in the vast field of nature. In England, every painter has to instruct himself. The art is begun *de novo* by every new candidate for fame; and hence, the willing hand toils laboriously after the excursive mind, too weak to execute its will.

Rubens, whose powers of execution as tonish and delight, has left a precept, which cannot be too strongly inculcated to the rising artist; for where the beginning is wrong, few have sufficient constancy, though journeying, as they thought, onward for the region of truth, to retrace their steps on discovering that they are far advanced in the path of error. This great painter says, "Begin by painting in your shadows lightly, taking particular care that no white is suffered to glide into them; it is the poison of a picture, except in the lights; if once your shadows are corrupted by the introduction of this baneful colour, your tones will no longer be warm and transparent but heavy and leady. It is not the same in the lights; they may be loaded with colour as much as you may think proper, provided the tones are kept pure; you are *sure* to succeed in placing each tint in its *place*, and afterwards by a light blending with the brush or pencil, melting them into each other without *tormenting* them; and on this preparation, may be given those decided touches, which are always the distinguishing marks of the great master."

It is want of attention to this golden precept, or if he knew it not, the want of power to follow its dictates, that causes the pictures by our honoured Reynolds, to suffer by comparison, when surrounded with the works of the old schools—and by those of the great Flemish masters, Rubens and Vandyke, he suffers most. The grand conception of form, the majesty of light and shadow, the just perception of character, and all the strength which are displayed by his gigantic powers, cannot bear Reynolds up to the comparison of the dazzling brilliancy of these. His pictures look dull, "*heery, and leady*,"—destitute of the viracious rancour of the Flemish style of art.

It is when dwelling on the conviction this deficiency in the English style of painting, that we have often been almost urged to venture with due deference to suggest to the enlightened and noble directors, whether during the time which is allowed for copying the fine specimens lent for the imitation of the youth who paint in the

Gallery, it would not be advisable to appoint professors, who might afford advice to the students. Such might find among our distinguished painters.

Mr. Ward has sufficiently proved his knowledge of the process of every celebrated school, whether Italian, Venetian, Dutch, or Flemish; we allude to his own inimitable representation of animals, wherein the purity and transparency of the happiest periods of art have been rivalled by his brilliant pencil and masterly execution. His copy of Titian, by favour of the Marquis of Stafford, at Cleveland House, has all the original spirit of that great master, and his pasticcios of every school, bear testimony to the extent of his powers. He could direct the student, and point the way to this desired object; and thus effect a reformation in the executive department. This is all that is wanted: we have a superabundance of mind and talent in every other attribute of the art. If to this distinguished painter, at the approaching opening of the British Gallery, were added the sterling talent of Mr. Phillips, the students might by their aid be directed to the development of the pure Flemish style, and England might commence a new era, and excel the world in arts as in commerce, and in arms.

#### BRIGHTON GALLERY.

A Correspondent at Brighton (under the signature of P. S.) informs us that two picture galleries have been opened there, and describes one of them as containing the following works of art. A Moses striking the rock, by Nicholo Poussin, formerly in the Houghton Gallery, and combining all the well known beauties of design and colouring peculiar to that great master; an original Marriage of St. Catherine by Parmigiano, painted for the Grand Duke of Tuscany, which for harmony of composition and richness of colouring deserves equally the encomium of the connoisseur and the admiration of those less experienced; an exquisitely finished portrait of Menga, by himself; and a Cupid in Vulcan's Forge, by Domenichino; the Cupid is particularly beautiful, the expression of countenance, and grace of the head, as he archly shows his Mother the sharpened point of his arrow, and the ease and repose of the whole contour of the figure, are sweetly wrought, which with the deep shade enveloping the back ground, and throwing a softness over the colouring, affords one of the most voluptuous evidences of the magic of the chiaro oscuro. This painting combines so finely the masterly disposition of light and soft colouring of Corregio, with the beauties of expression produced by Domenichino, that it is a contested point, to which of these great artists it is to be attributed. In addition to these are numerous specimens of the Italian, Dutch, English, and French schools, and perhaps the most splendid collection of De Louthembourg extant, comprising thirty-one paintings.

#### THE TOMB OF JULIET,

Of which Mr. Galiffe gives so whimsical an account, we forgot to mention in our Re-

view, had previously attracted so much of our attention that we not only inserted an original account of it from a distinguished pen, but also an accurate engraving, in Number 9 of the Literary Gazette—March 22, 1817.

### ORIGINAL POETRY.

[By Correspondents.]

NOTHING.

Aug. 28, 1820.

Sir.—In offering the following translation, it is much for a Neophyte to request that you would differ for a time from the noblest sentiment of the foster-friend of Scipio—"Humani nil a me alienum puto."—I have nothing in rhyme (or reason) to back my desire; yet whilst I am assured that among your richly-stored columns, *nothing*—meritless or faulty—can find a place; let me not be deemed *paradoxical*, or *malicious*, when I express the hope that they may shortly contain *Nothing*, that will prove agreeable or entertaining to your numerous readers.

I am, sir, yours respectfully,  
TO THE EDITOR OF THE  
Literary Gazette. ΟΥΔΕΙΣ.

• JOANNIS PANSERATII POEMA.

..... οὐδὲν γὰρ οὐδὲν ΟΥΔΕΝ.....  
ΟΥΔΕΝ ἢ ἄλλοι οὐδὲν. ΑΝΤΙΟ.

Another year revolves! the festal days  
Require their due, my tributary lays.  
What! the Castalian fountain drain'd so low  
That not a streamlet can be forced to flow?  
The exhausted fancy sink o'erworn,  
So soon desert, and point me out to scorn?  
No! If she thus with my mistresses sport,  
Let newer plans, and unknown paths be sought.  
Yet whilst my muse on every side looks round,  
Despise her not though *Nothing* still be found;  
*Nothing* than gems is richer; whilst with gold  
*Nothing* a just comparison will hold.  
Turn then your thoughts on *Nothing*, and be  
kind,—  
For look thro' Rome and Greece—and you will  
find  
That *Nothing* ever 'scaped their poets' eyes,—  
*Nothing* to their attempts the Muse denies,  
Where'er on earth bright Ceres holds her reign,  
Or billowy Neptune lords it o'er the main,  
Without beginning *Nothing* is produced;  
And *Nothing* of immortality can boast.  
*Nothing* with heav'n's high power may well com-  
peer;

Then *Nothing* let us serve with equal fear.  
More than the grove delights, can *Nothing* please,  
*Nothing* is softer than the zephyr's breeze;  
The gayest garden *Nothing* can outvie—  
Greener than meadows *Nothing* meets the eye;  
*Nothing* thro' hostile fury can endure,  
In peace is just, in treaties is secure;  
Who *Nothing* has (Tibullus speaks) is blest—  
The traitor's wife ne'er harnesses his rest;  
Pointless for him, is sheath'd the assassin's knife,  
Silent the tongues of all judicial strife.  
The minds which Zeno's arduous lessons fire  
For *Nothing* hope—and *Nothing* long desire;  
+ The Prince of Grecian wisdom, see! declares  
That *Nothing* is the end of all his cares:

• The original may be found annexed to Johnson's Life of Rochester.

+ Socrates, after contemplating the power of the Divinity, exclaimed in despair, that the sum of his own knowledge was less than *Nothing*.

*Nothing* at school is gain'd; ah, happy fate!  
Since to know *Nothing*, both in church and state,

Seems one sure op'ning to be rich and great.  
Know *Nothing*, and the horrid "Pun" is seen,  
Which fill'd Philosophy's forbidden bean.  
Behold! the earth's metallic entrails forc'd,  
And all the grandeur's fortune—'all disgorg'd,  
+ Whilst our crucible and furnace heat,  
On one vain hope see multitudes intent!  
Their means exhausted, and their prospects few,  
Tho' *Nothing* is found, still *Nothing* they pursue.  
Its measure baffles geometric art;  
Not Ocean's sands would form its meanest part:  
*Nothing* escapes the gaze of Phœbus' eyes,  
Or soars triumphant o'er the starry skies:  
E'en thou, immortal Newton! who so well  
The secret motions of the spheres could tell,  
Tho' *Nothing* open'd at thy summons bold,  
Still *Nothing* lingers by thine art untold.  
Touch *Nothing*—incorporeal *Nothing* meets  
Thy touch—thy proffer'd contact greets.  
Look upon *Nothing*—*Nothing* will be there,  
And colorless emit a vivid glare.  
Defend'd, will *Nothing* hear; or tongueless,  
talks;

Or without legs, or plumes, flies or walks:  
*Nothing*, without motion, and devoid of place,  
Wanders thro' boundless realms of empty space;  
See, generous Physic rescues half mankind!  
Stronger than Physic—*Nothing* heals the mind:  
Seek not for health in herbs, nor cures in balms—  
*Nothing*, can stay th' approach of Death's alarms!  
Love draws his bow—a fatal arrow flies!  
*Nothing* subdues its heartfelt agonies.  
Grim Charon plies his bark from shore to shore—  
*Nothing*, brings back his freight for evermore!  
Pluto's unbending soul can *Nothing* move,  
Or turn the Fates to pity and to love!  
The horrid Titans, scorch'd to ashes, own'd  
That thunder *Nothing* strikes a deeper wound;  
Beyond the earth's vast circle, *Nothing* reigns;  
The very Gods it tears with racking pains.  
*Nothing* is perfect—Virtue yields the palm  
To *Nothing*; 'tis than Love itself more warm.  
But hold, my trifling muse—these forward  
pranks  
Will scarce entitle you to niggard thanks:  
How shall I ask redemption for my verse,  
Or *Nothing* with a blushing cheek rehearse?  
Prythee, let *Nothing* 'scape you, and be wise—  
For out of *Nothing*, *Nothing* can arise.

#### LINES,

Written on the blank leaf of "The Angel of the World and other Poems, by the Rev. G. Crab."—

#### 1.

It is a sunny vision—a deep dream,  
Too full of beauty for the heart to dwell,  
Unpain'd, on that dazzling rays that stream  
Around the Bard's creations: Music's swell  
Voluptuous on the ear—the camel-bell  
Borne softly on the distance—banners bright  
Instinct with gems: that Angel ere he fell,  
And starry Eblis, in their mingled might,  
Deluge each weary pulse with too intense delight.

#### 2.

We turn away, with dim delirious sense,  
From that so fervid blaze, and seek repose  
From Eastern splendour and magnificence,—  
From gorgeous palaces, and clouds of rose,  
Sceptres and thrones and diamond-crested brows,

+ Beans, it is well known, were forbidden by Pythagoras to his followers.

+ Alluding to the search for the Philosopher's Stone.

Where sweet Florante\* warbles forth her woes,  
In strains, of power each turbulent thought to  
'swage,  
And bid the passions cease their fierce wild war  
to wage.

## 3.

Surpassing Lyrist! from thy powerful hand  
The thunders and swift lightning of the Muse  
Speed forth in glorious might;—thou canst com-  
mand

The noon-tide burst of Poesy, yet infuse  
Its twilight calms, and bloom-refreshing dews,  
Amid thy deep conceptions,—and canst braid  
Woofs rich and bright, with variegated hues,  
As those on an Arabian heaven display'd,  
Ere day's last rainbow beams have vanish'd into  
shade.

C. R. S.

## STANZAS FOR MUSIC.

While I upon thy bosom lean,  
And gaze into thine eyes,  
I turn from sorrows that have been  
To those which yet may rise:—  
I think on thy untiring truth,  
And faster flow my tears;  
I mark thy waning rose of youth,  
And cannot hide my fears.

## 2.

Oh! light have been the pangs we've proved  
To what may yet remain;  
We've suffered much—but fondly loved—  
Parted—but met again!  
Still something speaks a wilder doom,  
From which we ne'er may flee:  
Well, dearest, let the thunder come  
So that it spares me thee!

## 3.

Even whilst I clasp thee to my soul,  
And feel thou'rt only mine,  
The bodings I can not controul  
My lip breathes out on thine.  
Thy stooping lid and pallid brow,  
The hue thy features wear,  
With voiceless eloquence avow  
That I have much to fear.

## 4.

And when to this I add the thought  
Of parting soon again,  
The future, as the past, seems fraught  
With undivided pain:—  
But no—I will not dwell upon  
Such dreams while blest with thee;  
This hour is bright, and all our own,  
Whate'er the next may be.

1815.

A. A. W.

## SKETCHES OF SOCIETY.

## THE POLONG.

The Polong is one of the many evil Spirits in the existence of which the Malays believe; and as it is curiously different from our fairies or vampires, a few particulars respecting it, from the Indo-Chinese Gleaner, may be amusing. The Malays say that the Polong is capable of being conveyed down from parents to children. According to their laws, it is death to keep one of these supernatural beings; and the possessor uses for this purpose a small earthen bottle with a neck of sufficient size to admit a finger. The Polong feeds on human blood. The keeper cuts the tip of his fore-finger once or twice a

week, either Friday or Monday night, till blood issues, and he then puts it into the vessel for the Spirit to suck his fill. If neglected to be fed regularly he comes out, and sucks the whole body to such a degree that the skin becomes all over black and blue. The Polong is seldom kept by males, generally by females; and the woman, however ugly by nature, is endowed, through his influence, with surprising charms in the eyes of every beholder. If the keeper of a Polong entertains a grudge against any one, or if asked for or hired by another, he is let loose upon the person whom it is wished to injure. The marks of his vengeance are numerous.

As soon as he enters the victim, consciousness leaves him, and he screams and falls down; sometimes he becomes speechless and death-like; sometimes there is no appearance of ailment, but he talks incoherently; sometimes he begins to beat all about him; and sometimes sudden death ensues. The Polong always strictly obeys his orders, and inflicts the punishment which is commanded. Occasions occur in which his inflictions are inferior, and from one to twenty individuals suffer similar evils with the party originally visited. The people are so well acquainted with the power of this demon, that as soon as they see any one affected they send for a physician skilled in necromancy and the occult sciences, who administers medicaments, or more frequently employs spells to cure the patient. One of these is to draw a fantastical figure (pretended to be that of the soul fiend), on the inside of a white basin, into which water is poured for the sufferer to drink. Then the doctor takes hold of the end of his thumb, that being the door of the human body by which the Polong makes his entrances and his exits, and interrogates him in the following style: "Why do you torment this man?" Then he answers through the patient, "My father (so he designates his keeper) has a grudge against him." "Who is your father?" "—" "What has he told you to do?" "To eat his heart and entrails," (the usual phrase for torment). But sometimes the Spirit braves all exorcisms, and refuses to speak; and at other times he lies and gives wrong names. When however he does confess, the operator tries to discover his local habitation, (for though invisible and spiritual, he has dimensions and substantial shape), and for this purpose feels the body all over, to detect his lurking place, between the flesh and skin. When found in the arm, or behind the ear, or in any other part, the process of expulsion commences. The soothsayer first exacts an oath that he has spoken nothing but the truth, and further, that he will never return. He is then permitted to escape; and where the power of the physician is very great, he is even sent back to plague his own keeper.

The *Penanglan* (a derivative from the verb to "Pull out,") is another creature of Malay demonology. It is described as a human head and neck, with the intestines hanging to this odious conception. It has a female body to inhabit, but frees itself at pleasure from this covering to pursue its excursions through the air, and pounce and

prey upon all kinds of garbage. The *Penanglan* also sucks the blood of its victims. The body which it inhabits is, like that of our witch, devoted to the devil. Nothing can exceed the disgusting attributes and actions ascribed to this abominable and loathsome imagination.

HISTORICAL RECOLLECTIONS OF PARIS.  
REMARKABLE TOMBS.

[We select these particulars from the *Memorial Parisien*: they are rendered interesting at present from the destruction, by fire, of the *Quarter Bercy*, in which they were situated.]

The *Hôtel de la Vierge* is the oldest edifice in the Rue de St. Paul, Ile Louvier:—it has survived the church of St. Paul, of which not a fragment now remains. At the period of the expulsion of the Jesuits, their magnificent church in the Rue St. Antoine, was used for the performance of divine worship, instead of the parish church of St. Paul. The latter was a massive heavy building, and its interior was dark and gloomy. The interest of the arts called for the preservation of the Jesuits' Church; but nothing could be lost by the decay of St. Paul's. The latter, which was originally a mere chapel, had been enlarged without being beautified. It however contained a vast number of remarkable tombs. Near the grand altar, Henry III. had, at enormous expence, erected monuments to the memory of his three favourites, Louis de Mougiron; Jacques de Levis, Count de Quelus; and Paul de Stuart, Count de St. Meurin. These tombs consisted of black marble, and were each surmounted by a statue of the person to whose honor they had been raised. Saint-Foix has preserved the courteous epitaphs inscribed on them. These funeral monuments did not long exist; they were destroyed in the year 1588. The three favourites all came to an unhappy end. The two first died in consequence of the wounds they received in a duel which took place in 1578, Mougiron on the spot, and Quelus shortly after him; the latter had received nineteen wounds in the conflict. Saint Meurin was assassinated in the Rue Saint Honore on the 21st of July 1578.

The Church of St. Paul also contained the tombs of the following distinguished persons:—Marechal de Birou, who was beheaded at the Bastille for high treason, on the 31st of July 1602; Jean Nicot, the author of the French and Latin Dictionary, and who originally imported tobacco into France, which when first introduced was called *nocotiane*, or *herbe à la reine*, because Nicot presented it to Catharine de Medici; Pierre Biard, a celebrated sculptor and architect; François and Jules-Haroulin Mansard, to whom Paris is indebted for some of its finest monuments; the Countess de la Suze, the daughter of Admiral Coligny; Saint Sorin, the poet, now only known through Boileau's epigrams; and finally, François Rabelais, who was a cordelier, a benedictine, a physician, and the curate of Meudon. If the laconic will which some writers attribute to Rabelais, be really his, it is not very creditable either to his head or

\* See "Sebastian, a Spanish tale," in the same volume.

his heart; it is this. *I have nothing; I owe much, and I leave the rest to the poor.* It is, however, gratifying to turn to the simple but expressive epitaph of William Devienne, the father of the celebrated Jean Devienne, Admiral of France under Charles VI. William Devienne, when on his death-bed, ordered the following words to be inscribed on his tomb. *He was the father of Jean Devienne.* The hero was killed in Bulgaria, on the 26th September 1396.

A sensation of horror is excited on contemplating the spot in the burial ground of St. Paul's Church, in which were deposited the bones found in the different cells of the bastille in 1789. They are all enclosed in one tomb, which is surmounted by a stone bearing two inscriptions, one French and the other Latin; the latter is as follows.

Qui nos incarcerabat viventes,  
Nos adhuc incarcerat mortuos  
Lapis.

No other stones were used in the construction of this monument, except those of which the cells were built.

## THE DRAMA.

### ENGLISH OPERA HOUSE.

On Monday a *melo drame*, from the French, (as usual) was performed, for the first time. The title is the *Baron de Trench*; and the story is founded on the prison escapes of that luckless and liberty-loving personage. A *melo drame* which followed the adventures which his famous book has unfolded to so many wondering ears, must have a great deal to excite interest; for nothing in the romance of all the Jonathan Wilds and Caleb Williamses of the earth can exceed the details of *Trench's* prison hours. But they order those matters in another style in France; and as simple innocence, and constant love, are the two theatrical admirations of the most artificial and most unfeeling people in existence, the *Baron Trench* must be a perpetual lover, and his deliverance must be wrought neither by his own hard won hands, nor by the wearied hatred of his royal persecutor, but by a boy, won to his service by chivalrous gratitude. All this is absurd, though it is French; but what is too absurd for France and *melo drame*? We have no time to recapitulate the mass of heavy adventure through which the Baron is dragged, in order to be dragged out by the grateful page, and chaunted over by the enamoured Countess. But after having been on the verge of escape, and of the scaffold, the requisite number of things for three acts, *Trench* is at last delivered by the detection of the plot which had originally appeared him, as carrying on a correspondence with the Austrian enemy. On the whole, the *melo drame* is interesting, though many a cloud of tediousness heavily portended its failure. It is an hour too long; but Miss Kelly's acting was charming. We are reluctant to panegyrise this clever performer too much, because we wish to avoid contributing to the pride which sometimes besets the clever, and which would spoil even Miss Kelly. But she

yet seems free from this sinister inflation; and we must praise her at least so far as to say, that she makes the prettiest page imaginable—*"Puella pene puer."* Her dress too was, by a rare fortune for those who have such taper limbs, sufficiently decorous; and, with such qualities, we are only surprised at the tastelessness of the *Celibataires* of the present age. Miss Carew, *helo!* *encore une priere*, sang as the Countess, and made love as Miss Carew, with delightful and delighted tenderness. There may, perhaps, be more beauty before the eye; there can scarcely be more grace: other voices may swell with more power upon the ear; none can die with more sensibility. She is one of the most feeling singers upon the stage; and feeling is the soul of beauty, poetry, and song.

## VARIETIES.

A deputation of the members of the French Institute, a few days ago, attended the funeral of the late academicien M. Tschon d'Ancey. The deceased possessed one of the most valuable cabinets of medals in Europe.

About two years ago we announced the arrival of a considerable botanical curiosity in this university (copied into the Literary Gazette), namely, the *Tree Pink*, from the island of Scirphos, in Greece; sent, in a living state, to the botanical garden of this university, by Mr. Rawson of Halifax. This plant, the *Dianthus fruticosus* of Linnaeus, is now in full flower. It blossomed for the first time upon the 17th inst. in the evening. This beautiful shrub, promising so great an ornament to the green-house of this country, has already attained the height of two feet. The stem is twisted, woody, brittle, and hard, covered with a dark cloven bark; the leaves grow in tufts, and the flowers, which are numerous, are solitary. The petals are shorter than when the plant flowers in its native country, but exhibit a very beautiful appearance.—*Cambridge Chronicle.*

The King of France has issued an ordinance authorizing the Secretaries of the *Academie Française* and the *Academie des Inscriptions et Belles-lettres*, to accept the legacy of 24,000 francs bequeathed to them by the late Count Chassebault de Volney, with the view of exciting the philosophic study of languages, and encouraging every undertaking that may tend to put in practice a method invented by the testator for transcribing the Asiatic languages in European characters.

*Remarkable Accident.*—A singular circumstance lately took place at the *Comédie Française*. Baptiste, who was playing the part of a bailiff, drew from his pocket a paper to represent the warrant by virtue of which he exercised his authority. What was his astonishment on reading the name of one of his female relations, who, through ignorance of a Will which had been made in her favour at Dresden, was deprived of a considerable fortune bequeathed to her by her uncle. The paper was a true copy of this will. Baptiste uttered several excla-

mations of surprise, accompanied by such comic gesticulations that the theatre resounded with applause. The audience were, however, far from suspecting the real cause. Baptiste, having carefully deposited the paper in his pocket, continued his part, and on the following day, communicated the discovery to his relation, whose claims will probably be speedily acknowledged. This strange adventure is explained as follows:—Some time ago, a party of the performers of the *Comédie Française* proceeded to Dresden to play in the presence of the Sovereigns who were assembled in that city. Among other *scenic accessories*, they found it necessary to procure a number of old parchments; and it is probable that the document in question has ever since remained in the pocket of the dress worn by Baptiste when he made the fortunate discovery.

*Seeing an Eclipse.*—Many of our readers, no doubt, remember the story of Galileo. A nobleman of some consequence, desirous of seeing an eclipse, which happened in his time, to the best advantage, applied to the philosopher to admit him and a party of ladies to view the phenomenon through his apparatus. Galileo assented; but our fine gentleman was too much of a dandy to be dressed in time; and he arrived at the Observatory when the eclipse was over. The ladies were, of course, shockingly disappointed; but he consoled them, saying, "Pray don't mind it; I assure you, I have great influence with Galileo, and I make no doubt, but to oblige me, he will perform it over again!"

Many persons, indeed, have odd notions about heavenly as well as earthly matters. We remember a worthy farmer at Doncaster in the comet year, who being asked by some of his friends in that town, if he had seen the fiery stranger, replied with much simplicity, "Na, how could I? when I was at Wakefield all the while?"—18 miles off.

*AN IRISH FUN.*—Two pretty girls of the name of Hobbs, made their appearance some years ago at Cheltenham, where they were a good deal admired. One of them was much taller than the other, and a difference arose one day, between some gentlemen, as to their respective claims to superior beauty. It was referred to Dr. S. an Irish physician, who happened to be on the spot; and he decided the dispute in these words: "My dear fellow, I can't say I am much a judge of beauty, but I think the devil's in the dice but there's a grate (great) difference between the Hobbs."

*Grand Map.*—On the summit of the mountain of Méné-la-Horgne, in the department of the Meuse, there is at present an establishment of geographic engineers appointed to draw up a grand map of France. At night fires are kindled, which correspond with other points, and serve for the trigonometrical measurement.

*Lusus Nature.*—At Void, in the department of the Meuse, a cow lately brought forth a calf with a wolf's head, while its hind legs and tail resembled those of an ape. This singular monster however did not long survive its birth.—*French Journals.*

**Superstition.**—On the banks of the river Bhaugrutty, at Bhowaneah, between Moorshadabad and Sooty, is a tank, called the Koop (well) of Bhowaneah, possessing the credit of being haunted by a preet or sprite, which drags into its power and drowns whoever approaches the tank alone after dark. Its depth sufficiently accounts for the origin of this superstition, for those who fall into it can rise no more. It has thus become an object of fearful adoration; and lately, when the cholera morbus broke out in this part of India, the credulous natives assembled in hundreds daily upon its banks, to deprecate the wrath of its unearthly occupant.

## LITERARY NOTICE.

*Contents of the Journal des Belles Lettres, for July, 1820.*

Biot on the Aurora Borealis (second article).

B. de Roquefort, Poésies de Marie de France.—Reviewed by M. Raynouard.

C. A. Valckenær, Le Monde Maritime.—Abel Rémusak.

M. P. Le Bru, Marie Stuart, tragédie en cinq actes.—Vanderbourg.

Albuquerque, Georgina Portuguesa.—M. Raynouard.

Lettres de Saint James.—M. Tessier.

## METEOROLOGICAL JOURNAL.

AUGUST, 1820.

Thursday, 24.—Thermometer from 37 to 68. Barometer from 30, 31 to 30, 25.

Friday, 25.—Thermometer from 44 to 66. Barometer from 30, 08 to 29, 93.

Saturday, 26.—Thermometer from 52 to 66. Barometer from 29, 86 to 29, 84.

A fine parcelion formed west of the sun, about 5 P. M. Rain fallen, .95 of an inch.

Sunday, 27.—Thermometer from 45 to 68. Barometer from 29, 85 to 29, 89.

Rain fallen, .075 of an inch.

Monday, 28.—Thermometer from 50 to 63. Barometer from 29, 67 to 29, 74.

Rain fallen, .1 of an inch.

Tuesday, 29.—Thermometer from 44 to 68. Barometer from 29, 71 to 29, 91.

Rain fallen, .025 of an inch.

Wednesday, 30.—Thermometer from 56 to 64. Barometer from 30, 05 to 30, 12.

The Wind generally in the S. W. the weather fine, with occasional clouds.

Thursday, 31.—Thermometer from 43 to 62. Barometer from 30, 22 to 30, 23.

Wind N.E. and N. b. E.  $\frac{1}{2}$ .—Morning cloudy, with rain; the rest of the day generally clear.

SEPTEMBER, 1820.

Friday, 1.—Thermometer from 49 to 64. Barometer from 30, 26 to 30, 22.

Wind N. E. and N. 1.—Generally clear; clouds passing.

Rain fallen, .125 of an inch.

Saturday, 2.—Thermometer from 42 to 64. Barometer from 30, 22 to 30, 23.

Wind N. b. E. 3. and 1.—Generally clear.

Sunday, 3.—Thermometer from 50, 27 to 30, 31.

Wind N. b. E.  $\frac{1}{2}$  and N. W.  $\frac{1}{2}$ .—Clouds generally passing till the evening, when it became clear.

Monday, 4.—Thermometer from 36 to 67. Barometer from 30, 34 to 30, 30.

Wind N.  $\frac{1}{2}$  and N. E. 1.—Generally clear.

Tuesday, 5.—Thermometer from 35 to 69.

Barometer from 30, 30 to 30, 24.

Wind N. E.  $\frac{1}{2}$ , and S. E. 1.—Generally clear.

Wednesday, 6.—Thermometer from 39 to 65.

Barometer from 30, 21 to 30, 24.

Wind N. E.  $\frac{1}{2}$ , and E.  $\frac{1}{2}$ .—Generally clear; clouds passing during the morning.

Thursday, the eclipse commenced 22 minutes, 3 seconds after 12; ended 14 minutes, 4 seconds after 3.

From the intervening clouds, no particular observation could be made on the Thermometer. Venus became visible sometime prior to the greatest obscuration, but the darkness was not so great as it was thought it would have been.

On Saturday the 16th, at 11 minutes, 41 seconds after 7 o'clock, the 1st Satellite of Jupiter will emerge from an eclipse.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

**THE SHADOW.**—The several papers received in answer to our invitation of communications towards a weekly series of *Essays on Men and Manners*, under the above title, are under inspection: the writers of such as required private replies will find letters at their respective addresses.

T. K. has been forwarded to the proper quarter.

Miscellaneous Advertisements,  
(Connected with Literature and the Arts.)

To Booksellers.—A Caution.

Messrs. Pinnoek and Maunders consider it their duty to inform the respectable Members of the Bookselling Business throughout the Country, that since their Series of Elementary Works for the instruction of Youth, denominated "Pinnoek's Catechisms," have been honoured with such an unprecedented share of public approbation, the most fraudulent and contemptible Piracies and Imitations of them have been thrust on the notice of the public, by men equally destitute of literary abilities and originality of design.

The Trade cannot well fail to remember, that on the 27th of July, 1819, Messrs. Pinnoek and Maunders found themselves compelled to apply to the Court of Chancery for its protection against the injury they were then sustaining, by several of their Catechisms being pirated, and it was determined in that Court that the said attempts to evade the law of copyright by printing and transcribing certain passages, should not screen the authors of the piracy. The Lord Chancellor therefore granted the Injunction in the most explicit terms:—*"Extract from the Injunction."*—"That the defendants be restrained from printing, publishing, selling, or exposing to sale, books produced in Court, or any book or work in which the matter of any of the Plaintiff's books or works, of any part or parts thereof, is or are verbally, or substantially, or in effect, introduced."

In the course of the Lord Chancellor's examination of Pinnoek's Catechisms, with the pirated Editions produced in Court, after having given them very minute attention, his Lordship was pleased to make the following important Observations on the originals:—"It appears to me that *details* might be greatly benefited by the *Instruction* these Books contain, as well as the *younger Branches of Society.*"

Anxious to avoid the necessity of again resorting to legal measures, but determined at the same time to visit such Plagiarists as they may hereafter discover, with the punishment due to the offence, P. and M. most respectfully take this method of cautioning the whole Trade not to sell any work coming within the meaning of the foregoing Injunction; as the sellers of a single Copy are equally exposed to the penalties attached to an infringement of the orders of the Court of Chancery, as the individuals who have the temerity to commit the piratical act.

To Booksellers.

**WANTS** a Situation, a Young Man from the Country, who has served an apprenticeship of four years to the business, and can be well recommended. An Old Book Shop would be preferred. Address to J. W. at Mrs. Roan's, 11, Great Turnstile, Holborn.

## BOOKS PUBLISHED THIS DAY.

Biographical Works.

Lately published, by Colburn and Co. Conduit Street; and sold also by Bell and Bradfute, Edinburgh; and John Cumming, Dublin.

**MEMOIRS of GRANVILLE SHARP, Esq.**—composed from his own Manuscripts and other authentic documents, in the possession of his family and of the African Institution. By Prince Hoare; with observations on Mr. Sharp's biblical Criticisms. By the Rt. Rev. the Lord Bishop of St. David's.

**MEMOIRS of the LATE QUEEN**, from authentic Documents, by John WATKINS, LL. D. &c. containing numerous Anecdotes illustrative of the Secret History of the British Court during the last Fifty Years. In one large vol. 8vo. embellished with portraits and other plates, 15s. boards. Part II. separately to complete sets, 9s.

**MEMOIRS of JOHN EVELYN, Esq.** the celebrated author of *Sylva*, &c. written by himself, and Edited by William Bray, Esq. F. R. S. the second edition, 2 vols. royal 4to. with engravings by the first artists, 6l. 14s. 6d. boards.

**MEMOIRS of BENJAMIN FRANKLIN**, written by himself, including his Correspondence and Posthumous Writings, 2d edition, in 6 vols. 8vo. price 3l. 12s. boards. The volumes may also be had separately to complete sets.

**THE LIFE of SIR JOSHUA REYNOLDS**, late President of the Royal Academy. By James Northcote, Esq. R. S. Compiling original Anecdotes, of Dr. Johnson, Dr. Goldsmith, Burke, Garrick, and many other distinguished characters; second edition, 2 vols. 8vo. with portraits and other plates, price 1l. 1s. 6d. boards.

**MEMOIRS of the Right Hon. E. B. SHERIDAN**, By John Watkins, LL. D. Illustrated with Original Correspondence, and a variety of interesting Anecdotes of distinguished Persons, 2 vols. 8vo. embellished with several fine portraits, price 1l. 8s. 6d.

**MEMOIRS of LADY HAMILTON**, drawn from original sources, and comprising many new and authentic Anecdotes of distinguished Personages; the second edition, with a fine portrait, 10s. 6d.

**MEMOIRS of GOLDONI** (the celebrated Italian Dramatist), written by himself; 2 vols. 8vo. 21s. Ditto French.

Lord Byron has pronounced the *Life of Goldoni* to be one of the best specimens of auto-biography. It is replete with curious anecdotes, literary and dramatic.

**MUSICAL BIOGRAPHY, or Memoirs of the Lives and Writings of the most eminent Musical Composers and Writers, who have flourished in the different countries of Europe during the last three centuries**, including the Memoirs of many who are now living; 2 vols. 8vo. 24s.

**A DICTIONARY of the LIVING AUTHORS of Great Britain and Ireland**; comprising Literary Memoirs and Anecdotes of the Lives, and a Chronological Register of their Publications, 8vo. 14s.

**MEMOIRS of GEORGE FREDERICK COOKE, Esq.** late of the Theatre Royal Covent Garden. By W. Dunlap. In 2 vols. 8vo. with a fine portrait, 21s. 6d.

**MEMOIRS of Captain ASHES**, author of "The Spirit of the Book," written by himself; 3 vols. 21s.

**MEMOIRS of Prince POTEMKIN**, with curious anecdotes of the Russian Court, 2d edition, 8vo. 9s.

## Popular Novels.

Lately published by Henry Colburn and Co. Conduit Street, and sold by Bell and Bradfute, Edinburgh, and John Cusumung, Dublin.

1. **THE HERMIT IN THE COUNTRY**, or Sketches of English Manners, by the author of the Hermit in London. 3 vols. 18s.

No. 191.

SATURDAY, SEPTEMBER 16, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

POEMS, BY A COMMON SAILOR.

In the Literary Gazette, No. 76, July 4, 1818, we reviewed a publication entitled "The Harp of the Desert, containing the Battle of Algiers." &c. and purporting to have been written by Ismael Fitzadam, a Seaman. At that period we were led to believe that this title was merely assumption, and that the real author was Captain C—, the brother of a noble Lord who has travelled much and to good purpose, in distant countries. Certainly there was nothing in the poetry which could warrant any conclusion hostile to this theory; for its merits, both of composition and mind, were such as would not have disgraced a writer of any eminence in station or literature.

We have recently learnt to our great surprise (from anonymous, but self-evidently respectable authority), that Fitzadam is really what was given out...an Able Seaman on board a King's Frigate! And what is still more incredible, that neither the noble Lord, Exmouth, whose exploits he so gloriously sings, nor any of his officers, have ever thought it worth while to seek for and reward this nautical but genuine Child of Song. Perhaps we should be still more astonished at the same neglect in another quarter, were it not known to us that the official duties of the two Secretaries of the Admiralty (both high among the literati of England, and one of them himself a distinguished poet), are of so engrossing a nature, that they may have prevented their attention from being drawn to this fact: otherwise, we should unhesitatingly express our opinion, that it was a discredit to Mr. Barrow, and especially to Mr. Croker, to overlook the author of the striking production to which we have alluded.

All that we know of Fitzadam: is, that he is a self-educated Sailor; a native, as we understand, of Leith; and now discharged, after long and honourable service, unfriended and unprovided for. That such a man should pine in obscurity and want, is a disgrace to VOL. IV.

the country, from which we trust this public notice will pave the way to redeem it. For ourselves, we shall gladly promote any plan to benefit the individual in question: and that our goodwill towards him may find congenial sentiment and co-operation, we beg not only to refer to our Paper indicated at the commencement of this article, but to the following extracts from a MS. by the same hand, and, we believe,\* from a volume in preparation for the press, under the title of "LAYS OF LAND." The variety of talent which they display, their beauty, their pathos, their unaffected and pure poetic character, will plead more effectually than we can for our Poor Sailor!

Extracts from the unpublished Poems, "LAYS OF LAND."

### SONGS.

Oh, would I were among the bowers  
Thy waters, Witham! I love to lave,  
Where Botolph's far-distinguished towers  
Look out upon the German wave.  
There is a star upon that stream,  
A flower upon those banks there blows—  
Heaven cannot boast a lovelier beam,  
Nor earth possess a sweeter rose.  
How blest were I, how more than blest,  
To sit me down those scenes among,  
And there, the cot's contented guest,  
Divide my life 'twixt love and song.  
To guard thee, sweet, and in thine ears  
Plead passion, not perchance in vain—  
The very vision costs me tears  
Of mingled tenderness and pain.

Alas! how different is my lot!  
To drag out being far from thee,  
Far from that dear, that sacred spot,  
Which Witham leaves in tears like me.  
But, pilgrim of whatever shore,  
No fate from thee my soul shall tear;  
And even when life itself's no more,  
My spirit will be with thee there.

### A PETER-PINDARIC.

A Frenchman, on a recent tour to *Landres*,  
Made rather a factious blunder;  
And, what is much more rare, got out of it  
With somewhat of an expiating bit.

His stock of linen, as it did befall,  
A curse long plumed to shoulders of Monsieur,

\* Our readers will perceive that we speak doubtfully on several points in this brief notice: the reason is, that we are personally ignorant of these circumstances, and rely on information given to us under the signature of "Philo Nauticus," who seems warmly to espouse the cause of this extra-ordinary bard. If required, we hope he will furnish us with further means of promoting the interests of the writer. Ed.

Was mutilated much, and small,  
Collar, and frill, and wristband riddled thro'  
By pounding *blanchettes*' potent drub,  
Instead of rub,  
The river Seine her suds, a boat her tub.—  
"Ma foi," quoth he, "il faut que je m'adoise,  
J'ai beson à present de *von chemist*—  
Et en voila, à-propos,— tout pris—"  
A gilded shop-front just upon his way,  
Inform d his eye, in letters painted fair,  
A *chemist*—'twas enough—did business there.  
Our traveller entered—made his bow—took  
snuff—  
And look'd complacent round—John Ball look'd  
gruff.  
"Sare," said the son of frogs, "je vois tish here  
Que, l'on vend les *chemistes*.... que.... c'est à  
dire,  
That you do sell some shirt, et.... tout comme  
ça—  
N'est ce pas?"

"Shirts! shirts!" scowled Bolus, tempted half  
to throttle,  
"Who ever saw, or heard, of shirts in bottle,  
Or in a gallipot's dimensions cooped?  
Tho' yours, sir, 'windowed' as it is, and 'loop-  
ed,'  
Seems from some mortal's vengeance to have  
fled,  
Which discipline might serve your own goose  
head.—  
Sir, I'm no seamstress—Nay, sir, quit your gria-  
ping—  
I make up medicine, jackanapes, not linen."  
"Ah, vous le medecin-chemist—ah, oui, oui—  
Je suis sans trompé done, je trouve—I see.  
C'est drole ça, mais—the difference is small—  
A peu pres c'est égal—  
Monsieur le medecin, you be trop, too proud,  
To make some shirt, but you do make the shroud—  
Voila tout—that's all."

### PARTING.

No, never other lip shall press  
The plighted one where thine hath been,  
Nor ever other bosom press  
The heart whereon thy head did lean.  
Oh, never, love! tho' after this  
Thy smile perchance no more I see—  
The very memory of that bliss  
Shall keep me sacred all to thee.

Farwell, farwell! in woe or weal,  
Tho' worlds may interpose to sever,  
And "the world's law," I wildly feel,  
Thy heart and mine are one for ever.  
Farwell! the ripe tear fills mine eye—  
My very inmost soul is riven!  
After such pang 'tis light to die—  
Matilda, we shall meet in heaven!

### LOVERS' OATHS.

By the first hint of love  
Heaved from hearts newly swollen,  
While it secretly strove  
Thro' the glance that was stolen—

By the hope mildly bora  
In that false gleam of gladness,  
As a moment of morn  
Soon clouded in sadness—

By the sigh that would steal,  
And the silence, and trembling,  
Which make the soul feel  
It has done with dissembling—

By the vow breath'd thro' lips,  
Meeting oft as they breathed it,  
As to drink the warm life  
Of the heart that bequeathed it—

By the big tear of blisses,  
That moistened, in starting,  
Our long-clinging kisses,  
The moment of parting—

By the sweetness and grace,  
More than heaven to a lover,—  
By that form and that face,  
Which are heavenly all over—

By the struggle we proved,  
Shewing, oh, too severely!  
That, tho' both dearly loved,  
We loved virtue more dearly—

By the anguish like death  
Our hearts felt to sever—  
By the memory, whose faith  
Will adhere to these ever—

These pledges I call, love,  
To witness I take thee—  
By these, each and all, love,  
I'll never forsake thee!

## BALLAD.

A dew-drop hung on the cheeks of a rose,  
Fast by a flower,  
Where, at sunset hour,  
The young sylph, Beauty, sought repose.  
Lovely as nature the flower looked at even,  
And the pure pearl wan,  
That trembled thereon,  
Had just been distilled from heaven.

An angel of light, on some errand alore,  
By accident strayed  
Where the innocent maid  
Lay dreaming—her dreams were of love.

Soft, soft to her wild-flower pillow he stole—  
Her bosom of snow,  
Now lighted, now low—  
Spoke the visions that warmed her soul.

Then he plucked the rose, and diffused its fine dye  
O'er her cheek so bright,  
And bade the mild light  
Be henceforth the herald of tender joy.

"And thou, little gem, be still trembling near,  
For if hint of my heaven  
To mortals be given,  
'Tis beauty's blush set with love's tear."

It may be that we have readers (we hope we have none) whose hearts can resist these appeals. If such there be, our last effort upon them is an extract which appears to us to have but too much of the expression of truth in it not to be drawn from the life. The author, we fear, is himself—

## THE MARINER.

Son of the storm, along the "vasty" world  
Of wild, unstable waters wafted far,

Or obvious to the hissing death-bolt, hurled  
Thro' the red bursting of confronted war,  
Was happiness—for then my worshipped star,  
The sacred one of duty, briefly shone,  
And audible above the cannon's jar,  
My country's voice, and honour's, hail'd me on,  
While hoarded hopes of glory to be won  
Enhanced the strife, where death and danger  
were.

To sternest ecstasy!—But all is gone—  
And nought is left me now to hope, or done.  
Recall'd upon thy stagnant pool, despair!  
With not one attribute of life, save breath—  
And misery—friendless in my sordid shed,  
Like the lone captive stretch'd on dungeon bed,  
Numbering the lone sands as they creep away,  
What recks to me such worse than living death!  
Such gloomy eve of no glorious day?  
Oh, bitter doom! bitterer for unforeseen!  
Within whose *apex* shadow joy, hope, nay  
The very spirit rots in dull decay—  
Is life then stripped to this sere, lifeless thing?  
Beams of my morning! blossoms of my noon!  
Whither, and wherefore, are ye fled so soon?  
Weep, fond enthusiast! weep thy withered  
spring—

God! that my grave, as was my birth, had been  
Amidst the living billows' mighty swing,  
Or pall'd beneath the battle's blazing wing,  
Then had I 'scaped this agony of keen,  
Keen suffering—'scaped the curse to bear, by  
turns,  
Ingratitude, that, with a stony eye,  
Like the vile heartless Levite, passeth by—  
Affected pity's mockery—the spurs  
Of pampered pride—perchance the stings of po-  
verty!

*Tentamen; or an Essay towards the  
History of Whittington, some time  
Lord Mayor of London.* By Vice-  
mus Blinkinsop, LL. D. P. R. S.  
A.S.S., &c. London, 1820. 18mo.  
pp. 76.

One of the most disagreeable features of the party politics of our times (leaving out of account the horrible nastiness of the investigation into the Queen's conduct abroad), is the sourness and malignancy of spirit with which the contest is carried on. There is no longer any thing humorous, gentle, or manly in the struggle; but it has assumed a gloomy, bloodthirsty, and barbarian aspect, at once frightful and abhorrent to the few who do not suffer their lives to be embittered by abandoning the bounties of Heaven, and plunging into this gulph of senseless turmoil and unproductive trouble. Politics are, indeed, the curse of our times. Peace, the mother of the useful arts, the nurse of the sciences, the improver of the condition of man, hath returned to earth in vain; the stormy and base passions seem loosened by the event, and we pass from aggravation to aggravation, like maniacs; while the detested flux and reflux of discontent drowns all the better parts of nature,

and the spirit of contention blasts creation, from the humble plough-boy to the scepter'd monarch.

Among the efforts of some of the clever partisans in this servile war, to introduce a little of the pleasantries, if not the chivalry of such conflicts into the struggle of the present period, this *Tentamen* is the most successful that we have seen. The author, whoever he is, is far above the ordinary standard of squib-writers; and has thrown much more wit into his jeu-d'esprit, than usually belongs to performances of its class.

The design appears to be, to ridicule a person publicly conspicuous enough to render him a fair object of satire to his opponents—we allude to Mr. Alderman Wood; and as this is cleverly done, and without ill nature, under the pretence of raking up the story of the celebrated Whittington, we shall endeavour to entertain our readers (on which ever side they range themselves), with a glance at its fashion and manner.

The dedication is to the Duke of Sussex, and enumerates a laughable list of His Royal Highness's titles, as patron or member of many benevolent and other institutions, from the Garter to the Fishmongers Company; and from the Grand Lodge of Freemasons, to the institutions for delivering married women at their own habitations, and the General-Central Lying-in Charity; from the Society of Arts, to the Beef Steak Club. The address which follows this enumeration is so severe, that we trust its insinuations are not well founded; and in this hope, pass on to the body of the work.

The author opens his subject with a good deal of drollery:

"In looking at the propensities of the age we live in, comparatively with those of times past, one cannot fail to observe a laudable love for the noble science of antiquities: of which it may be truly said, that it is conversant with peaceful and unoffending *yesterday*, while the idle votaries of the world are busied about *to-day*, and the visionaries of ambition are dreaming of *to-morrow*."

"Connected with this grave and useful pursuit is the general inclination to search into the minutie of history, which never before prevailed amongst us in so ardent a degree. The smallest information upon traditional points, is received with an avidity more salutary and commendable than that which is the result of a common place love of novelty; and the smaller the information, the greater the merit of the painstaking author; who, like a skilful clock maker, or other nice handy-craftsman, is lauded in proportion to the minuteness of his work."

Such are, for instance, the valuable discoveries which that excellent philosopher and novelist Mr. Godwin hath made and edited, of and concerning the great poet Chaucer; and, inasmuch as the nice and small works of clock makers, which we have mentioned, are carefully placed in huge towers and steeples, beyond malicious or impertinent curiosity, so this prudent philosopher hath disposed his small facts in two

tall volumes, equally out of the reach of the vulgar.

"Such also are those valuable illustrations of the private lives of public men which have issued from the press under the titles of "*Ann*," "*Remains*," and "*Memoirs*," and which have so admirably answered the purposes for which they were put forth—namely, that of being *solid*—while they at the same time maintain a discreet silence on all matters which the ingenious subject of the biography might wish to conceal, agreeably to that excellent maxim *de mortuis nil nisi bonum*: by these means, such treatises become a delectable kind of reading, wherein nothing is admitted which can hurt the feelings of any of the worthy persons mentioned in the course of the work, particularly if they be deceased. This mode of writing conduces to good humour and charity amongst men, and manifestly tends, as Dr. Johnson observes on another occasion, to raise the general estimate of human nature.

"On these principles and considerations have I been induced to at no small cost of time and labor, to endeavour to throw a new light upon the life of Matthew Whittington, some time Mayor (or Lord Mayor, as the courtesy goeth) of this worthy City of London, a man, whose fame needs no addition, but only to be placed in a proper point of view, to challenge the admiration of a grateful posterity of Mayors and Aldermen.

"In humble imitation of my aforesaid friend, Mr. Godwin, and of divers other well-reputed authors, I have written this life in one hundred and seventy-eight quires of foolscap paper, in a small and close, but neat hand; which by my computation, having counted the number of words therein contained, as well as the number of words in the learned Bishop Watson's life of himself, (which made my excellent friend Dr. Snodgrass, who lent me the same, facetiously declare, that I was the only man he ever knew who could get through it); I say, having counted all these words, I find that my life of Mr. Whittington, (including thirteen quires on the general history of Cats) would, if duly printed after the manner of Mr. Davison, who never puts more than sixteen lines into a quarto page, make or constitute five volumes of a similar size and shape to Dr. Watson's life, which, with cuts by Mr. John Britton, author of several curious topographical works, might be sold for the reasonable sum of 31*l*. 10*s*. being only six guineas the volume; and if it should please the legislature, in its wisdom, to repeal the Copy-right Bill, (by which costly books are made accessible to poor students at the Universities, who have no business with such sort of works) my said work might be furnished at the reduced price of 31*l*. 4*s*. 6*d*.

"But small as this sum is, it is with grief I say, that such is the badness of the times, occasioned by the return of peace, and the late long succession of plentiful harvests; that I find booksellers strangely reluctant to embark in this transaction with me."

"The badness of the times, according to that venerable Rule of modern days. Mr.

They offer indeed to print my work if I can get it *precisely printed* in the Edinburgh Review; and the Reviewers say, that they are not unwilling to praise it, but that it must, of a necessity, be *precisely printed*.

"I have observed to Mr. Jeffrey in my seventh letter to him on this subject, that this condition is not only new and injurious to me, but, by his own showing, clearly gratuitous and unnecessary; because for aught that appears in the generality of his articles, he may never have read the work which is the subject matter of them; nay, it hath sometimes been *proved* from the context, that he never hath even seen the work at all; and as this little accident hath not hindered his writing an excellent essay under color of such work, so I contended, that he need not now make the preliminary *sine qua non*, as to having my work *printed*; for 'de non impressis et de non lectis eadem est ratio.'

"But I grieve to say, that all my well grounded reasoning hath been unavailing; and as neither party will give up his notion, I stand at a dead lock between the booksellers and reviewers.

"In this dilemma, I should—like Aristotle's celebrated ass—have starved till doomsday; but that, through the kindness and prudent advice of my learned friends Mr. Jonas Backhouse, Jun. of Pocklington, and the Rev. Doctor Snodgrass of Hog's-Norton, I have been put upon a mode of extricating myself, by publishing, in a small form, a *tentamen*, specimen, or abridgement of part of my great work, which I am told Mr. Jeffrey will not object to review, he being always ready to argue 'à parti culier ad universale;' so that, in future time, the learned world may have hope of seeing my erudite labours at full length, whereof this dissertation is a short and imperfect sample or pattern."

Having thus beat out his flag, not without hitting some very worthy persons of ours; the author begins the *magnam opus*.

"The whole history of the illustrious Whittington (he says) is enveloped in doubt. The mystery begins even before he is born; for no one knows who his mother, and still less who his father was. We are in darkness as to where he first saw the light, and though it is admitted that he most probably had a Christian name, adhue sub judice sit est, as to what that Christian name was."

The inquiry to settle this important point is conducted with due solemnity, and with the help of the Rev. Dr. Snodgrass of Hog's Norton, it is brought to a successful issue.

"Tradition has handed down to us that Whittington was a charity boy, as it is called, and received the rudiments of letters at the parish school of Hog's-Norton aforesaid; this clue directed the Doctor's researches,

Cartwright, is owing to the Septennial Parliament Bill (1 Geo. I. cap. 78); but according to the better opinion of Mr. J. C. Boguehouse, to the battle of Waterloo. (vide Panegyric. Nap. Bon. passim.)

† Erratum, for "Boguehouse," read "Hobhouse."

and by that enlightened zeal for which he is conspicuous, he has been so fortunate as to discover rudely carved on the wainscot by some fellow pupil,

M. W. IS A FOOL;

M. W. IS A DUNCE;

And one, which is more satisfactory.

M——W. W. IS A STUPID DOG,

1772.

"This date seems at first sight to apply to a period long posterior to Mr. Whittington; but when we recollect how often the wisest men, the most careful copyists, the most expert printers, mistake dates and transposition figures, we are not to be surprised at a similar error in an unlettered and heedless school-boy; and therefore, as Dr. Snodgrass judiciously advises—(a noble conjecture indeed, which places the critic almost on a level with the original writer)—the mistake may be corrected by the simple change of placing the figures in their obvious proper order, 1277, which as Mr. Whittington is known to have been Sheriff or Mayor about the year 1330, when he was probably near sixty, shews that he was about seven when at Hog's-Norton; and proves incontestibly, that to him and him alone, these ancient and fortunately discovered inscriptions refer."

It is afterwards added:

"It may seem to some readers that these epithets,—*approbri*, as some may think them,—do not redound to the credit of Mr. Alderman Whittington's intellect; but even if they are not, as before suggested, the production of envy, they are by no means inconsistent with Whittington's successful progress in life; on the contrary, they seem to designate him as a person who would naturally rise to City honours. It is grown to be a proverb, and admitted by the best writers on the subject, that Lord Mayors are "stupid dogs." The City hath a prescription to choose "fools," for places of honor therein; and as Matthew was at least twice Lord Mayor, he might with great propriety have been *twice* as great a fool as any of the others."

In the same style of irony follows an investigation to ascertain how often Whittington was mayor; but this we must overlook. The subject is then systematically divided into nine sections; but they are all, save one, postponed for discussion in the great work, and the eighth only treated of in this *opusculum*. That head is—

"What the Cat was by which he rendered himself chiefly notorious, and whether his famous expedition to catch the Cat was undertaken prior, or subsequently, to his second Mayoralty."

Previous however to entering even upon this single point, we have some notice of the earlier life of Whittington, during which he formed an intimacy with one Joshua, a thief and receiver of King's stores.

"This Joshua was of a very low origin, and was ironically called Joshua the son of *note*, never having had an ostensible father or mother; to which untoward circumstance may be charitably attributed the errors into which he was occasionally betrayed. The first notion of property which a child receives,

is from being told, I am *your* parent; you are *my* son; this is *your* milk; that is *his* bread. The poor innocent who does not receive this early instruction is naturally deficient in this particular: whence it happens that such persons are generally found rather lax in their principles of *meum* and *tuum* to the end of their lives; which, however, by an equal dispensation of Providence, are usually shortened by a special interposition of the law."

"It was in allusion to these boards, and the *means* and *times* by which they were collected, that in the quaint bil-lal-factiousness of that age it used to be observed, that if Joshua of old had known how to do his business by night, as well as his modern namesake, he need not have desired the sun to stand still; a witicism which Speed records with great delight."

Other incidents of the hero's youth are related; and it is decided, that it was not the housemaid, but another domestic who drove him from his service, on these grounds—

"Certain it is, that Mr. Whittington when in very different circumstances, maintained his rooted dislike to a *cook*, while his favourite remembrance of the housemaid's kindness evinced itself in the respect he openly professed for a *broom*, (however cracked or crazy it might be) wherever he saw one."

The grand subject of inquiry now demands all the acuteness of our antiquarian. He is puzzled to find out whether the source of M. W.'s fortune was a *bona fide* cat, an animal,—a ship so called, as that in which Newcastle coals are imported in to this day,—or a *great lady*. It may be guessed, that he inclines to the latter opinion, which he supports in the first instance, "by a very curious ballad of the times," now in the British Museum (Messalin 2), of which the annexed is a genuine copy.

*Ann exceeding, ex-cite, and excellents good ballads, written by mee Geoffrey Lydgate, upon mee Master Whittington hys Catte.*

Yee Cytyens of Lundun tounne,  
Ande Wyres so faire and fattee,  
Beholde a gieste of high renouee!  
Grete Whittingtone hys Catte!  
Ye kynge hath yun hys towre off state  
Becare, lyones and alle thatte;  
But hee bathe notte a beste so grate  
As Whittingtone hys Catte!  
This Catte dothe notte a catte appear,  
Berynge toe bigge forre thatte  
But herre attendaunts alle doe weare  
Some tokyon off a Catte!  
Ye one bathe whykkes, thicke ass burrs  
Monste comelye toe looke atte :—  
Ander weares a gowne of furrs,  
Ye lyverye off ye Catte!  
She dothe notte creepe along yf floores,  
But standes or else lyes flatte :  
Whyles they must gamble onee all fours  
Whoe wyshe to please ye Catte!—  
A conyng monkeye off ye lawe,  
Asse bye ye fyre he satte,  
Toe pick hys nuts oute, need ye pawe  
Off Whittingtone hys Catte!  
But Whittington discovered playne  
Whateer this ryle ape was atte;

Whoe faylde thus hys nuttes toe gayne,  
And onely synge ye Catte.

Thenne Whittington yun goarrouse state.

Syttyng wythoute his hatte,

Broughte toe hys house atte Grover-gate

Thys moste yllustrious Catte.

She ys so graciouse and soe tame

Alle meane may strooke and patte ;

But yt ys sayde, norre maye norre dame,

Have dared toe seee thatte Catte.

Fuller hugelye gladd, she seemeth, whenne

They brynge herre a grete ratte

But still more gladd, atte katchyng meane

Ys Whittington hys Catte.

A Catte, they saye, maye watche a kynge ;

Ye apotheme ys patte ;

Ye conserve is a differente thyng :

Noc kynge may watche thys Catte.

Thenne take, each manne, hys scarlatte gowne,

Ande eke hys velvete hatte,

And humblye welcomme yntoe tounne

Great Whittington hys Catte.

Lest any doubt should hang on his allusion, he adds, as if from Mr. Hallam.

"This great Lady," he says, "was *Catti*; that is, a *German*, one of the people called *Catti*, who inhabited that part of the ancient Germania now called the Duchy of Brunswick."

Another hypothesis is, from "a more ancient writer still, (Prenlergast on Sorcery,) that that which rendered Whittington famous, was both a Cat and an illustrious Lady."

He says, "that while under the appearance of a human being she was capable of performing what in those days passed for miracles; at one time metamorphosing menials and washer-women into Lords and Ladies; causing unknown and portentous stars to appear, and changing by "*arte magice*," white into black, and black into white. He also more fully explains in the same way, the strange facts alluded to in the ballad, of her putting off at pleasure, the form of a cat, and transforming the several feline attributes and appearances to her followers; giving to one supernatural whiskers; to another, a covering of fur; to a third, eyes that can see best in the dark; to a fourth, the faculty of falling on his legs, whatever may happen, and so forth."

This Prenlergast! is a useful authority for Mr. Blinkinsop; for he "goes so far as to hint, that Whittington himself, from the rapid acquirement of his wealth, lay under the imputation of sorcery, and that he aimed at the attainment of some secrets from the Enchantress to carry on his schemes, which was the chief cause of his devotion to her. The same author says, that he was taxed with concocting a liquor made from noxious weeds and deadly herbs, with which he was enabled to steal away men's senses, and lead them according to his will; but I, quoth the liberal author, must be allowed to doubt the truth of this charge, it seems to be a vulgar revival of the old story of Circe—looking at the events of his life, there appears to me abundant proof that Matthew was no conjuror."

In this way of pleasant trifling, the advance of the worthy alderman is marked, till we

come to some lines in his praise, though in deference to his notorious modesty and hatred of public notice, only the initials of his name are employed.

Serche Eynglonde round, naye all the earthe,  
Litle myghtelle would trouble you  
To find a manne so rich in worthe  
As honest Matthew W.

He's notte the manne to doe you wrong  
Nor wyth false speeches bubble you  
Whyle Beef growes fatter, and Beef growes strong  
Long lye the Matthew W.

The writer now falls more directly into the question which has so much agitated the country; and though he treats it at once shrewdly and sportively, we hold it in such dislike, that, having quoted enough to show what the Tentamen is, we shall here beg leave to close the volume.

*Poems for Youth.* By a Family Circle. Liverpool and London, 1820. 12mo. pp. 100.

This *Family Circle* is, we believe, that which gathers round the fireside of Mr. Roscoe; and, if amiable sentiments and refined expressions are to be taken in confirmation of the fact, we may say that we have no doubt of its truth. The *Poems for Youth* are very sweetly written; and they are especially deserving of applause for their invariable tendency to cherish the purest feelings, and inculcate the softest humanity—the grace and blessing of our nature. Those who have studied the formation of character will be the best able to appreciate the value of so delightful an assistant as this little volume offers—

— To rear the tender thought,  
And teach the young idea how to shoot:  
And we enjoy the pleasure of doing a good action, when we recommend it to instructors and parents.

That it may not, however, rest altogether on our favourable report, we transcribe a few of the pieces, which, we trust, even age and learning may peruse with satisfaction.

#### TO AN EARLY SWALLOW.

Wild tenant of the changeful year,  
That borne upon the southern wind,  
Across the ocean's distant waves,  
Would'st here a sheltering region find;  
Too soon, alas! from brighter climes  
Thou heedless spread'st thy transient wing;  
Too soon thou hast their comest to greet,  
With artless notes, the infant spring.

In hoary Winter's palsied lap  
The infant Spring all cradled lies,  
Whilst round the nursing's tender form  
The bitter storms unquenching rise.

To melt the tears that freeze his eyes  
No zephyr lends its balmy breath;  
For ever clo'd their purple light,  
Seal'd by the icy hand of death.

And gentle May, in sable garb,  
Seeks with slow steps his mournful bower;  
And sudden in the silent grove,  
The leafless tree, and lingering flower.

For thee, amid the noontide beam,  
No gossamer floats along the vale;

And fled the various insect tribes,  
That revel in the summer gale.

Behind yon mountain's misty brow  
The low ring storm is gathering fast,  
And sweeps along the cultured plain,  
And wakes the wind and welkin blast.

Then turn thee to my humble cell,  
And shield thee from the beating rain,  
Till Winter's dreary reign is o'er,  
And Summer suns shall smile again.

Thus would I soothe Misfortune's child,  
And gently calm his troubled breast;  
And when life's pelting storms arise,  
Here bid the wretched wanderer rest.

It is thus that benevolent morals are im-  
planted in young hearts: For sheer fancy, we  
will quote an example of another kind.

## FAIRY SONG.

Swiftly we fly  
Thro' the evening sky,  
When the silver moon shines bright;  
When the bat flits round,  
And the dewy ground  
Is speckled with the glow-worm's light.

When the ring-doves rest  
On their downy breast,  
Flitting thro' the air we pass;  
Where screams the owl,  
And watch-dogs howl,  
We revel in the shaven grass.

Then when we hear  
Loud chanticleer,  
Again to our haunts we fly;  
And thro' the day,  
Sleep the hours away,  
Till the moon-beams again we spy.

The language of the following is, per-  
haps, too elevated for the subject; but the  
thoughts are charming, and we are not with-  
out hopes that it may augment that sym-  
pathy which has lately been bestowed on the  
wretched creatures whose lot it befalls, and  
aid the efforts of the good Samaritans who  
have, as yet in vain, endeavored to accom-  
plish the amelioration of their condition.

## THE CHIMNEY-SWEEPER'S COMPLAINT.

Sweep, Sweep! I cry from street to street,  
With wailing loud to all I meet;  
In sorrowing voice and dismal plight,  
'Tis still Sweep, Sweep! from morn till night.  
Oh! many a frightful risk I've run,  
Since first my wretched lot began;  
I've climb'd up many a chimney dark,  
Bear witness many a cruel mark;  
My limbs are cramp'd, my spirit's gone,  
And all unheeded is my moan.  
I once could laugh, and sing, and play,  
Full jocund, thro' the merry day;  
Breathe unconfin'd the air of heaven,  
And feel the blessings God had given;  
But now all stunted, maim'd, diseas'd,  
I wait till I may be releas'd.  
Beyond the grave there sure will be  
No master hard to torture me;  
With tearful eye and flinty heart,  
To act the ruthless tyrant's part.  
'The secret truth will then be shewn,  
And all my silent sufferings known;  
And all will find, ev'n hearts of steel,  
That little chimney-sweepers can feel.  
Oh! once I had a mother dear,  
She would have shed the bitter tear,  
To see her darling thus degraded,

His ruin'd health—his cheek so faded;  
That cheek where she left many a kiss:  
Thank God! she has not liv'd for this.  
No, she rests in her last calm home,  
And thither her poor boy will come.  
The world, alas! is all unkind;  
There's nought I love to leave behind;  
No! there is none to pity me,  
And only when I die—I'm free!

The following short poem is, we think,  
extremely pathetic.

## A DIRGE.

The summer winds sing lullaby  
O'er Mary's little grave,  
And the summer flowers spring tenderly,  
O'er her little buds to wave.

For oh, her life was short and sweet  
As the flowers which blossom at her feet.  
A little while the beauteous gem  
Bloom'd on the parent breast;  
Ah! then it wither'd on the stem,  
And sought a deeper rest;  
And we laid on her gentle frame the sod,  
But we knew her spirit was fled to God.  
The birds she loved so well to hear  
Her parting requiem sing,  
And her memory lives in the silent tear,  
Which the heart to the eye will bring;  
For her kind little feelings will ne'er be forgot  
By those who have mourn'd her early lot.

Our readers will not dislike a livelier strain  
to close our notice; and we (in preference to  
an *Elegy*, page 23, which strikes us as the  
only failure in the book, being rather ludic-  
rous than affecting), select for them, the

## FORRESTER'S SONG.

Forrester! leave thy woodland range,  
And his thee hence with me;  
For brighter scenes and pleasures strange,  
Forake thy greenwood tree.  
Come, gather thy cloak above the knee,  
And take thy tall staff down,  
I'll show thee what delights they be  
That dwell in town and town.

Nay, stranger, check thy bright bay steed,  
To sojourn with me here;  
And turn him forth at large to feed,  
Amongst these dappled deer:  
And thou, while summer skies are clear,  
Within my greenwood bowyer,  
Shalt count the pleasures once so dear,  
That dwell in town and town.

Well may I find a better home,  
My steed a warmer stall,  
I know full many a lordly dome,  
Full many a palace hall;  
Where stately rows of columns tall,  
The fretted roof sustain,  
Then, Forrester, yield thee to my call,  
And follow me o'er the plain.

Doth lofty roof delight thy eye,  
Or stately pillar please?  
Look, stranger, at yon azure sky,  
And pillars such as these—  
Where, wreathing round majestic trees,  
The verdant fry clings;  
The pillar'd roofs, the peasant sees,  
Are fit to shelter kings.  
O, who would to the greenwood roam,  
To hear the hauty's sound,  
To see the glittering goblets foam,  
While mellow pledge goes round;  
Then, while our cares in wine are drown'd,  
The precious stake to hold,

And find our varying fortunes crown'd  
With hopes of yellow gold?

Stranger! the woodman's frugal fare,  
No sickly rosin stain;  
Nor ever hauty's artful air,  
Might match yon throstle's strain:  
And, if the stores of ample grain  
Thy avarice crave,  
Go, stranger, teach the ruddy grain  
O'er yonder wastes to wave.

Nay, rather to my lady love,  
My courtly lays I'll sing;  
And in my helmet wear her glove,  
When gallants ride the ring,  
Or foremost in the battle spring,  
Where charging squadrons meet;  
And all my warlike trophies bring  
An offering to her feet.

Falsehood in beauty flies conceal'd,  
Guilt haunts the deadly fight:  
Here woods a harmless warfare yield,  
And make their true-love plight—  
Such simple joys of rustic right,  
To thee 'twere vain to tell;  
But heavily fall the shades of night—  
Now, stranger, fare thee well.

We are sure we need not reiterate our  
eulogium on a publication so unpretending,  
and yet containing such compositions as  
these.

## ASAM.

An account of this eastern kingdom,  
collected by Francis Hamilton, Esq.  
in 1808-9, at Bengal, and published in  
the 2d No. of the *Annals of Oriental*  
Literature, furnishes the substance of  
the following epitome.

Without entering into their early history,  
which, as is generally the case, reaches to the  
gods, we may observe, that for many cen-  
turies the Asamese were distinguished as a  
valiant and enterprising nation. Previous  
to the year 1721, Siva Singha, the eldest son  
of Rudra, ascended the throne; but in this  
reign a curious cause threw the whole power  
into the hands of women, or of those who  
promoted them. Soon after Siva's succes-  
sion, a brahman, by his profound skill in the  
science called Iyotish, discovered that the  
reign would be very short, and that the mo-  
narch would be deprived of rule before his  
death. To avoid these calamities it was  
suggested that the prophesy might be ren-  
dered nugatory, by resigning the government  
to a wife, in whose fidelity confidence might  
be placed. Poor Siva was glad to accede to  
this mode of cheating his destiny; and se-  
veral queens reigned in turn, while he re-  
mained a mere cypher, merely mounting the  
throne to marry them as they were wanted.  
Siva (or rather his wife) was succeeded by  
his brother Pramatta, in 1744, and he, on  
his death, about 1751, by another brother,  
Rajeswar. Rajeswar reigned about twenty  
years, and inclined to the Moslem manners.  
Lakshmi, his brother, succeeded him; and,  
according to the custom of Asam, married  
all the males of his family, so as to secure  
the throne to his own son. The kingdom  
was now, however, hastening to ruin. The  
power of the spiritual teachers had acquired

such force, that their insolence became intolerable, and Lakshmi, as Lord of heaven (Swargadeo), could no longer contain his anger; so that, to check their pride, he burned a splendid building, which, contrary to law, had been erected by one of them named the Mahamari, who guided a multitude of the lowest and most ignorant of the people. The inflamed multitude put the chief minister to death; but the prudence of Lakshmi enabled him, although with great difficulty, to smother the rebellion; and he died in peace.

Gaurinath, the son of Lakshmi, succeeded his father, and was the twelfth prince and seventeenth generation of the family since it came on earth.

He seems to have been a weak young man, totally unable to contend with the enthusiastic multitude. The low followers of the Mahamari (mostly fishermen) drove him from his throne, and Pitambar, the spiritual guide of these ruffians, appointed his nephew, Bharat Singha, to be king. This person, in a coin dated in the year Saka 1715 (A.D. 1792), claims a descent from Bhagavatta, which, had he been successful, would have been considered as an indisputable fact. But Gaurinath, having thrown himself on the protection of Lord Cornwallis, that nobleman, shortly before his departure for Europe in 1793, sent Captain Welsh, with eleven hundred Sepoys, who restored Gaurinath to the throne of his ancestors, and after a short stay returned to Bengal, very much to the regret of the prince. The usurper rebelled about two years after, and was seized and put to death. The restored king, however, soon died, and an overbearing minister, Bara Gohing, placed a boy (not upon the throne, an illegitimate descendant from Gohindhar the father of Rudra. About 1802 or 1803 there was a conspiracy against Bara Gohing, which he suppressed, putting to death five hundred persons of some rank, among whom was the brother of his own wife. The executions were performed with the cruelties usual among the Asamese, namely, with hoes heated to redness; but the terrible example is not thought to have quelled the spirit of insurrection.

The persons descended from Rudra Singha by legitimate marriage, and entitled to continue the succession, are called Tungkhungya; and all these have a right to succeed to the royal dignity; except such as have on their body some blemish or mark, whether from disease or accident, the scar either of an honourable wound, or of the small-pox, being equally a complete bar to the royal dignity. This induced the practice of rounding conspicuously on the nose or ear, all the royal progeny, except the presumptive heir. As a further precaution, all the princes, not sons of the reigning king, and their families, were confined on a hill among forests called Tejinamrup, two miles from Gargang the capital, to which there are three ascents, and three strong guards, Chandang, Dolakakuriya, and Kukurachoya. "The kings formerly lived at Gargang; but Siva Singha removed the seat of government to Rangapur Nagar (the city the abode of

pleasure), which is situated on the Dihko river, that, about three hours' journey from the fort, falls into the Dihing or southern part of the Brahmaputra river." Near the royal palace was a small temple, composed entirely of copper, in which the god Chung, it is supposed, was kept; but the whole worship of that deity is veiled in profound mystery.

The coronation, or rather enthronement of the king, is performed with much ceremony. The raja, mounted on a male elephant, and accompanied by his principal wife (Bara Kumari) riding on a female, proceeds to plant a tree (Ticus religiosa) on the hill Choral Khorong, where his ancestor Khumtai first appeared on earth. By the way he takes up the young tree, and pays the proprietor whatever price he chooses to demand. In performing this ceremony, the god Chung is suspended round his neck, he is girt with the sword Hyangdang, he carries in his turban the feathers of the sacred bird Deokakura (Pavo bairacetrans), and he is accompanied by all the principal officers of the kingdom, by a great part of the army, and by a vast multitude of the people.

Having planted the tree, the Raja and his followers descend to three huts, that have been erected for the purpose, and which are called Patchar, Holongghar, and Singgorighar. The Raja and his queen first enter the Patchar, where some water is poured on them from a shell called Duckshinavarta Sangha, the mouth of which is turned the way contrary to that of the shell, which is usually sounded by the Hindus, in order to attract a little notice from the gods.

The two royal persons then enter the Holongghar, and sit on a stage made of bamboos, under which is placed one of each species of animal that can be procured, such as a man, an elephant, a horse, a cow, a deer, a hog, a fowl, a duck, a snake, an insect, a fish, &c. Then water from nine Tirthas, or holy places, is poured over the king and queen, and falls on the animals.

The water of each holy place is kept in a golden vessel, and the plants called Sarvaushodhi, and Mahaushodhi have been infused into it.

The royal persons having been bathed, the king replaces the feathers in his turban, and advances with his queen to the Singgorighar, having in his hand the sword Hyangdang; and with this, before he enters, he kills a buffalo. The original custom was to kill a man, a criminal having been selected for the purpose; but since the time of Rudra Singha a buffalo has been substituted. The Raja then enters the Singgorighar, and ascends a throne (Singhasan) of gold, consisting of seven stages. Having been seated, the queen and the three chief persons of the kingdom make many presents of gold and jewels, and then lay their hands on the four feet of the throne. These nobles then walk seven times round their sovereign, who orders money to be coined, and gives some presents to the Deodhial, and to the Brahman who is his spiritual guide. He also orders gratuities (siropa) to be given to all the principal officers, and to religious mendicants; and some days'

provisions are distributed to the multitude, who have assembled to see the show. The Raja and his queen then dine with all the Asamese of high rank. Then all the tributary rajas, landlords, and inferior officers are introduced, and make presents, which occupies a whole month. In all these ceremonies the Chiring Phukon presides, and regulates every thing according to the ancient customs of the kingdom.

The whole kingdom of Asam, or Akam, as the natives pronounce it, formed a portion of Kamrup, one of the ancient divisions of Indian geography; and at the commencement of this degenerate iron age Kamrup was subject to Bhagadatta, a person celebrated in the fables concerning the great war. Dikorbisul, a temple which was at the eastern boundary of Kamrup, is at the extremity of Asam in the same direction. In modern Asam, however, the term Kamrup is confined to the western and most important province of the kingdom, the greater part of which was wrested from the Moslems early in the reign of Aurungzebe."

The trade between Bengal and Asam is stated at, exports from Beugal 223,300 rupees; imports 130,000 rupees. The balance is paid in gold from the mines, and in silver. The gold is from the mine Pakerguri, and is contained in the sand at the junction of the Dowsiri, or Dushiri, with the Brahmaputra. It is wrought by 1,000 men, from 15th September to 14th October, and each man must deliver one and a half rupee weight of gold dust. If successful he keeps all the overplus; if otherwise he must make good the quantity. "The mine, therefore, produces to the royal treasury 15,000 rupees weight of gold dust; for every person employed is paid in land. The rupee weight of gold dust is worth twelve rupees of silver; but it is adulterated and formed into small balls, which sell at Goyalpara for eleven sicca rupees for the weight of an Asamese rupee. The mine, therefore, is worth to the king somewhat more than 18,000 sicca rupees a year.

"In the territory called Doyang, S.W. from Jorhat a day's journey, there is an iron mine, which is wrought in the same manner on account of the king. It supplies the whole country with abundance." There is also a fine salt mine, worth 40,000 rupees a year to the treasury.

"The capital offences are treason, murder, rape, arson, and voluntary abortion. Rebels are never excused; for other offences pardon may be purchased. Capital punishment extends to the whole family of a rebel, parents, brothers, sisters, wives, and children. Offenders are put to death in various manners, by cutting their throats, by empaling them, by grinding them between two wooden cylinders, by sawing them asunder between two planks, by beating them with lammers, and by applying burning hoes to different parts until they die. This is the most horrible.

"Except the gang from Bengal, there are few robbers and atrocious house-breakers, or pirates. Such persons are punished in a summary manner by thrusting out their eyes,

or by cutting off the knee-pans. The wretches usually die of the latter operation, but survive the former. Both punishments are inflicted by the sole order of the chief minister in Assam proper, or of the governor of the two other provinces. Petty thefts are very common, and are punished by whipping, or by cutting off the nose or ears."

The productions are chiefly rice, mustard, black pepper, the betel-leaf; the sugarcane flourishes, and cotton is grown on the hills. But silk forms the greater part of the clothing, and no fewer than four different kinds of worms are reared, that on the mulberry being the least, and that on the muga (a species of laurel) the most common. The insect is fed on the tree as it grows. There are two crops; the silk procured at the beginning of the dry season (karlik) is red, that which is cut in the end of spring (jishutha) is white, and reckoned the best. The silk Meddangori, obtained in Assam proper, on a cultivated tree of another description, is still dearer than the preceding. The fourth kind, called Grenli, is reared on the Ricinus, and is abundant. Oxen and buffaloes are plentiful; but the art of making butter and cheese unknown: sheep are scarce, and goats not numerous. There are no asses, and very few horses. Ducks are more common than fowls, though many persons keep game cocks.

The handicraftsmen do not seem to be very expert, though the turners, it is said, can straighten an elephant's tooth, by covering it with a thick coat of clay and cow-dung, and then exposing it to the fire.

"No one is allowed to wear shoes without a special licence from the king, and it is an infuigence that is very rarely granted. At the capital there are a few Bengalese shoemakers, who are ready, whenever his Majesty chooses, to have a pair of shoes, or to imulge one of his chiefs with that luxury.

"There are no confectioners, no butchers, no bakers, no tailors.

"All the domestics are slaves, and they are pretty numerous, every man of rank having several. The slaves are procured from among the necessitous, who mortgage themselves, in the same manner as in the eastern divisions of Rangoon. Some are exported. About a hundred of pure cast are annually sold to Bengal. They are mostly children: the girls are chiefly bought by prostitutes, and cost from twelve to fifteen rupees. A Koch boy costs twenty-five rupees, a Kolita fifty. Slaves of impure tribes are sold to the Garos, and many are said to be sent to Nora, from whence they are probably exported to Ava."

#### BRITISH BIRDS.

*A Compendium of the Ornithology of Great Britain; with a Reference to the Anatomy and Physiology of Birds.*

By John Atkinson, F.L.S. &c. London and Leeds. 1820. 8vo. pp. 322.

In his preface the author of this very useful work, truly says:—"It has long been regretted that the want of a concise system of British Ornithology has prevented the diffusion

of these advantages. The works on this subject, though highly valuable in themselves, are too expensive for every one to procure, and so volunuous as to discourage those whom we should invite, and appal the student with images of difficulty and labour, when we should cheer his efforts, and smooth his approach."

He then unfolds his design as follows:—"The intention of the author, in forming this compendium, was to collect the information scattered through extensive treatises, and the transactions of learned societies,—to state the species which have been recently discovered,—and to correct those errors in synonyma, which the difference of feather in different ages, or at certain times in the year, has frequently produced. Far, therefore, from aspiring to supersede the standard works, he trusts his synopsis will facilitate their study.

"From the writings of Shaw, Montagu, Pennant, Latham and Bewick, he has often drawn his descriptions; but in almost every instance, diligently compared them with specimens in his own cabinet, or those of his friends. The details of authors, however, the conspicious plan of his compendium has often obliged him to abridge; yet he is not aware of having ever omitted the characteristic of a species.

"Besides the external appearance, this synopsis will be found to contain anatomical remarks. A great proportion of the British birds have been accurately examined by the author as to their internal structure, while others were dissected in the Orkney Islands by well informed assistants, sent for the purpose of procuring specimens. The habits of several species these gentlemen also ascertained, and some were kept alive under the author's inspection."

In the beaten path of criticism we have but to state, that Mr. Atkinson appears to us to have formed a good plan, and to have executed it very ably. Such a publication admits of hardly any other mode of illustration, than the expression of opinion; but we shall endeavour to condense its information (on leading points), and add such examples of the peculiarities and habits of some of the birds, as may serve to relieve the technical dryness of the subject.

Mr. Atkinson thus classes the birds of Great Britain. First division, LAND BIRDS.

*Order I. Accipitres*, consisting of three genera.—*Genus 1.* Falco. Eighteen species from the golden eagle to the sparrow hawk. *Genus 2.* strix (owl) of eight species, and *Genus 3.* lanus (strike) three species. *Order II. Picæ*, consisting of eleven genera; viz. corvus (crow) of nine sorts, coracias (ruekoo) one, oriolus (oriole) one, cucullus (wuekoo) one, yunx (wryneck) one, picus (woodpecker) five, alcedo (kingfisher) one, sitta (nutbath) one, meops (bee-eater) one, upupa (hoopoe) one, and certhia (creeper) one. *Order III. Passeres*, sixteen genera; viz. sturnus (starling) one, turdus (thrush) seven, cinclus (water-ouzel) one, glareola (pratcole) one, ampelis (chatterer) one, loxia (finch) five, emberiza (humming) seven, fringilla (sparrow) nine, muscicapa (fly-

catcher) two, alauda (lark) six, motacilla (vagtail) three, vitifera (wheat-eater) one, sylvia (nightingale) nineteen, parus (titmouse) seven, hirundo (swallow) four, and caprimulgus (goatsucker) one. *Order IV. Columbae*, one genus, the pigeon, four species. *Order V. Gallinae*, four genera; viz. colchicus (pheasant) two, tetrao (grouse) four, peridix (partridge) three, and otis (bustard) two.

The Second Division is that of WATER BIRDS. These are subdivided into the three orders, grallæ, pinnatipedes, and palmipedes. The grallæ are of the following eleven genera. *Platalea* (spoonbill) one sort, ardea (crane) fourteen, tantalus (ibis) one, numenius (curlew) two, scolopax (snipe) eleven, tringa (ruff and reeve—scaup) fourteen, charadrius (plover) seven, cursorio one, isomatopus one, rallus (rail) one, and gallinula (water hen) five. The pinnatipedes are of only three genera; the phalaropus of two kinds, the fulvia (coot) one, and the podiceps (grebe) six. The last order is the palmipedes, or web-footed, which consist of ten genera; viz. the avocata, of one kind, alca (auk) five, uria (guillemot, &c.) three, colymbas (divers) five, sterna (tern) six, larus (gull) ten, procellaria (petrel, &c.) three, mergus three, anas (swan, goose, &c.) thirty one, and pelicanus (cornorant, &c.) three.

In all, fifty-nine genera: one hundred and forty-two kinds of land birds, and one hundred and thirty-seven water-fowls: in all two hundred and ninety-seven kinds of birds known to Great Britain.

We now insert three definitions, to show the author's method.

"Alcedo.—Bill long triangular, tongue short, sharp pointed; legs short, feet, in most species gressorial. 1. Ispida, kingfisher. *A. atroviridis*, subulius fulvus, dorso caruleo nitidissimo vertice macula transversa carulea. Shaw. The bill is two inches long, and blackish; base of the lower mandible orange; irides light hazel; crown and coverts of the tail bright azure; under parts dull orange; legs red orange. The kingfisher generally deposits her eggs in an ascending rats-hole. The nest is composed of the bones of fishes, the castings of the parent birds. The eggs are seven, white and transparent. It is supposed that the young are fed by the parents ejecting food from their stomachs. See an interesting account in Mont. Orn. Dict.

"Genus XI. Sitta.—Bill salutate, straight, sharp pointed; nostrils covered with reflected bristles; feet three toes forwards, one backward. 1. Europea, nut-batch, wood-cracker, nut-jollier. *S. pyralis*, subulius subfuliginosa fascia transoculari nigra, rectricibus lateralibus nigris prope apicem albidis. Shaw. The bill is strong, black above, beneath white; irides hazel; the crown and upper parts are of a fine bluish grey; the cheeks and chin are white; breast and belly are of a dull orange; quills dusky; the legs are pale yellow. The female lays six or seven white eggs, spotted with rust colour. She forms her nest in the hole of a tree, the entrance to which is contracted, by a plaster of clay, so as barely to allow a passage

When disturbed she hisses like a snake. The nut-hatch feeds upon beetles and crabs, the latter after securing in a chink, it nicks by a stroke of its bill."

"*Rubecula, red-breast. S. grisea, gula pectoraque ferrugineis.* Shaw. The bill is slender and black; the irides are large and dusky; the plumage is yellowish brown; the breast deep rufous-orange; the belly and vent are whitish. Both sexes are alike. Length six inches. The red-breast builds its nest at the bottom of some thick shrub: it is composed of leaves, moss and feathers. The female lays from five to seven dirty white eggs, spotted with rust colour. Its food is worms and insects, which it never eats alive, but beats them with its bill against the ground until they cease to move."

Agreeably to our proposition we conclude with a few characteristic notices.

"As birds do not possess the sense of taste, the fluid usually secreted by the parotid gland is not saliva, but a mucus fluid, and its use is to lubricate the throat, and defend it from the many hard substances constantly swallowed. In the woodpecker this gland is unusually large, and the fluid most viscid, which enables it to attach insects, &c. the better to its curiously formed tongue. This organ in most birds has the os hyoides, which runs in the centre cartilaginous, but in the woodpecker it is completely ossified, runs longitudinally through the tongue, and projects at its tip, a barbed point, the use of this structure is of course to transfix insects. But in order to allow a sufficient protrusion and retraction, the cornua of the os hyoides are elongated backwards and upwards, and slide in a groove of the cranium. Thus by the surprising latitude of motion, which this conformation allows, conjoined also with the elasticity of the root of the tongue, and the peculiar muscles which produce its motions, the bird has the power of darting out for several inches its singular weapon."

"The organ of voice in birds is at the bifurcation of the trachea, and not in the larynx: it appears by the observations of Cuvier to depend upon the number of constrictor muscles, and their situation. He found in all singing birds five pairs:—

- Two anterior longitudinal contractors.
- Two posterior do.
- Two small do.
- Two oblique
- Two transverse

"In most birds which do not sing there is in general only one pair."

"Of the owl." "Spallanzani found that the gastric juice of the owl and some hawks, is perfectly incapable of digesting vegetable substances, however triturated or masticated; but that the gastric fluid of the ring-tail eagle, digested bread when forced into the stomach, although the bird would not touch it voluntarily after four days fasting."

"The gastric fluid will not act upon the enamel of the teeth, horn, or the cartilaginous portion of the gizzard of fowls."

"A curious anecdote is related of the screech owl, by a gentleman who resides in Yorkshire, and who is well acquainted with Ornithology. Having observed the scales of

fishes in the nest of a pair, which had built near a lake, upon his premises, he was induced one moonlight night to watch their motions; when he was agreeably surprised to see one of them plunge into the water, and seize a perch, which it bore to its nest, whence the gentleman took it."

The hooded crow. Mr. A. says, "This bird, my assistant observed in Orkney, to break shell-fish, by letting them fall upon the rocks from a great height."

"The hooded crow is rarely seen in this part of the country, but is frequent on the shores of our tide rivers, during the winter. We have seen it in most parts of the Highlands, Scotland, in July and August."

"A remarkable instance of a male of this species, pairing with the female carrion crow, (*corvus corone*) we witnessed at Arrochar, on Loch Long, and this singular attachment, had subsisted three or four years; their nest was like that of carrion crow, in the fork of a tall pine, and the young brood had already flown, but we were unable to procure one of them, or to ascertain which of the parents they most resembled."

The cuckoo. "It is curious, that when two cuckoo-eggs, are deposited and hatched, the stronger bird ejects the weaker, and remains sole possessor of the nest."

"A young cuckoo was hatched in the nest of a water-wagtail; after it had quitted the nest, we observed the singular manner in which it was fed by its foster-parent; the young bird remained squatted on the ground, and in that position, with its head thrown backwards, and gaping with its mouth, received the wag-tail on its back, who liberally supplied it with worms and insects."

The sparrow. "The ignorant, ever ready to judge from superficial observation, have condemned the sparrow, because it feeds on the produce of the farmer, as a most noxious bird, fit only to be extirpated. It is to be recollected, however, that insects form no inconsiderable part of the food for birds. Mr. Bradley, in his treatise on husbandry and gardening, has proved by actual observation, that a pair of sparrows, during the time they had young, carried to the nest forty caterpillars in one hour; and supposing them employed with equal diligence for twelve hours a day, they will in one week consume the astonishing number of three thousand three hundred and sixty caterpillars."

"Thus an all wise Providence checks the inordinate increase of insects; which, however useful in themselves, would if left unmolested, propagate with such rapidity as to consume the vegetable productions of the earth, and leave it a desert waste."

The chaffinch. "Mr. White, in his History of Selborne, observes, that great flocks sometimes appear in that neighbourhood, about Christmas, and that they are almost all hens. In Sweden the hens migrate, leaving the males."

The author mentions tobacco smoke as the only cure for the disease called *acuties*, or the gapes, in birds; and the following is another of his notes, worth repeating.

"It is curious to observe a bird on its

perch and at rest; it is not by any voluntary action which it exerts by which it is prevented from falling when asleep; it is by the pressure of the body upon the legs, by which the flexor tendons of the feet are compelled to embrace the branch upon which it is seated."

An appendix describes the best mode of preserving birds for the cabinet; but for this and other matters, we must refer to the work itself, which needs no further recommendation either to ornithologists, or the public generally.

#### LODGE'S PORTRAITS.

##### Parts. III & IV.

The greatest difficulty which appears to stand in the way of a work like this, is that of selecting subjects to engrave. In many instances the portraits of our most eminent characters are but of small value as works of art; and yet to omit them on account of this defect would be to exclude the most illustrious persons in our history. This necessarily creates an inequality in the engravings; since the artist well knows the impossibility of producing a fine plate from a picture destitute of talent. But when such a drawback has occurred in any portrait which is the most authentic representation of a distinguished individual, it has been balanced by the care and skill of the engraver in finishing the plate; for we can truly say, that we never had occasion to review a work of such extent, where the combination of ability requisite to bring it before the world has been so various; in which the plates have been so uniformly good, and in which they have improved so much in merit as the publication proceeded.

This is in itself no mean praise, and certainly does honour to the proprietors of the copyright; though it prevents our saying so much of the plates in the early parts, as we may have occasion to observe upon those of later date. It will be a sufficient assurance of their general beauty to state, that the talents of Messrs. Hilton, Satchwell, and others, have been employed in making the drawings, and of Messrs. Agar, Meyer, Cooper, &c. upon the engravings.

Part III. contains Prince Henry the son of James I. (by Mytens), and gives us the idea of a beautiful Stuart countenance in youth, full of benevolence and intelligence. Archbishop Cranmer, from the original in the British Museum. What we find remarkable in the literary portion belonging to this portrait, is a statement that Cranmer had a son and a daughter by his second wife (the niece of Osiander, a protestant divine of Nuremberg), whom he sent back to Germany on the promulgation of the famous six articles, in 1539, forbidding the marriage of the clergy upon pain of death. This fact, which has escaped all who have written concerning Cranmer, is put beyond doubt by the Journals of Parliament, where Mr. Lodge has discovered a Bill passed by the House of Commons, on the 9th of March 1562, for "the restoration in blood of Thomas and Margaret, children of the late Archbishop Cranmer." Another singularity in this portrait is its being the production of one Ger-

liens Fieclis, and not only possessed of much intrinsic merit, but the only known specimen of an artist whose very name has escaped the observation of Vertue, Lord Orford, Pilkington, Bryan, and others who have devoted their attention to pictorial biography.

The third portrait is that of Ann Clifford, the renowned Countess of Pembroke (by Mytens). The fourth is John Paulet or Powlett (for our ancestors were not very particular in the orthography of even their own names), who was the fifth Marquis of Winchester. It is from a picture by Peter Oliver, and does credit to the gallant royalist and brave defender of Basing House. Edward Courtenay Earl of Devonshire, the last of the elder male branch of that great house, is the fifth subject. This is the personage who was suggested as a husband to Queen Elizabeth; he died at Padua in 1556. The last portrait is that of George Clifford, the third Earl of Cumberland, the father of Ann of Pembroke, and one of the commanders against the Spanish armada. His costume is very peculiar; and he wears in the front of his hat the glove which Elizabeth dropped, and when he presented it to her, bade him keep it for her sake. This honourable mark of his politic mistress's favour is proudly enriched with gems, and seems to be as proudly worn by the adventurous sailor.

Part IV. consists of the following: John Russell, 1st Earl of Bedford, and Thomas Sackville, 1st Earl of Dorset, by unknown artists; John Selden, by Mytens; George Villiers, first Duke of Buckingham, by Jansen; Lucy Harington, Countess of Bedford, by Honthorst; Lionel Cranfield, Earl of Middlesex, by Mytens. The second of these is the well known author of *Perrex and Porrex*, afterwards called *Gorbudoe*, the prototype of the tragic drama in the English tongue. He ought, perhaps, to be almost equally celebrated for his "Induction," to which Warton (though Virgil and older poets might claim it) ascribes the honour of teaching Spenser the mode of designing allegorical personages; as the tragedy no doubt did much towards the production of that resplendent era of which *Shakspeare* was the sun. We copy a verse or two from the poem, as illustrative of Warton's opinion. The poet is led by Surrow to the infernal regions:

And by and by another shape appears  
Of greedy Carc, still brushing up the breers:  
His knuckles knob'd, his flesh deepe dented  
in;

With tawd hands, and hard ytanned skin,  
The morrow gray no sooner hath begun  
To spread his light, even peeping in our eyes,  
When he is up, and so his worke yrun.  
But let the night's blacke mistie musles rise,  
And with foule darke never so much disguise,  
The faire bright day, yet censeth he no while,  
But hathe his candles to prolong his toile.

By him lay hevie Sleepe, cosin of Death,  
Flat on the ground, and still as any stone;  
A very corpse, yae yeelding forth a breath.  
Small keepe tooke he whom Fortune frowned on,  
Or whome she lifted up into the throne  
Of high renown; but, as a living death,  
So, dead alive, of life he drew the breath,

The bodys rest; the quiet of the heart;  
The travails ease; the still night's feere was he;  
And of our life in earth the better part;  
Rever of sight, and yet in whom we see  
Things of that tide, and oft that never bee.

Without respect, esteeming equally  
King Cræsus' pompe, and Iru's povertie.  
And next in order, ad Old Age we found:  
His beard all bore, his eyes hollow and blind;  
With drooping cheere, still poring on the  
ground;  
As on the place where Nature him assigned  
To rest.

This is not only fine, but displays much of the cunning of poetry. The alliteration is obvious, without affectation; and many of the images served later lords in good steal, as all our readers will at once perceive.

In the biography of the Duke of Buckingham, Mr. *Lodge* is wrong where he says that "England could not at that time furnish moustiers sufficiently depraved to apologise for a frantic enthusiast (Felton) who had murdered even a bad minister." Never was the country more disgraced by such apologies than on this very occasion: pamphlets were published in praise of Felton, with the names of persons of respectable station attached to them, and multitudes openly regarded the assassin with the veneration of a martyr.

Of Lionel Cranfield, whom Buckingham ruined and got dismissed with heavy fine and disgrace from his office of lord treasurer, we have a good anecdote. A question had arisen at his table (after this event) as to the best means of prolonging human life, upon which his lordship facetiously observed, "Let a man get himself appointed lord treasurer, for no one ever died in that office." His humour was also displayed in some mock-complimentary verses prefixed to the *Travels or Crudities of Tom Coryat* in 1611, who, like Mr. Curwen, (see a subsequent page) seems to have written as he ran.

Poor Coryat was so insensible to ridicule that he inserted all the burlesques upon himself in his book, and, among the rest, Lord Middlesex's:

"Great lude deserves the author of this worke,  
Who saw the French, Dutch, Lombard, Jew,  
and Turke,

But speaks not any of their tongues as yet,  
For who in five months can attaine to it?  
Short was his time, although his booke be lone.  
Which shewes much wit, and memory more  
strong

And yron memory—for who but he  
Could glue together such a rhapsodie  
Of precious things, as towers, sleeples, rocks,  
Tombs, theatres, the gallows, buls, and stocks,  
Mules, asses, arsenals, churches, gates, and  
townes,  
The Alpine mountains, cortezans, and Dutch  
clowms?

## ORIGINAL CORRESPONDENCE.

### CURWEN'S TOUR IN IRELAND.

#### To the Editor of the *Literary Gazette*.

Sir,—Mr. Curwen, M.P. published, a few years ago, a tour through Ireland, the second volume of which I accidentally met with yesterday, and read for the first time. Whatever that gentleman's other qualifications

may be, it would be very unjust to deny him the praise of exemplary expedition. He travels, in the second volume, from south to north of the island, traversing several hundred miles, viewing innumerable towns, villages, seats, and farms, some of them with the utmost minuteness, (whether real or assumed I cannot say) and the tour only occupies him from the 14th of September, when he leaves Macroom, to the 19th of October, when he departs for England, after having, in these five weeks, produced his comely octavo of 355 pages!

We have, however, an old proverb, which does not bear favourable testimony to the advantages to be derived from such hasty operations; and I must say, that the venerable adage is borne out completely on this occasion by Mr. Curwen: for his book, at least as far as my personal knowledge goes, is very inaccurate indeed. But I am not willing to bring general charges without substantiating them; and shall accordingly point out a few inaccuracies. As I am a Cork-man I shall only speak of what relates to my own neighbourhood.

Page 4. We have a couple of errors: "*Bally Cobleck*, six miles from Cork, is a great ordnance depot." The name of the place is *Ballincollig*. And shortly after, he talks of the *Irishtown* of Cork, no part of which city is designated by such a title; and in fact the name conveys an erroneous idea.

Page 7. "The situation of Cork is particularly striking. The old town being built on the side of a hill forms an amphitheatre, at the foot of which the river Lee formerly ran." Now the old town of Cork is built on a flat at the foot of the hill, and was surrounded by the Lee. When the necessity for keeping themselves cooped up in a fortified town censured, the inhabitants spread over the adjoining hills; so that what Mr. Curwen calls the old town is in truth the most modern. He might have learned this fact from Spenser, who sings of

The spreading Lee that, like an island fair,  
Encloseth Cork with its divided flood.

Page 8. "The old town occupies the southern bank, the new is built on the northern." The old town, as I have said before, was encompassed by the two branches of the Lee, which divides above and unites below it.

Page 9. We have a couple of verbal errors in names; let that pass; but they are a sign of carelessness.

Page 10. "Party animosities here are carried to a great height—private comfort and public prosperity are always sacrificed to these unfortunate local misunderstandings, which are greatly promoted by the mutual desire that each party fosters to avoid personal conferences with each other, and to prefer the insinuations and misrepresentations of interested, invidious characters." I must positively deny every word of this. No one who knows any thing whatever of Cork could make such an assertion. There is perhaps no city of its size in the empire, where all

\* Of the first I know nothing, so I cannot tell whether its contents are as galling as those of the second.

sects of religion and politics mix in such unrestrained intercourse both in public and private society.

Page 21. After some very silly remarks on the state of our county representation, we are told that "the representation of the town rests mostly in each body corporate, which seldom exceeds twelve members." Of what town? As he is writing from the county of Cork, he must mean its county town; and so far from its elective franchise being confined to twelve members, its corporate body consists of over two thousand freemen, and its freeholders, who vote at elections, to as many more. But I am not astonished at this error when I find,

Page 22. That he informs us that *twenty-eight* peers are returned to Parliament for Scotland by *two hundred and seven* electors! I thought every body knew that Scotland returns but *sixteen* peers, and the elective body is, I believe, under one hundred. Why this is as bad as any thing in Debreut.

Page 24. "Mr. McCasell, whose residence is near Fernoy, has the reputation of being a good farmer." Here is a hopeful blunder. Who do you think this gentleman is? I am sure you would hardly guess that he is neither more nor less than Lord Mountcashel—one of the first farmers indeed in the county. The accurate name under which he appears in Mr. Curwen's pages was no doubt picked up from some of the peasantry, in whose dialect his lordship's title is often corrupted into McCasell; which pretty barbarism, a little more barbarized, is promulgated to the world by our senatorial tourist.

Here he gets out of the county, and I shall not follow him. He is not more exact in other shires, but they are not in my bulliwick. If I wished to go *arguing* against his statements, I might have swelled the list easily enough; but I have pointed out only palpable blunders. It would be wonderful, indeed, if such were not committed, when the dates of his letters are as follows: Cork, September 14; Fernoy, September 14; and Lisnmore, September 15. Giving thus about two days to the survey of the largest county and the second city of Ireland.

I am, Sir, your humble servant,  
Passage West. R. P.

#### AMERICA.

#### OBSERVATIONS OF A TRAVELLER, ON THE UNITED STATES.

M— 21st June 1820.

I have resided some time in America, and believe myself tolerably well acquainted with the state of commerce and manufactures in the United States; and cannot but wish, for the good of so many deluded people, to destroy, as far as lies in my power, the false representations which are entertained of this country, and which are particularly supported by those whose interest and selfish purposes require it. Having arrived about three weeks ago in Hamburg, my information is recent and authentic; and having no other motive than to counteract the delusions which are assiduously spread abroad concerning that country, I shall speak the truth, and nothing but the truth.

The proposal (which is mentioned in an article in the Gazette of Spire) to prohibit the importation of all woolen, cotton, and iron goods into the United States, has indeed been made to the congress: there was, however, never any talk of an absolute prohibition, but merely of an inconsiderable addition to the present import duty, in order, by this means, as they supposed, to bring the American manufactures to such perfection that they might maintain the competition with those of foreign countries. But this proposal will never be adopted, for this reason; first, because the landowners, who are the far larger part of the American people, are so decidedly against it, and the members of the congress having been elected by the people, dare not vote but according to their pleasure; secondly, because the American manufactures, even with additional import duties, which at the most can be only from 40 to 50 per cent, will never support the competition with the foreign, consequently an additional impost duty would never accomplish the proposed object.

In the last war with England, the American manufactures rapidly flourished, merely because they had no others to contend with. Suppose a cloth coat, which a farmer can now buy for ten or twelve dollars better than at that time for eighty to one hundred dollars, should be again raised to this price, it is very natural to suppose that he would vote against such a measure. Manufactures do not spring up like plants in hot houses; they require many years, much experience, immense capitals, and a contentedness with respect to the enjoyments of life, which the American never had nor ever will have. Supposing such an act passed in congress, how will the immense deficiency in the revenue be covered, which would be the consequence, if the importation of foreign goods was so much decreased, or was perhaps even totally given up; as the constitution will not admit of a land tax, and the farmer who is firmly attached to it, never would consent to pay one.

The internal wealth of the United States, which the article mentions, is very inconsiderable, and rather decreases than increases; for according to my ideas, it consists in the prosperity of trade and commerce, in the quick circulation of money; but now the first are very much declining in North America, and the money is like a mere article of merchandise; bank notes, which are almost the only currency, being always at a discount, and continually varying in value.

Of what service is it to the individual or to the country, if large tracts of uncultivated land are ploughed and the farmer does not find a market for his superfluous produce, and must therefore suffer that to spoil which he does not want for his own use?

Surely the internal wealth of a country cannot be established by such means. But that the American manufactures can be brought to such a height as to be exported, and thus to enter into competition with those of Europe, is so far beyond the limits of probability, that it is wholly unnecessary for me to adduce any arguments on the sub-

ject; if they are unable to support the competition with strangers in their own country, with protecting duties of 40 or 50 per cent, how will they be able to compete with the Europeans in other parts of the world? The sixty cotton, and the thirty-six woollen manufactures, are inconsiderable in themselves, and are besides only in the northern states, including Maryland, and extend no farther to the south; they manufacture only goods of very inferior quality, and may therefore be said merely to vegetate. America has indeed natural advantages, and all the raw materials in abundance; but this is not sufficient; there are required, besides hands, skill, long experience, capital, and many essential things which they are far, very far from possessing. It is only on the Ohio or Mississippi that steam boats are established for the conveyance of goods; on all the other rivers they only carry passengers. The rates are in truth insignificant, and in the interior of the country provisions extremely cheap; but this will not make manufacturers thrive, when the most essential requisite is wanting.

The influx of strangers will not greatly increase the population; for it is a fact, that by the highly exaggerated delusive notions of this country, which were designedly circulated, many thousand persons have been brought to want, misery, and death; and last year many vessels with English, Irish, and French, returned back, which they would surely have done if they had met with great success there. The distinctive epidemic peculiar to America and the West Indies (the yellow fever) has carried off, in the southern states, by far the greater part of the strangers lately arrived, including even the North Americans themselves; which has induced the state of Georgia to issue an ordinance prohibiting the importation of strangers during the unhealthy season, which is from May to October.

If, at Savannah, all foreigners died, and, in New Orleans, a city containing 25,000 inhabitants, of whom only 8000 are whites, 50 persons died daily, and 1,400 in five weeks, this is surely not the land of promise, whither every body should desire to travel. It is to be wished, for the sake of humanity, that the deceitful nimbus which hangs over that country may be at length dispelled, which has cost Germany so many thousands of her sons, and millions of money, that never return. The preponderance of the English manufactures is not temporary, but firmly established for a long time to come. In the great towns on the Atlantic, there are very insignificant manufactures, or rather none at all; for a worker who has two, or at the most, three looms, cannot well be called a manufacturer. Besides Pittsburgh, Zanesville, Cincinnati, and Lexington, are quite insignificant towns, and the last three in particular, are going to decay, in consequence of the banking system, the notes often being at a discount of 50 or 60 per cent. compared with money, and frequently not being current at any exchange. At Marietta, a small town in the state of Pennsylvania, a house which was built only four years ago, at the expense of 16,000

dollars, was sold last winter for as many hundreds; and such instances are not rare. It is not to be denied, that the Americans have a great talent for mechanics, particularly in building bridges and ships, (though the most skilful bridge-builder in Pennsylvania is a German); but in manufacturing machinery, they have hitherto done but little, as almost all that they possess is of English origin. According to my conviction, therefore, it is impossible that the seven or eight millions of Americans will soon be able to produce as many manufactures as the 15 millions of English and Irish. The South American gold and silver mines lie as near to the English, and the West of Europe, as to the Northern States of America, which alone have any manufactures: for it requires as much time to sail to South America from New Orleans, Boston, New York, Philadelphia, &c. as from the ancient hemisphere, because all vessels sailing from those ports are obliged to proceed nearly off Madeira, and then steer south-west, if they can gain the wind; they therefore require as much time as those that sail from Europe.

A remarkable proof of the scarcity of money in North America, particularly in the Western States, is furnished by an advertisement in one of the three journals, published in the flourishing town of Cincinnati, on the Ohio: the editor offers to take from his subscribers corn, brandy, meat, sugar, linen, flax, feathers, wool, wax, tallow, candles, skins, and rags, at the current prices of the market.

## ARTS AND SCIENCES.

### LITHOGRAPHY.

We are glad to find that this interesting art continues to attract the public attention in this country, and we hope ere long to see it succeed still more than it has done in Germany and France. The perfection of the machinery employed is of the greatest con-

sequence; and we therefore take an opportunity of laying before our readers a sketch of a new Lithographic Printing Press, constructed by Mr. J. Ruthven of Edinburgh, on the principle of his patent, and which answers perfectly for printing from stone. It is represented as free from the disadvantages that have hitherto attended lithographic presses, and as thus promising to render the art very generally adopted. Any degree of pressure is at once brought to bear on the stone, by means of the lever. The roller is found to clear the stone from the printing ink at each impression, and the labour of winding the bed through is much less than by the method hitherto used. By this machine a greater number of impressions may also be obtained in a day than formerly. One of them has been for some time at work at the Lithographic Establishment of Mr. Charles M. Willch, No. 6, Dartmouth Street, Westminster, where we have inspected it, to satisfy ourselves of its merit, and where we believe it may be seen by the admirers of this interesting art. This press has also the advantage of being applicable to copper-plate printing. Upon enquiry we learnt, that at length English stone has been found to answer the purposes of lithography. In the above establishment it has been used with perfect success for Transfer Lithography, in which branch it is even thought to be superior to the German stone. The press from which the sketch has been made is intended for printing from stones 10 inches by 15 inches. It is extremely neat, and works with great facility.

### NEW CARRIAGE.

The Journal de Nancy announces that a gentleman of that city has invented a carriage which is impelled forward by a piece of mechanism, set in motion by a person stationed at the back of the vehicle. It is said that six persons may ride in this carriage, as rapidly as though it were drawn by horses at a trotting pace.

### STEEL ENGRAVING.

To the Editor of the Literary Gazette.

Sir,—I have, with much satisfaction, read the paper over the signature of F. E. Guilloit, ex-director of assignats, which appeared in your valuable Gazette of the 9th instant, since it affords me an opportunity of doing justice to the inventors of the *Silicographic Art*. M. Guilloit says "claim to the priority of the invention of engraving in *relief on copper*, by the pressure of a plate engraved by incision (*encreux*) on steel." The inventors of this valuable art do not claim the discovery of engraving in *relief on copper*; it constitutes no part of their process of multiplying copper or steel engravings.

The method adopted by the French artists to multiply engravings is not practicable, and is acknowledged by M. Guilloit to have been abandoned long since: what practical man could suppose that copper having been pressed into a steel engraving, although made harder by the operation, could indent, by its relief, another copper plate, without enlarging each, and thereby distorting and injuring the engraving?—M. Guilloit, after claiming for his countryman this invention, says it is worth nothing, and points out the reason why. He says (and we perfectly agree with him) "Copper when strongly pressed experiences in all its parts an extension proportioned to its degree of annealing, and to its thickness. The difference between two impressions in copper has been found to amount, in the eagle and in the figure of liberty, to two centimetres 25-100ths (a line); hence the identity is destroyed." M. Guilloit has, we think, fairly proved that, although the French artists long ago conceived the idea that engravings might be multiplied, yet they could not put their ideas into practice, and, after many experiments, it was given up. Messrs. Perkins and Fairman also conceived the idea of multiplying engravings, and have put their ideas into most successful practice. The simple reason is this: Messrs. Perkins and Fairman's method is practicable, and entirely different from the French method, which is not practicable.

"If such a difference has been discovered on so small a surface as that of these two engravings of 30 and 66 square centimetres, (4 square inches and 9 square inches) it is easy to foresee the enormous difference which will result from the multiplication of engravings on any large copper plates, especially when this multiplication shall be effected under a cylinder acting as a flattening mill."

We perfectly agree with M. Guilloit, that when copper plates are attempted to be produced by the above described process, they, as he has stated, would be destroyed. We have seen a copper plate made by Messrs. Perkins and Fairman's indenting process, of 360 square inches, without the least enlargement; is not this a proof that the invention is dissimilar? We have also seen some of Heath's most delicate engravings retouched, after having been worn out by use; now if the plate had been the least enlarged, would the original lines and dots be again renewed? It is very evident, that although M. Guilloit

perfectly understands the plan adopted by his countryman, he has not correctly informed himself of the system adopted by Messrs. Perkins and Fairman.

M. Desnoyès, the celebrated French engraver, on his recent visit to this city, called on the inventors, and was shewn the process; he, like all the English artists, spoke in the warmest terms of its utility, beauty, and originality; if Mr. Guillot would visit his countryman, he could satisfy him that what was attempted in France, without success, is now successfully practised in this country. I have only to add, that such is the demand for this invention, that nearly 1,000 steel plates have already been ordered, for bank notes and other purposes.

I am, Sir, your obedient servant, &c.  
September 15, 1820.

JUSTICE.

## NEW SPANISH PLOUGH.

The Royal Society of Valladolid has published a description of an improved plough, presented to the society by Don Andres Herrarrie, one of its members. The improvement which this ingenious artist has given to an instrument of such importance to agriculture, preserving the same simplicity and the common uses, varying it only in the share, cause it to work with much less fatigue to the cattle and the driver, moving and penetrating the earth every where to the same depth, clearing away the weeds, and cutting through the deepest and largest roots.

## LITERATURE &amp; LEARNED SOCIETIES.

## FRENCH ACADEMY.

*Prizes to be distributed at the Annual Sitting of August, 1821.*

*Prize of Eloquence.*—To determine what constitutes poetic genius, and how it may be ascertained independently of diversity of languages, and forms of versification, in all its varieties, from the *Epopée* to the *Apologue*. The prize to consist of 1500 francs.

*Prize of Poetry.*—1st. The Devotion of *Malesherbes*, prize 1500 francs. 2d. The Restoration of Literature and the Arts, under Francis I. prize 1500 francs.

*Prize for the literary work most useful to morals.*—The Academy not having awarded this prize in 1819 and 1820, will grant, according to the merit of the work, a double or triple prize, consisting of a gold medal, of 800 or 1200 francs value, to the author of that literary work (published completely, and for the first time, between the 1st of January and the 31st of December, 1820), which may be deemed most useful to morals.

*Prize of Virtue.*—At the same sitting, the Academy will grant a prize to reward some virtuous action which may have been performed in the department of the Seine, within the three years preceding the 1st of July, 1820.

*Prize of Eloquence for 1822.*—The subject for the prize of Eloquence, which the Academy intends to propose for 1822, will be—The *Eloge* of Le Sage. The prize will consist of 1500 francs.

## ORIGINAL POETRY.

[By Correspondents.]

## THE CALM.

Phœbus o'er the mountains bright,  
Now sheds his dawning light;  
The wood-bird hails with joy the day,  
Hopping from spray to spray.  
Come, Nora! let us brush the dew—  
From yon tall peak we'll view  
The sluggish vessel's lazy motion  
Over the glassy ocean.  
There! the belling sail is spread;  
Yet on the unruddied bed  
Of azure, rests it motionless—  
"Sleeps it there, Albert?"—"Yes,  
The tedious sleep of lethargy;  
Not so the watchful eye  
Of the expectant sailor closes—  
Not so his heart reposes.

Again he sees his native shore;  
He hails it! its cliffs once more;—  
The tear-drop to his eye will start,  
Beats his responsive heart,  
As his lone Nancy's pensiveance  
Will on his memory press.  
Twere but a leap from thence to her,  
Why, why, his bliss defer?—  
And lo! her love-discerning eyes  
The signal recognize!  
That wave must bring him to the shore—  
It murmurs—but no more.

Thus Nora! should thine Albert's heart  
Be doom'd from thine to part,  
Would thine eyes trace the tardy keel  
Thro' the blue waters steal?

I know they would—and so would mine  
Strain to encounter thine;  
And stretching o'er the vessel's side,  
They'd curse the mocking tide.

Yet us, sweet girl! ah, never, never  
May the wide ocean sever;  
Fix'd here, thine Albert will be found  
In thy heart's fibres bound.

My labour o'er, sweet be my rest,  
Soft pillow'd on thy breast;  
I'll joy, with thee my nature's balm,  
One universal calm!

Thou weeps't—I see the frequent lash,  
Prepare thy cheeks to wash;  
Come, the breeze stirs—we'll add one greeting  
At the fond lover's meeting.

Sept. 5, 1820.

OTAEIS.

*To the Editor of the Literary Gazette.*

Sir.—In one of the Free-schools in the West Riding of Yorkshire, founded by Queen Elizabeth, there is an annual holiday kept in honour and commemoration of the foundation, when the boys of the first three classes exhibit verses, in which mention at least is to be made of Queen Elizabeth. They have not to vouch for the authenticity of their poetical assertions. I send you the flights of a couple of these boyish Poets.

Yours, &amp;c.

T. H. M.

*Verses on Queen Elizabeth.*

Queen Elizabeth! once on her travel  
Met, by chance, with sir George Saville;  
She took him by the hand, and gave him a salute,  
And he play'd her a tune on the German flute.

*A Second Attempt.*

Queen Elizabeth crept up a spout,  
She crept so far, that she could not get out;  
She called for help, and help did come,  
And they pul'd her Majesty out by the—thumb.

## LINES TO "THE IPHIGENIA OF MILAN."

When Greece of old, urged on by rival hate,  
On Troy's proud towers pour'd the vengeful  
storm;  
Thou may'st have read, have wept the hapless  
fate  
That clothed in death thy namesake's virgin  
form.

With grace like thee adorn'd, and beauty's  
bloom,  
She saw unheeded pass youth's fleeting hours,  
And wandered, reckless of her destined doom,  
Mid Argive meadows, and Love's romantic  
bowers.  
She fell—the victim of misguided zeal—  
A parent's trembling frame o'erhung her bier;  
And as each chieftain view'd the reeking steed,  
Burst from each chieftain's eye the pining  
tear.

Oh! may thy fate to her's far different prove;  
And since fair Science decks for thee her  
crown,  
Cease not the page of ancient lore to love,  
But boldly claim Minerva's ear'd throat.

Be like Virginia chaste, like Poria brave,  
And grasp the laurels of no vulgar fame;  
Fair flowers! then will deck thy honour'd grave,  
And Milan's matrons hail thy classic name.

Middle Temple.

ALPHEA.

## FARODY.

"Young Love."

Tom Stokes liv'd once in a garret high,  
Where fogs were breathing,  
And smoke was wreathing  
Her curls to give the cerulean sky,  
Which high up above Tom's head did lie:  
His red cheeks flourish'd,  
For *Sam Swipes* flourish'd  
Their bloom fall off with *Walden's* stream.  
But debts, tho' 'horrid, must be paid,  
And Bailiffs a't' bane'd for many hours.

Ah! that the *Nabster's* evil eye  
Should e'er come hither,  
Such cheeks to wither!  
The fat soon, soon, began to die,  
And Tom fell sick as the blades drew nigh.  
They came one morning,  
Ere Stokes had warning,  
And rapp'd at the door where the wild spark lay.  
'Oh, bo!' says Tom, 'Is it you?' good bye—  
So he pack'd up his awls, and he trad'd away.

ON SEEING A BUTTERFLY IN A CHURCH-TARD.  
AUGUST 30, 1820.

And dost thou, giddy rover, dare  
Thus to prophane the House of Fry?  
Dost thou presume to enter here,  
Thou gaudy fly?  
Thou hast indeed assurance rare,  
I can't deny.

For in that solemn, sacred dome,  
Thou canst not think to find a home;  
Thence therefore, fluttering insect, come  
To sport about,  
Where man prepares him for the tomb,  
With heart devout!

Oh! hie thee hence! this holy place  
But ill befits the thoughtless race;  
The stiflen cloak, and golden lace,  
Are here unknown;  
But a meek heart, and humble grace,  
It suits alone.

\* See Literary Gazette, No. 185.

Go where sweet Spring's enchanting bow's  
Are deck'd with ever-varying flowers,  
And there employ thy wanton hours  
With honey'd dew :  
Or sip the drops of April's showers  
From cups of blue.

'Light on the cowslips' golden heads,  
Or range along the violet beds,  
Or o'er the plains where primrose spreads  
Its yellow ray,  
Or where the modest cistus sheds  
Its leaves by day.

There trifle thy short life away  
In wantonness and idle play ;  
Or boast thee of thy colours gay,  
Vain Rutterfly !  
For there will surely come a day  
When thou must die !

Canterbury, Aug. 20, 1820. W. B.

#### JEU DE MOT.

To M—int—sh some one expressed his surprise  
That a certain learned counsel, both sprightly  
and wise,  
Would play second in that where so low the first  
stood ;  
But Sir J— said that *Broom was always Under-wood*.

[Sir.—I hope you will have no objection to  
insert the following little song, which I wish  
you could without violating any principle pub-  
lish as soon as possible.] \*

#### FROM A SICK BED.

To *Blackwood's Magazine*.

Prey to sickness and to pain,  
On my troubled bed I lie,  
Doomed upon it to remain,  
While the warm sun glids the sky,  
Tossing, tho' all nature's glad.  
Fretful, gloomy, lonely, sad.  
Seldom does the cheerful smile  
On my care-worn visage glow ;  
Hard I find it to beguile  
The dull moments of their woe,  
Save when comes, to chase my spleen,  
*Blackwood's merry Magazine*.

Turning o'er its various page,  
Passing light from grave to gay,  
Sometimes laughing, sometimes sage,  
Brilliant with the warmest ray  
Genius, taste, or wit can give,  
For an hour I seem to live.

Dear to me the olive coat,  
As in that its sheets are drest ;  
On that calm mild face I doat,  
Which upon its back impress,  
Almost loudly seems to cry,  
"Hither, sons of humour, hie !"

Could I say but half I feel,  
I should rhyme the whole day long,  
And express for it my zeal  
In a full career of song ;  
And although my muse were rude,  
It should speak my gratitude.

But I fear my verse is dull—  
How unlike the strains of thine—  
Strains of wit, of talent full,  
And of energy divine :

\* Having received this from a valued corre-  
spondent, though not quite *en regle*, we comply  
with his request. Ed.

May success thy steps attend,  
Blackwood, my own jolly friend !  
Ireland. R. T. S.

#### SKETCHES OF SOCIETY.

##### REMARKABLE STORY.

##### 'PRETENDER TO THE DANISH THRONE.'

The following account of this person is  
given in a Berlin Journal:—

The late king, Christian VII. had a mother-in-law, Juliana Maria, upon whom his-  
tory has already pronounced sentence, with  
respect to her endeavours to place upon the  
throne her son, the hereditary Prince Fre-  
deric, to the injury of the lawful heir. This  
Juliana was as inimical to King Christian as  
to his descendants : to her alone is attributed  
the unhappiness which the King experienced  
in his marriage with the English Princess,  
Matilda, sister of George III. : nay, and  
even the state of mental debility in which  
Christian passed his life. But, as she could  
not accomplish all her plans in favour of her  
son, she is stated to have attempted, at least,  
to secure the crown for her grandson  
(Prince Christian Frederic, who, with his  
amiable consort, is now travelling in Italy).  
When, therefore, the present Queen, then  
Crown-Princess, consort of Frederic VI. was  
first delivered of an heir to the throne, she  
is said to have had the child taken away as  
soon as it was born, and a dead child substi-  
tuted in its room. The dead child was bu-  
ried, and the true heir to the throne en-  
trusted to one of the Royal attendants, named  
H—, who, being in the secret, brought  
him up as his own son. The step-grandmo-  
ther assigned the sum of 4000 dollars annu-  
ally for his education, to reward her coun-  
dant. When the Prince grew older, he was  
sent to the academy Schnepfenthal, and a  
great banking house at Altona paid the ne-  
cessary sums to order, without knowing any  
thing further of the matter. The young  
man probably remarked, from many circum-  
stances, that the — was not his father :  
and when he returned to Denmark, after  
finishing his studies, urged him to reveal to  
him the secret of his birth, which the latter,  
partly instigated by his conscience, at length  
did. He furnished his foster-son with all the  
documents necessary to support his claim,  
and then committed suicide, being justly  
afraid of punishment, for having so long  
concealed so shameful an action.

The Prince, being at Copenhagen, and  
furnished with his papers, laid his claims  
before the police, which immediately re-  
ported the affair to the King, who sent for  
the Pretender, examined his papers, and,  
finding that his countenance and figure  
greatly resembled his own, and the papers  
contained important explanations, which  
seemed deserving of attention, he immedi-  
ately caused him to be put under confine-  
ment, but without any rigour, and placed  
officers to guard him, in order to examine  
thoroughly who he was.

This is the present state of the affair,  
which, in truth, is more like the romantic

invention of some idle fancy, than a real fact.  
However, letters from Denmark, and even  
from Copenhagen, speak with such con-  
fidence on the subject, that the story certainly  
deserves attention. It is farther affirmed,  
that the Altona banker, who paid the money  
to the school at Schnepfenthal, has been  
summoned to Copenhagen, to give such in-  
formation as is in his power ; that he set  
out for that city a week ago ; that the Dan-  
ish Minister of State K—, passed through  
Hamburg, on the night of July 22, on his  
way to Schnepfenthal ; and it is also said,  
that the Danish government has sent for to  
Copenhagen two ladies of the chamber of  
the late Queen, who live in Hanover, (whether  
in the kingdom or city of Hanover, we  
are ignorant,) and who, it is pretended, are  
in the secret. The Pretender is stated to be  
about 29 years of age, and very like the  
King, (except that his hair is brown, whereas  
that of his majesty is very fair,) and to have  
served last with the rank of Lieutenant. This  
is all that I have been able to collect, re-  
specting this most strange affair, which it  
must be left to time to clear up.\*

#### Trick of the Spanish Mule Drivers, and Obstinacy of their Mules.

(Related by an Eye-witness.)

It is customary in Spain to guide the mules  
without reins, and merely by calling to them.  
The animal, when called by its name, punctu-  
ally follows the orders of its driver. But it is a  
very peculiar circumstance, that they must al-  
ways be yoked at the very same place to which  
they have been accustomed, otherwise they  
will not draw. After the battle of Cordura,  
several waggons were required to carry  
away the effects of King Joseph Napoleon  
from Madrid. While the waggons were  
loading, most of the drivers unyoked their  
mules, under pretence of feeding them, and  
then put them too again at an unaccustomed  
place. The animals refused to draw. The  
drivers at first seemed to give themselves all  
possible trouble to make them go on. The  
French who escorted the train, attempted to  
assist, and liberally dealt out their blows  
on all sides. The Spanish drivers, however,  
contrived to get out of the way, and the  
mules kept their place, in spite of all this  
beating. This occasioned a long delay ; for  
the French sought in vain the cause of the  
obstinacy of the mules. At last, a part of  
the escort of cavalry were obliged to dis-  
mount, and their horses were harnessed to  
the waggons. But, during this time, a part  
of the Spanish cavalry, whose approach ap-  
peared to have been known to the drivers,  
had made a detour about Madrid, and cap-

\* We have seen some accounts of a later  
date, which say, that the pretended Prince has  
been discovered to be the son of a tailor ; and  
others, that he has been found to be insane.  
Without being able to vouch for the truth of  
any of these statements, we have thought our  
readers might like to have a more particular  
account of this strange business (which created  
great sensation in Denmark,) than has ap-  
peared, to our knowledge, in any other English  
Journal. —Ed.

tured almost all the baggage of poor Joseph who is said to have narrowly escaped being made prisoner.

## EAST INDIES.

## Monday Morning.

Sir,—As your articles, under the head of Sketches of Society, do not seem to be confined to any class or country, I send you an anecdote illustrative of Indian cunning and address, which you may depend on as being related without the least exaggeration, and well known to many people.

The Rajah of Travancore being dispossessed of some territory by the British collector resident at that station, during the late Governorship, applied to the authorities at the Madras seat of government, for its restoration. Not finding his application attended to for some time, he was induced to listen to the proposal of one of the government dobashis,\* who offered to manage the affair for him on certain conditions. The credulous rajah consented, and came on an appointed day, was introduced (as he thought) to the Lady Governor's, to whom he presented 50,000 pagodas in cash, with some handsome rhinels, and other valuable presents, and withdrew, much pleased with his reception.

Nothing was heard of the circumstance for some time, and the Rajah was in daily expectation of having his territory restored; but some time after, meeting the real wife of the Governor, on the Mount road, he saw that it was not the same person to whom he had been secretly introduced, and he mentioned the circumstance. At last it reached the ears of the Governor, and it was discovered that the Dobash had got a Portuguese in the Governor's employ to personate Mrs. —, who did so, without having been in the least suspected by the Rajah, with such condescension and dignity did she receive the presents. The facts were traced, the Portuguese turned king's evidence, and discovered the whole plot. The Dobash was fined 5000 pagodas, (20000*l.*), sentenced to the pillory, and three years imprisonment. The poor Rajah was said to have died of a broken heart for the loss of his territory and money; and the Portuguese was destroyed by his infamous colleague.

The attempts on the life of the Portuguese by the Dobash, shew to what guilt will impel even the timid and merciful Hindoo.

This man hired a house in the most retired part of the Black Town, and, in the inner apartment, destined for repose, which is generally without other opening than the door, he had a grave dug: having got persons to assist him in his murderous intent, he invited the Portuguese to an entertainment, and, having made him drink pretty freely, he led him into the sleeping apartment, and they had actually got a rope round his neck, when they were broken in upon by the police, who had by some means or other got notice of their design.

\* The Dobashce, or dobash, is a native secretary, or manager of business connected with natives.

This attempt having failed, the Dobash employed persons to supply him with drink, of which he was very fond, and, at last, succeeded in giving him the dose of brandy and opium, which caused his death.

R. N. W.

## THE DRAMA.

HAYMARKET THEATRE.—On Wednesday Brabam commenced his engagement at this theatre. We can add nothing to the public knowledge or the public praise of this admirable singer, and we shall limit ourselves to the mere mention, that his songs on Wednesday gave perfect evidence of unimpaired powers. A report has spread itself that Brabam is about to retire: for this we can discover no ground in the performer. His voice is at its height in all that constitutes the charm of music. What portion of its volume it may have gradually exhausted, it is still difficult to ascertain, for it is still more than equal to fill the largest of our theatres. But its delicacy, finish, and execution, are matters of simpler judgment; and in those points we can discover no inferiority to the triumphs of his earlier days: we are even satisfied, that if by the failure of his volume of voice he should be compelled to adhere to his more delicate and tasteful style, to exchange the English for the Italian, he would add only so much the more to his true popularity. The opera was *Guy Ragonier*, in which he was the *Henry Bertram*. He sang the *Death of Abercrombie*, *Loch's Young Dream*, and *Scots who ha*, with great applause. Miss R. Curri was the *Lory Bertram*. This young performer promises to be among the first singers of the stage. Her voice is rapidly purifying; her style is Italian, and her taste exhibits a spirit and elegance rare to English Opera. J. Russell was a tolerable *Dandie Diamond*. Liston, as the *Dominie*, was *pro-di-gi-ous*! and the rest were sufficiently well in their vocation. The house was full and feverish.

## FOREIGN DRAMA.

THEATRE DU VAUDEVILLE.—*La Poste Dramatique, revue Allegorique*.—M. Lambin has set up a dramatic posting establishment. The business of his post-hoys is to convey novelties to the different theatres. M. Succes d'Argent, who, in his character of cousin german of Fortune, loves to escape from those who pursue him, has taken up his abode at the establishment, assuming the name and dress of the proprietor. The *Bergeres Chateleine*, the *Platteur*, and the *Homme Poli*, successively arrive, but none of them recognise *Succes d'Argent*. At length *Mary Stuart* and Queen Elizabeth make their appearance, and a laughable scene takes place between the two queens. They appear attired in rich court dresses, and commence a dialogue in an elevated strain: by degrees, however, their anger is roused; their robes fall off, they appear dressed like women of *la Halle*, and they continue their dispute in language corresponding with their costumes. A little disapprobation was manifested towards the conclusion of the piece.

## SECOND THEATRE FRANCAIS.

*Frederick and Conradi*, a tragedy, in five acts.—The death of these two young princes is one of the most touching events of modern history. Conradi, the son of Conrad IV. Emperor of Germany, was only two years of age when his father died. The Roman Pontiffs, Pantaleon, Urban, and Clement IV. had disposed of the States of Naples and Sicily, and Conradi, the lawful heir to those kingdoms, was deprived of his rights until the age of fifteen, when fortune favoured his cause. Accompanied by his young cousin, Frederick of Austria, he placed himself at the head of an army; and, after being received with transport in Rome, he triumphantly entered Abruzzo. He was, however, overcome in a sanguinary battle, in which he had at first enjoyed the most brilliant advantage; and after the death of Frederick, he wandered about in the disguise of a shepherd. He was at length recognised by a Roman nobleman, who seized him, and delivered him up to Charles of Anjou, and shortly after the unfortunate prince perished by the hand of the executioner.

The author of the new piece probably thought that the simplicity of the above story did not afford sufficient dramatic resources: for almost all the secondary events have been changed, and a kind of romantic machinery has been attached to the main incident, which is in contradiction to the best authenticated historical facts.

## THEATRE ITALIEN.

*Il Turco in Italia*.—The brilliant success of Rossini's *Barber of Seville*, induced the managers of the opera to bring forward another production of that master. *Il Turco in Italia* has been selected; and this preference is in some measure justified by two or three charming pieces, such as the finale of the first act, &c. But even Rossini's music could scarcely induce the audience to tolerate the absurdity of the piece. A gallant Turk visits Italy, where he unexpectedly meets with a lady, who, on the suspicion of infidelity, he had formerly doomed to death. He is once more ensnared by her charms, after having resisted the fascinations of an Italian coquette. The Turk is reconciled to his slave, with whom he returns to Turkey, to the great satisfaction of the husband and *caendiere serrette* of the Neapolitan lady.

## THEATRE DE LA GAITE.

First representation of *Le Payan grand Seigneur*, a melo drama, in three acts.

The substitution of one child for another is the incident on which this piece is founded. The Chevalier de Saint Alban, who has witnessed the death of the Marquis d'Esparville, his pupil, substitutes in his stead a young peasant boy, named Justin. He at the same time directs Leonard, one of his agents, to present Marguerite, the mother of Justin, with the sum of ten thousand francs; but the honest agent finds it more convenient to appropriate the money to his own use. The marriage of the young man is about to be celebrated with Adolphe, the daughter of Count d'Ormeuil, when a peasant, named Bazili, who suspects that

Justin is not the real Marquess, conducts Marguerite to the presence of the Count, and thus the truth is discovered. The Count pardons Justin, who has been the means of saving his life, and he consents to his union with Adolpheine.

The piece was tolerably successful.

### VARIETIES.

Professor Spacermann, the naturalist, who was one of the most distinguished pupils of the celebrated Linnaeus, died lately at Stockholm, in the 73d year of his age.

The resident population of Paris, according to the latest enumeration, amounts to 657,172 persons. Strangers amount, upon an average, to 56,794. Consequently Paris contains 713,966 inhabitants,—about a sixth part more than before the revolution.

**REMARKABLE CANNON.**—At Kubberepore na Jheel, in India, there is a cannon 213 inches long, 66 inches round the muzzle, and 18 inches round the calibre. It has five, and had, originally, six equidistant rings, by which it was lifted up. This gun is called by the natives *Jann Kushal*, or the destroyer of life, and its casting and position are attributed to the deotas or divinities, though its almost obliterated Persian inscriptions declare its formation by human means. But what is most extraordinary about it is, that two peepul trees have grown both cannon and carriage into themselves. Fragments of the iron, a spring, one of the flitches, and part of the wood-work, protrude from between the roots and bodies of these trees, but the trees alone entirely support the gun, one of the rings of which, and half of its whole length, are completely hid between and inside their bark and trunks. A more curious sight, or a cannon more firmly fixed, though by the mere gradual growth of two trees, cannot well be imagined. The Indians assert that it was only once fired, and sent the ball 24 miles!—(*See Asiatic Journal.*)

The busts of celebrated Italians, which have hitherto adorned the Pantheon at Rome, were lately removed to a gallery prepared for that purpose in the Capitol, where it is in contemplation to form a museum of all the celebrated men that Italy has produced. The writer of an article inserted in the *Allgemeine Zeitung*, strongly censures the removal of the busts of Raphael and of other distinguished men who were buried in the church of the Rotunda (the Pantheon). It is, however, extremely doubtful whether the mortal remains of Raphael were deposited in the church; and with the exception of Carlo Maratti, it is pretty certain that none of the great men, whose busts have lately been removed, were buried there.

A horticultural society in England, which annually distributes medals for beautiful flowers exhibited by its members, this year awarded the grand prize to the cultivator of a fine carnation, which was named the *Afflicted Queen*. The second prize was given for another flower of the same species, called *British Opinion*. Where will *opinion* fix it-

self next? The third prize was adjudged to a flower distinguished by the name of the *Trial by Jury*!—(*French Paper.*)

**Miracle.**—At the church of St. Gervais, in Paris, a mass, called the *Hostie enlevée*, is performed every Friday. Respecting the origin of this custom, the following curious story is related. A thief stole the vessel containing the host from the church of St. Gervais. On arriving near St. Denis, he opened the cup, when the host flew out, and fluttered around him, without his being able to catch it. He was tried and condemned on the prosecution of the Abbé of St. Denis. A lawsuit afterwards ensued between the Abbé and the Bishop of Paris, respecting the possession of the miraculous host; and it was finally agreed that it should be delivered up to the curate of St. Gervais, who had consecrated it; but on the express condition that the mass above mentioned should be regularly celebrated.

**Paquinade.**—At all the religious festivals in Rome, travellers of whatever religion, and especially British, obtain admission, in preference to the native Catholics. *A bon mot* has appeared on this custom. Paquin asks Marforio, "Where are you going, brother, dressed in black, and a sword at your side?"—Marforio, "I am going to the Sixtine Chapel, to hear the Miserere."—Paquin, "You go in vain. The Swiss Guards will push you away, and the papal cavaliers politely refuse you admission."—Marforio, "Don't be afraid; I shall get in, for I turned heretic yesterday."

Dr. Gesenius, who, with Lord Guildford, has been recently translating some Arabian MSS. at the Bodleian Library, has nearly completed the singular task of translating the Book of Enoch from the Abyssinian language. This language resembles the Arabic, one fourth of the words perhaps being radically of that tongue, in which the learned Doctor is well skilled, while he is also one of the most celebrated Hebrew scholars on the continent.

We are informed that the report of M. S. Poems of Ossian having been discovered at Connor, is unfounded. It is not likely that any one credited it.

### LITERARY NOTICES.

*Contents of the Journal des Savans, for August, 1820.*

B. de Roquefort, Poésies de Marie de France.—Reviewed by M. Raynouard.

Biot on the Aurora Borealis.

F. de Neufchâteau, L'Esprit du grand Corneille.—M. Raynouard.

T. Matter, Essai Historique sur l'Ecole d'Alexandrie.—M. Daunou.

Abel Rémusat, Recherches sur les Langues Tartares.—Silvestre de Sacy.

Barde du Vign, Un Mot sur la nouvelle Orthographe.—M. Raynouard.

The famous Bergault is, according to the French Papers, preparing his memoirs for publication at Neuchâtel.

A tragedy from the pen of Lord Byron is on the tapis. We understand that it is to be published, and not offered to any Theatre for performance.

### METEOROLOGICAL JOURNAL.

SEPTEMBER, 1820.

Thursday, 7.—Thermometer from 37 to 62. Barometer from 30, 27 to 30, 30. Wind E. b. S.  $\frac{1}{2}$  and 1.—Generally fair; the sun shining through light clouds.

Friday, 8.—Thermometer from 41 to 69. Barometer from 30, 33 to 30, 50. Wind N. W. 1. and N. b. W. 2 and  $\frac{1}{2}$ —Generally hazy; at times clear.

Saturday, 9.—Thermometer from 39 to 70. Barometer from 30, 51 to 30, 49. Wind N. b. W.  $\frac{1}{2}$  and S. W. 1.—Generally hazy; at times clear.

Sunday, 10.—Thermometer from 41 to 71. Barometer from 30, 48 to 30, 43. Wind S. W.  $\frac{1}{2}$ —Generally clear.

Monday, 11.—Thermometer from 41 to 70. Wind S. W.  $\frac{1}{2}$  and E. b. S. 1.—Generally clear.

Tuesday, 12.—Thermometer from 49 to 71. Barometer from 30, 41 to 30, 38. Wind S. E. 1.—Generally clear; clouds passing. The Northern Lights about 10 this evening, rather bright, but quite silent.

Wednesday, 13.—Thermometer from 43 to 73. Barometer from 30, 55 to 30, 52. Wind S. E.  $\frac{1}{2}$  and 1.—Generally clear.

A thick haze or fog every morning during the week, which sometimes lasted all the forenoon.

On Saturday the 23d, at 5 minutes, 46 seconds after 9 o'clock, the 1st Satellite of Jupiter will emerge from an eclipse.

On Friday 22nd of September the moon will be eclipsed, partly visible at Greenwich. Beginning of the eclipse (clock time).

5. 6. 29. A.M.  
5. 49. 59.  
Moon sets eclipsed.  
Edmonton, Middlesex. JOHN ADAMS.

### TO CORRESPONDENTS.

\* \* \* We shall be glad to receive the conclusion of the Essay on the Incontinence of the Clergy anterior to the Reformation: it is contrary to our rule to commence a subject without being sure that we shall be able to finish it.

R. R.'s hint respecting a more copious Index to the annual volume of the Literary Gazette, shall be attended to: the Editor is aware of the utility of distinct reference in so mixed a publication.

T. R. C.—We must see the drawings, &c. mentioned by T. R. C. before we can make any statement concerning them.

A. C.'s communication is objectionable on grounds which may (if wished) be stated in a private letter.

ERRATA.—In the Review of *Prometheus Unbound*, last Number, p. 580, col. 3, l. 23, for *Saturnian* read *Saturnia*; l. 31, for *Signior* r. *Signior*; l. 82, for *Canevas* r. *Canevas*; p. 581, col. 2, l. 13, for *Calorific* r. *Caloric*.

In the verses on the *Angel of the World*, in our last, a line was accidentally dropped in passing from one column to the other. It is the fifth line of the second stanza.

"Plucking our spirits pinions at the page  
Where sweet *Florante*, &c."

### BOOKS PUBLISHED THIS DAY.

*Medico-Chirurgical Transactions.*  
In 4vo. (with 4 plates) price 2s. 6d. Vol. XI. Part I. of  
**MEDICO-CHIRURGICAL TRANSACTIONS.** published by the Medical and Chirurgical Society of London. Printed for Longman, Hurst, Bess, Orme, and Brown, London. Of whom may be had, Volumes 1. to 10, with numerous Plates, &c. 2s. 6d.

**THE ABYSS**. A Romance. By the Author of *Waterley*, &c. Printed for Longman, Hurst, Kees, Orme, and Brown, London; and Constable and Co. and John Edmonstone, Bookseller to the King, Edinburgh.

Of whom may be had, by the same author,

**THE MONASTERY**, a Romance, 3 vols. 12mo. 11. 4s.

**ROB ROY**, a Novel, 3 vols. 12mo. 11. 4s.

**THE ANTIQUARY**, a Novel, 3 vols. 11. 4s.

**GUY RANNING**, a Novel, 3 vols. 11. 4s.

**WAVERLEY**, a Novel, 3 vols. 11. 4s.

In 8vo. price 6s. 6d. boards.

**THE CHARACTERS OF THE CLASSES, ORDERS, GENERA, AND SPECIES**, or, the Characteristic of the Natural History System of Mineralogy. Intended to enable Students to discriminate Minerals on principles similar to those of Botany and Zoology. By FREDERICK MOHSE, Professor of Mineralogy, Freiberg. Printed for Longman, Hurst, Kees, Orme, and Brown, London; and W. and C. Tait, Edinburgh.

New Novel.—Price 11. 1s.

**LOCHIEL**, or, The Field of Culloden.—A Novel, in three Volumes, 12mo. Printed for G. and W. B. Whittaker, 13, Ave-Maria-lane.

"We recommend this Work for its interesting theme, and from the spirited and genial way in which it is treated."—*New Monthly Magazine*, September, 1820

## Second Edition.

**THE TRAVELS AND OBSERVATIONS OF THE WANDERING JEW**, comprehending a View of the most distinguished Events in the History of Mankind, since the Destruction of the Temple of Jerusalem by Titus; with a description of the Manners, Customs, and remarkable Monuments of the most celebrated Nations; interspersed with Anecdotes of eminent Men of different periods. Embellished with Maps and numerous Engravings; now first collected and arranged by the Rev. T. CLARKE, Es.

This Work will afford a systematic view of the Decline and fall of Empires, the improvement in morals effected by the propagation of the Christian Religion, and the causes which tended to form the different Kingdoms that now constitute the European confederacy. Printed for J. Sonnet, 73, St. Paul's Church Yard.

Of whom may be had, by the same author, **THE TOLK OF EUROPE**, in one volume, 12mo. price 8s. abridged from the most popular Modern Voyages and Travels, adapted to the use of Schools and young People, and embellished with Plates and Maps.

**THE TOLK OF ASIA**, in one vol. 12mo. price 8s. on the same plan as the foregoing.

This Work will enable the reader to acquire, in a concise form, a knowledge of all the material points of information contained in the most esteemed modern books of Voyages and Travels, without those repetitions which have rendered so many works of great merit trite and uninteresting.

In 12mo. price 9s. boards.

**ESSAYS AND SKETCHES OF LIFE AND CHARACTER**. By a Gentleman who has left his Lodge.

"We have seldom perused any similar volume with higher pleasure. It is written throughout with great facility and elegance, and bears every where indubitable marks of an upright and honourable mind, richly cultivated both by study and travel."—*Blackwood's Magazine*, August, 1820.

Printed for Longman, Hurst, Kees, Orme, and Brown, London.

*Books of Travels, lately published by Longman, Hurst, Kees, Orme, and Brown, London.*

**TRAVELS** in various COUNTRIES, from the East; being a Continuation of Memoirs relating to European and Asiatic Turkey, &c. Edited by ROBERT WALPOLE, M. A. This volume contains the last Travels of the late W. G. Brown, Esq.;—also a Journey through the Desert to Mount Sinai; another to Java, in Persia; and various Communications relating to Parts of Asia Minor, Syria, and the Islands and Continent of Greece. In 4to. with plates, 82s. boards.

2. **MEMOIRS ON EUROPEAN AND ASIATIC TURKEY**, from the Manuscript Journals of modern Travellers in those Countries. Edited by ROBERT WALPOLE, M. A. 2d Ed. 4to. illustrated with Plates. 21. 3s. 6d.

3. **HISTORICAL ACCOUNT OF DISCOVERIES AND TRAVELS IN ASIA**, from the earliest Ages to the present Time. By HUGH MURRAY, F. R. S. F. In three large volumes octavo, with three steel Maps, engraved by Hall, price 31. 2s.

4. **THREE MONTHS PASSED IN THE MOUNTAINS EAST OF ROME**, during the Year 1819. By MARIA GRAHAM, author of a *Journal of a Residence in India*. In 8vo. with six Plates, 10s. 6d. 6s.

5. **AN ACCOUNT OF TIMBUCTOO AND HOUSA**, Territories in the Interior of Africa. By EL HAGE ABD SALUM SHAAREENIE, a Native of Morocco, who personally visited and resided as a Merchant in those interesting Countries. With NOTES, Critical and Explanatory. To which are added, Letters, descriptions of various JOURNEYS through West and South Barbary, and across the Mountains of Atlas. By JAMES GREY JACKSON, Esq. In 8vo. with two Maps, price 14s.

6. **A SECOND JOURNEY THROUGH PERSIA TO CONSTANTINOPLE**, between the Years 1810 and 1816. With a Journal of the Voyage by the Brazils and Bombay to the Persian Gulf, together with an account of the proceedings of his Majesty's Embassy under his Excellency Sir George Ussher, Bart. K.B. By J. HORNER, Esq. In royal 4to. with Maps, and coloured Plates, 31. 12s. 6d. 6s.

7. **TRAVELS IN THE IONIAN ISLES**, in ALBANIA, THESSALY, and GREECE, in 1812 and 1813. Together with an Account of a Residence at Corfu, the Capital and Coast of All Pasha; and with many curious Sketches of a Route through Attica, Morea, &c. By HENRY HOLLAND, M.D. F.R.S. In 3 vols. 8vo. 3d edition, with Map and 13 Plates, price 11. 10s. 6d.

8. **TRAVELS IN FRANCE IN 1819**, by FRANCIS HALL, Esq. author of *Travels in Canada*, &c. In 8vo. 12s. 6d.

9. **THE EMIGRANT'S DIRECTORY** to the WESTERN STATES of NORTH AMERICA; containing a Voyage out from Liverpool; the Geography and Topography of the whole Western Country, according to the latest improvements, with Instructions for obtaining the Ohio and Mississippi Rivers; also a brief Account of a New British Settlement on the Head Waters of the Susquehanna in Philadelphia. By W. ANPLETT, Esq. Crown 8vo. price 6s. boards.

10. **NARRATIVE OF A JOURNEY TO YERUSALEM**, in the Suite of the Imperial Russian Embassy in the Year 1817. By MORITZ DE ROTZLER, Esq. in 8vo. with plates, 12s. 6d.

11. **A VOYAGE OF DISCOVERY**, made for the order of the admiralty in his Majesty's ships Isabella and Alexander, for the purpose of exploring Hadram-Ya, and inquiring into the probability of North-West Passage. By J. Ross, K. S. Captain R.N. 2d edition, in 2 vols. 8vo. with a map and plates, 11. 2s. 6d.

12. **VIIEWS OF SOCIETY AND MANNERS** IN THE NORTH OF IRELAND, in a Series of Letters written in the year 1818. By JOHN GAMBIE, Esq. In 8vo. price 12s. 6d.

13. **A VOYAGE UP THE PERSIAN GULF**, and a Journey overland from India to England, in 1817, containing an account of Arabia Deserta, Arabia Felix, Persia, Mesopotamia, Babylon, Bagdad, Koosistan, Armenia, Asia Minor, &c. &c. By W. HEPPES, Esq. 4to. with plates, 11. 5s.

14. **A NARRATIVE OF A JOURNEY OF FIFTY THOUSAND MILES** through the Eastern and Western States of AMERICA. With Remarks on its Climate, "Notes" and "Letters." By H. F. FARRIS, Esq. 4to. price 10s. 6d.

15. **SPANISH AMERICA**; or, a Descriptive, Historical, and Geographical Account of the Dominions of Spain, in the Western Hemisphere, Continental and Insular; with Maps. By R. H. BROWN, Esq. In 2 vols. 8vo. 11. 1s. 6d.

16. **NARRATIVE OF A JOURNEY** in the INTERIOR OF CHINA, and of a Voyage to and from that Country, in the Years 1816 and 1817; containing an account of the most interesting Transactions of Lord Amherst's Embassy to the Court of Peking, and Observations on the Countries which it visited. By CLAYTON ABBEL, M. D. F. L. S. F. R. S. Naturalist to the Embassy. In 4to. with Maps and Plates, 31. 2s. 6d.

17. **A NARRATIVE OF SHIPWRECK** on the coast of South Barbary, and of the sufferings of the Master and the Crew while a prisoner among the Arabs; interspersed with numerous Remarks upon the Country and its Inhabitants, and the perils of that Coast. By JUDAH FADDOCK, late R.N. Master. In 4to. 11. 6s.

18. **A JOURNEY FROM INDIA TO ENGLAND**, through Persia, Georgia, Russia, Poland, and Prussia, in the Year 1817. By Lieutenant-Colonel JOSEPH C. B. In 4to. illustrated with numerous Maps. Price 21s. boards.

19. **TRAVELS** through some Parts of Germany, Poland, Moldavia, and Turkey. By ADAM NEALE, M.D. In 4to. with 11 plates, 21. 2s. 6d.

20. **A JOURNEY TO ROME AND NAPLES** performed in 1817; giving an Account of the present State of Society in Italy; and containing Observations on the Fine Arts. By HENRY SASS, Esq. 12s. 6d.

London: Printed for the Proprietors, by W. POKES, of Chancery Lane: Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, No. 1, Pall Mall East. (Extra Charge) Send, where Communication not paid) are requested to be addressed to the Editor.

PRICE 8d.

### REVIEW OF NEW BOOKS.

#### YOUR TEETH!

*The Dentiste de la Jeunesse; or, the way to have sound and beautiful Teeth, preceded by the advice of the Ancient Poets upon the Preservation of the Teeth, &c. &c.* By J. R. Duval, Dentist; Translated and supplied with Notes by J. Atkinson, Surgeon Dentist, &c. London and Leeds, 1820. 8vo. pp. 161.

We have made "YOUR TEETH" our head, for the sake of attracting peculiar attention to the very generally interesting book whose title we have partially extracted above. Yet, truly, this may seem needless, since they must be young indeed who are not aware of the importance of the subject, and extremely old who do not care for it. To all who come within the pale of life, from nine months to ninety years; to all who stand between that period, when Time itself is toothless, and that epoch when the devouring jaws of eternity are gaping for their final crash, this work must present much for rumination.

*The Dentiste de la Jeunesse* is rather an inauspicious Anglo-French mixture of a name; and hypocritics might feel disposed to imagine that the volume would be but so-so, which set out in so fantastic a manner; but, as no one can tell what sort of a mouthful of teeth may spring up from merely looking at the tumours of their cutting, so we would advise no one to form an opinion of a scientific publication from a mere glance at the first page. If in the present instance, for example, they persevere, as we have done, to the end, we can promise them that considerable amusement, if not instruction, will be their reward.

Quackery apart, Monsieur J. R. Duval is a very extraordinary person, as the following analysis "shall fructify unto you."

The preface is not remarkable for any great discovery, except it be that "Attention to the teeth is necessary at every age; and when we have been deprived of some, still it is of very great importance to be able to preserve those which remain." Our readers will therefore observe, that, however

few the number of their remaining grinders may be, they ought to regard them with due care: in fact, we can well suppose that the value even of a stump augments as its neighbours successively disappear; and we love the last of our old friends apparently with the whole concentrated affection which we once bestowed on a whole row of them.

But our author does not rest his claim to universal interest on the simple appeal to the personal feelings of every individual; he sustains himself on the highest classical authorities; and with all that philosophy and astonishing erudition so happily illustrated by French writers, lays deep the foundations of his theory; and, accordingly, commences with a chapter containing the "Advice of the Ancient Poets on the Preservation of the Teeth." This, it will be allowed, even by national jealousy, is a genuine, and an original mode of setting out with a treatise on teething and tooth-powders. It would have been long before so brilliant an idea entered the mind of a native of our land of fogs and stupidity. But to return to Mr. Duval and the ancient poets. Lucretius was, it seems, quite wrong in supposing that age demanded the fall of the teeth:

*Nec minus in certo dentes cadere imperat ætas Tempore.*

Had Mr. Duval practised in those days, the hard would have known better. Ovid was a wiser, as well as a more delicate observer of the teeth.—

*Quid si principium, ne fuscet inertia dentes; and Horace and Martial were strenuous advocates for keeping them clean. Plautus, Catullus, Herodotus, Palladius, Hippocrates, Juvenal, Macedonius, Petronius, Tibullus, Sæmoneus, Galen, Virgil, Apuleius, and a hundred other illustrious authors, fortify Mr. Duval's positions.*

Petronius, in describing the luxury and effeminacy of a certain people, observes that they made use of silver tooth picks. Martial says "the best tooth pick is the lentisk; if, however, you cannot procure a tender shoot, you may pick your teeth with a quill," but this was not to be used too freely. Ovid forbids the picking of the teeth in company. The neglect of this rule by Esculapius, probably drew upon him the remonstrance of Martial: "He was almost toothless," says he, "and the tooth-pick was constantly in his mouth." The coquettes of Greece, when they were laughing, were in the habit of holding a little branch of myrtle, in order to display their beauty, between their teeth; this trait has not escaped the notice of the comic Alexis: perhaps however it may have been used for the sake of necessity. Hippocrates, and the other physicians of antiquity, recommended certain substances to be chew-

ed, for the purpose of removing a swelling of the gums, and of fastening loose teeth. From the advantages which have been experienced, some of these have been converted into articles of luxury. Such is the advice given by the ancient poets upon the preservation of the teeth; it is in vain to observe that Tibullus represents Venus as always sure to please, without having paid attention to the mouth: it is only by conforming to the precepts of the art, that we can give to the teeth that lustre alluded to by Ovid, in the following expression, "I can perceive your attentions, by the whiteness of your teeth." When Julia presented herself to Manlius, she shone, according to Catullus, by a flowery mouth: she doubtless possessed those teeth of snow so sung by the favourite of the muses, or that row of pearls so extolled by Lucian; the lustre of which was extolled by Theocritus, as above that of the finest marble of Paros.

"Let youth, who with too much security regard the loss of the teeth as an uncertain problem, remember, that according to Marcan, the figure cannot be agreeable when a front tooth is wanting; a Greek poet observes, that such a mouth has lost the graces with which it was decorated: Ovid wisely proposes as a remedy against love, to make her laugh who has defective teeth; attentive to this stratagem, ought not the young amant to recollect, that art is capable of supplying the defect, and should it not call to the remembrance of him, who wishes to please, the following lines:

*Si Chloe dans ses dents vous offre quelque appas, Par les vôtres, Daphnis, ne lui répondez pas."*

Having in this way, and with so much learning, established the fact, that teeth are really useful and ornamental, and ought to be taken care of, our philosophical dentist very judiciously adds, "It is not enough to know with the poets, the mole of treating the teeth adopted by the ancients; it is of more importance to be acquainted with the best and most likely means of rendering and preserving them in a healthy state."

To supply this information, is the avowed object of his treatise; and, if it does invariably resolve into the conclusion that you ought always to employ a dentist, that only shows the extreme anxiety of the writer that the best assistance should be at hand for so momentous a matter as dentition and tooth-cleaning. That laudable anxiety is also further evinced by the references kindly furnished to preceding publications by the author, whose "Dissertation upon the Accidents arising from the Extraction of the Teeth," "Propositions respecting Dental Fistulæ, Paris, 1814;" "Historical Researches upon the Dentists' Art among the Ancients, published at Paris in 1808;" "Anecdotes His-

torical, Literary, and Critical, in Medicine, Surgery, and Pharmacy, (Paris, 1785); "Bulletin de la Faculté de Médecin de Paris, 1808," and "Reflections upon Odontalgia," (all which "see," contain the fullest and most valuable information.

Should the world not be inclined to buy all these tomes, it may be well to know how much intelligence is contained in *le* (we beg pardon, *the*) Dentiste: and in the first place it is worthy of remark, as Mr. Duval incriminously states, "that the Latin word which signifies a tooth, is an abbreviation of another word, which implies chewing", and which proves that the teeth have always been considered by the ancients as formed especially for that operation." 11

This marvellous natural secret being ripped from the mystical and hieroglyphical oracles of the earliest sages; Mr. D. increases our admiration of his acumen and sagacity by further informing us, that "The teeth are found in most animals which live upon solid food, and they serve naturalists for the purpose of classing them into herbivorous, granivorous, and carnivorous; and as man is endowed with all these different kinds, he is called omnivorous, that is, he is intended to eat of all." 11

The Ogre Man, thus felicitously defined by his edacious qualities, is fitted, as our readers who are concerned in the fact will be happy to learn, for his devouring purposes, in the following manner:

"When the mouth is opened the teeth exhibit themselves under the form of two semicircular rows of little white bodies, hard and shining; in the adult they are thirty-two in number, sixteen for each jaw: the four in the middle are flat and cutting, they are therefore called incisives or cutting teeth; from their connection with the four others of the lower jaw, which have the same name, there can be no doubt, that they are intended to cut, when they come in contact, like a pair of scissors. Upon the sides of these in each jaw are two teeth, which are more round and sharp, and which seem made to tear the aliment, like those of dogs, from which they borrow their name; (canine) they are also called eye teeth, because their root being exceedingly long, approaches the eye nearer than those of any other tooth; they do not however communicate with that organ, and the involuntary tears which are observed to flow when one of them is drawn, are also seen upon the extraction of one of the grinders; they are also called angular teeth, either on account of their form, or because being placed at each angle of the mouth, they regulate its extent: more backward, and on each side of these teeth, are five others called molars or grinders, two small, and three large, whose office it is to grind the food, and have the same effect in mastication as the mill stones have in a mill."

So provided with cutters, terrors, and grinders, including the wisdom teeth, it is strange that men should have fallen into a blunder about these members, as to have regarded them as inorganic bodies *without life*, which Mr. Duval assures us has been

the case; drawing, at the same time, this very obvious inference from it (for he is literally *avant jusqu'aux dents*) viz. "From this circumstance it arose no doubt the ingenious fable, which represents Cadmus as giving birth to men, by sowing the teeth of the dragon which he had slain." 11

Not being quite sure that men were born from teeth, we are, at all events, certain that teeth are exceedingly serviceable appendages to them, after they have been born. In this Mr. Duval bears us out: "If (says he) the orator to whom Rome had the honour of giving birth, compared the teeth to the chords of a musical instrument for the purpose of modifying the sound of the voice; if, in order to speak the Jewish tongue with more grace, St. Jerom caused his teeth to be filed; if they serve physiognomists with the means of calculating the probable longevity and moral character of man, and if they form one of the greatest ornaments of beauty, the parasite in his turn only esteems them for one function more important, in which he puts those organs into action for the purpose of dividing and grinding his aliment, which forms the object of his delight; the freshness of his appearance announces his having masticated well, and consequently the digestion has been perfect; which seems to verify an adage used by the Arabian physicians, 'he who does not masticate well, is an enemy to his own life.'" And this admirable axiom is immediately illustrated by a quotation from the Arabic! "Illum qui non bene masticaverit, animam suam odise constat."

The next branch handled by our author is that of the first dentition, or milk teeth; and here again, if he mounts into the third heavens, it will be acknowledged that he has the excuse of some connection with the Via Lactea, or Milky Way. His exordium is in a style worthy of him, or of his translator: "Although," says he, "in general dentition is only considered as an operation by which the teeth tend to pierce and traverse the gums, in order to arrange themselves in their places, yet we cannot dispense with the necessity of considering it in a more extended point of view. The teeth, as well as every other part of the body, require to exist from the earliest moments of life."

Nevertheless, "The child being born, the nourishment destined for him, proves that he has no need of teeth during the first year; it is true that infants have been born with one or more teeth, this was the case with a great monarch, (Louis XIV.) in whom the presence of a tooth at his birth seemed the presage of his future greatness."

This prophetic property of teeth is another recommendation to Mr. Duval's work; for it will readily be granted, that so extraordinary a quality, in addition to their common and daily usefulness, renders them of infinitely greater importance than any other organ. M. Duval proceeds to condemn the washing of infants in cold water, as prejudicial to the teeth; and with a marked severity, reprehends the mothers in Scotland for the practice, as giving their children the croup. "It has been remarked (he tells us) that this cruel disease, which speedily suffo-

cates the little sufferers, was endemic of peculiar to Scotland: and it is observable, that the Scotch plunge themselves and their children into cold water, even in the depth of winter!" Nor let any of our southern readers fancy that Mr. Duval approves more of their customs. No, addressing his countrymen, he says; "To clothe a child as such is a requisite to shelter it from the sudden impressions of heat and cold, is what nature demands for an easy digestion; every one she offers us the example. Let us endeavor rather to imitate her, than to believe that we can do better, and leave to the English to make their children walk barefoot, according to the advice of their writers Locke, Flax, Hamilton, and others." After this we are not surprised to learn that the French ladies are such admirable nurses that their milk sometimes absolutely *intoxicates* their babies! \*

These little drunken animals, however, like other children, about the age of seven years, come to their second dentition, or permanent teeth; and in this department Mr. Duval learning shines once more: "To see (says he) two rows of teeth, as in the son of Midas, or three, as in Hercules, must certainly excite our astonishment: perhaps, we might be tempted to doubt these facts, as consider them only as fables, if in a collection of observations published at Berlin, 1772, and dedicated to the celebrated Mr. Arnold had not reported, that he had seen a child, aged fourteen years, who had seventy-two teeth, thirty-two for each jaw, which were healthy and well placed in two rows, except the front ones, which were slightly irregular." The cutting of teeth in very old age, he also tells us, is not in the common course of nature, and facetiously proposes the following epitaph, composed by himself for the general use of such exceptions to the rules of dentists.

Here lies an old person once toothless and bare,  
Who renew'd all his teeth, and his health and his hair,  
And then was cut off in the height of his years,  
After living two ages devoid of all care.

For these ultra-teethings, and other misconduct, the author mildly remonstrates with Nature: that *beneficent* mother is, as he justly observes, "sometimes forgetful in her operations, and wanders from the path which the *Author of all things* has marked out for her; sometimes she gives to certain teeth an oblique direction, again she transports them to a distance from their proper use; here they cross each other, or they are so turned as to present one of their sides; there we observe one which presses against the lip, producing excoriation; again we find a tooth planted in the middle of the palate."

Oh! be on Nature, to give dentists so much trouble as these confounded transpositions, transpositions, crossings, and plantings must

\* It is a common saying in France, that such a one lies like a *dentist*—"Il meurt comme un arabeur de dents;" from the dentists always assuring their patients that drawing a tooth will give no pain. Has Mr. Duval furnished any other ground?

\* Dens quod dicitur edere.

occasion! We should like to see the skill of Duval employed in transplanting a grinder from the middle of the palate to some more appropriate situation.

Having administered this wholesome correction to nature, our author next falls foul of acids, for the mischief they do to his charge, the teeth. "The ancients (as he tells us) were not ignorant of the injurious effects which acids have upon the teeth, the prophet Jeremiah expressly says, that if we eat unripe grapes the teeth will be set on edge; and Solomon, who was not unacquainted with the physical sciences, observed an analogy between the action of smoke upon the eyes, and that of vinegar upon the teeth." Well may he exclaim after this, punning so happily upon the *blowing of flowers*. "By what fatality then are the minds of men fascinated by those powders which have an acid base? It is like the charm of a *face flower*, which only yields an agreeable odour, that it may more effectually strike a mortal blow at those who dare approach it." Such persons are worse than beasts.

"If these truths should appear to some persons ill-founded, or of less weight than we believe they merit, we request them to recollect the lesson which has been given them by the cows, of which M. le Vaillant has given an account, from his own observation of their habits among the Caffres: according to this illustrious traveller, when these cows have eaten herbs which have a sour taste, their teeth are strongly set on edge; to relieve which, they mutually bite each others horns, when they cannot find any bones: those persons then, (i. e. such as are not blessed with horns) after using acids to clean their teeth, will try from the example of these animals, to soften their effects by gnawing their nails, and they will finish by biting their fingers."

But if this example will not suffice, to another.

"Two young persons, Pasquin and Simone, were conversing together at the foot of a tree, which was situated in a garden, upon the properties of sage for cleaving the teeth; Pasquin even gathered some leaves of that plant, with which he rubbed his teeth and gums; but immediately became pale, lost his sight, his speech, and soon died: his face was swelled, and marked with black spots. Simone was accused of having poisoned this young man; when brought before the judge, she clearly explained to him by going to the foot of the tree, how the leaves of sage had been used by Pasquin, and illustrated it by rubbing her own gums with the same plant; but how great was the astonishment, when the same effects were immediately seen to ensue, and she died. To prevent a similar scene, the ma-

gistrate ordered the plant to be pulled up and destroyed, believing it to be venomous; and there was found among its twigs an enormous toad. It was, therefore, believed that this animal had communicated a pernicious quality to the leaves of a plant among which it delights to live."

The lesson from this is very rich—  
"Whatever be the origin of this account, it may serve as a lesson to those who hold in their mouths, either for their teeth, or for any other purpose, certain substances, whose pernicious tendency they are unacquainted with."

Mr. Duval now warns his patients against certain things, which have been found by experience, (and he as usual quotes his authorities,) to be a little detrimental to the teeth. Among these, we may particularize cracking cherry stones, knocking your mouth in playing at blind-man's buff against the marble table of a commode or of a chimney, the stroke of a hammer, thumps with tennis balls, a push in the jaw with a foil; against all which practices, we join in dissuading those who wish to preserve a good show of teeth.

Mr. Duval further advises any one whose teeth are "entirely knocked out of their sockets," not to *swallow them*; though Elian praises this act, in a wrestler whom he mentions (*Historiar. Discreet.* lib. x. cap. xix.). To this we may annex another piece of excellent counsel given by this prince of dentists. He proceeds:

"To represent a ferocious animal with teeth of iron is an ingenious idea which belongs to the style in which the prophet Daniel wrote: it is to arm ferocity with weapons of such a hardness, that sparks might be drawn from them. But confiding too much in this solidity, no one should imitate the example of him whose teeth gave sparks when struck with a flint, as related by Bartholin; he will also leave the bully to chew glass and stones, as well as those who have the indiscretion to crack nuts with their teeth. To use them thus, is to run the risque of breaking or of loosening them, or at least of producing an irritation which afterwards may become the source of pain and caries."

Biting threads, tying parcels, drawing corks and nails with your teeth; and moreover, vagering them in any bet, ought prudently to be avoided. "Want of cleanliness also renders the mouth fetid, which in society where it is customary to embrace often, is a matter of importance."

This is in France, where fashion and costume too operate against the teeth, which leads their zealous patron to condemn inexorably slight clothing, crops, and shaving.

"It is not a matter of indifference with regard to the teeth, to submit the head to the caprices of fashion. Although pains in the teeth may have been cured, according to the report of some observers, by cutting the hair, we ought not to conclude, that we can always imitate without inconsequence the head-dress of Titus and of Caracalla, many persons could depose to the contrary."

"It sometimes happens, that the toothache is produced every time that a person is

shaved; but we should not conclude with Hottinger, that the presence of the beard is a preservative against that malady. The curious and painful teeth of those venerable anchorites, who distinguished themselves by their long beards, have scarcely left us room to believe that any intimate connection exists between this part and the teeth."

There are many other things to be shunned, and many to be done; but we must now refer those of our readers who are desirous of further information on this subject, to the work itself, which they will find to be exceedingly particular in its directions on every misadventure and malady incident to teeth—to employ a dentist! This, indeed, is the sum of what we have gathered from it, and the whole may be summed up in the author's own words.

"If, notwithstanding all the precaution to preserve the teeth, certain disorders should still appear, yet we need not despair of a remedy; submitted to the vigilant eye of the professional man, his hand is often able to arrest the progress, and his counsel to remove the cause; but it is important to apply in the incipient state of the disease, for at a certain period, medical science is often unavailing, or precarious."

This course, gentle reader, will make your gums more odorous than the precious gums of Arabia; you may smile and even laugh without fear, and salute without apprehension; but as for the teeth, we would humbly suggest to Mr. Duval, in his own drolling style, that his last word above quoted, seems to us to be erroneous, since the best system of treatment that we can think of, is that which he appears to depreciate; namely, the *Pre-cautious* method.

*Jack Randall's Diary of Proceedings at the House of Call for Genus.* Edited by Mr. Breakwindow, &c. &c. London, 1820. pp. 75.

We ought in conscience to say a good word for this little *spirited* publication, since Mr. Breakwindow, whoever he is, has favoured us anonymously from time to time, with the effusions of his fancy. Having thought them worthy of a place in the Literary Gazette, we need hardly repeat, that as lively trifles, characterising one of the follies of the age, they seem to us amusing and ingenious. But the very preference which we have already displayed, cramps our purpose of illustration; and we are compelled, in allowing Jack Randall and his congenial Editor to put in their own blows, to reject those that hit hardest, for the sake of what are of a newer cast. The following, from the Diary, is Master Randall's picture of his "Changehouse" at different periods.

Who has e'er been at Randall's at day-break?  
And seen

The first gleam of light from the East stealing in,  
And bright'ning the white chalks that on the

Tap-door,  
Mrs. Randall has scored; and the pipes on the

floor,  
That, broken and crack'd, have fell from the

boards

Of the *Covers* who love *light-twist*\*, at evening  
to cheer 'em?

Who love them when sleeping, for stretch'd on  
the sand,  
Are the *Covers* rather cut †, in somnolence  
near 'em.

Who has e'er been at Randall's, when twilight  
has lent

Inexpressible charms to this *luch-crab*, and sent  
All those who were *Swipers*, yet hated the day,  
To witness the spot where their feet lov'd to  
stray?

When the light that is streaming from the new-  
lit Gas,

Sheds its ray on the *top tables, benches, and*  
*pillars,*

And illumines the *light wet*, that now shines in each  
glass

Of the *Soakers* that sit in sweet Chancery Lane.

This night, just at nine, the *Kids* 'gan to drop-in,  
But seem'd 'd undetermined for going or stopping;  
Which I thought unhandsome,—for most of them  
knew

I'd got all on purpose for them, clean and  
ready,

A *brass-nose* fresh cargo of *Prime-wet me-through*;  
(A name Trot thought genteeler for gin than  
the *Deady*.)

And I long'd just as much as a beau at a ball,  
To shew off in *prime style*, or a wit with his  
funning;

And 'twas my intention, when the *Chair* gave a  
call

For *blue ruin*, to set this "right sort of stuff"  
running.

We now select an address to a renowned  
pugilist, in which the pun is fairly carried  
through.

To Mr. Painter, on his late Pugilistic Combat with  
the resuscitated Tom Oliver.

Oh, Painter! thou *Artist*, whom *Same Nature*  
owns,

For painting the *life, the flesh, and the bones*,  
In colours cerulean,—whose bright-tinted hue  
Could be drawn out, my old one, by no one but  
you.

Rejoice in your laurels, and *swing* the full cup;  
Let your old heart with triumph, and joy be  
clate,

For in *milking* tough Tom, and *sewing* him up,  
You've prov'd your *executive* powers most  
great.

Thou Raphael of fancy! your *fat* was the *brush*,  
And Tom's *head* was the *palette*, where many a  
blush

Of the *crimson* was drawn; but the *blue* and the  
*black*,

You contriv'd to extract from his *chest* and his  
*back*.

Your powers of *handling* we saw in a trice,  
When your *bunch of fire* † tickled his *mane*,  
and then *ribb'd* him;

And your genius for *keeping*, for just like a  
vice,

You held the old boy while you *fac'd* † and  
*ribb'd* him.

Oh! when Sir Thomas, by that *Miller* Time,  
Is sent *full trot* to that delicious cline,  
Where Rubens dwells, and Titian takes the  
air,

Thou Painter, fit for such a station rare,  
Come up to town and stand for the Professor's  
Chair.

Oh! when Sir Thomas, by that *Miller* Time,  
Is sent *full trot* to that delicious cline,  
Where Rubens dwells, and Titian takes the  
air,

Thou Painter, fit for such a station rare,  
Come up to town and stand for the Professor's  
Chair.

Thou Painter, fit for such a station rare,  
Come up to town and stand for the Professor's  
Chair.

Thou Painter, fit for such a station rare,  
Come up to town and stand for the Professor's  
Chair.

Thou Painter, fit for such a station rare,  
Come up to town and stand for the Professor's  
Chair.

Thou Painter, fit for such a station rare,  
Come up to town and stand for the Professor's  
Chair.

Thou Painter, fit for such a station rare,  
Come up to town and stand for the Professor's  
Chair.

One poem more will suffice to give an  
adequate idea of the volume, to our classi-  
cal and female readers.

## MOULSEY.

On Moulsey when the moon was bright,  
And comets wing'd their burning flight,  
Was heard the sound of *tax-car* light,

Of *Baldwin* rolling rapidly.

But Moulsey when the sun was high,  
Saw clouds of dust in myriads fly;  
For *prads* and *rattlers* rolled by

Full trot in drunken revelry.

At early dawn was heard the "sing"  
Of—"Clear, Baldwin, clear the Fancy's ring,  
For soon Tom Crib will Randall bring,

In buggy—to fight devilishly."

Then, then arose a murd'rous din;  
For Randall then came rattling in,  
And, when he gain'd the ropes vaulting,

He flung his *costor* vauntingly.

Then Turner rais'd a deaf'ning shout,  
And whips war'd high, and fists flew out,—  
For Belcher loap'd the ring elmet,

And post'd the *buffers* dexterously.

On, Turner, on—now *Nonpareil*,  
Let every blow in thunders tell,  
Your *manly* do their duty well,

And mill the *fibber* gloriously.

His *agles* now both look askance,  
His *chatters* all in air now dance,  
Now, *Nonpareil*, thine is the chance,

And thou hast won it easily.

Smile, Moulsey, smile, the sun again  
Shall once more blaze upon thy plain,  
And dry each *claret* mantling stain

That Turner has spilt willingly.

The grass once more shall grow upon  
The spot of all this slaughter'ring fun,  
Where *blunt* was lost and *flunkeys* won,

And *Deady* guzzled merrily.

## SHABENEY'S WIMBUCTOO, &amp;c.

By J. G. JACKSON.

Had we not become, through prac-  
tice, somewhat hardened reviewers, we  
could not so long have delayed the ex-  
ecution of our promise, to bring further  
parts of this curious and entertaining  
volume before our readers. In our No.  
171, we abridged Shabeneey's remark-  
able intelligence respecting Timbuctoo  
and Housa; and in 178, gave only a few  
miscellaneous extracts from Mr. Jack-  
son's more direct and personal labours.  
Referring to these, we now resume his  
interesting notices of various places and  
customs, &c. in Africa.

"The second part consists of letters,  
giving an account of various journeys through  
West and South Barbary, performed by the  
author: it is from these that our present  
selections are taken. The Emperor Soliman  
having marched from Fas to Morocco, sent  
orders to his nephew, Abd el Melk, the go-  
vernor of Santa Cruz, to join him with  
the garrison and merchants of that place. Mr.  
Jackson was of the party; and on the second  
day they reached the noble chain of the Atlas  
mountains. He gives the following descrip-  
tion of this superb region:

"This country abounds in extensive plan-

tations of olives, almonds, and gum trees;  
some plants of the (*fashook*) gum ammoniac  
are here discovered. Vines producing purple  
grapes of an enormous size and exquisite  
flavour: (*degrmuse*) the Euphorbium plant  
is discovered in rocky parts of the mountains;  
and great abundance of worm-seed and stick-  
liquorice.\* The indigo plant (*caneel*) is  
found here; as are also pomegranates, of a  
large size and a most exquisitely sweet fla-  
vour, and oranges. Ascending the Atlas,  
after five hours' ride, we reached a table-land,  
and pitched our tents near a sanctuary. The  
temperature of the air is cooler here, and  
the trees are of a different character; apples,  
pears, cherries, walnuts, apricots, peaches,  
plums, and rhododendrons, were the pro-  
duce of this region. The next morning, at  
five o'clock, the army struck their tents, and  
after ascending seven hours more, we met  
with another change in vegetation. Legu-  
minous plants began to appear; pines of an  
immense size, ferns, the *belute*, a species of  
oak, the acorn of which is used as food, and  
is preferred to the Spanish chestnut; elms,  
mountain-ash, *seadra* and *enobar*, the two  
latter being a species of the juniper. After  
this we passed through a fine campaign coun-  
try of four hours' ride: we were informed  
that this country was very populous; but our  
fakier and guide avoided the habitations of  
men. We now began again to ascend these  
magnificent and truly romantic mountains,  
and in two hours approached partial cover-  
ings of snow. Vegetation here diminishes,  
and nothing is now seen but fir, whose tops  
appear above the snow; the cold is here  
intense; and it is remarkable, that the pul-  
lets' eggs that we procured in the campaign  
country just described, were nearly twice the  
size of those of Europe. Proceeding two  
hours further, we came to a narrow pass, on  
the east side of which was an inaccessible  
mountain, almost perpendicular, and entirely  
covered with snow; and on the west, a tre-  
mendous precipice, of several thousand feet  
in depth, as if the mountain had been split  
in two, or rent asunder by an earthquake:  
the path is not more than a foot wide, over  
a solid rock of granite. Here the whole army  
dismounted, and many prostrated in prayer,  
invoking the Almighty to enable them to pass  
in safety; but, however, notwithstanding all  
possible precaution, two mules missed their  
footing, and were precipitated with their bur-  
dens into the yawning abyss. There is no  
other pass but this, and that of Belawin,  
which is equally dangerous for an army; so  
that the district of Suse, which was formerly  
a kingdom, might be defended by a few men,  
against an invading army from Morocco of  
several thousands, by taking a judicious po-  
sition at the southern extremity of this narrow  
path and tremendous precipice, which is but  
a few yards in length. Proceeding north-  
ward through this defile, we continued our  
journey seven hours (gradually descending  
towards the plains of Fruga, a town of con-  
siderable extent, distant about fifteen miles  
from the mountains). Proceeding two hours

\* This root abounds all over Suse, and is  
called by the natives *Arti Suse*, i.e. the root of  
Suse: the worm seed is called *sheb*.

\* Tobacco.

ed—"the bunch of *fire*."

further, making together nine hours' journey, the army pitched their tents, and we encamped on another table-land, on the northern declivity of Atlas, at the entrance of an immense plantation of olives, about a mile west of a village, called Ait Musie, a most luxuriant and picturesque country. The village of Ait Musie contains many Jews, whose external is truly miserable; but this appearance of poverty is merely political, for they are a trading and rich people, for such a patriarchal country. The olive plantations at this place, and in many other parts of this country, do honour to the agricultural propensity of the emperor Muley Ismael, who planted them. They cover about six square miles of ground; the trees are planted in right lines, at a proper distance; the plantation is interspersed with openings, or squares, to let in the air. These openings are about a square acre in extent.

"In travelling through the various provinces of South and West Barbary, these extensive plantations of olives are frequently met with, and particularly throughout Suse. It appeared that they were all planted by the emperor Muley Ismael, whose indefatigable industry was proverbial. Wherever that warrior (who was always in the field) encamped, he never failed to employ his army in some active and useful operation, to keep them from being devoured by the worm of indolence, as he expressed it. Accordingly wherever he encamped, we meet with these extensive plantations of olive trees, planted by his troops, which are not only a great ornament to the country, but produce abundance of fine oil. The olive plantations at Ras El Wed, near Terodant in Suse, are so extensive, that one may travel from the rising to the setting sun under their shade, without being exposed to the rays of the effulgent African sun.

"We remained encamped at Ait Musie three days, amusing ourselves by hawking with the prince's falconer, and hunting the antelope. Early in the morning of the fourth day, we descended the declivity of the Atlas, and travelling eight hours, we reached the populous town of Fruga, situated in the same extensive plain wherein the city of Morocco stands. From this village to Morocco, a day's journey, the country is one continued corn-field, producing most abundant crops of wheat and barley, the grain of which is of an extraordinary fine quality, and nearly twice the size of the wheat produced at the Cape of Good Hope.

"On our approach to the metropolis, the emperor sent the princes that were at Morocco to welcome the prince Abd El Melk. They were accompanied by 100 cavalry, who saluted our prince with the Moorish compliment of running full gallop and firing their muskets. These princes, who were relations of Abd El Melk, son of Abd Salan, shook hands with him respectively, and then kissed their own. This is the salutation when friends of equal rank meet. We entered the city of Morocco at the *Bab El*

*Mushoir*, which is the gate situated near the palace and place of audience, towards the Atlas mountains. The next day I had an audience of the emperor, who received me in (the *Jenan En neel*) the garden of the Nile, a small garden adjoining the palace, containing all the fruits and plants from the Nile of Egypt. The (*wordes fillety*) Tabet-rose grows in great luxuriance in this garden, resembling that of China; the odour is very grateful and strong, perfuming the air to a considerable distance. This is the rose, from the leaves of which the celebrated (*attar el rose*) i. e. distillation of roses is made, vulgarly called in Europe, *otto* of roses.

"The emperor declared the port of Santa Cruz to be shut; and that no European merchant of any nation should continue there."

In travelling from Morocco to Mogador, "the first day's journey is through the plains of Sheshawa, a fine champagne country abounding in corn; the mountains of Sheshawa, which are higher than any in Great Britain, have strata of oyster and other shells at the top of them.

Mr. J., on examination, found these strata several feet deep, and extending all the way down the mountains.

Leprosy, it appears, is still as prevalent in this part of Africa as it was once in Europe.

"There is (says our author), near to the walls of Morocco, about the north-west point, a village, called (*Deshira el Jeddam*) i. e. the Village of Lepers. I had a curiosity to visit this village; but I was told that any other excursion would be preferable; that the Lepers were totally excluded from the rest of mankind; and that, although none of them would dare to approach us, yet the excursion would be not only unsatisfactory but disgusting. I was, however, determined to go; I mounted my horse, and took two horse guards with me, and my own servant. We rode through the Lepers' town; the inhabitants collected at the doors of their habitations, but did not approach us; they, for the most part, showed no external disfigurement, but were generally sallow; some of the young women were very handsome; they have, however, a paucity of eyebrow, which, it must be allowed, is somewhat incompatible with a beauty; some few had no eyebrows at all, which completely destroyed the effect of their dark animated eyes. They are obliged to wear a large straw hat, with a brim about nine inches wide; this is their *badge of separation*, a token of division between the clean and unclean, which when seen in the country, or on the roads, prevents any one from having personal contact with them. They are allowed to beg, and accordingly are seen by the side of the roads, with their straw hat badge, and a wooden bowl before them, to receive the charity of passengers, exclaiming, (*attanie m'ta Allah*) "bestow on me the property of God," (*kulakie m'ta Allah*) "all belongs to God" reminding the passenger that he is a steward of, and accountable for the appropriation of his property; that he derives his property from the bounty and favour of God.

When any one gives them money, they pronounce a blessing on him; as (*Allah e seed kherik*) "may God increase your good," &c. The province of Haha abounds in lepers; and it is said that the Arganic oil which is much used in food throughout this picturesque province, promotes this loathsome disease!"

In another journey to Mequinas, by way of Rabat, it is stated—

"On the morning of the 15th, we pursued our journey to Mequinas, passing through a very fine country, inhabited by a Kabyl of Berberbers, called Ait Zemurh. We halted, at four o'clock P. M. at a circular Douar of these Berberbers, in a fine champagne country. The next morning, at five o'clock, we struck the tents, and proceeded through a dangerous country, infested by artful robbers, and the occasional depredations of the lion and other wild beasts, whose roaring we heard at a distance. We saw several square buildings, which our guides informed us were built by the Berberbers, for the purpose of destroying the lion. The patient hunter will conceal himself in one of these buildings, which are about five feet by seven, and will wait whole days for an opportunity to get a shot at the lion: these noble beasts are here said to be the largest in all Africa. After travelling this day ten hours, we pitched our tents at another circular encampment of the Zimurite Berberbers. These people drive in stakes and place thorny bushes round their encampment, eight feet high, and fill up the entrance every night with thorns, as the fiercest lions of Africa abound in the adjacent forests, and sometimes attack their habitations, accordingly they keep a large fire all night to deter the lions and other wild beasts from approaching."

At page 198, we find a curious paper on the excavated residences of the inhabitants of Atlas, which we subjoin; only prefacing that *Hel el Killeb* and *Ben el Killeb* are synonymous; the former signifies the *dog like race*, the latter the *sons of dogs*. In the Map of the World by Fran. Mauro. A.D. 1459, inserted in Dr. Vincent's Periplos of the Eritrean Sea, the country of these people is described as lying N. W. of Abyssinia, or the country of Prester Jan; and they are there denominated *Benicheleh*, the province of Dogs; because the natives (as the map asserts,) have the heads of dogs. The orthography *Benicheleh* is however incorrect; the final *h* ought to be a *z*—this is possibly an error of the press.

"The inhabitants of the snowy or upper regions of the Atlas live, during the months of November, December, January, February, and half of March, in caves or excavations in the mountains; the snow then disappears, and they begin to cultivate the earth.

"I have repeatedly heard reports of the (*Hel el Killeb*), dog-faced race; of the (*Hel Shual*), tailed race; and of the race having one eye, and that in the breast. It is extremely difficult to ascertain the origin of these reports, which are so involved in metaphor that the signification is not intelligible to Europeans; their existence is not

† Here the prince sent couriers to the emperor, to announce his approach.

doubted, however, in Africa. Of the *Hel el Kilbeh* some ignorant people affirm that the Almighty transformed one of the tribes of the Jews into these people, and that these are their descendants; others report them to be a mongrel breed, between the human and ape species; their strength is said to be very great. The Africans assert with considerable confidence, which is corroborated, that the *Hel Shnal* have a tail half a cubit long; that they inhabit a district in the desert at an immense distance south-east of Morocco; that the *Hel El Kilbeh* are in a similar direction; that the latter are diminutive, being about two or three cubits in height; that they exclaim *bah, bah, bah*, and that they have a few articulate sounds, which they mutually understand among themselves; that they are extremely swift of foot, and run as fast as horses. The Arimaspi of Herodotus are called by the Arabs *Hel Ferid*, these are represented by the Arabs of the desert as living at the foot of the lofty mountains of the Moon, near Abyssinia: the male and female are equally without hair on their head, having large clins and nostrils, like the ape species; they are said to have a language of their own; their costume is a *jelabea*, and a belt, without shoes or head dress; their country is said to abound in gold. It is "a consummation devoutly to be wished," that our knowledge of Africa should increase so as to enable us to unravel the mystery of these doubtful reports, to ascertain the degree of credit that is due to these mysterious traditions. These desiderata, however, can hardly be expected, whilst the present injudicious plans for the discovery of Africa are persevered in. We must, if we desire to discover effectually the hidden recesses and reported wonders of this continent, adopt plans and schemes very different from any that have hitherto been suggested; we must adopt a *grand system upon an extensive scale*, a system directed and moved by a person competent to so great an undertaking. The head or director of such an expedition should be master of the general travelling and trafficking language of Africa, the modern Arabic: he should moreover be acquainted with the character of the people, their habits, modes of life, religious prejudices, and fanaticism. A grand plan, thus directed, could hardly fail to secure the command of the commerce of Africa to Great Britain. Then the discovery of the inmost recesses would follow the path of commerce, and that continent, which has baffled the researches of the moderns as well as of the ancients, would lay open its treasures to modern Europe, and civilisation would be the natural result. Then would be the period to attempt the conversion of the Negroes to Christianity; and the standard of peace and good will towards men might be successfully planted on the banks of the *Nile El Kabee*, or *Nile Asudan*, the Great Nile, or Nile of Sudan, or Nigriti, commonly called the Niger."

The following is a singular fact:

"Every house in Morocco has, or ought to have, a domestic serpent: I say ought to have, because those that have not one, seek

to have this inmate, by treating it hospitably whenever one appears; they leave out food for it to eat during the night, which gradually domesticates this reptile. These serpents are reported to be extremely sagacious, and very susceptible. The superstition of these people is extraordinary; for rather than offend these serpents, they will suffer their women to be exposed during sleep to their performing the office of an infant. They are considered, in a house, emblematical of good, or prosperity, as their absence is ominous of evil. They are not often visible; but I have seen them passing over the beams of the roof of the apartments. A friend of mine was just retired to bed at Morocco, when he heard a noise in the room, like something crawling over his head, he arose, looked about the room, and discovered one of these reptiles about four feet long, of a dark colour, he pricked it with his sword, and killed it, then returned to bed. In the morning he called to him the master of the house where he was a guest, and telling him he had attacked the serpent, the Jew was chagrined, and expostulated with him, for the injury he had done him: apprehensive that evil would visit him, he intimated to his guest, that he hoped he would leave his house, as he feared the malignity of the serpent; and he was not reconciled until my friend discovered to him that he had actually killed the reptile."

*A Tour through a Part of the Netherlands, France, and Switzerland, in the year 1817.* By Thomas Heger. London, 1820. 8vo. pp. 250.

We anticipated from the preface a rather more entertaining tour than this upon perusal has turned out to be. The writer, indeed, lays no claim to a very elevated station in travelling lore; but, even moderate as his pretensions are, we do not think that he has accomplished anything which ought in sound judgment to have thrust his labours out of the private circle of friends into the public for sufrage. The most favourable view that we can take of the volume is, that the writer has journeyed abroad under the influence of very amiable feelings, and acted in a manner which it could be wished, for the credit of our country, were the fashion with all its tourists; but beyond this, we find little to praise. He went over a very beaten road; saw little that has not been described a thousand times; and, excepting a species of sentimentality belonging to one of the lower forms of the school of Sterne, has varied in no degree from the accustomed style of the note and common-place book. A bit of romance is super-added; and this is all that Mr. Heger produces in support of his right to publish a book. We are afraid we must nousait him in the critic court with costs (except the cost of our time); but will allow him a brief pleading. It is thus humbly that he sets forth his own capabilities.

"There is a kind of talent—I beg the critic's pardon, I mean a sort of—I really don't know how to call it, but a something which

has a knack of putting words together, till a kind of composition is effected, at which those who are not over fastidious contrive to feel somewhat amused. It is here I make my stand, and I think not sufficiently in any body's way to run much chance of being molested. It is on the first step of the ladder to fame; and if by accident I should be jostled off, it won't much matter, as I have not far to fall."

We congratulate him on this fact; but still it is painful to fall even one step, and especially, for a heavy body, which in truth is the case here. At Brussels, the author mentions the following report, which we do not remember having heard before.

"One thing at least I must speak of on account of its extraordinary nature; the Americans, I forget the year, in order to destroy the Dutch shipping in the Texel, conveyed there several casks of a peculiar worm, which they emptied into those waters: the result was, that they ate their way into the hulls of the vessels, which in a short time became completely rotten; a piece of the timber, thus rendered useless, is preserved in spirits at this cabinet, containing still the destructive agents in the holes which they had made. I mention this circumstance because I do not remember that we have any such curiosity at our British Museum."

Another of the most agreeable extracts we can pick out, will sufficiently exemplify the writer's general manner. He and his companions set out for Rouvray.

"As there was a good deal of hill-work for the horses in this day's journey, we were not able to reach that town, and were obliged to put up at a lone house, at ten o'clock at night, about a mile out of the public road. The appearance of the place was rather against it, to those whose taste the use of comforts had spoiled for flock beds, jack-towel sheets, and sanded tile floors; but where there is no choice, the proudest must yield;—we had walked up several of the hills, to save our horses, in the course of the day; and fatigue is not much disposed to quarrel with any place of rest.

"A large kitchen divided my room from that of my companions; and in a recess, at one extremity of it, was a bed, screened by a dirty old red-and-white chequered curtain, full of large holes; though one of which, at each extremity, we were greeted, on entrance, by a grim face, surmounted with a red cap, which once, no doubt, in its earlier servitude, had been able to confine the stubble which it encumbered; but, alas! subdued by its hard duty, it could no longer keep under the refractory bristles, which now stood on end through the breaches of their prison. Conceive to yourself a welcome of this sort, in a lone house, at the entrance of a wood nine miles through; and when you feel the alarm getting master of you, imagine a whispering from various quarters, without being able to see the mouths from whence it issued; then, when you have worked up your fears to an almost overwhelming pitch, just fancy to yourself, on suddenly looking up, an arm extended from a hole in the ceiling, beckoning a tall

figure, with a belt and hatchet, who had just come in at a back door; and when you have got the picture to this height of colouring, keep looking at it with all the chilly sensations which it inspires, till the recollection comes upon you, that, whatever the prospect, there is no eluding it; and I think you will have done enough for yourself in the way of terrors. There was no getting out of this business; so I judged it better to put a good face upon it, and, calling for a bottle of such wine as they had, and an unclet, we refreshed ourselves and retired to rest; but not before we had examined our separate cells, (without indeed appearing to do so,) to see that there was no way of entrance or exit, but by the door at which we were introduced: having settled matters on this point to our satisfaction, we separated.

"I must confess I did not like the appearance of things, but could hardly bring myself to believe in the residence of bandits so near the public road, except in the pages of romance. Caution, however, is always the right side of doubt; so, without taking off more than my coat and boots, I threw myself into bed, and lay divided between sleep and the adventure; but just as the former was getting a-head, and I had nearly forgotten where I was, I heard a strange breathing noise, close to the head of my bed, and began to fear I had not been sufficiently particular in examining my room; for no one could enter by the door, as I had taken care to double lock and bolt it. I listened again, and heard the breathing distinctly; my heart began now to quicken its pace a little, and had got from the quiet gentle walk into a trot; I thought that before it got into a gallop, it would be better to be on my legs, and prepared for the worst; so jumping out of bed, (as much as to say, who's afraid?) I rushed to the door, and unbolting it, disturbed one of the many occupants of the kitchen, which was by this time converted into a general chamber:—"Est-ce que Monsieur manque le p?" was the first exclamation which greeted my ear, in a female voice, since our arrival. "Non," replied I, "*je manque seulement la lemme*."—With the greatest good nature she brought me one, and showed her civility in so doing, at the expense of her modesty, for she had nothing on but her chemise; I wished her good night, and, having again secured my door, renewed my examination of the room.

"Darkness is a powerful ally to terrors; and it not unfrequently happens, that without its assistance, they are scarcely formidable enough to produce more than a start on the nerves which they assail. The breathing which I had heard, I now began to think could have been nothing but the wind, and the rustling of the leaves in the great wood beside us,—so valiant does a lighted candle make us. I was almost resolute enough by this time to be ashamed of myself; and out of bravado, was actually going to extinguish the light, when my hand was arrested by the dreaded sound. I listened attentively, and traced it to the place I at first imagined it issued from. There was now no longer a doubt upon the point; so, pulling my bed away

from the wall behind it, I discovered the real, the genuine night-mare; no sickly offspring of the fancy, mounted by a sleep-oppressing demon, but a good substantial horse, who, with a kindly snort, dismissed all my fears and anxiety: not even a window glass separated me from my welcome companion, and I was glad of it—for there was more to allay my doubts in his physiognomy, than in that of any of his masters,—and, patting his neck through the hole in the wall, I wished him good night, and slept till six the next morning, without farther fear or trembling.

"Had we given ourselves time to think, we should not have found it so difficult to account for the strange appearance of things, on our arrival at this place. The proximity of the wood might have accounted for the hatchet and bolt, and the novelty of visitors in a carriage, for the silent reception and the respectful whispers, as well as for the arm that beckoned, in order, no doubt, to make silent enquiry about the unlooked-for guests. The fact is, the inhabitants of this lone residence were heavers of wood, and in all probability, (whatever their appearances,) full as honest as ourselves."

As Mr. H. observes no system in his lucubrations, we may be the more readily excused for following the same rule of want of rule. We shall therefore only briefly add, that he has made some blunders in his names of painters, speaks of the onths of the Horaces, and commits a few other offences amenable to criticism. But as his performance has not challenged close examination, we shall now dismiss it, with the expression of a hope that the next will be better: if not, we shall abjure the lines in John Gilpin.

And when he next doth ride abroad,  
May we be there to see.

*An Introduction to the Knowledge of the Fungusses, &c. &c.* London, 1820. pp. 20.

When we opened this little publication, we thought we were about to fall upon some satire on men of sudden wealth, and equally sudden importance, brokers, nabobs, speculators, trading politicians, or such like; and were not disagreeably disappointed when we discovered that it was literally a *bona fide* scientific performance, to help the botanical student to a knowledge of mushrooms, champignons, toad-stools, and other fungi. These are divided into fourteen genera, (too few, we imagine,) and brief definitions given of each, are rendered more plain by coloured figures. The descriptions seem accurate: but are, perhaps, somewhat too technical without explanation for the use of learners. All elementary works ought to be, as the phrase is, adapted to the meanest capacities. We are glad however, to see any thing done to rescue this branch of botany from the neglect it experiences, and think this very small tract may afford both gratification and instruction to those who love to study the productions of nature, which are wonderful in the ant as in the elephant in the glow-

worm as in the pincet in the fungus as in the oak.

#### THE GAROS.

In our last Number, we abridged, from the narrative of Francis Hamilton Esq., an account of the kingdom of Assam: the same authority supplies the following particulars respecting another oriental people, formerly more powerful than they now are; namely, *The Garos*.

Previous however to entertaining this subject, the author takes a brief view, chiefly statistical, of the countries adjacent to Assam, consisting of Bhutan and its dependencies Dinkhoth, Lakhwar, Baka dvar, Hlipidwar, &c. north of the Brahmaputra, and of Tripura, Manipur, Jaintiya, Kachhar, Chingpho, Nora, &c. to the south of that river. The people of the district of which Manipur is the capital, are called Maitay, and the country produces elephants, horses, buffaloes, and oxen. Its wonderful abundance, or the excessive disproportion of the precious metals may be imagined, when we say that twelve cows may be bought for a rupee, about twopence half-penny a piece, and as much rice as a man can consume in a year for the same money! The sugar cane grows as thick as a man's leg.

It is to the westward of this that the remains of the Garo nation have retired to the hills for independence; all their territories on the plains having been gradually conquered by the Zemindars (Bengal) and other enemies. Mr. Hamilton's observations apply to the northern parts of the Garo country, the only preceding intelligence respecting which that we have seen, consists of the very short geographical note of Major Rennell, and some remarks on the southern side, by Mr. Elliot, who (as well as Major Rennell) writes the name, Garraw. The dimensions of the Garo dominion are now limited to about 100 miles in length from east to west, and thirty in breadth from north to south. The extreme difficulty of penetrating into this territory is the cause of its preservation: for Mr. Hamilton tells us "It seems a mass of hills from 1000 to 3000 feet of perpendicular height, and very steep; and although watered by numerous small streams contains scarcely any level land, the hills being every where immediately contiguous to each other. Towards the centre, I am credibly informed, that there are immense masses of naked rock, and even large spaces totally destitute of vegetation; but so far as I saw, and as I am told, is the case in by far the greater part of the territory, the hills, however steep, consist of a deep rich soil, and are fit for being cultivated by the hoe. The climate being very moist, such a soil produces a most luxuriant vegetation; and wherever undisturbed by cultivation, the mountains are covered by noble forests, that contain a great variety of trees and plants, highly ornamental, curious, and valuable."

Such Garo chiefs as remain upon the plains, are tributaries to other powers; and

we therefore confine our view to the occupants of the mountains, whom freedom and independence render worthy of contemplation.

"The Garos are a short, stout-limbed, active people, with strongly marked Chinese countenances, as is the case with all the aboriginal tribes of the mountains, from the Brahmaputra to Cape Negrais. In general the features of the Garos are harsh, but the chiefs are rather handsome, and their manners, in both urbanity and veracity, are superior to those of the Zemindars of Bengal. The Garo chiefs in their address are equally exempt from insolence and adulation; two extremes into which the Zemindars are apt to indulge, according as they are confident or afraid; while the veracity of the whole Garo nation is undoubted; and it is avowed by the Bengalese that a Garo was never known to forfeit his word. It is admitted by both people that a Garo woman can carry on the hills as great a load as a man of Bengal can carry on the plain; and that a Garo man can carry one third more; and this is attributed to their using more animal food and spirituous liquor.

"Garo is a Bengalese word, nor do they seem to have any general word to express their nation, each of the tribes into which it is divided having a name peculiar to itself. An individual of the tribe adjoining to Hawaraghat is called Achlik; but the collective name or plural number is Achlikrong. The high hills of Mechpara are occupied by the Abeng. The tribe bordering on Mechpara and Kalmalupara, that occupies the high mountains and retains an entire independence, is the Kochinasiindya. The tribe bordering on Saanaga is called Kœhi, or Conneh, as Mr. Eliot writes. The tribe of the Garo nation that borders on Assam is called Nuniya. Part of the Nuniyas have been converted to the worship of Vishnu, and occupy a large portion of the lower part of Assam; a part however inhabits the mountains, and is independent. The Nuniyas are also called Dugol.

"The language of the Nuniyas is said to be different from that of the other Garos; and although all Garos can intermarry, it is generally admitted that the Nuniyas are of highest rank. Their priests can officiate for all Garos; but no priest of any of the other tribes can officiate for a Nuniya. The Nuniyas and Kochinasiindyas have made some farther progress in society than the others. Some among them are merchants, and trade in slaves, salt, and silver; while others are artists, and work in iron, brass, and the precious metals. The Achliks and Abeng are all cultivators, who practise some rude arts, and who live no other commerce than the exchanging of the produce of their farms for the articles which they want for consumption. The languages of the four western tribes appear to be nearly the same. The Achliks seem to occupy by far the greatest part of the territory, in which the nation is entirely independent.

"The chiefs and the head men of families assemble in a council called Jingma changga, and endeavour to reconcile all those of the

clan who have disputes; for it would not appear that they have a right to inflict any punishment unless a man should be detected in uttering a falsehood before them, in which case he would be put to instant death, more from popular indignation than from a regular progress of justice. Dishonesty or stealing seem rarely to be practised, and almost the only source of dispute seems to be murder, which would appear to be an ordinary crime. But the relations of the persons killed, are, by custom, held bound to demand blood for blood, and ought to put to death either the murderer or one of his kindred, or at least one of his slaves. The other family then is bound to pursue a similar mode of retaliation, and the feud would thus continue endless, unless the council interfered, and brought about a mutual reconciliation, which it is usually able to effectuate, by inducing the parties to accept a price for the blood that has been spilt. Although every head of a family has an equal right to sit in their assemblies, the influence of the chiefs, or of one or two wise men, usually decides every thing.

"When a man of one clan murders a person belonging to a different community, the matter is arranged with more difficulty, and often produces a war, unless the chiefs mutually endeavour to reconcile matters, in which case their influence generally prevails; but they have no authority to declare peace or war, nor even in the field do they pretend to command any free man. If any man complains of an injury, such as one of his family having been murdered by a foreigner, the whole clan is ready to avenge his cause, or to fight until their companion is satisfied. No compulsion can be used; but the man who refused to take the field would be entirely disgraced. In the field every free man (Nokoh) fights as he pleases; but as the slaves (Nokol) form about two fifths of the whole population, as they almost entirely belong to the chiefs, and as they all are led to war, and implicitly obey the orders of their masters, the influence of these last predominates in every resolution; as their men, acting in subordination, form the chief strength of the clan. The slaves are not only distinguished for their obedience, but for their courage, as freedom is a reward often bestowed on such as exhibit valour. Unless, therefore, the injury has been committed by a chief on some person of a chief's family, the dispute is usually terminated after a little skirmishing, and the chiefs induce the injured person to accept a price for the blood of his kinsman.

"The important matters of succession, and union of the sexes, have been arranged in a manner that does not seem convenient.

"A Garo man or woman, that has connexion with a person of a different nation, is not liable to excommunication; and any person who chooses to live among them and follow their manners, may obtain the rights of a free man. A young unmarried woman, who proved with child, would suffer no disgrace; but instances are very rare, as the women are usually married while children. A man cannot turn away his wife on account

of adultery, unless he chooses to give up his whole property and children, and to this he seldom consents, except when he knows that some other woman, who is richer than his wife, will take him for her husband. A woman, whenever she pleases, may turn away her husband, and may, in general, marry any other person, conveying to him the whole property that her former husband possessed, and taking with her all her children; but the rank of the children arises from that of their father. A man is thus placed in a very difficult situation. If his wife chooses a paramour the husband is terrified lest this intruder should be able to persuade the woman to transfer the property of the family. It is true, that, as a remedy, he may kill the lower, which he may do without blame; but he is afraid not only of the revenge of the man's kindred, but of that of his wife, who, if permitted to enjoy her lover, might be unwilling to disturb the family in which she had lived, but who would be very apt to avenge her lover's death by choosing a new husband. In fact, however, it is said that divorces are very rare, and many wives when they are infirm, or have no children, allow their husbands to marry a second wife, or to keep a concubine. When a chief dies, his heir is any one of his sister's sons, that his widow, or if he has left no widow, that his surviving concubine chooses. The fortunate youth, if married, immediately separates from his wife, who takes all his private fortune and children; while he marries the old woman, and receives the dignity, fortune, and insignia of honor becoming his high rank. These insignia consist of a red turban, two bracelets of bell-metal for each arm, and a string of beads for his neck, and are bestowed in a great ceremony, that cannot cost less than a hundred rupees. These acquisitions, however, do not always compensate for the disparity of age in his bride; and a boy who had been lately elevated to the dignity, after taking a draught of wine that opened his heart, complained with great simplicity, that he had married an old toothless creature, while his cousin, although poor, had a pretty young wife, with whom he could play the whole day long. When the old lady dies he will of course take a young wife, who will probably survive him, and select a new chief from among his sister's sons. The wife of a chief may divorce him, but she must choose her next husband from the same noble family, as its members alone are capable of being raised to the dignity.

"A man cannot marry his father's brother's daughter; but he may marry the daughter of his mother's brother. A chief may marry the daughter of any free man (Nokoh); but intermarriages between free men and slaves are not tolerated; nor can a man even keep a slave girl as a concubine.

A great part of the slaves are procured from the Nuniyas, who bring them from Assam. They are chiefly Garos, who had been converted, and who have lost cast by impure feeding, and have been sold as a punishment for their transgression. They of course return to the customs of their ancestors, and often obtain freedom by their va-

lorous conduct in war. Many poor parents, however, are reduced by want to sell their children; a conduct that is considered as reprehensible, but for which there is no punishment. Several chiefs can bring 60 able bodied slaves into the field, which in such small clans gives them a vast authority.

The Garos rear, for eating, kine, goats, swine, dogs, cats, fowls, and ducks; and they purchase from the inhabitants of the low country all these animals, together with tortoises, and fish both fresh and dried. In the hills they also procure many deer, wild hogs, frogs, and snakes, all of which they eat. In fact they have no aversion to any food, except milk and its preparations, all of which they abominate; and they have no objection to eat in any company, nor to eat what has been dressed by people of another nation. Their vegetable diet consists chiefly of rice and millet (*Panicum Italicum*) with many arums, caladiums, and discoreas. For seasoning they have capicum, onions, and garlic; but they do not use turmeric. In their dishes they employ both salt and ashes, and sometimes oil; but they cultivate no plant that produces this. From both the rice and millet they prepare a fermented liquor, which is not distilled, and is used both by men and women to great excess. Poor people usually get drunk once a month, the chiefs once every two or three days. On such occasions they commonly squabble and fight. They liked the taste of brandy, but preferred wine, as not being so strong.

Although the Garos have long raised great quantities of cotton, they formerly neither spun nor wove. They now have begun to practise these arts, and weave the small slips of cloth, which both men and women wrap round their waists, and their turbans. This constitutes their ordinary dress. For cold weather they make a kind of rug from the bark of the *celtis orientalis*. This serves as a blanket, and by day is thrown round the shoulders. The chiefs, or others in easy circumstances, when in full dress, throw round their shoulders a piece of cloth, silk, cotton, or gold. Their favourite ornament consists of rings of bell-metal, which are passed through the lobes of the ears, and are so heavy as to distend these until they reach the shoulders.

"In science they have not even proceeded so far as to write their own language: a few have learned to write the Bengalese.

They believe in the transmigration of the soul, as a state of reward and punishment. Those who are morally wicked are punished by being born as low animals. Those who have not been wicked, and who have made many offerings to the gods, are born in high and wealthy families. Saljung is the supreme god, who lives in heaven (*Rang*) and has a wife named Manim. No offerings are made to this goddess; but to her husband are offered male goats, swine, and fowls. This seems to be the deity whom Mr. Eliot called Mahadera, which merely signifies the great god; but there is no affinity between Saljung and Siva, who, by the Brahmans is usually called Mahadera. Saljung, in fact, is the firmament or visible heavens. The

heavenly bodies, sun, moon, and stars, and spirits who preside over hills, woods, and rivers, are considered as the agents employed by Saljung to manage the affairs of the world. White cocks are offered to the heavenly bodies, and fermented liquor, rice, and flowers, are offered to the spirits of the hills, rivers, and forests. The blood of the animal is first offered, and then, after the flesh has been dressed, a portion is added to the offering, and the votary eats the remainder. There are no temples nor images. Before each house a dry bamboo, with its branches adorning, is fixed in the ground. To this the Garos tie tufts of cotton, threads, and flowers, and before it they make their offerings.

"They have an order of priests who, by the Bengalese, are called *Rojas*, from the resemblance between them and the *Rojas* or *Ojas* of Bengal. In their own language, these priests are called *Kamal*. They marry, cultivate the ground, and go to war like their neighbours, and the office is not hereditary; any man who has committed to memory the requisite forms of prayer, may assume that office. These forms of prayer are publicly repeated at marriages, funerals, and in cases of sickness, or when the clan is about to engage in war. The *Kamals* also pretend to explain the fates by an examination of the entrails of sacrifices. The liver, in particular, is an object of their attention. The presence of the priest is not necessary on the occasion of common offerings, that are made to the gods.

"The funeral of the *Accchiks* are inconvenient and expensive. When a person dies, the relations are summoned to attend, and ten or twelve days are allowed for their convenience. As they assemble, they are feasted, until the number is complete. In the mean time the body falls into a dreadful state of corruption; but no attention is paid to that circumstance. The head of a stake is then formed into an image, supposed to resemble the deceased, and the point of the stake is driven into the ground. The body is then burnt, the bones are collected into an earthen pot, and the relations retire. After some months, when the family has recovered from the former expense, and has laid in a stock of food and liquor for a new entertainment, the relations are again assembled, and feasted for three days. The bones are then thrown into a river."

#### MILAN. \*

[By a German Traveller.]

The city of Milan is eight Italian miles in circumference, and contains one hundred and thirty thousand inhabitants. The streets are narrow and angular, with the exception of a few; for instance, those which lead to the *Porta Orientale* and the *Porta di Roma*, which on account of their great breadth and length, serve as promenades to the inhabitants, and are called *Corai*. The streets of Milan, notwithstanding their narrowness, are

• Milan has got a sort of *supra-English* attraction at present, through its famous Commission. We take this time to lay a very clever account of it before the public.—Ed.

kept quite clean, partly by the canals which run through the city, and partly by the poor children, who collect and sell the street-sweepings, and every thing that can serve the purpose of manure. The streets are paved with marble, and small granite stones of various colours (*migliarino*), which are found in the bed of the neighbouring river, and even two or three feet below ground in the vicinity of the city. The houses, which are for the most part white, are three or four stories high, and are furnished with green window shades and balconies. They have in general a very unpleasant effect, owing to a total want of uniformity in the situation of the windows, balconies, and doors. The lower stories of the houses are, for the most part, occupied by shops of various kinds, so that the city has altogether the appearance of a vast market.

The utmost bustle prevails in the streets of Milan, particularly in those in the vicinity of the Cathedral, and in the royal palace, where the most elegant goldsmiths' and jewellers' shops are situated. In the latter, the goods are very tastefully arranged, though in general the shops of Milan are far inferior in magnificence to those of Paris and London.

The Milanese are passionately fond of walking and riding. On Sundays, the promenade at the end of the *Corai*, near the *Villa Bonaparte*, is crowded to excess. Rows of lofty chestnut-trees form a thick roof over the heads of the promenaders, and shade them from the sun. In the evening, the fashionables of Milan drive out in carriages, chaises, or whisks, which extend in an uninterrupted line to the *Porta Orientale* or the *Porta di Roma*. The common people resort to little public houses where wine is sold, and ladies of rank, after driving once or twice up and down the *Corai*, return to the city to regale themselves with ices.

The inhabitants of Milan are very fond of repairing to the coffee-houses, which are continually crowded with visitors, except during a few hours in the morning and afternoon; and in the evening they are frequented by women as well as men. They are, for the most part, elegantly furnished and brilliantly illuminated.

The licentious manners of the women of this city have frequently been condemned. Certainly, it cannot be said, that the morals of the people in general have been improved by their intercourse with the French. The custom of educating young females in cloisters is now exploded; and, they are taught nothing but music, singing, and French.

The girls are for the most part pretty; they have good figures and bright animated eyes; but I observed some frightful countenances among the old women, particularly among those of the common class. Their natural ugliness is, if possible, increased by the custom of wearing their heads uncovered with their hair hanging down in disorder. Some of these old gorgons wear powder in their bristly hair, which has a truly hideous effect.

The principal edifice in Milan is the celebrated Cathedral, which stands in the very

centre of the city. It was begun in the year 1385, by order of *John Galeas Visconti*, the first Duke of Milan. Some suppose the architect to have been a German, named *John Camodius*, while others attribute the plan of this magnificent structure to *Marco de Campione*. To the building of this Cathedral, the Duke assigned an abundant quarry of marble, situated at *Candoglia*, near the valley of *Dono d'Ossola*. The stone was conveyed along the *Lago Maggiore*, to the Tessino, and from thence to Milan by the *Naviglio* canal. The Gothic style of architecture was chosen, and for the space of two centuries, the works were carried on according to the original plan. Under *Charles Borromeo*, the front was completed and ornamented; and it was agreed, that in finishing the edifice, the Gothic and Grecian styles should be united. *Pellegrini's* plan was adopted, and a cousin of *Charles Borromeo*, who was a great friend and patron of art, carried it into execution. At a later period, the architect *Sessa* made some alterations on the building.

The exterior of the Cathedral has a most imposing effect; it is entirely faced with white marble, and appears like a huge mountain of stone with numberless towers, loaded with carved work, and adorned with thousands of statues of various sizes. Its immense magnitude bewilders the imagination, and the whole structure pleases from its sublimity rather than from its beauty. It has a most singular, and it may be said, magical effect, by moon-light, when the numberless statues by which it is surmounted, seem to be floating in the blue ocean of the clouds.

The church is built in the form of a Roman Cross, and a flight of steps leads to the entrances, which are five in number. The doors are all of common wood, except the principal one, which is painted grey. The pillars before this door are seven feet in diameter. The interior of the church has a very grand effect, owing to its vast size. The largest portion,—namely, that which extends from the front to the arm of the cross, is divided into five naves, each of which has a separate door. The gothic arches and arcades are supported by fifty-two marble columns, each forty-eight feet high; and the naves are lighted by five cupolas, the principal one being supported by four massy pillars, twenty-seven feet in circumference. The church measures 455 feet in length, from the front to the polygon behind the choir; the five naves are 166 feet in breadth; and the breadth of the whole edifice is 267 feet, including the chapel of *Madonna dell'Albero* on the north, and that of *St. Jean Bono* on the south, which form two towers at the extremities of the arm of the cross.† The walls are nearly 7 feet in thickness. The floor is paved with white marble; and in the year 1786, some astronomers

drew a meridian line across it, the extremity of which is carried up the wall; for the winter-solstice, on the wall, where the image of a goat is figured, the sun's rays enter through an aperture in the dome. The windows of the middle nave are of plain glass, but those of the side naves are painted. The church contains pictures by *Perracini*, *Zuccaro*, *Barocci*, *Flammenghino*, *Cerano*, *Figino*, &c. The statue of *St. Bartholomew*, by *Agrati*, stands behind the choir, completely in shade. As an anatomical study, it may be interesting and useful, though it certainly has but few claims to beauty. On the pedestal are inscribed the words. *Non me Praestitela sed Marcus finxit Agrati*. The people of Milan set a high value on this piece of sculpture, and relate many anecdotes respecting it. They declare that its weight in silver has been offered for it. It formerly stood in a niche on the outside of the church, but it was deposited in the interior, in consequence of a report that the inhabitants of Bergamo, whose tutelary saint the statue represented, had laid a plan for carrying it off. The church contains other statues of saints, but they present nothing remarkable.

The baptistery stands on the left-hand side of the grand entrance; it is a beautiful urn of porphyry, which was found in the *Thermae*. Above is a canopy, executed after the design of *Pellegrini*, and supported by pillars of a kind of marble, called *Moscina Vecchia*, which is found at *Arzo*, near the Lake of Lugano.

The choir is of considerable extent; in the inside it is adorned with elegant bas-reliefs of carved wood, and on the outside with white marble. At each of the two entrances there is a pulpit supported by bronze-figures of fathers of the church, as *Cariates*.

On the left side of the church, near the grand altar, is a staircase, consisting of four hundred and sixty-eight steps, leading to a balcony which runs completely round the building. Those who take the trouble to ascend this interminable staircase are amply repaid, by being as it were transported into a region of sculpture; and the magical effect of the innumerable statues is increased by the dazzling whiteness of the whole structure, and the gilt image of the *Madonna* which surmounts the lofty spire. In clear weather this balcony commands a most extensive prospect; the chain of the Alps which unites with the *Apennines*, is distinctly visible, together with the luxuriant plains of *Lombardy*, justly styled the Garden of Italy,—the towns of *Pavia*, *Bergamo*, *Brescia*, &c.

In the vicinity of the cathedral, there is a church called *Santa Maria dei Morti*, the singularity of which attracts the attention of foreigners. The walls are entirely lined with human skulls and bones piled up in various forms; the altar is ornamented in a similar way, and the church contains several crucifixes formed of piles of human skulls.

The church of *St. Ambrose* is the oldest in Milan. It was originally built in the fourth century, by *St. Ambrose*, that celebrated founder of the Catholic liturgy. The present church, which stands on the site of the old

one, is built in the Gothic style, and consists of three naves; the floor is paved with variegated marble. In the choir are some pretty specimens of mosaic in coloured glass, executed in the tenth century by some Greek artists, who were at that time in Italy.

The Ambrosian library, which was founded in the seventeenth century by *Charles Frederick Borromeo*, is not so rich in printed volumes as in manuscripts; of the latter, the most important are the Jewish antiquities of *Josephus* on papyrus, probably written in the seventh century; a copy of *Virgil* of the thirteenth century, which belonged to *Petrarch*, and the manuscripts of *Leonardo da Vinci*. The library is open four hours every day.

In an apartment, which was once the refectory of a cloister of Dominican monks, near the church of *Maria della Grazie*, may be seen *Leonardo da Vinci's* celebrated picture of the Lord's Supper. The cloister is now transformed into barracks; but the refectory is kept closed, and a small sum is paid to the porter for admittance. The picture, though on the wall, is painted in oil, and not on the bare line (*ad fresco*). *Francis I.* of France, who saw it in all its beauty, wished to have it removed from the walls and conveyed to Paris; but the process was not then sufficiently known, and it was deemed hazardous to meddle with it. Since that period, this master-piece of art has been exposed to the most shameful injuries. It was painted in the year 1497, and in 1566, *Vasari* found it in a wretched state, as did also *Armenini*, who in the year 1587, wrote an account of the picture. It is not improbable, that the circumstance of its being painted with oil, has accelerated its decay, as the oil has not united with the damp of the wall; others suppose that the covering which *Leonardo* laid on the wall has proved the cause of the mischief. So little were the ignorant monks aware of the value of this admirable performance, that they cut through the figures of the Saviour, and several of the Apostles, in order to make a door to communicate with an adjoining apartment. On another occasion it was partly washed off, and again restored by *Michael-Angelo Del-luti*. It however received the greatest damage in the year 1796, from the troops who converted the refectory into a stable.

(To be concluded in our next.)

## ORIGINAL CORRESPONDENCE.

To the Editor of the Literary Gazette.

Sir,—The conjecture in *Galiffe's Italy*, of the origin of the Roman language, mixes with some fancy so much fact, that it is to be hoped the attention of our antiquaries will be turned with new interest to the older monuments of Rome, or rather of the ruined cities in its territory, which by their early overthrow have preserved their monuments from being pounded into mortar or buried in caverns by the spirit of building. The greater part of those monuments are in characters which have baffled the whole host of excavators and etymologists, and which for want of a better

† The largest churches in Europe may be ranged in the following order, taking their length as the point of comparison for their size:—*St. Peter's* at Rome, *St. Paul's* in London, and the Cathedral at Milan. The last, however, exceeds *St. Paul's* in height.

solution they have generally decided to be Pelagic. Their meaning is altogether beyond conjecture. Of those a memorable specimen is found in the brass tables dug up in 1444, near Cortona. The antiquaries have decided a portion of the characters to be Etruscan, and a portion to be Pelagic—a character, by the bye, on which no two authorities are agreed. But there are traces of a resemblance to the Latin, i.e. the Russian, in the few phrases which this toilsome ingenuity has been enabled to delve out; and we may yet be indebted to some hyperborean for the elucidation. It appears that there were characters and dialects in use among the first Roman settlers, of which their posterity, even so early as the time of Cicero, could make nothing. The *Carmen Sabinæ*, for instance. The *Engubine Tables* are still a dead letter. Let some of the old Scythian be tried upon them. The present Russian has not been a written language, or rather had not assumed its present characters till within about these 200 years. But the dialects are various; there has been always a kind of barbaric bardic literature in the country. Scythian philosophers occasionally made the grand tour; and the borderers on the Euxine may have been the most likely immediate progenitors of the polished language of the Eternal City.

I have the honour to be, Sir, yours,  
A CONJECTURER.

## INSANITY.

[Resumed from L. G. No. 181.]

On this interesting investigation, Dr. Veitch continues to observe,—a mode of thinking on the subject of the moral treatment of maniacs, has recently occurred to me; and which I believe to be new in its application, and likely to be useful to that unfortunate, and much neglected class of our fellow-creatures; I am therefore induced, well knowing the interest which the Board takes in the comfort and recovery of the patients under my care, to submit these opinions to their consideration. The plan, if approved, can be easily extended to our naval maniacs; among many of whom there exists a turn for drawing, reading, ship building, writing and design, and in which they should assuredly be indulged, where nothing exists to forbid such employment, as such objects of attention would call forth and engage their mental faculties, in a way likely to contribute to their recovery, and to their amusement. I am decidedly inclined to believe that madhouses, constituted as they in many instances, have been, and even now are, have often confirmed a disease that was, in its early stages, easily curable.\*

From such receptacles, generally speaking, not being endowed with the means of agreeably engaging the attention of the maniacs, by either new or favourable pursuits, or of rousing their bodily powers by exercise; the imagination, which may be regarded

as the fountain of insanity, gains an ascendancy on the deranged points; and, by this despotism, the other powers of the mind are absorbed, or embodied under a homogeneous form and tendency, as a sponge does water, if I might be allowed such an illustration, in treating such a subject; so that—all the powers engaged in mental operation are thus brought to aid the original delusion, and hence an obstinate and confirmed disease. Manics, to my judgment, should be regarded as adult children, among a few of whom, comparatively speaking, there will exist a tendency to violence and mischief (often, however, increased by just resentment, flowing from brutal treatment), but this point in the character of a few of these unfortunate men, has been, by general opinion, unjustly extended to the whole class. This sentiment has ever been kept in view, and has been most erroneously and most injuriously associated with the treatment of almost all forms of insanity;—hence their rigid confinement, and abstraction from society; their irons, and prison-like cells, (which are generally unnecessary) with many other revolting circumstances, almost always obstructing their cure, and which have not, until lately, been duly attended to. The physician who aims at a faithful discharge of his duty, ought to analyse every recent case of insanity with the same care that he investigates the nature and causes of bodily disease. Four-fifths of the recent cases placed under my care have already been cured, besides several which were deemed incurable.

With the above impression acted on by my mind, and well knowing the tractable character of a great proportion of the insane, would not a person in the capacity of an instructor, or school-master, be useful at mad-houses? Thus, those whose minds were in any degree accomplished, or informed on subjects of art, might be employed with such arts and accomplishments, or in reading such books, or directed to such pursuits, as would contribute to their employment and to their recovery. Those who were capable, might be led to read aloud to others who were less informed, and thus assist in the restoration of such maniacs, as well as advance their own cure; indeed they might, in some instances, be rendered the actual teachers and instructors of each other; an extension of my ideas on this head, which I owe to a gentleman whose name I at this moment decline mentioning in the manner I could wish, as it might prove disagreeable.

I consider the suggestion most excellent and highly practicable, and therefore likely to perform an important part in this interesting and pleasing pursuit.† Such measures, by subjecting this disease to more general and mixed observation, will tend to remove prejudice; a more extended sympathy will be brought in aid of our sorely distressed fellow creatures, and the hideous impressions invariably flowing from the word mad,

† The effects of intercourse with friends and others, on the mind of the maniac, should be watched; and, when found useful, it should be continued, but when injurious interdicted.

will be corrected, and take a juster position in our minds; and thus the miseries of this unfortunate class will be more generally relieved, and the sound in mind rendered more sensible of the blessings they enjoy, by contemplating these exertions in favour of mental distress.

Premiums (in the form of dress, or of instruments tending to aid their resources in the way of recovery) for good conduct or for excellence of any kind, might be distributed amongst them; and, if their labours were of such a nature as to be sold, the product should be applied to their individual encouragement, comfort, and restoration. They might be assembled a certain number of hours daily, under their instructors; but the nature and duration of their pursuits to be regulated by their medical attendant: and here the analysis of the morbid mind might probably be studied with advantage to that science, in which we have as yet made little progress. Intellectual combination and structure, like that of the body, can probably only be ascertained through the same channels, those of patient observation and dissection of what is morbid and what is healthy; and as these states of corporeal texture reflect light on each other, so in mental operation may the varied conditions of mind contribute to the same end. The reproductions arising from corporeal diseases, *neurosis* for example, throw light on the growth and functions of health; and the returning intellect, keenly watched, may open useful reflections on the varied connections and powers of the mind. It would be singularly pleasing, if that disease, which has heretofore derived so little advantage from intellectual operation and from medicine, should be the means of extending the boundaries of both these sciences. In all cases of incipient mental disease, the action of stimuli is hurtful, and this analogy very generally extends to all incipient corporeal diseases. These opinions are offered with much deference; and I can affirm, that they spring from an ardent and anxious desire to be useful to a class of men, certainly labouring under the greatest affliction that can befall human nature. D.

To these excellent hints we shall at present add only a very few remarks. It is because we have seen the beneficial effects of mild treatment in private practice, that we feel anxious to impress, in importance as well as humanity, on the more extended scale of public institutions and numerous establishments.

The following are the conclusions which

‡ The want of consciousness is commonly supposed to be a constant feature of insanity, which is a most egregious mistake: there is a defect of attention, and consequently of memory, pretty generally accompanying this malady, which has led to the belief of the absence of consciousness. In the application of mental remedies, the faculties of attention and memory should be diligently cultivated; and so acted on as to obliterate old and existing hurtful impressions, by substituting those that are sound, new, and agreeable.

\* I here allude to those establishments that are without medical aid directed to the relief of the mental disease, and consequently are mere receptacles.

we draw from the facts now under our consideration.

In the treatment of insanity, the difference of results between recent and old cases, and the superior success arising from the employment of early and active means, is truly most astonishing. This is forcibly illustrated by the statement which was placed before the Committee of the House of Commons, to inquire into the state mad-houses, by Dr. Veitch.

These successful and most interesting consequences seem to us to be ascribable to the diligence and humanity of that gentleman; for certainly the sphere of action in which he was directed to move professionally, was surrounded with many difficulties, because defective in the means of giving exercise and employment to the unfortunate maniacs who were the objects of his care. That medical man who possesses this resource, and can wield it combined with just views of the nature of this afflicting malady, will always be a successful practitioner. Between the 1st July, 1815, and 4th February, 1817, seventeen recent cases of insanity appear (from the returns) to have become the objects of Dr. Veitch's care, eleven of whom were discharged, cured, and relieved; two died; and four remained at that time, who were deemed curable. One of the two patients who died, was in an advanced state of incurable bodily disease when he became the patient of Dr. Veitch, and the other suffered from an organic affection of the brain, suddenly terminating his existence. Out of 140 cases of long standing, nine were discharged, cured, and relieved. Some of these nine cases had been of six, seven, and eight years standing; and such results are calculated from their duration to shew, that, while there is life, the maniac should not be abandoned by the powers of medicine.

The advantages of continued attention are invariably extended to all bodily diseases, however protracted in their character; and mental disease certainly has stronger claims on our protection and compassion; and the relatives of the deranged who, possessing the means, withhold such efforts for their relief, incur an awful responsibility. We here again repeat, that there can be no method better calculated to render disease, whether bodily or mental, incurable, than to consider it so; and this fate has generally awaited the maniac; and hence the overburdened state of our mad houses. These cures are, upon the whole, most satisfactory, and they assuredly merit the attention of the philanthropist, and of all who are interested in the relief of their afflicted fellow creatures. We know Dr. Veitch to disclaim all pretensions to secret methods of treating this malady. His success flows from humanity, combined with experience, which are both of the utmost importance in the management of this disease. It is a principle with this gentleman, that, where pain exists, it should be instantly relieved; and where exacerbations take place, whether in mental or bodily disease, they should be, with as little delay as possible, met by proper aid, and such

a system of visitation has the effect of checking undue coercion, from which the greatest evils have arisen in the cure of mental derangement.

## ARTS AND SCIENCES.

### PESTILENTIAL DISEASES.

#### To the Editor of the Literary Gazette.

The wide circulation of your highly valued journal, which unites in so eminent a degree the useful with the agreeable, that it well merits to bear for its motto the celebrated and often quoted line of the Roman poet, induces me to hope that the information contained in the following extract may be welcome to many of your readers, though it is of course no novelty to adepts in the science of chemistry.

On the disinfecting action of Chlorine, from the *Guide to the Study of Chemistry*, by Dr. Gaspard Brugnatelli of Pavia.\*

Notwithstanding the persevering researches of chemists, no means have hitherto been discovered of collecting and subjecting to examination the contagious miasm which are exhaled in certain diseases. That they have nevertheless a real existence, is proved by the peculiar odour, which is one of their properties: the means formerly used to destroy them were limited to palliating this odour, by the mixture of odoriferous substances, more or less powerful and innocuous; but the germs of contagion were not destroyed. The chemists of our days, by the powerful aid of chlorine, have succeeded in decomposing or wholly neutralising these terrible enemies of the public health. Whatever the infected place may be, the neutralizing action of chlorine is certain; it causes the offensive odour to disappear, and that of the chlorine itself becomes hardly sensible (unless it has been employed to excess), which manifests the reciprocal action of the miasm and the gas. Fumigations with nitric acid, and of hydro-chloric acid (muriatic), may be employed for the same purpose: they are less active than those of chlorine, but they may be used with advantage in many cases.

We will here describe the mode of proceeding, for the use of families in which one or more individuals are attacked by one of those maladies from which contagion may be apprehended, and where the (rather complicated) means of producing chlorine are not at hand. It is sufficient to procure some nitre or sea salt, pulverized; to put half an ounce into a teacup, and to pour upon it sulphuric acid (oil of vitriol). You must stir the mixture, which is of the consistence of paste, with the end of a glass tube: a white smoke is seen to arise from it, the smell of which, though strong, is not disagreeable, and which forms in the chamber, as it were, a slight mist. The operation must be repeated from time to time, and the mixture frequently stirred.

\* Guida allo Studio, &c. Vol. I. We are not informed of the publication of more than this first volume of a work which promises to be highly interesting to the chemical student.

The author, at the conclusion of his article on chlorine, points out one very precious use of this substance; that is, as a specific against hydrophobia. "We have," says he, "very flattering hopes on this subject; for there must be a very strange combination of chance, if the numerous cases of success in the application of this remedy in the hospitals of Pavia and Milan were to prove nothing in its favour. Yet it is so difficult to stop all the sources of error or of illusion, in researches of this kind, that we ought to remain in a state of philosophic doubt, while we invite those who are versed in the art, to multiply experiments for the final discovery of the truth."

### EXPERIMENTS ON THE VENOM OF THE VIPER.

Communicated to Professor Pictet, by Professor Confligiacchi, and read to the Helvetic Society of Natural Philosophy. (From the *Bibliothèque Universelle*.)

I have employed myself for several years in searching after the venomous reptiles of the province of Como, and of a part of the Canton of the Tessin (Ticino). I have found only two species of viper, and one variety. One is the *Coluber Berus*, or the common viper; the other is the *Viper of Bedi*. The variety of the common viper is the *Coluber aspis* of Linnaeus, which is pretty common in France, and is called *Aspis* by Daubenton.

Having opened a hundred of these venomous animals, I have found the number of males to be to that of females in the proportion of one to three. They are alike in all other respects. I have found no difference in the power of their venom; on the other hand, the season, and the nature of the places which they inhabit, contribute to the greater or less degree of promptitude with which it acts.

I collect this venom by pressing with little iron forceps the bladders, situated behind the canine teeth, and squeezing it into a watch glass; then with a needle, channelled towards the point, I inoculated in the thigh (always with an equal quantity of venom,) the animals intended for the experiments: I tried it on pigeons and sparrows.

I convinced myself in the most positive manner that this poison has no effect on the animal economy, unless it is introduced into the blood vessels; for I made these birds swallow pills moistened with this venomous juice, instead of inoculating them with it.

When I made use of the venom extracted from several vipers, and mixed, a small number of the sparrows inoculated died in five minutes; and the mean time was eleven minutes. But when I used the venom of a single animal, the differences were very great: some even recovered when the venom was not strong enough. Our celebrated Masigli has written sufficiently on experiments of this nature; but those in which I chiefly engaged, (having many warm-blooded animals, sparrows for instance, which died before my eyes, after a small number of palpitations,) were to subject them to the electric current of a voltaic apparatus. An inquiry in an-

tural philosophy often opens the way to others; and though in our observations and experiments we propose a determinate object, we do not know whether they may lead us.

With a pile of 80 pair, copper and zinc, excited by a solution of sulphate of alumine, of the tension of one degree of our electrometer à pilettes, I subjected the dead birds which I had poisoned, while still warm, to the electric current, comparatively with others, which I had killed either by suffocating them, or cutting off their heads, or breaking the vertebral column near the neck. I made one pole communicate with the spinal marrow, and the other with one of the muscles of the thigh. The result was, that the irritability of the muscles was considerably diminished in those animals which had been killed by the venom of the viper: its duration was only about a quarter of that of the animals killed in another manner, and was not even the sixth part of those which had been decapitated.

The muscular contractibility was besides so weak in the animals poisoned by the venom of the viper, that a quadruple number of plates did not produce an effect equal to that obtained by the fourth part on those which had been decapitated. It is useless to observe, that in these experiments, the electricity of the pile of 80 pair was sometimes excessive; I reduced it to 40, to 10, according to the effect which I desired to produce: I afterwards subjected the poisoned animals to this same electrical apparatus, before they expired, and that as soon as possible, in order to observe the effect of the action of electricity, at the moment when that of the venom tended to the destruction of life; I was not able to make more than three of these trials; but the result, as I shewed to my master and colleague, Volta, was, that life was sensibly extinguished, more especially in the animals poisoned and exposed to the action of the electric fluid, than in the others: the mean difference was six minutes. Perhaps these researches may throw some light on the deleterious action of the venom of the vipers, and of some other substances, by repeating the same experiments on other animals: they may also guide us respecting the effects of electricity on the animal organization, which would be useful at a moment when opinions are still so much divided upon its use in diseases, and when physiologic-medical researches are making in England, in the same point of view.

Pilghen conceived some years ago the same idea, to class the action of various substances employed in medicine; and I have made use of it to try these experiments, which I intend to repeat in another manner.

I shall only add, that, having poisoned several birds with *Prussic*, or *hydrocyanic acid*, more or less diluted, that is to say with laurel water, (*eau de laurier écriée*) more or less concentrated, I obtained the same results, only with the difference, that the time is always shorter, as well in the duration of the agony, as in that of the irritability of the muscles after death.

## FINE ARTS.

*Competition for the Prizes to be adjudged by the French Academy of Painting.*

The subject this year selected for competition is from the Iliad; namely, Achilles distributing the prizes after the solemn games which took place at the funeral of Patroclus. Achilles presents Nestor with a magnificent gold cup, as a testimony of his veneration for the valour and wisdom of the old warrior.

The pictures exhibited are ten in number: the seven which are hung first in order are only remarkable for exhibiting every sign of a tendency to retrograde towards the bad taste of the old school. Certainly they are not all equally indifferent, but they are feeble in composition, style, drawing and colouring.

The remaining three are also indifferently spoken of, though somewhat better.—(*F. Journal.*)

## ORIGINAL POETRY.

[By Correspondents.]

SONG.

My love is like a young rose, blushing  
At the wild embrace of the summer-breeze;  
Fresh as the fountain-waters gushing  
With constant song  
As they sparkle among  
The spreading shade of the deep-green trees.  
Oh! she is fair as a bright cloud, sailing  
Alone in the beauty of the sky,  
When the glory of the sun is falling  
And dying away  
From the splendor of day,  
And ere's light sighs come whispering by.  
And I will love her long and purely,  
Mighty and vast as love should be,  
And she shall reign in my soul securely,  
And not one hour  
Shall lessen the power  
Of the love that shall lengthen eternally.

R. T. LAMBE.

*Nota Bene.*—This will be seen among crotchets and quavers  
As soon as the song can be got from the grave.

## REMEMBER ME.

Remember me, remember me,  
When I am far away from thee,  
When many a sad and weary day,  
When long, long years have passed away.

That careless eye, that wild bewail,  
But tell my heart a bitter tale;  
Oh think how ill that heart can bear,  
The grief it sees depicted there.

Hark! 'twas the signal gun—nay, nay—  
Farewell, farewell, I must away;  
One kiss—and—now farewell to thee—  
Remember me, remember me!

R. T. LAMBE.

## THE RECLUSE.

*A Fragment.*

Pleasure and joy are terms I only know  
From those who tell me they have felt their glow.  
The abbey's bounds, its solitary gloom,  
At once my habitation and my tomb,

Where day succeeding day, and each the same,  
In point of change no preference can claim  
On the blank void. I feel no early trace,  
From childhood's years, to fill the vacant space.  
Yet something, like the memory of a dream,  
Across my floating fancy shook its gleam.  
A vision like the sun's departing ray,  
Struggling to flush upon the close of day;  
Or, when its beams in pictur'd fragments fall,  
Through the stain'd window, on the cloister's wall.

Even in my prayers some wanderings I find  
Break on the trackless desert of my mind;  
And in confession's holiest hour I pour  
My lapse and failings from this hidden store;  
And still condemned to meet the father's brow  
Severe, he bid me think upon my vow.

Yet I have marked upon his pallid cheek,  
The big tear drop, a sigh so sadly meek  
Escape his bosom, when I press'd he'd tell  
The morning of my life he knew so well.

But all is passed away—for he is gone;  
And I, upon this spot of earth, alone  
Stand unconnected with all human ties,  
And wait my long reversion in the skies.

D.

## THE CLOSING SCENE;

*A Sketch from real Life.*

Tho' the shade  
Of death hung darkening over him, there played  
A gleam of rapture on his eye and cheek  
That brightened even death—like the last streak  
Of intense glory on the horizon's brim,  
When night o'er all the rest hangs chill and dim.

MOORE.

Who can bring healing to thy heart's despair?  
Thy whole rich sum of happiness lies there.

CROLY.

Pale is his cheek with deep and passionate  
thought,  
Save when a fevered hectic crosses it,  
Flooding its lines with crimson.—From beneath  
The long dark fringes of his drooping lid  
Stream forth the fitful glances of his eye,  
Like star-beams from the bosom of the night.  
Above his high and ample forehead float  
The gloomy folds of his wild waving hair,  
Even as the clouds that crown a lofty hill  
With a more stern sublimity. Upon  
That broad and prominent front the fiery seal  
Of Febris seems to burn; and on his lid  
The swelling brow weighs heavily, as though  
Bursting with thoughts for utterance too intense.  
His lip is curled with something too of pride,  
Which ill befits the meekness and repose  
That should, at such an hour, within his heart,  
Spite of this world's vexations, be enshrined.  
'Tis not disdain; for only those he loves  
Are round him now, wild mild, low whispered  
words,  
Tender heart-offered kindnesses,—and  
watching  
With fond inquietude the couch whereon  
His slender form reclines. What can it be?  
Perchance some rooted memory of the past.  
Some dream of injured pride that fain would  
wreak

Its force on dumb expression; some fierce  
wrong

Which his young soul hath suffered unappeased.  
But thoughts like these must be dispelled, be-  
fore

That soul can plume its wings to part in peace.

And now his gaze is lifted to the face  
Of one who bends above him with an air

Of sweet solicitude, and propa his head  
 Even with her own white arm; until at length  
 The sliding pillow is replaced;—but ere  
 His cheek may press on its own down,  
 Her delicate hand hath smoothed it.—(What a  
 theme)

For those who love to weave the pictured spell,  
 And fix the shadows that would else depart,  
 From all but memory, on the tablets fair  
 Of the divine Euterpe: Her blue eyes  
 With tenderness grow darker as they dwell  
 Upon the wreck before her;—and a tear,  
 Collecting 'neath their fringes, large and bright,  
 Falls on the snow of her high heaving breast.

Too well divineth he the voiceless grief  
 Which breathes in each unbidden sigh, and  
 beams

From forth her humid eyes; too well he knows  
 That love and keen anxiety for him,  
 Have paved the ruby of her lip, and chased  
 'Till rose's dye from her so beautiful cheek.  
 His quivering lips unclose, as if to pour  
 The fond acknowledgments of grateful love  
 On that sweet mourner's ear;—but his parched  
 tongue,

Denies its office. Gathering then each ray,  
 Each vivid ray of feeling from his heart  
 Into a single focus,—in his eye  
 His inmost soul is glauced, \* and love, deep love,  
 And grateful admiration, beam confessed,  
 In one wild passionate glance!

The gentle girl  
 Basks her while in that full blaze,—then stoops,  
 And hiding her pale visage in his bosom,  
 Murmurs sounds inarticulate, but sweet  
 As the low wail of summer's evening breath  
 Amid the wind-harp strings. Then bursts that  
 tide

Of woe, which may no longer be repressed;  
 Stirred from its source by chill hope-withering  
 fears,

And from her charged lids, big drops descend  
 In quick succession. With more tremulous  
 hand

Clasps she that sufferer's neck.

Upon his brow  
 The damps of death are settling, and his eyes  
 Grow fixed and meaningless. She marks the  
 change

With desperate earnestness; and staying even  
 Her breath, that nothing may disturb the hush,  
 Lays her wan cheek still closer to his heart,  
 And listens as its varying pulses move,  
 Haply, to catch a sound betokening life.

It beats; again, another—and another—  
 And now hath ceased—for ever! What a  
 shriek—

A shrill and soul appalling shriek peals forth,  
 When the full truth hath rushed upon her  
 brain.

Who may describe the rigidity of frame,  
 The stony look of anguish and despair,  
 With which she hangs o'er that unmoving clay?  
 Not I; my pencil hath no farther power,  
 So we'll let fall the Grecian painter's veil.

A. A. W.

\* You clift that glazes  
 Its rugged forehead in the neighbouring lake.

MARRINGER.

And so Lord Byron, on various occasions.

#### ON A PORTRAIT.

Yes—it is thine—that portrait—how true,  
 How perfect the resemblance! The dark eye  
 Of intellectual beam—the brow of thought  
 And energy mingled. The pale cheek, the lip,

No careless smile doth light up. All that art,  
 Most finished art, can give, it there has given;  
 But the high mind, what pencil may portray!  
 Aye—there art fails.

Yet powerful is the skill, whose impress thus  
 Can stamp an untold value on the span  
 Of worthless canvass which that frame enshines  
 Nor warrior's, statesman's, sage's head it is.  
 But worth of one yet dimly known to fame,  
 (Careless to pierce the shadowy cloud—that the  
 sun

The brightest oft—doth love to lie beneath)  
 Thy portrait I would not exchange—my brother,  
 For all that Guido—Titian ever painted.

JULIA.

#### BALLAD.

My bowls were of the purest gold  
 That mortal eye could view,  
 And all the streams that in them rolled  
 Were of the brightest hue;  
 My halls they were the resting place  
 Of every son of song,  
 And Wit and Folly there kept pace,  
 And drove their steeds along.

But Wisdom came one wintry night,  
 When all were deep in sleep,  
 And broke each gem and goblet bright,  
 And flung them in a heap.  
 She fired the pile, and Folly then  
 From all her dreams awoke,  
 And she and Wit wept deeply when  
 They saw the goblets broke.

But Wit took hold of Folly's hand,  
 And said, "Why all this fuss,  
 Though Wisdom drives us from this land,  
 There's still a home for us:  
 A home beneath congenial skies,  
 Where all is bright and fair,  
 Where Folly lives, but Wisdom dies,  
 That house is,—We know where."

Richard Ryon.

#### SKETCHES OF SOCIETY.

The following story is related in the Paris papers:—A young gentleman from one of the French departments, being lately on the point of forming an advantageous union with a lady in Paris, was anxious to be distinguished in his marriage contract by the title of *Chevalier*. He therefore applied to a person, a sort of universal character, styling himself a *General* at Genoa, a *Colonel* at Venice, a *Duke* at Rome, a *Marquess* at Paris, *Commander* of almost all the orders in the world, past, present, and future, and a member of every learned society in Europe; through the powerful influence of this gentleman, he hoped to attain the wished-for honor.

The ribbons of several foreign orders were laid before the young gentleman. He made choice of one, which as the *Marquess* observed, required numerous titles, for the attainment of which many obstacles must be surmounted. "There is only one foreign Sovereign," said he, "who has the power of conferring the decoration; his secretary, however, is my most intimate friend, and probably for a douceur of about two thousand five hundred francs, it might be obtained. The young man readily paid the money, and in a short time, the *General*,

*Duke*, *Marquess*, &c. came to congratulate him on his new dignity.

At length, I am a Knight! exclaimed the young gentleman; and I have only to purchase a cross and a ribbon. He flew to the Palais Royal, entered the shop of a jeweller who keeps a large assortment of foreign orders, and asked for a cross of the order of the *White Bear*. The jeweller replied, that he had not got it. The *Marquess* informed me it was a scarce thing, thought the *Knight*, as he quitted the shop. He by turns enquired at every jeweller's shop in the Palais Royal, with no better success; when he at length met with a friend, who gave him sufficient proofs of the trick by which he had been duped. He hastened to the hotel of the obliging *Marquess*, but alas! he had set out on the preceding evening for *Constantinople*.

#### THE DRAMA.

DRURY-LANE.—Mr. Kean finished his intercalary season at Drury-lane on Saturday, in Richard the Third, which is, we believe, reckoned his second best character. He took an affectionate leave of his friends and the public, and was very cordially noticed by them in return. A year or two in America will serve to revive his attractions; in these days nothing delights if long continued.

COVENT GARDEN opened on Monday. It has undergone some alterations and improvements. The grand chandelier is now enlarged and made more brilliant. The fronts of the boxes have exchanged their orange for green, and the old royal lion and unicorn that used to frown with such glittering ferocity above the proscenium, have given way to a rich green drapery with a painted shield of the arms. The *coup d'œil* is handsome. On Monday a Miss Wensley made her tragic debut in Juliet. She is a clever actress, but not yet a Juliet. She once succeeded tolerably in Rosalind. On Wednesday a Miss Green, a young copy of Miss Tree in person, countenance, and awkwardness of attitude, and even in style of voice, appeared in Polly. She was well received. Her voice has extraordinary power.

ENGLISH OPERA HOUSE.—On Saturday, Mr. Bartley performed Falstaff for his own benefit. His general conception and outline of the part did him infinite credit; for it requires no small share of talent to perform this character well. He certainly did so. An objection might be made to a sort of sub-acidity in the less prominent places, which does not seem congenial to the contented epicurism of the fat knight, whose very anger vents itself in quips and satirical jokes. But there was a green vigour in the principal scenes, which afforded great satisfaction; and, in criticising a Falstaff, it ought ever to be remembered, that the actor has not only to contend against the part, but, in many points, against the preconceived opinions of perhaps the majority of the audience.

## VARIETIES.

The French journals mention, that in the department of Gers, a piece of brass has been found in the heart of a block of stone which was lately dug out of a quarry near the city of Auch. It is conjectured that this piece of brass must have been buried in the quarry, where the stone has been forming, for upwards of two thousand years. Some philosophers have asserted that the art of making brass was known even before the deluge!!

On the night of the 19th of August last, there was observed between Lyons and Grenoble, in the direction of the north-west, a meteor of a serpentine form, extending to the length of 80 toises. The phenomenon continued visible for about two minutes, and then disappeared without detonation, leaving behind it innumerable stars of fire.

Naldi and his daughter have made their debuts at the Opera in Paris, in Mozart's *Cosi fan Tutte*.

## ESTIMATE OF THE NUMBER OF PAUPERS IN PARIS, IN 1819.

First arrondissement, 3,542; 2d arrondissement, 4,434; 3d ar. 4,197; 4th ar. 3,952; 5th ar. 6,175; 6th ar. 7,155; 7th ar. 5,399; 8th ar. 11,979; 9th ar. 9,629; 10th ar. 8,882; 11th ar. 6,730; 12th ar. 13,283.—Total, 85,357 paupers of both sexes.

## MODE OF WARFARE PRACTISED BY THE YUEN TARTARS.

From the *Pekin Gazette* of the 26th of March 1817.

In order to act effectually against certain mountaineers, in a late engagement, the Tartars were ordered to advance, each carrying a bundle of thorns, to enable them to ward off the arrows and stones which were hrown at them. When they had advanced within gun-shot of the enemy they were ordered to fall back on their first position. This manoeuvre was repeated for six successive days, when the mountaineers having exhausted their stock of arrows and stones, fell an easy prey to the Tartars. When the latter attack a town, they are accustomed to seize the inhabitants of the adjacent places, and make them march before them to the walls of the town. Every horseman appropriates to himself ten villagers, whom he dispatches to procure provisions and fuel, or stones and arth to fill up the ditches of the fortress. The peasantry are employed night and day in this labour. Those who work slowly, or who do not procure sufficient quantities of provisions, are massacred. When a town is taken, all the inhabitants, old or young, rich or poor, who oppose the victorious party, are slaughtered without mercy, and indiscriminately.

**THE ECLIPSE.**—From a French Journal. The eclipse, which was so impatiently looked for from the Shetland Isles to the shores of the Adriatic, has at length been seen. Whether it was too much spoken of before-hand, or whether in this, as in other things, we are grown more fastidious than our forefathers, we know not; but certainly very few were satisfied with the effect of the *grand eclipse*. We expected complete obscurity—

night at noon-day—or at least Milton's *darkness visible*! In vain we provided ourselves with telescopes, helioscopes, pieces of smoked glass, and pricked paper!—In vain we thronged to the bridges at the risk of seeing our watches and handkerchiefs *escapade*! All our hopes were disappointed. We may, however, shortly expect a scientific narrative of this sublime spectacle:—it will probably reveal circumstances which have escaped vulgar eyes. Philosophers promise a much grander effect twenty-seven years hence; and those who may live to see the 20th century, will enjoy an eclipse in perfection.

It is a melancholy instance of the superstitions which prevail in Holland, that the announcement of the eclipse produced a kind of panic among the ignorant class of the people. Many were of opinion that it would occasion a remarkable change in the order of the seasons, or some dreadful revolution in the universe. M. Bourjé, a mathematician of Zealand, published a little pamphlet, with the view of tranquillizing the fears of his countrymen. He observed, that during the eclipse the moon would still be several leagues distant from the sun; and he adds with great *naïveté*, that consequently *no disaster can take place in the Heavens*.

**OLIVES: Curious fact in Botany.**—Letters from Provence, mention the total failure of the olive plantations in that part of France. It has, indeed, been remarked, that for upwards of half a century, the olives have shewn a tendency to emigrate. The soil of Provence now appears to be entirely ruined, and no hope is entertained there of the future cultivation of olives. For the last fifty years, none of the young shoots have risen to above five or six feet high. It is the same in the adjacent countries, which have all suffered more or less from the cold of late years. Two-fifths of these plants have been cut down to the very roots; and three years will scarcely suffice to enable them to attain maturity. The olives of Marseilles and Var were some time ago in excellent condition; but all have perished.

**Pun.**—At the commencement of the late eclipse, a gentleman in the country (who would undoubtedly belong to that class denominated, by the writers of the directions for observing the sun on that occasion, inserted in the *Courier*, "*Common observer*,") had not been provident enough to procure before hand two pieces of glass to be smoked *secundum artem*, and being at a distance from any place where they might be purchased, was in great perplexity. His friend, who was by, coolly advised him to break one of his drawing room windows for the purpose; "for," said he, "you ought to spare no pains to promote the advancement of science."

A shocking accident lately occurred at Cologne. The keeper of a menagerie had put his head into a lion's mouth, which he was accustomed to do to shew the tameness of the animal; suddenly, however, the natural ferocity of the lion became roused, and the man was so dreadfully mutilated that he almost instantly expired.

## METEOROLOGICAL JOURNAL.

SEPTEMBER, 1820.

**Thursday, 14**—Thermometer from 41 to 74.  
Barometer from 30, 12 to 30, 01.  
Wind S. W.  $\frac{1}{2}$  and 1.—Light clouds generally passing, with faint sunshine.  
**Friday, 15**—Thermometer from 53 to 67.  
Barometer from 29, 88 to 30, 05.  
Wind S. W. 3 and  $\frac{1}{2}$ .—The middle of the day cloudy, with rain; the rest generally clear.  
**Saturday, 16**—Thermometer from 44 to 65.  
Barometer from 30, 11 to 30, 15.  
Wind W. b. S. 2 and 1.—Morning clear; the rest of the day generally cloudy.  
Rain fallen, .05 of an inch.  
**Sunday, 17**—Thermometer from 46 to 66.  
Barometer from 30, 15 to 30, 05.  
Wind S. W. 2, W. and N. W.  $\frac{1}{2}$ .—Generally cloudy; about ten in the evening it began to rain.  
**Monday, 18**—Thermometer from 49 to 52.  
Barometer from 29, 72 to 29, 66.  
Wind N. 1, N. b. W. 3 and W.  $\frac{1}{2}$ .—Generally cloudy till the evening, when it became clear. Continually raining till 11 o'clock A. M.  
Rain fallen in the night 1 inch, and, 725 of an inch.  
**Tuesday, 19**—Thermometer from 37 to 54.  
Barometer from 29, 99 to 30, 17.  
Wind N. 3, and N. W.  $\frac{1}{2}$ .—Generally clear; light clouds passing.  
Rain fallen, 125 of an inch.  
**Wednesday, 20**—Thermometer from 30 to 53.  
Barometer from 30, 11 to 29, 65.  
Wind S. W. 2, 3, and 4.—Morning clear, with a white frost; the rest of the day cloudy, with rain from 2 till 10 P. M. Ice as thick as a shilling this morning.  
On Friday the 29th, at 11 minutes 30 seconds after 8 o'clock, the second satellite of Jupiter will emerge from an eclipse.  
On Saturday 30th, at 2 minutes, 3 seconds after 11, the 1st Satellite of Jupiter will emerge from an eclipse.  
Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

An *Annotator's* letter has been forwarded to our coadjutor, and due notice will be taken of it. If it should be much obliged to our correspondent to inform us whence *Old Reality* is derived: if he looks to our last No. he will see that we cannot begin any series of papers without due assurance of having it in our power to bring it to a ripe conclusion. Experience has taught us that this is hardly ever done, but the issue is disappointment; indeed we have reason to reproach several volunteer friends for want of perseverance in their kindness.

"A *Layman's*" excellent letter is, we are sorry to say, inadmissible into the *Literary Gazette*, which avows even an approach to political or religious controversy.

We shall be induced to become subscribers to the *Retrospective Review*, in consequence of our correspondents' (G. R.) praise of it; but we cannot admit the dicta of a third party in matters of criticism into our columns, as coming from our own pens. Public confidence could never be given to a journal so open to irresponsible and accidental opinions.

**ERRATA.**—In the last verse of "*The Calm*," in our last Number, for "pregnant lark" it was printed "frequent lark;" and for "our greeting," "one greeting."

—In our next, we commence "*Wine and Walnuts*," the cockney gossip of the last century, from original sources.

## BOOKS PUBLISHED THIS DAY.

*Godwin on Population.*

In the course of October will be published, in one Vol. 8vo.

**AN ENQUIRY** concerning the Power of Increase in the Numbers of Mankind, being an Answer to Mr. Malthus's Essay on that subject. By WILLIAM GODWIN.

Fond, impatient man! I think thou art anguished cloud, Raised by thy breath, has quenched the orb of day! To-morrow he repairs the golden flood, And warms the nations with redoubled ray.

Printed for Longman, Hurst, Rees, Orme, and Brown, London.

In 2 vols. royal 8vo. embellished with 50 engravings, price 7s. 12s. 6d. in boards; a few copies with plates on India paper, price 3s. 12s. 6d. in boards.

**ACCOUNT OF A TOUR IN NORMANDY**, undertaken chiefly for the purpose of investigating the Architectural Antiquities of the Duchy, with Observations on its History, on the Country, and on its Inhabitants. By DAWSON TURNER, Esq. A. M. F. R. S. L. &c. and author of "Historia Focorum." London: Printed for John and Arthur Arch, Cornhill.

In a few days will be published, Price 6s.

**THE EDINBURGH REVIEW**; or, Critical Journal. No. XLVII. Contents:—1. France.

2. Classification of Rocks. 3. Plan for a Commutation of Tithes. 4. Farrington's Life of Sir Joshua Reynolds. 5. Buckhardt's Travels in Nubia. 6. Edgeworth's Memoirs. 7. Hogg's Jacobite Edition. 8. The Sketch Book by Geoffrey Crayon, Gent. 9. Ancient Laws of the Scandinavians. 10. Keats's Poems. 11. The new Plan of Education for England. Quarterly List of new Publications. Printed for Archibald Constable and Co. Edinburgh; and Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, all the preceding Numbers.

A second edition, in 12mo. price 10s. 6d. bds. illustrated with 22 engravings by Lowry.

**CONVERSATIONS ON NATURAL PHILOSOPHY**, in which the Elements of that Science are familiarly explained, and adapted to the Comprehension of young Pupils. By the Author of "Conversations on Chemistry," and "Conversations on Political Economy." Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had,

**CONVERSATIONS ON CHEMISTRY**. Illustrated by Experiments. In 2 vols. 12mo. with plates by Lowry. The 6th edition, enlarged, 14s. bds.

**CONVERSATIONS ON POLITICAL ECONOMY**. Third edition, improved, in 1 large vol. 12mo. price 3s. boards.

*The Encouragements of the Christian Minister.* Price 1s. 6d.

**A SERMON**, preached in the Parish Church of Henley, Aug. 22d, 1820, before the Chancellor of the Diocese of Oxon, Joseph Phillimore, D. C. L. and the Rev. the Clergy of the Dioceses of Aston and Henley, and published by their request. By the Rev. J. B. SUMNER, M. A. Fellow of Eton College, and Vicar of Mapledurham, Oxon. Published by Hatchard and Son, 187, Piccadilly. Of whom may be had, by the same author, 2d edition of

**A TREATISE ON THE RECORDS OF THE CREATION**, &c. 2 vols. 1s. 1s.

*Oriental Literature.*

Price 6s. each, Nos. 1. and II. of the

**ANNALS OF ORIENTAL LITERATURE**, containing: 1. An Account of Aam, with some Notices concerning the neighbouring Territories. By Francis Hamilton, M. D. F. R. S. &c. 2. An Analytical Comparison of the Sanscrit, Greek, Latin, and Teutonic Languages; shewing the original identity of their Grammatical Structure. By F. Bopp. 3. A Translation of the Mahabharata, the ancient Epic Poem of the Hindus. 4. A Translation of the Geography of Idriai. 5. Persian Anthology, by Gulchin; a Translation of the Shah Name of Ferdousi. 6. Translations (original from the Chinese) and a variety of curious information on Oriental Subjects. Printed for Longman, Hurst, Rees, Orme and Brown, Paternoster Row; and Ogle, Duncan, and Co. High Holborn, London.

**THE QUARTERLY REVIEW**, No. XLVI, will be published in a few days.

*Dr. Carpenter on Education.*

In 8vo. price 12s. boards.

**PRINCIPLES OF EDUCATION**, Intellectual, Moral and Physical. By the Rev. LANT CARPENTER, LL. D. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, **SYSTEMATIC EDUCATION**, or Elementary Instructions in the various Departments of Literature and Science, with Practical Rules for studying each branch of useful Knowledge. By the Rev. W. Shepherd, the Rev. J. Joyce, and the Rev. Lant Carpenter, LL. D. Second edition, in 2 thick vols. 8vo. Price 12s. 11s. 6d. boards.

**AN INTRODUCTION TO THE GEOGRAPHY OF THE NEW TESTAMENT**, principally designed for young persons, and for the Sunday employment of Schools. By Lant Carpenter, LL. D. The 4th edition, 12mo. Price 4s. bds.

In 3 vols. 12mo. price 12s. 4s. bds.

**THE ARBUTH**. A Romance. By the Author of *Waverley*. Printed for Longman, Hurst, Rees, Orme, and Brown, London; Constable and Co. and John Kellandine, Bookseller to the King, Edinburgh. Of whom may be had, by the same author, **THE MONASTERY**, a Romance, 3 vols. 12mo. 11s. 4s. **ROB ROY**, a Novel, 3 vols. 12mo. 11s. 4s. **THE ANTIQUARY**, a Novel, 3 vols. 11s. 4s. **GUY RANSOMER**, a Novel, 3 vols. 11s. 4s. **WAVELEY**, a Novel, 3 vols. 11s. 4s.

In 12mo. price 5s. boards.

**ESSAYS AND SKETCHES OF LIFE AND CHARACTER**. By a Gentleman who has left his Lodgings.

"We have seldom perused any similar volume with higher pleasure. It is written throughout with great facility and elegance, and bears every where indubitable marks of an upright and honourable mind, richly cultivated both by study and travel."—*Blackwood's Magazine*, August, 1820.

Printed for Longman, Hurst, Rees, Orme, and Brown, London.

In the press, and shortly will be published, in 1 vol. 8vo. illustrated with Maps and Plates.

**A STATISTICAL ACCOUNT OF UPPER CANADA**, written by the Inhabitants, and Compiled by ROBERT GAURLAY. Published by Longman, Hurst, Rees, Orme, and Brown, London.

Price 1s.

**AN ENGLISHWOMAN'S LETTER** to Mrs. HANNAH MORE on the Present Crisis. Printed for J. Hatchard and Son, 187, Piccadilly. Of whom may be had, price 6d.

**A LETTER** to S. C. WHITEHEAD, Esq. M. P. for Middlesex, by J. W. Cunningham, M. A. Vicar of Harrow, &c.

Handsomely printed in 4to. with Engravings, price 12s. 6s. in boards, volume IV. Part II. of

**SUPPLEMENT TO THE ENCYCLOPEDIA BRITANNICA**, edited by MACVEY NAPIER, F. R. S. L. &c. This half volume is enriched with the following articles and treatises, contributed by John Allan, Esq. John Barrow, Esq. Jean Baptiste Biot, Member of the Royal Institute of France, William Jacob, Esq. James Ivory, Esq. James Mills, Esq. David Ricardo, Esq. M. P. and other well known writers. In Topography—Forthshire; Galloway, County; Glamorganshire; Glasgow; Gloucestershire; Haddingtonshire; Hampshire; Herefordshire; Hertfordshire; In Geography, Statistics, and History—France; Germany; Granada; New Great Britain; Greece; Guatemala; Guiana; Hanover; Heligoland; Herculanum; Himalaya Mountains. In Biography—Fontana; Foster (J. H.); Foster (J. G. A.); Foxcroft; Fox (Charles James); Frisi; Gallani; Garze; Genovesi; Guyton de Morveau; Hays; Home (John). In Arts and Sciences—Equations; Fluids (Elevation of, in Capillary Tubes); Food (Selection, Preservation, and Preparation of); Galvanism; Gas Light; Horticulture. In Politics and Political Economy—Funding System, Government. Edinburgh: Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London. Of whom may be had, Vol. I. Part I. to Volume IV. Part I. inclusive.

*Anecdotes of the Royal Family.*

In post 8vo. price 6s. 6d. boards.

**LETTERS** from Mrs. DELANY (Widow of Doctor Patrick Delany) to Mrs. FRANCES HAMILTON, from the year 1779, to the year 1790, comprising many unpublished and interesting Anecdotes of their late Majesties, and the Royal Family. Now first printed from the original Manuscripts.

"Little circumstances show the real men, but such things of greater moment."—*Adams*. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

**New Novel, by one of the Edgeworth Family.** In a few days will be published, in 3 vols. 12mo. price 12s. boards.

**ECCENTRICITY, A Novel.** By Mrs. MACNALLY, daughter of the late Rev. Robert Kebleworth, of Lisard, Ireland. Published by Longman, Hurst, Rees, Orme, and Brown, London; and J. Cunningham, Dublin.

Price 3s. 6d.

**THE HARP OF THE DESERT**; containing the Battle of Agincourt, with other Poems in Verse. By ISMAEL FITZADAM, formerly able Seaman on board the "Frigate." Printed for Whittam and Finn, Charing Cross.

Entire New School Books, and New Editions, published by Longman, Hurst, Rees, Orme, and Brown, London.

**SELECT WORKS OF THE BRITISH POETS**, with Biographical and Critical Prefaces. By Dr. Aikin. In one large Volume of 812 pages Medium 8vo. price 12s. extra boards.

The object of this Work, which is entirely new, to comprise, within a single volume, a Chronological list of our Classical Poets, from Pindar to Keble, without mutilation or abridgment, with Biographical and Critical Notices of their Authors. The system of the volume are so comprehensive, that few Poets, who were, however, omitted, except such as are of secondary merit, or unsuited to the pursuit of youth. The Work, within those bounds, may be termed a "Library of Classical English Poetry," and may be safely recommended to the heads of Schools in general, and to the library of young Persons.

**2. THE FAMILY SHAKESPEARE**; in which nothing is added to the original Text; but those Words and Expressions are omitted which cannot properly be read aloud in a Family. By Thomas Bowdler, Esq. F. R. S. L. &c. A. N. 10 vols. royal 8vo. price 21s. 6s. boards. A new edition.

**3. AN INTRODUCTION TO MODERN HISTORY**, from the Birth of Christ to the present Time, in Continuation of an Introduction to Classical and Ancient History. By W. Jelfard Wort. (Printed uniformly with the Chronology and Ancient History) In 2 vols. 18mo. Price 10s. 6d. bound.

**4. LETTERS ON FRENCH HISTORY**, from the earliest Period to the Battle of Waterloo, and the re-establishment of the House of Bourbon; for the use of Schools. By J. England. In 12mo. 6s. boards.

**5. LETTERS ON ENGLISH HISTORY**, from the Invasion of Julius Caesar to the Battle of Waterloo; for the use of Schools. By J. England. In 12mo. 6s. boards.

**6. UNIVERSAL HISTORY**, in Twenty-four Books, translated from the German of John Weller. In 2 vols. 8vo. 12s. 11s.

**7. HINTS ON THE SOURCES OF HAPPINESS**, addressed to her Children by a Mother. Author of "Always Happy." &c. In 2 vols. foolscap price 12s. boards.

**8. A SEQUEL TO THE EXERCISES OF CHAMBAUD, HAMEL, PERRIN, VANOSTROCH, and other famous; being a practical and easy way to translate from English into good French, on a new Plan, with Grammatical Notes.** By G. H. Poppleton. In 12mo. 3s. bound.

London: Printed for the Proprietors, by W. POPE, 47, Chancery Lane; Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 25, Old Bailey; Strand, where Communications, post paid, are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 193.

SATURDAY, SEPTEMBER 30, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Account of a Tour in Normandy; undertaken chiefly for the purpose of investigating the Architectural Antiquities of the Duchy, with Observations on its History, on the Country, and on its Inhabitants. Illustrated with numerous Engravings. By Dawson Turner. London, 1820. Large 8vo. 2 vols.*

Though the principal object of this tour has been to examine the rich and curious Ancient Architecture of Normandy; and though by far the largest portion of these volumes is devoted to the illustration of that interesting inquiry; the collateral parts, the historical debris, and the remarks on customs, manners, costume, and internal economy, are written in so agreeable a style, that the general reader will find as much to please him, as the antiquary to admire, in Mr. Turner's labours. Some botanical notices will also be met with; but the charm of the whole lies in the easy gentlemanly way in which the facts, gathered by an enlightened perception and an elegant feeling for the fine arts, are communicated. It is like being in company with persons of taste and understanding: they not only take up such matters as are most worthy of attention, and reject what are trite and frivolous; but they place in the clearest view what they do take up, and adorn whatever they deem deserving of their regards.

This is the character of Mr. Turner's Norman Tour; and we are the more desirous of stating it impressively, because it would carry us to an inconvenient length, to display the principal merits of his publication in our limited pages; and we are compelled to leave the most important circumstances, in order to select those most readily separable for our review. We are thus made defaulters by the omission of the architectural investigation into the round, and more modern pointed styles of building in Normandy; which throws much light upon their contemporary, ecclesiastical antiquities, in England; and are thrown upon selections of a miscel-

laneous kind, which rather suit our own purpose, than adequately exemplify the nature of the work. To these we now proceed.

The volumes before us are the fruits of three distinct tours, in 1815, 1818, and 1819; that of 1818 being the longest and most inquisitive. The author sets out with an account of Dieppe, and certainly draws a more novel and interesting picture of that Town, than we have before seen in any English writer. Among other topics, he dwells on the suburb called Pollet and its inhabitants, of whom the description is rather remarkable.

"Three-fourths of the natives of this part of the town are fishermen, and not less effectually distinguished from the citizens of Dieppe by their name of Poltese, taken from their place of residence, than by the difference in their dress and language, the simplicity of their manners, and the narrow extent of their acquirements. To the present hour they continue to preserve the same costume as in the XVth century; wearing trowsers covered with wide short petticoats, which open in the middle to afford room for the legs to move, and woollen waistcoats laced in the front with ribbands, and tucked below into the waistband of their trowsers. Over these waistcoats is a close coat, without buttons or fastenings of any kind, which falls so low as to hide their petticoats and extend a foot or more beyond them. These articles of apparel are usually of cloth or serge of a uniform colour, and either red or blue; for they interdict every other variation, except that all the seams of their dress are faced with white silk galloon, full an inch in width. To complete the whole, instead of hats, they have on their heads caps of velvet or colored cloth, forming a *tout-ensemble* of attire, which is evidently ancient, but far from unpicturesque or displeasing. Thus clad, the Poltese, though in the midst of the kingdom, have the appearance of a distinct and foreign colony; whilst, occupied incessantly in fishing, they have remained equally strangers to the civilization and politeness, which the progress of letters during the last two centuries has diffused over France. Nay, scarcely are they acquainted with four hundred words of the French language; and those they pronounce with an idiom exclusively their own, adding to each an oath, by way of epithet; a habit so inveterate with them, that even at confession, at the moment of seeking absolution for the practice, it is no uncommon thing with them to *swear* they will be guilty of it no more. To balance, however, this defect, their morals are uncorrupted, their fidelity is exemplary, and they

are laborious and charitable, and zealous for the honor of their country, in whose cause they often bleed, as well as for their priests, in defence of whom they once threatened to throw the Archbishop of Rouen into the river; and were well nigh executing their threats."

Dieppe itself was a despotic Seignory belonging to the Archbishops of Rouen, to one of whom it was assigned by our Richard the 1st. The church government seems to have been of the most oppressive and obnoxious sort; the prelate-lord not scrupling to convert even the wages of sin into a source of revenue, as scandalous in its nature, as it must have been contemptible in its amount, by exacting from every prostitute a weekly tax of a farthing, for liberty to exercise her profession. The annexed extract will not seem strange after the record of so disgraceful a fact.

"Many uncouth and frivolous ecclesiastical rites and ceremonies of the middle ages, which good sense had banished from most other parts of France, where they once were common, still lingered in the archbishop's seignory. Thus, at no very remote period, it was customary on the Feast of Pentecost to cast burning flakes of tow from the vaulting of the church; this stage-trick being considered as a representation of the descent of the fiery tongues. The Virgin, the great idol of popery, was honored by a pageant, which was celebrated with extraordinary splendor; and as I must initiate you in the mysteries of catholicism, I think you will be well pleased to receive a detailed account of it. The ceremony I consider as curiously illustrative of the manners of the rulers, of the ruled, and of the times; and I will only add, by way of preface, that it was instituted by the governor, Des Marêts, in 1443, in honor of the final expulsion of the English, and that he himself consented to be the first master of the *Guild of the Assumption*, under whose auspices and direction it was conducted.—About Midsummer the principal inhabitants used to assemble at the Hôtel de Ville, and there they selected the girl of the most exemplary character, to represent the Virgin Mary, and with her six other young women, to act the parts of the Daughters of Sion. The honor of figuring in this holy drama was greatly coveted; and the historian of Dieppe gravely assures us, that the earnestness felt on the occasion mainly contributed to the preservation of that purity of manners and that genuine piety, which subsisted in this town longer than in any other of France! But the election of the Virgin was not sufficient: a representative of St. Peter was also to be found among the clergy; and the laity were so far favored that they were permitted to furnish the eleven other

apostles. This done, upon the fourteenth of August the Virgin was laid in a cradle of the form of a tomb, and was carried early in the morning, attended by her suite of either sex, to the church of St. Jacques; while before the door of the master of the guild was stretched a large carpet, embroidered with verses in letters of gold, setting forth his own good qualities, and his love for the holy Mary. Hither also, as soon as *Laudes* had been sung, the procession repaired from the church, and then they were joined by the governor of the town, the members of the guild, the municipal officers, and the clergy of the parish of St. Remi. Thus attended, they paraded the town, singing hymns, which were accompanied by a full band. The procession was increased by the great body of the inhabitants; and its impressiveness was still further augmented by numbers of the youth of either sex, who assumed the garb and attributes of their patron saints, and mixed in the immediate train of the principal actors. They then again repaired to the church, where *Te Deum* was sung by the full choir, in commemoration of the victory over the English, and high mass was performed, and the Sacrament administered to the whole party. During the service, a scenic representation was given of the Assumption of the Virgin. A scaffolding was raised, reaching nearly to the top of the dome, and supporting an azure canopy intended to emulate the 'spangled vault of heaven'; and about two feet below the summit it appeared, seated on a splendid throne, an old man as the image of the Father Almighty, a representation equally absurd and impious, and which could alone be tolerated by the votaries of the worst superstitions of popery. On either side four paste-board angels of the size of men floated in the air, and flapped their wings in cadence to the sounds of the organ; while above was suspended a large triangle, at whose corners were placed three smaller angels, who, at the intermission of each office, performed upon a set of little bells the hymn of '*Ace Maria gratid Dei plena per Secula*,' &c. accompanied by a larger angel on each side with a trumpet. To complete this portion of the spectacle, two others, below the old man's feet, held tapers, which were lighted as the services began, and extinguished at their close; on which occasions the figures were made to express reluctance by turning quickly about; so that it required some dexterity to apply the extinguishers. At the commencement of the mass, two of the angels by the side of the Almighty descended to the foot of the altar, and, placing themselves by the tomb, in which a pasteboard figure of the Virgin had been substituted for her living representative, gently raised it to the feet of the Father. The image, as it mounted, from time to time lifted its head and extended its arms, as if conscious of the approaching beatitude, then, after having received the benediction and been encircled by another angel with a crown of glory, it gradually disappeared behind the clouds. At this instant a buffoon, who all the time had been playing his antics below,

burst into an extravagant fit of joy; at one moment clapping his hands most violently, at the next stretching himself out as if dead. Finally, he ran up to the feet of the old man, and hid himself under his legs, so as to show only his head. The people called him *Grimaldi*, an appellation that appears to have belonged to him by usage, and it is a singular coincidence that the surname of the noblest family of Genoa the Proud, thus assigned by the rude rabble of a seaport to their buffoon, should belong of right to the sire and son, whose *mops* and *moors* afford pastime to the upper gallery at Covent-Garden.

"Thus did the pageant proceed in all its grotesque glory, and while—

'These labor'd nothings in so strange a style  
'Amaz'd the unlearned, and made the learned smile.'

the children shouted aloud for their favourite Grimaldi; the priests, accompanied with bells, trumpets, and organs, thundered out the mass; the pious were loud in their exclamations of rapture at the devotion of the Virgin; and the whole church was filled with 'un non so che di rauco ed insinista.'—But I have told you enough of this foolish story, of which it were well if the folly had been the worst. The sequel was in the same taste and style, and ended with the enthusiasm of all similar representations, a hearty dinner."

Near Dieppe, Cæsar's camp, and the Castle of Arques attract the attention of our agreeable traveller; but we must pass these, and the priory of Longueville, &c. taking from Havre itself no more than the brief notice of a vessel whilom constructed in that port.

"As ship-builders, the inhabitants of Havre have always had a high character; they stand conspicuous in the annals of the art, for the construction of the vessel called *la Grande Française*, and justly termed *la grande*, as having been of two thousand tons burthen. Her cables are said to have been above the thickness of a man's leg; and, besides what is usually found in a ship, she contained a wind-mill and a tennis-court. Her destination was, according to some authors, the East-Indies; according to others, the Isle of Rhodes, then attacked by Soliman II.; but we need not now inquire whether she was bound; for, after advantage had been taken of two of the highest tides, the utmost which could be done was to tow her to the end of the pier, where she stuck fast, and was finally obliged to be cut to pieces. Her history and catastrophe are immortalized by Rabelais, under the appellation of *la Grande Nau Française*."

Rouen, however, with its treasures of antique sculpture and architecture, naturally occupies the greatest share of Mr. Turner's observation. The descriptions of the churches are excellent; and the engravings, like the rest which ornament the work, are at once spirited and correct, replete with refined art, yet appearing to despise all labour and technicality. They well become the text. Among the rest of the buildings are the *Halles*, considered the finest in France, and occupying the site of the Castle of Richard the First.

"The historians of Rouen, in the usual strain of hyperbole, hint that their *Halles* are even the finest in the world, though they are very inferior to their prototypes at Bruges and Ypres. The hall, or exchange, allotted to the mercers, is two hundred and seventy-two feet in length, by fifty feet wide: those for the drapers and for wool are, each of them, two hundred feet long; and all these are surpassed in size by the corn-hall, whose length extends to three hundred feet. They are built round a large square, the centre of which is occupied by numberless dealers in pottery, old clothes, &c.; and, as the day on which we chanced to visit them was a Friday, when alone they are opened for public business, we found a most lively, curious, and interesting scene.

"It was on the top of a stone staircase, (Mr. Turner tells us) the present entry to the *Halles*, that the annual ceremony of delivering and pardoning a criminal for the sake of St. Romain, the tutelary protector of Rouen, was performed on Ascension day, according to a privilege exercised, from time immemorial, by the Chapter of the Cathedral.

"The legend is romantic; and it acquires a species of historical importance, as it became the foundation of a right, asserted even in our own days. My account of it is taken from Dom Pommeraye's *History of the Life of the Prelate*.—He has been relating many miracles performed by him; and, among others, that of causing the Seine, at the time of a great inundation, to retire to its channel by his command, agreeably to the following beautiful stanza of Santeuil:—

'Tangit exundans aqua civitatem;  
'Vox Romanus jubet effici;  
'Audient fluctus, docilemque cedent  
'Unda jubeant.'

"Our learned Benedictine thus proceeds:—But the following miracle was deemed a far greater marvel, and it increased the veneration of the people towards St. Romain to such a degree, that they henceforth regarded him as an actual apostle, who, from the authority of his office, the excellence of his doctrine, his extreme sanctity, and the gift of miracles, deserved to be classed with the earliest preachers of our holy faith. In a marshy spot, near Rouen, was bred a dragon, the very counterpart of that destroyed by St. Nicaise. It committed frightful ravages; lay in wait for man and beast, whom it devoured without mercy; the air was poisoned by its pestilential breath, and it was alone the cause of greater mischief and alarm, than could have been occasioned by a whole army of enemies. The inhabitants, wearied out by many years of suffering, implored the aid of St. Romain; and the charitable and generous pastor, who dreaded nothing in behalf of his flock, comforted them with the assurance of a speedy deliverance. The design itself was noble; still more so was the manner by which he put it in force; for he would not be satisfied with merely killing the monster, but undertook also to bring it to public execution, by way of atonement for its cruelties. For this purpose, it was necessary that the dragon should be caught; but when the prelate required a

companion in the attempt, the hearts of all men failed them. He applied, therefore, to a criminal condemned to death for murder; and, by the promise of a pardon, bought his assistance, which the certain prospect of a scaffold, had he refused to accompany the saint, caused him the more willingly to lead. Together they went, and had no sooner reached the marsh, the monster's haunt, than St. Romain approaching courageously, made the sign of the cross, and at once put it out of the power of the dragon to attempt to do him injury. He then tied his stole around his neck, and, in that state, delivered him to the prisoner, who dragged him to the city, where he was burned in the presence of all the people, and his ashes thrown into the river.—The manuscript of the Abbey of Hautmont, from which this legend is extracted, adds, that such was the fame of this miracle throughout France, that Dagobert, the reigning sovereign, sent for St. Romain to court, to hear a true narrative of the fact from his own lips; and, impressed with reverence awe, bestowed the celebrated privilege upon him and his successors for ever.

"The right has, in comparatively modern times, been more than once contested, but always maintained; and so great was the celebrity of the ceremony, that princes and potentates have repeatedly travelled to Rouen, for the purpose of witnessing it."

"To keep alive the tradition, in which Popish superstition has contrived to blend Judaic customs with heathen mythology, the practice was, that the prisoner selected for pardon should be brought to this place, called the chapel of St. Romain, and should here be received by the clergy in full robes, beaded by the archbishop, and bearing all the relics of the church; among others, the shrine of St. Romain, which the criminal, after having been reprimanded and absolved, but still kneeling, thrice lifted, among the shouts of the populace, and then, with a garland upon his head and the shrine in his hands, accompanied the clergy in procession to the cathedral. But the revolution happily consigned the relics to their kindred dust, and put an end to a privilege eminently liable to abuse, from the circumstance of the pardon being extended, not only to the criminal himself, but to all his accomplices; so that, an inferior culprit sometimes surrendered himself to justice, in confidence of interest being made to obtain him the shrine, and thus to shield under his protection more powerful and more guilty delinquents. The various modifications, however, of latter times, had so abridged its power, that it was at last only able to rescue a man guilty of involuntary homicide. We may hope, therefore, it was not altogether deserving the hard terms bestowed upon it by Millin, who calls it the most absurd, most infamous, and most detestable of all privileges, and adduces a very flagrant instance of injustice committed under its plea.—D'Alégre, governor of Gisors, in consequence of a private pique against the Baron du Hallot, lord of the neighbouring town of Vernon, treacherously assassinated him at his own house, while he was yet upon crutches, in consequence of

the wounds received at the siege of Rouen. This happened during the civil wars; in the course of which, Hallot had signalized himself as a faithful servant, and useful assistant to the monarch. The murderer knew that there was no hopes for him of royal mercy; and, after having passed some time in concealment and as a soldier in the army of the league, he had recourse to the Chapter of the Cathedral of Rouen, from whom he obtained the promise of the shrine of St. Romain. To put full confidence, however, even in this, would, under such circumstances, have been imprudent. The clergy might break their word, or a mightier power might interpose. D'Alégre, therefore, persuaded a young man, formerly a page of his, of the name of Pehu, to surrender himself as guilty of the crime; and to him the privilege was granted; under the sanction of which, the real culprit, and several of his accomplices in the assassination, obtained a free pardon. The widow and daughter of Hallot, in vain remonstrated; the utmost that could be done, after a tedious law-suit, was to procure a small fine to be imposed upon Pehu, and to cause him to be banished from Normandy and Picardy and the vicinity of Paris. But regulations were in consequence adopted, with respect to the exercise of the privilege; and the pardons granted under favor of it were ever afterwards obliged to be ratified under the high seal of the kingdom."

The following lively account of an encounter with an old character at Rouen, is given by the author.

"It chanced, that I visited the hill on Michaelmas-day, and a curious proof was afforded me, that, at however low an ebb religion may be in France, enthusiastic fanaticism is far from extinct. A man of the lower classes of society was praying before a broken cross, near St. Michael's Chapel, where, before the revolution, the monks of St. Ouen used annually on this day to perform mass, and many persons of extraordinary piety were wont to assemble the first Wednesday of every month to pray and to preach, in honor of the guardian angels. His manner was earnest in the extreme; his eyes wandered strangely; his gestures were extravagant, and tears rolled in profusion down a face, whose every feature bore the strongest marks of a decided devotee. A shower which came at the moment compelled us both to seek shelter within the walls of the chapel, and we soon became social and entered into conversation. The ruined state of the building was his first and favourite topic: he lamented its destruction; he mourned over the state of the times which could countenance such impiety; and gradually, while he turned over the leaves of the prayer-book in his hand, he was led to read aloud the hundred and thirty-sixth psalm, commenting upon every verse as he proceeded, and weeping more and more bitterly, when he came to the part commemorating the ruin of Jerusalem, which he applied, naturally enough, to the captive state of France, smarting as she then was under the iron rod of Prussia. Of the other allies, including even the Russians, he owned that there was no complaint to be

made: "they conduct themselves," said he, "agreeably to the maxim of warfare, which says 'battez-vous contre ceux qui vous opposent; mais ayez pitié des vaincus.'" Not so the Prussians: with them it is "frappez-les, frappez-les, et quand ils entrent dans quelque endroit, ils disent, il nous faut ça, il nous faut ça, et ils le prennent d'autorité." Cruel Babylon!—"Yet, even admitting all this," we asked, "how can you reconcile with the spirit of christianity the permission given to the Jews by the psalmist, to 'take up her little ones and dash them against the stones.'" Ah! you misunderstand the scene, the psalm does not authorize cruelty; —mais, attendez! ce n'est pas ainsi: ces pierres là sont Saint Pierre; et heureux celui qui les attachera à Saint Pierre; qui montrera de l'attachement, de l'attachement pour sa religion."

This is as whimsical an expounding of a text as any we remember. The following, is also curious.

"The date of the erection of the chapel (of a supposed Lazar-house, dedicated to St. Julian three miles from Rouen,) is well ascertained. The hospital was founded in 1183, by Henry Plantagenet, as a priory for the reception of unmarried ladies of noble blood, who were destined for a religious life, and had the misfortune to be afflicted with leprosy. One of their appellations was *filles mesclées*, in which latter word, you will immediately recognize the origin of our term for the disease still prevalent among us, the *measles*. Johnson strangely derives this word from *morbilli*; but the true northern roots have been given by Mr. Todd, in his most valuable republication of our national dictionary; a work which now deserves to be named after the editor, rather than the original compiler. It may also be added, that the word was in common use in the old Norman French, and was plainly intended to designate a slight degree of scurvy."

"To pursue this subject a few steps farther, Jamieson, who is as excellent in points of etymology as Johnson is deficient in quotes, in his Scottish Dictionary, an instance where the identical expression, *measle-houses*, is used in old English."

"..... to measles houses of that same road,

Thre thousand mark unto ther spense he fond." R. BRUNS, p. 136.

The Norfolk farmers and dairy-maids tell us to this day of *measle pork*; in Scotch, a leper is called a *measl*; and, among the Swedes, the word for measles is one nearly similar in sound, *mäsling*. The French academy, however, have refused to admit *measle* to the honor of a place in their language, because it was obsolete or vulgar in the time of Louis XIII. The word is expressive, and no better one has supplied its place; and we may suppose that it was introduced by the Norman conquerors, and that it properly belongs to the Gothic tongue, in the whole of which the root is to be found more or less modified. Instances of this kind, and they are many, serve as additional proofs, if proofs indeed were needed, of the

common origin of the Neustrian Normans, of the Lowland Scots, and of the Saxon and Belgian tribes, who peopled our eastern shores of England."

The great bell of Rouen Cathedral, called *Georges d'Amboise*, weighed 33,000 lbs. Its diameter at the base was 30 feet, its height 10; and 30 stout ringers could hardly persuade it to swing. But, says our author, "after all, this great bell proved, like a great book, a great nuisance: the sound it uttered was scarcely audible; and, at last, in an attempt to render it vocal, upon a visit paid by Louis XVth to Rouen in 1786, it was cracked. It continued, however, to hang, a gaping-stock to children and strangers, till the revolution; in 1793, caused it to be returned to the furnace, whence it re-issued in the shape of cannon and medals, the latter commemorating the pristine state of the metal with the humiliating legend, 'monument de métal détruit pour l'utilité.'"

After dwelling on the pomp and power of former times, the picture of the present condition of the Archbishop of Rouen in particular, and of the Gallican church in general, is extremely illustrative of altered times.

"The present archbishop is the Cardinal Cambacérès, brother to the ex-consul of that name, a man of moral life and regular in his religious duties. He was placed here by Napoleon, all of whose appointments of this nature, with one or two exceptions, have been suffered to remain; but I need scarcely add that, though the title of archbishop is left, and its present possessor is decorated with the Roman purple, neither the revenue, nor the dignity, nor the establishment, resemble those of former times. The chapter, which, before the revolution, consisted of an archbishop, a dean, fifty canons, and ten prebendaries, besides numberless attendants, now consists but of his eminence, with the dean, the treasurer, the archdeacon, and twelve canons. The independent annual income of the church, previous to the revolution, exceeded one hundred thousand pounds sterling; but now its ministers are all salaried by government, whose stated allowance, as I am credibly informed, is to every archbishop six hundred and twenty-five pounds per annum; to every bishop four hundred and sixteen pounds thirteen shillings and four pence; and to every canon forty-one pounds thirteen shillings and four pence. But each of these stipends is doubled by an allowance of the same amount from the department; and care is taken to select men of independent property for the highest dignities.—From the foregoing scale, you may judge of the state of the religious establishment in France."

As a further development of the same subject, we copy another passage.

"The laws of France do not recognize monastic vows; but of late years, the clergy have made attempts to re-establish the communities which once characterized the Catholic church. To a certain degree they have succeeded: the spirit of religion is stronger than the law; and the spirit of contradiction, which teaches the subject to do whatever the law forbids, is stronger than either. Hence,

most towns in France contain establishments, which may be considered either as the embers of expiring monachism, or the sparks of its reviving flame. Rouen has now a convent of Ursulines, who undertake the education of young females. The house is spacious; and for its neatness, as well as for the appearance of regularity and propriety, cannot be surpassed. On this account, it is often visited by strangers. The present lady abbess, Dame Cousin, would do honor to the most flourishing days of the hierarchy: when she walks into the chapel, Saint Elizabeth herself could not have carried the crozier with greater state; and, though she is somewhat short and somewhat thick, her pupils are all wonderfully edified by her dignity. She has upwards of a dozen English heretics under her care; but she will not compromise her conscience by allowing them to attend the Protestant service. There are also about ninety French scholars, and the inborn antipathy between them and the *insulaires*, will sometimes evince itself. Amongst other specimens of girlish spite, the French fair-ones have divided the English damsels into two *genera*. Those who look plump and good-humoured, they call *Mesdemoiselles Rouffes*; whilst such as are thin and grave acquire the appellation of the *Mesdemoiselles Goddams*, a name by which we have been known in France, at least five centuries ago. The Ursulines and *sœurs d'Ermenon*, or *sœurs de la Charité*, who nurse the sick, are the only two orders which are now protected by government. They were even encouraged under Napoleon, who placed them under the care of his august parent, *Madame Mère*.—There are other sisterhoods at Rouen, though in small numbers, and not publicly patronized.

"Nuns are thus increasing and multiplying, but monks and friars are looked upon with a more jealous eye; and I have not heard that any such communities have been allowed to re-assemble within the limits of the duchy, once so distinguished for their opulence, and, perhaps, for their piety and learning."

Before we conclude (reserving the second volume for notice in our next Number) it would be disgraceful in a Literary paper not to advert to the public library at Rouen, which, besides containing 70,000 volumes, has recovered some of the ancient stores of the Religious Houses, so wantonly wasted, dispersed, and destroyed during the revolution. These wrecks, as might be supposed, relate chiefly to theological topics and scholastic divinity; but there are about 800 manuscripts, said to be of very considerable value, though as yet unarranged and uncatalogued. Mr. Turner, says, "Among those pointed out to us, none interested me so much as an original autograph of the *Historia Normannorum*, by William Jumièges, brought from the very abbey to which he belonged. There is no doubt, I believe, of its antiquity."

Mr. Turner gives a tracing of the first paragraph of this singular document, and also a fac simile of the initial letter, like a P, in the top part of which Jumièges "has in-

troduced himself in the act of humbly presenting his work to his royal namesake. I am mistaken, (adds the author), if any equally early and equally well authenticated representation of a King of England be in existence. The *Historia Normannorum* is incomplete, both at the beginning and end, and it does not occupy more than one-fifth of the volume; the rest is filled with a comment upon the Jewish History.

"The articles among the manuscript, most valued by antiquaries, are a *Bréviaire* and a *Missal*, both supposed to nearly the same date, the beginning of the twelfth century."

#### LODGE'S PORTRAITS.

##### Parts I. VI. VII. VIII. IX. and X.

The arrangement of the portraits in these six numbers is as follows;

Part V. Anne Hyde, Duchess of York, by Sir Peter Lely; Secretary Walsingham, by an unknown artist; William Villiers Viscount Grandison, William Lawd Archbishop of Canterbury, James Stanley seventh Earl of Derby, and William Seymour first Marquis of Hertford, by Vandype.

Part VI. Lord Keeper Coventry, by Jensen; Thomas Cromwell Earl of Essex, by Holbein; Algernon Percy Earl of Northumberland, Elizabeth Woodville, Queen of Henry VII, Matthew Parker Archbishop of Canterbury, Walter first Lord Aston, by unknown hands.

Part VII. William Warham Archbishop of Canterbury, by Holbein; James Stuart Duke of Richmond, and William Herbert Earl of Pembroke, by Vandype; Arthur Lord Capel by Jansen; George Monk Duke of Albemarle, by Lely; and Margaret of Lancaster mother of Henry VII, by an unknown artist.

Part VIII. Sir Henry Wotton, by Jansen; William Lord Russell, by Lely; Sir John More, and John Dudley Duke of Northumberland, by Holbein; Mary Sidney, Countess of Pembroke, by Mark Gerard; Cardinal Pole, by Titian.

Part IX. Thomas Wentworth Earl of Stafford, Lucy Percy Countess of Carlisle, Francis Russell fourth Earl of Bedford, Daniel Sidney Countess of Sunderland, and Anne Countess of Bedford, by Vandype; and Thomas Egerton Viscount Brackley.

Part X. Henry Spencer first Earl of Sunderland, by Walker; Elizabeth Cecil Countess of Devonshire, by Vandype; Fife Greville Lord Brooke, Robert second Lord Brooke, Edward first Lord North, and Spencer Compton second Earl of Northampton, by unknown painters.

Though we find nothing particular to say of any of these engravings, viewed simply in that light, we may generally observe, that they cannot be otherwise considered than as specimens of a rich variety in the improved state of the graphic art, and peculiarly well suited to the character of portrait.

This eulogium indeed is due to the whole of the plates, for it is in very few that we discover an occasional dryness of manner, and a multiplicity of folds, arising probably in

a great degree, but we are inclined to think not always, from copying minutely the style of the originals. In those from Vandeyke especially, this must have been the consequence of too much attention being paid to subordinate parts; for the painter himself is free from the blemish.

From the letter-press we shall make a few selections; only remarking, that taken separately these little sketches are admirably calculated to revive, and, in some instances, to correct our historical recollections, from the era of Henry VII, through the important epoch of the reformation, and the interesting period of the civil wars, the reign of the Stuarts, and the revolutions of the commonwealth.

Of William Laud Archbishop of Canterbury, not to speak it punningly, a most laudable trait is handed down to us; but we are afraid it has been very little imitated. Of this prelate, it was the "constant practice to allot a certain number of poor to each of his church preferments, in proportion to the amount of their revenues respectively, whom he maintained; and he commenced that practice on his induction into the first benefice ever held by him." We have not so much as heard of any hint, in these our reforming days, when every cozier is mending the church and state, to revive this very benevolent and charitable custom; although we believe there are as many theories as writers, as many plans as parishes, for the reduction of the poor rates. Yet it would, besides setting so good an example to our great lords and barons, lighten them a little!

Of another Archbishop of Canterbury, viz. Mathew Parker, it is mentioned that Queen Bess, alluding to the want of title of an archbishop's wife, thus addressed his spouse at one of the great banquets given to her Majesty. "And you, Madam I may not call you, and Mistress I am ashamed to call you; so as I know not what to call you, but yet do I thank you." This prelate was profoundly learned, and delighted in antiquarian research. We are indebted to him for the publication of four of our best early English historians, Mathew of Westminster, Mathew Paris, Thomas Walsingham, and Asser, whose Life of King Alfred, Parker caused to be printed in Saxon characters, in order to encourage the study of that language. He published himself the lives of his predecessors in the see of Canterbury. His remains were torn from the grave during the ascendancy of the puritans, and buried in a dunghill: thus we observe that the French revolutionists had not the merit of inventing such brutality; heaping indignity on the insensate corpse, and disgracing the living by a miserable attempt to degrade the dead.

In the life of Walter the first Lord Aston, Mr. Lodge states that "a great treasure of his diplomatic papers has lately been discovered in his family mansion, and a zealous and accomplished descendant from him has promised to open it to the public view." Such documents must throw striking lights upon the foreign affairs in the reign of James I, and especially upon the Spanish negotiations.

From the biography of Algernon Percy we quote a remarkable passage of Clarendon's; but such things may be repeated with impunity, for they are curious to some readers though well known to many. This passage points out the origin of two political designations, since the period when first employed, become very famous in this country. The noble historian says, "the bulk and burden of state affairs, whereby the envy attended them likewise, lay principally on the archbishop of Canterbury, the Earl of Stratford, and the Lord Cottington; the Earl of Northumberland, for ornament; the Lord Bishop of London, by his place, being Lord High Treasurer of England; and the two secretaries, Sir Henry Vane and Sir Francis Windelbank, for service and communication of intelligence. These were reproachfully called the *Juncto*, and enviously, at court, the *Calibinet Council*."

The portrait of James Stuart, Duke of Richmond, represents him in a sort of night dress, made by the skill of the painter to resemble the Roman costume, and a fine greyhound, with a collar adorned with pearls, looking up to his face. This corroborates a tradition, that the duke, when on his travels, was preserved from assassination by a favourite dog which lay in his chamber and roused him from his sleep; in remembrance of which such a collar as is here painted was put about his neck by his grateful master. His Grace was one of the faithful friends who laid the body of the martyred Charles in the grave; and died soon after of grief for the loss of so dear a sovereign.

Our last extract, for the present, shall, for variety's sake, be a specimen of Sir Henry Wotton's poetry, entitled "A Description of Spring; on a Bank, as I sate a Fishing."

And now all nature seemed in love;  
The lusty sap began to move;  
New juice did stir the embracing vines;  
And birds had drawn their Valentines.  
The jealous trout, that low did lie,  
Rose at a well-dissembled fly.  
There stood my friend, with patient skill,  
Attending of his trembling quill.  
Already were the carps poised  
With the swift pilgrim's caubed nest.  
The groves already did rejoice  
In Philomel's triumphant voice.  
The showers were short; the weather mild;  
The morning fresh; the evening mild.  
Joan takes her nest-rubb'd pail, and now  
She trips to milk the sand-red cow;  
Where, for some starchy foot-ball swain,  
Joan strokes a syllabub or twain.  
The fields and gardens were beset  
With tulip, crocus, violet;  
And now, though late, the modest rose  
Did more than half a blush disclose.  
Thus all looked gay; all full of cheer;  
To welcome the new-livered year.

With all its carelessness, there is much of picturesque beauty in this little pastoral description: some of its epithets would redeem a modern poet in the lack-a-daisy-cad style.

#### JACKSON'S AFRICA.

We deem no preface necessary to the continuation of our extracts from Mr.

Jackson's very various and intelligent volume. In a chapter upon trade he says—

"The preparation of leather at Morocco surpasses any thing known in Europe: lion and tiger skins they prepare white as snow, and soft as silk. There are two plants that grow in the Atlas mountains, the leaves of which they use in the manufacture of leather; they are called *tiera*, and *tasaga*. Whether these render the leather impervious, I am not competent to say; every inquiry that I have made at Morocco respecting this beautiful manufacture, has been unsatisfactory. I have always found the manufacturers very guarded, and extremely jealous; but I have often thought that two or three of our leather manufacturers, well versed in their art, and withal of penetrating minds, might contrive to extract the secret from them."

In the way of etymology &c, we find the following curious particulars.

"*Haram*.—This word is called by Europeans *haram* or *seraglio*; but *haram* thus applied, is a barbarism: it signifies *reious*. *Haram* is the correct pronunciation: it signifies a place of safety, that admits of no intrusion."

"The etymology of *muselman* is, a man of peace; from *salem*, peace."

"The word *Koran* conveys the same signification as *Bible*: it means 'the reading,' or 'the book';—*kor*, 'to read'; *el Kateb el Azis*, i. e. 'the dear or beloved book,' meaning thereby the *Koran*."

"*Nile* is a French term, and loses its proper pronunciation and is unintelligible when pronounced by an Englishman to an African; but if written *Neel*, and pronounced by an Englishman, it is intelligible."

Of general information we extract a few miscellanies.

"*Food of the Desert*.—The people, whose interest induces them to cross the desert, (for there are no travellers from curiosity in this country,) obviate the objection to salt provisions, which increases the propensity to drink water, by taking with them melted butter, called *amin*; this is prepared without salt. They also cut beef into long pieces, about six inches long, and one inch square, without fat; these are called *el hudeed*, which are hung on a line, exposed to the air till dry; they then cut them into pieces, two inches long; these are put into (*buckul*) an earthen pot; they then pour the *amin* into the *buckul* till it is covered. This meat and butter, besides being palatable, is comprised in a small compass, and feeds many. When this butter has been thus prepared and kept twelve or fifteen years, it is called *bu-dra*, and is supposed to contain penetrating active medicinal qualities. I have seen some thirty years old.

"*Antithesia, a favourite Figure with the Arabs*.—Mahmoud, sultan of Ocheza in the beginning of the eleventh century, though the son of a slave, was very powerful. He sent to the khalif Alkader, requesting a title suited to his exalted dignity. The latter hesitated; but fearing the power of the sultan, sent him at the expiration of a year the

ambiguous title, *Uly*; i. e. a prince, a friend, a slave. Mahmoud penetrated the khalif's meaning, and sent him immediately 100,000 pieces of gold, with a wish to know whether a letter had not been omitted. Alkaiser received the treasure, and took the hint, instantly dispatching letters patent in full form, creating him *Uly*, which signifies, without equivocation, a sovereign independent prince.

"Itinerant (*tebeebis*) doctors travel through the country to administer to the sick; which, however, are seldom found. They carry over their shoulders a leathern bag, containing their surgical apparatus, which consists of a lancet, a scarifying knife, and a caustic knife, or knife for burning: they scarify the neck, the forehead, or the wrists. The caustic knife is an instrument of very general application. They convert all gun-shot and other wounds, as well as sores, into burns, by heating the knife in the fire, and gently touching the circumference of the wound with it. This produces acute pain; but the Africans bear pain heroically: they say that this method prevents inflammation and festering. They perform, by caustic, extraordinary cures. I imagine this method would not agree with an European body, pampered with a variety of high food and luxurious living.

"The inhabitants of this country break their fast with (*el hassia*) barley-gruel; they grind the barley to the size of sparrow-shot, this they mix with water, and simmer over a slow fire two or three hours. This food is esteemed extremely wholesome, and is antiseptic. The Emperor takes this before he drinks tea in a morning: his father, Seedi Mubamed ben Abdallah, also, who drank none but fine hyson tea, never would drink that beverage till he had first laid a foundation of *el hassia*.

"The Arabs and Shellus, with whom *el hassia* is generally used, urge its salubrity, by reporting that a physician alighted in a strange country, and when he arose in the morning, after performing his matins, he seated himself with some of the inhabitants, and, conversing, asked them how they lived, and with what food they broke their fast? 'With *el hassia*,' was the reply: 'Then, rejoined Esculapius, (*Salam ad alikum*), 'Peace be with you; for if you eat *el hassia* in the morning you have no need of a doctor: and he immediately departed."

Mr. Jackson is a zealous projector of a plan for the gradual civilization of Africa; which embraces the propagation of the christian religion over that quarter of the globe, and the establishment of a vast and lucrative system of commerce. Our limits forbid our entering into the details of this important subject; but we consider it to be well worth the attention of government and the public. Should this not have been felt before, we imagine the following paragraph, which we translate from a Paris paper of last week, will bring it home to the minds of those whom it most concerns.

"The King of France has issued an ordinance, authorizing the establishment of a course of instruction in the Arabic language,

at the *Royal Academy of living Oriental languages*. M. Ellions Boethor, a native of Egypt, is appointed to superintend the pupils. The utility of the Arabic language, both in a commercial and literary point of view, cannot be doubted. It is spoken by upwards of forty millions of men, with whom Europe maintains political relations."

No doubt but France will go on extending its sphere of action in Africa; and its conduct at Senegal shows how much it looks to the advancement of its intercourse with the population. Would it not be wise in us, then, to consider the practicability of Mr. Jackson's more enlarged plan?

"1st. To lay open the interior regions of North Africa to British enterprise—to supply those vast and unexplored countries with British manufactures, with East-India goods, and with colonial produce.

"2dly. To encourage our manufactures, by opening a new market calculated to improve the revenue of the country, to provide employment for the labouring poor, and to enrich the mercantile community; the *genial influence of which sources of prosperity will necessarily diffuse itself through all classes*.

"3dly. To facilitate, through the medium of commerce (*the only medium by which it can possibly be effected*), the exploration of the interior regions of Africa, which have remained to this day a sealed book, notwithstanding the many adventurous expeditions that have been undertaken; by opening a communication with the natives of that vast and little-known continent, and by calling to our aid the co-operation of the native chiefs, by holding out to them the benefits which they will derive from commercial intercourse as a reward for their assistance and exertions in promoting this desirable object."

To effect these purposes a subscription of not more than the tenth of the amount of some of our *enuals*, viz. 100,000*l.* is estimated to be sufficient; and it is added, that

"The spot proposed to be fixed on as the point of communication and commercial depot, between Great Britain and the interior of Africa, is *safe and healthy*: it will afford a direct communication with *Timbuctoo* and the interior regions of *Sudan*, without being subject to the uncertainty of securing the favour and protection of the various sultans and sheiks of the respective territories of the interior, through which the merchants and traders may pass—a measure which would have been indispensable in every plan that has hitherto been suggested for the discovery of those interesting regions.

"The plan now to be adopted, on the contrary, will be subject to none of those impediments and uncertainties; but the merchants and travellers will pass through territories where they need fear no hostility, but will be received with hospitality and attention by the natives, who will give them every assistance and accommodation in their progress through their country."

We have only to repeat, in taking leave of this work, that readers will find in it a great variety of interesting information (not very well arranged) respect-

ing Africa, its geography, language, and customs.

*The Outlaw of Taurus; a Poem: to which are added, Scenes from Sophocles.* By Thomas Dale, of Bene't College, Cambridge, author of "The Widow of the City of Nain." London and Cambridge, 1820. 8vo. pp. 120.

In our publication of Saturday the ninth of October last, we delivered our sentiments upon the Widow of Nain; and extracted several passages, which we thought honourable to the genius of the then anonymous author. The reception of his first work has induced him to present a second; and we are now called to report our opinion upon his acknowledged production. We should have been rejoiced to say, that we noticed a year's improvement in his muse; but impartiality compels us to state, that we do not consider the present as in any way superior to the preceding poem. It certainly displays the same talent; but it also possesses the same inequalities: its beauties are not so prominent, while its imperfections are not less observable; and, in short, we think it perhaps fully as amenable to criticism as its precursor; at the same time, that the composition is more level, and without those redeeming flights, which inspired us with high hopes of the author's subsequent efforts. It is, perhaps, cruel to compare a youthful bard disadvantageously with himself; but *non castigant qui non amant*, is a motto, which Mr. Dale may do us the justice to appreciate; and it is only, we assure him, because we believe him capable of a greater advance, that we seem to speak less favourably of his labours, not intrinsically, but as not having answered our sanguine expectations.

Having said this much, we shall proceed to balance our own remarks, by quoting some very fine lines from the *Outlaw of Taurus*, in which the author breathes the same pure, pious, and elevated spirit, which he has invariably evinced, and which do equal credit to his heart and head.

The poem commences with a noble description of Ephesus, and its Temple, on a day of festival sacred to Diana. Among the votaries is a Nazarene, or Christian Pilgrim;

A work of mercy leads him on  
To seek and save a wandering soul;  
And oh! though joy may cease to warm,  
And Beauty's self forgot to charm,  
No time can chill—so perils move  
The firmness of a father's love!  
Once in the path of Christian truth  
'Twas his to train a generous youth—  
And fondly on his charge he smiled,  
Yea—loved him as an only child.  
Alas! ere yet his work was done,  
Constrained by duty's urgent power—  
The Saint, reluctant—left his son—  
And left him in an evil hour—  
'Reft of his father and his guide  
Too soon his new-born faith was tried—  
Mistled by Glory's meteor-flame—  
He burnt to wear the wreath of Fame,

And win the hero's wanted name;  
His dreams by night—his thoughts by day  
Were all of that delusive ray  
Which beams with radiance—false as fair—  
And leads to darkness and despair.—  
But 'tis a joyless tale to tell—  
Enough—the wily snares of hell  
Were spread around him—and he fell.  
Oh had he rested with the dead,  
Ere from the Christian's home he fled!  
And now he hears the flag of war,  
Where snow-crowned Taurus towers afar;  
And wields the red unhallowed brand,  
And madly leads the robber-band.  
For this—o'er mountain and o'er wild,  
The Father seeks his erring child;  
Though dreary toil—and hostile wrath  
Await him in his tedious path,  
Nought reck he of impending ill,  
When 'tis to work Jehovah's will;  
And oh! how welcome were the grave,  
Should Heaven accord his son to save.—

The renegade differs little from the bandit leaders of romance. He controuls the desperate propensities and inhumanity of his followers; is unhappy and half repentant; and accompanied by one tender and faithful youth, Azor, who turns out to be his beloved Irene in male disguise. Against the robbers, the troops of the government are sent; and just as the old man arrives, a battle is fought, in which the outlaws are victorious. We have here a well-drawn picture of their Captain.

And who, on yon steep crag's rude brow,  
In pensive attitude doth stand?

No conquering pride his looks avow,  
And who that saw would deem him now

The chieftain of the victor-band?  
His crested helmet's flowing pride;

His sword, in carnage deeply dyed;  
His arms, with dust and gore defiled,

Beneath his feet are rudely piled;  
He moves not, and his fiery eye

Rolls wildly round in vacancy;  
Unseen the dead beneath him lying—

Unheard the deep groans of the dying.  
Yet foremost in the desperate fray,

Through the thick legions of the foe,  
His arm shot panic and dismay—

His sabre struck no second blow;  
And chiefs, who never quailed before,

Had braved him once—and braved no more.  
Crowned with triumphant laurels now,

What deep dejection clouds his brow?  
Upon which, the following reflections are

pleas, and from it we select a part of the father's admonition.

What lured thee from the hallowed dome

Of piety and peace,  
Where Truth hath fixed her favourite home—

Where earthly sorrows cease!  
What won thee from the band who seemed

With thine their hearts—their hopes to blend;  
And all were dear—for each was dearest

A Father—a Friend?

Was it the false but specious flame

Of earthly pride—of earthly fame?

Was it the ardour of a soul

That spurred the Gospel's mild control?

Is right here, my son, I deem,

Where is that wild romantic dream?

Where are those joys—so falsely fair;

That ecstasy of glory—where?

Is not thy bosom like the billow

Which warping winds forbid to rest?—

Say, do not thorns corrode thy pillow,

And rankle in thy joyless breast?

Nor thou the end and confession speak,

Enough thy faded looks avow;

I read it in thy withered cheek—

I trace it on thy altered brow—

So calm before—so troubled now!

Think not, with harsh resentful pride

On thy changed looks I coldly gaze;

Those looks my tenderest pity raise

But wake no sterner thought beside;

For in thy Father's heart to thee

Oh how could scorn or sternness be?

Thou wert my hope—my bliss—my pride!

And—save to do Jehovah's will—

I only lived to be thy guide!

In woe or joy—in good or ill—

I loved thee then—I love thee still.

Oh think, my son! how wild and vain

Are all the dreams of earthly pride!

Shouldst thou the height of glory gain,

What countless ills the great betide!

Superior pomp—superior pain—

The madness of th' insatiate brain

That looks on earth with proud disdain,

And sighs for worlds beside!

Where is the meteor flash that shone

O'er Ecstacy and Babylon,

And smote the Persian from his throne?

Where is the self-exalted God?

The Hero of immortal birth—

The Lord of Macedonia—and earth—

Is now a vile and nameless clod.

A few short hours—and they who bowed

The meanest of the servile crowd,

Had spurn'd the mass of lifeless clay,

As on its kindred earth it lay,

In loathsomeness of foul decay.

Great Caesar rode the hour that gave

The free-born Roman for his slave;

And who—for all his sated pride—

Would wish to die as Marius died?

Know—heroes were by heaven designed,

(If heroes men like these we call.)

To rise upon their country's fall,

To gild the grave, and scourge mankind.

And what their guilty toil repays?

That falsehood of dissembled praise

Which Flattery's glowing tongue adorns,

And Vice extols—while Virtue mourns.

Yes—e'en the fame, for which was given

The love of man—the bliss of heaven—

The tale of after times—nay—worse—

Becomes a proverb and a curse.

Say, then, if pomp and high renown,

Thy martial deeds—like theirs—might crown;

Say, wouldst thou wish to share with them

The miseries of a diadem?

Oh spurn, my Son, the hero's name,  
And shun the infamy of fame;  
To thee let nobler praise be given,  
The friend of Man! the Loved of Heaven!

At the risk of refuting our criticism, which we should not be sorry to do, we quote one other extract; a very pleasing contrast between the ostentatious, and the simple worship of the Deity.

For not on proud majestic fane  
(Where tapers glare, and anthems peal,  
And few adore though thousands kneel)

His grace the God of glory deigns;

No—on the meek and lowly breast

Jehovah's eye delights to rest—

Grief's still small whisper He can hear,

And read the mute expressive tear—

And trace the burning thoughts that spring,

Borne upward on Devotion's wing:

No costly fane—no gorgeous shrine,

To Him so loved a temple rear—

So pure—so sacred—so divine—

We have only to add, that as a tale, the *Outlaw* terminates unsatisfactorily; but it seems to have been the author's intention, rather to verify a fact told respecting St. John in Eusebius' History of the Western Churches, and impress a christian and moral lesson from it, than to render the story merely interesting as a narrative; and it is but just to say that he has ably executed this design. Touching the blemishes, we wish to say little; three remarks only shall be adduced in support of our judgment. The first two lines are—

Read the dark veil Oblivion wraps around thee,  
Cheerless and cold as Beauty's virgin shroud.

We presume to think, *Virgin* inapplicable to *thou*: *Virgin* Beauty's shroud would have been intelligible. "*Courtly* dames," also strikes us as a bad phrase for the Ephesian virgins, summoned to do honour to "*Diana's festival* day." The words are not altogether obnoxious, but they are ill weighed—not the best. At the battle's close, we have the following—

How many a youthful heart of flame  
That burnt for conquest and for fame,  
Has withered in eternal gloom,  
And died for glory to the tomb!

With these lines we conclude, as they exemplify all our objections: a heart of flame does not *wither*—does not wither in *eternal* gloom;—and does not then nor at any time *fly* for glory to the tomb; and the whole is an ill-sustained piece of imagery. We still look for far superior things from Mr. Date.

MILAN.

(Concluded from our last.)

The artist has chosen the moment when Jesus thus addresses his disciples:—"Verily, verily, I say unto you, that one of you shall betray me;" and this very selection proves the talent of the painter. It is impossible to describe by words the masterly composition of the picture, or the admirable expression of the heads. Leonardo da Vinci himself relates, that he took the idea of most of his heads from a rough lime wall which faced the window of his study. He used to gaze on this wall until, by the force of his ima-

The outlaw is in this mood, when his saintly parent is brought to him a prisoner. Their colloquy is made the vehicle for the inculcation of many truly christian princ-

gination, the spots with which it was covered assumed the form of heads.

The Palace of Philosophy and Art, formerly the Jesuit College, is deserving of particular notice. It is an extensive building of two stories high, each story being supported by pillars of Baveno-granite, ranged in pairs. The pillars of the first story are Doric, and those of the second, Ionic. A majestic flight of steps leads from one story to the other. This palace is the residence of several men of learning, and artists. The library contains eighty thousand volumes, many of which were selected from the library of the Jesuit cloister. The establishment also contains a collection of twelve thousand medals, an observatory, and an admirable gallery of ancient and modern pictures.

The oil-paintings are ranged in eight apartments, four large and four small, separated from each other by marble pillars. The light descends from the roof, and is softened by white curtains.

One of the principal pictures is the marriage of Joseph and Mary, by Raphael; it contains a great number of figures, and in the back ground appears an octagonal temple. According to the date inscribed on this picture, it was painted in the year 1504, and consequently when the painter was only one and twenty years of age; it appears to have been the first picture in which he divested himself of the stiff manner of his master, Pietro Perugino. In the same year in which this picture was painted, Raphael visited Florence to study from the works of Leonardo, and Michael Angelo. The architectural drawing of the temple is executed in a style seldom met with in Raphael's productions. The picture was brought from Castello, by General Lechi, and sold to the Hospital of St. Lazzaro at Milan, from which the Vice-King Eugene purchased it for sixty thousand lire.

The study of the Saviour's head, from Leonardo's Lord's Supper, was also purchased for three thousand five hundred lire, and likewise an unfinished picture of a Madonna by the same master.

This collection moreover contains many pictures which formerly belonged to the Bolognese gallery. Of these, the most remarkable is Guido Reni's St. Paul and St. Peter, which is beyond doubt the finest production of that master. What energy is displayed in the head of the enthusiastic Paul, and how admirably it contrasts with the gentle expression in the countenance of Peter! Paul is represented standing, and with vehemence of manner, explaining his reasons for preaching the new doctrine to the heathen, and diffusing it over the world; Peter sits in a contemplative attitude; he is undecided, because he imagines his teacher and master came to this world, only for the sake of the Jews. The other principal pictures are a Groupe of Genii, dancing round a tree, by Albano, the painter of infant graces;—*Il patrocinio di Joseph*, with a charming figure of Christ, by the same;—the Woman of Samaria, by Annibal Caracci; and the Woman taken in Adultery, by Augustin Caracci, both highly powerful and expres-

sive;—a large picture by Paul Veronese, the subject of which is, Gregory giving Food to the Poor; among the hungry guests appears the Saviour, and the Pope is sitting on one side; here, as well as in the *Marriage at Canaan*, the painter has introduced himself in the character of an attendant;—an *Annunciation of the Virgin*, by Gio Sanzio d'Urbino, the Father of the Great Raphael;—the Archangel Michael overcoming the Devil, by Marco d'Oggione, a pupil of Leonardo; by a singular accident, the countenance of Satan bears a striking resemblance to that of Napoleon; the picture is remarkable for beauty of colouring. There is a picture here by an unknown artist, which must be extremely old, judging from the gilt ornament on the heads of the figures; the picture represents the four Saints Lewis, Bernard, Clara, and Bonaventura; the heads are painted in a masterly style.

Milan contains several theatres. The principal one is the *Teatro alla Scala*, which is the largest theatre in Italy, and may vie in magnificence with San Carlo at Naples. It was built in the year 1776, after the plan of Piermarini. Though the outside is by no means insignificant, yet it affords no idea of the splendour of the interior. It contains five tiers of boxes besides the gallery: the boxes, which are exceedingly spacious, are separated by partitions of rich coloured damask; in front they have silk curtains, which may be drawn or undrawn. Within them wax candles are sometimes lighted in branch candlesticks with small mirrors behind. The theatre however is in general but sparingly lighted, which renders the stage the more brilliant;—a single chandelier hangs from the centre of the ceiling, and it is drawn up on the rise of the curtain, so that only the proscenium and the orchestra are lighted. At the back of each box is a sofa and a table covered with refreshments.

The theatre *Lentasio* is situated near the Porta di Roma. It is far inferior, in every respect, to *la Scala*. The entrance is wretched, and the interior small;—the fronts of the boxes, of which there are only two tiers, are covered with paltry paper. The stage is narrow, and so extremely low, that the actors walk about like Titans, with their heads towering above the clouds.

[In commencing the series of papers under the title of *Wine and Walnuts*, we beg to state, that it is our purpose to publish them hereafter in a collective form; and therefore that we consider them to be copyright, and as such entitled to protection. It is not our object to debar the periodical press from fair and liberal extracts from the *Literary Gazette*; and we have reason to complain of gross and piratical pillage to an extent, we believe, without precedent, and often committed in a shameful manner, not only without acknowledgement, but partially altered and passed off as their own, by contemporaries, within a few hours of our publication. When we have obtained matter at very considerable cost, and especially original essays, we cannot but deem such conduct unhandsome and unjust; and we in candour prefer our claim to be at least

quoted, for those articles which we procure at quadruple the expense of any weekly journal that ever was published, and through correspondence with every portion of the civilized world.

Of *Wine and Walnuts*, a chapter will be published regularly every week; and from the MSS. which we have seen, we think we may, without boast, promise our readers a treat in this sort of desert.

The papers announced under the title of *The Shadow*, will also appear in due time.]

## Wine and Walnuts.

OR AFTER DINNER CHIT-CHAT.

By a Cockney Grey Head.

### CHAPTER I.

If ever a man possessed a particular bent of mind from some inherent feeling, I verily believe I may claim credence on asserting that I have experienced such an extraordinary faculty. But lest the assumption may appear proudly egotistical—nay, savour too strongly of vanity, in this modest age, be it known, that my pretensions to notoriety for this singular gift, are but on an humble score, being neither more nor less than for possessing an inherent love for the PICTURESQUE.

Now having said thus much, I will endeavour to show how this marvellous faculty had birth—call me EGOTIST, if it be your pleasure, for I am of the old school, and save a world of circumlocution, (being too old now to alter) by persisting to pen my sage observations in the first person—I myself I, having congeniality with my ancient friends, \* Baron M. . . . ., and Mr. C. . . . ., among the other ten thousand innovations, those of IT and WE, as though in this mingling age, every man must make the matter of *propria personae*, and worry his brains to stand before the world after all, like another Tom Fool, his own *smugness*, by writing as though mister some-one else sat at his elbow and prompted every line. Well, gentle reader, I will endeavour to shew thee how this faculty arose in my mind, how far it has been indulged (if it have bounds), what have been its concomitants, and what an unceasing source of happiness it has been from early infancy to the present moment—and what a solace amidst a multitude of cares; for its interest has "grown with my growth, strengthened with my strength," and I may add, has lengthened, through God's goodness, with my thread of life.

A foolish fellow wrote, when I was a boy, a book against religion, and by way of

\* Among these is that innovation which has banished pies from table. The sterling Mr. . . . who has outlived all his family, resides with a worthy matron who keeps a boarding house, she is a little romantic, and he a little fastidious—"Will you take a bit of tart," asks the good lady every day—"No Madam," invariably answers the guest, "but I will take a bit of pie." This is all in good part, and the recurrence, I verily believe, contributes to lengthen his days. I know not two worthier souls than he and the Baron; and both, my seniors by many years, read without spectacles.

poeme, like many a modern coxcomb, lamented being "born amidst the wilds of superstition," saying, "some of the briars and thorns yet stuck about him." Now, I was born in the midst of this bustling metropolis, and, *au contraire*, delight in many of the honest prejudices of my youthful days. Time sanctified the past, and the future day by day burst upon me, always thankful for continuance here, like a bright morning ray that awakened to new action from a happy dream. And when the last sun is destined to set upon me, may I watch its departure with a holy smile, and bless Heaven for my long sojournment in my mortal tenement.

Yes, young men and maidens, I was born more than seventy years ago, and have as distinct a recollection of the appearance of OLD LONDON, of London as it was, as tho' in our vast Panorama, it stood now displayed before my eyes; and the events of the greater part of this long period are to me as of recent date. A Journal, which I have occasionally kept, has helped the powers of reminiscence, so that past images by its aid, like the new mode of perpetuating impressions by the steel cylinder in this stupendous age of invention, are never worn out, but the rather are ever being renewed.—And this, I humbly conceive, is the principal member in that extraordinary machine denominated memory.

My father was a manufacturer, and resided in a part of the metropolis, in the very heart of a cluster of old buildings; his workshops were picturesque and rude, and would have furnished abundant subjects for the pencil of a Jan Steen, a Teniers, a Gerrard Douw, a Brauwer, or Ostade. Plastered walls, grotesque implements for business, nooks crowded with horn glasses, obsolete tobacco-pipes, crazy lanterns, broken pitchers, and all the *arrangé* that constitute the *episodes* to pictures of humble life.

The men who worked on the premises were of a "piece to form a whole," every thing in manners and costume was "fitting"; and though comprising objects unsought or disregarded by the greater part of mankind, yet brought before the eye of taste by such rare geniuses as these, with the charm of graphic art, excite the admiration of such as dwell with interest on "the various scenes of many-coloured life"—of men of mind, however high their sphere. Hence we see such pictorial traits of homely customs, and inferior habits and manners, purchased at an immense price; and the interior of a smithy,† a weaver's garret, or a wheel-wright's shed, forming the choicest ornaments of the palace walls, and these graphic treasures, bordered with massive frames of burnished gold. Such is the charm that the picturesque spreads over the cultivated mind.

In the midst of such a grotesque site, long since laid bare to give place to modern improvement, I passed from infancy to youth—from youth to manhood. Among the

workmen I delighted to end my leisure hours; and during their suspensions from labour, I listened with indescribable interest to their tales of mercurial, and enjoyed their artless controversies, and unsophisticated opinions upon passing events. Never did connoisseur character meet with such a collection of originals as in my father's attic stories. A lounge there was Hogarth's delight; he knew all their private history—and many a foaming can had there been drank to his health, at his expense. He was a great favourite, and addressed each man by the friendly appellation of shop-mate. He had a joke for every one, and sometimes found his match. One and all swore he was the "greatest hinker in the world." But more of him hereafter.

Many a man employed from time to time in the manufactory, had been soldier, sailor, or mariner; and there, during a succession of years, might be met some workman from every county in the land, at his department of the loom. Some sluggard, who, like Hogarth's idle apprentice, sat sleeping at the beam; some unfavoured drudge, with more industry than skill; some songster blythe, that beguiled the long hours of labour; and some silent money-saving wight, that bought his winter candles by the pound—nor "lent to none." And there too worked one genius, the wonder of the shop, and poorest of them all. For there were some of every cast, a multifarious group, from great to little, an epitome of all mankind.

Well do I remember the antiquated workshop on a winter's night, the Mother Ship-ton chimney piece in each corner, with the potatoes baking for the workmen to take home for supper; and some worn out old weaver, keeping each property separate, and giving each as its rind craped a friendly turn.

How many curious prints, old martial songs, and dismal ditties, old even then, now sixty years ago, do I yet remember word for word, posted on the walls—walls which time had smoked into endless fantastic scenes,—grottos, and caves, and landscapes wild, to some of which my young imagination gave a "local habitation and a name," scenes that, verily, I now could paint. And well do I remember the names of some old worthies, inscribed with candle-smoke upon the low plastered ceiling, who had worked on the premises before I was born, and who had been kind to "young master" in his juvenile days, long gone to their humble graves, in ostentatious pomp; followed by the fellow members of a *Burying Club*, in mournful train. Circumstances that excited sympathies and interests in my youthful breast not to be found in novels or romances, wrapping me

† It was the custom among the steady workmen of a manufactory in these days, to subscribe to a Burying Club. I remember several of these fifty years ago. A miniature pattern of the coffin lid used to hang out as a sign at the houses where these institutions were held. The male mourners were furnished with cloaks, and the females with hoods and scarfs. A funeral procession of such was an affecting sight. There were no radicals in these better times.

in reflections that opened my mind to tenderness, and up to this hour have claimed my charitable offices for all honest hard working handicraftsmen and mechanics.

Surely every manufactory of long standing has its history; but what manufactory has had its historian? Perhaps I am the first chronicler of the "simple annals of the poor." The first, at least, who put their history in print. And what if the fates should so ordain, that this my biography should hereafter stand side by side, in Russia binding and gilt leaves, with Plutarch, Bacon, Clarendon, and Johnson, inscribed too on the back with the author's name!!

Yes, every manufactory of long standing has its history, and the oral chronicle of some aged workman is heard with silent attention by the grand children and great-grand-children of Robert or William, Jeffery or Watt, and their skill as workmen, what they could weave in a given time, who could best execute this and that, with all the connoisseurship that belongs to the "art and mystery" of every craft. Their risks by land and sea—for what community has not its wanderers; their pleasures and griefs at home, their prowess with the fist, their lively soler pranks and grave drunken frolics, or marked circumstance, or memorable feat, enough to dub them heroes in their sphere, and fill the thoughts of their admiring posterity with a becoming pride, such as the great are wont to feel when speaking of a Milton or a Pope, a Marlborough or a Hawke; and I verily believe any one of my father's men would as soon have committed sacrilege, as have mutilated the carved name of an old fellow workman, or obliterated the impression of the chalked "hand next the heart," stamped upon the plastered wall by some worthy who had left such memorial when some new freak or misfortune had again urged him to enlist as soldier or marine, or take the bounty for another trip to sea.

I do remember too, some returned no more; others lived to meet again their old colleagues; and then how often have I been delighted to witness the warm and eager shake of the hand all round, and the hearty "welcome shopmate," a term of genuine friendship that always went to my heart.

It was then the looms were still for a while, and he that kept the beer-sec for the week quickly dispatched some willing apprentice urchin to the Black Horse; and soon the clinking of the gallon pewter pot was heard upon the stairs, full to the brim with stout porter, crowned with frothy head, to hail the wanderer's return. These were the doings I was used to see above, whilst another scene, a sort of counterplot, was brewing all-the-while below.

Know then, courteous reader, I am describing the times long past, when customs were homely, when master, alas! I say it! when master, true to the spirit of his age, was only as it were the upper workman of his own factory. The shop was his delight, when escaped from one of the long fits of the gout, which he poor soul was always giving warning to quit, although he took more care to invite that troublesome tenant of his than

† Who can have beheld the picture of the Scottish Distillery, by the inimitable Wilkie, and not enter into this feeling?

tenement, than prudence or the good counsel of his wife did warrant. But when the tormentor was, with the doctor, fairly sent a packing—it was then my father and my mother, at the foot of the stairs, were wont to hold discourse.

She, though liberal and kind and boundless in benevolence, never augured any good when one of these expatriates came back to the manufactory, for sad disorganization then prevailed. Long tales of "hair-breath scapes," seduced industry, who laid her hour-glass upon its side to join the group of gossips, and deep draughts of beer were swallowed as it should seem, for no other purpose but to render curiosity still more thirsty.

How eloquent on these occasions was my mother, "Fye," she would say, and tell my inconsiderate father the hundred-thousandth time, "such doings were not the way to maintain the respectability of the concern; I would not go among them," said the sensible housewife, "your presence only confirms them in their habits of thoughtlessness, and you lessen your reputation by such misplaced indulgence." I think I see him now, with his manly countenance, impatient of reproof, the more impatient because conviction whispered him the admonition was too true. Yet faulty as he was, in this he ever showed a virtue; he never expostulated the matter with my mother, but left her the victor of the argument, and hobbled up to the shop. The temptation was too strong.

The wily rogues, how well they knew the "length of master's foot." "Master," says one and all, "we are right glad to see you amongst us once again—You have had a long bout of it worthy air," and already some attentive wight had wiped a rush-bottomed chair with his shirt sleeve, and another had placed a folded jacket, a footstool for his gouty limb.

My uncle Toby never looked more benevolently on Trim, than did the master of the shop on those good fellows who offered him these attentions, and kind gratulations. No captain was ever more beloved by his crew—and woe to any unlucky wight of the Black Horse, or Chequers, that dared to mention him disrespectfully, for there were some prime boxers in his employ.—None might presume to speak a very word of him but themselves; and then 'twas said in "sober sadness, and soon forgot."

Sometimes affairs, even in the best regulated quarters, will run untowardly. Saturday night would come, and the reflections of next day, when *Idleness* peeped into the pot and beheld the short commons grudged by *Desert*;—an empty pot's a rueful sight to a poor man's good woman and hungry babes at Sunday dinner time. 'Twas then murmurs would be heard against old master, and John or Jerry would join in the reviling, to keep the peace. But these feelings lasted not longer than Monday morn, when resolution led them early and sober to the loom again; and taking opinion in the general, there was not a worthy on the crazy premises that would not have laid "down his life" for the master and commander of the garrison.

(End of Chap. I.)

## ORIGINAL CORRESPONDENCE.

### FATAL ATTEMPT TO REACH THE SUMMIT OF MONT BLANC.

Geneva, August 28.

"Dr. Hemel, a Russian physician, was commissioned by the Emperor to ascend Mont Blanc, in order to make experiments upon the accelerated pulsation of the blood in those high regions: for this purpose, he made his preparations at Geneva, and furnished himself with a great variety of instruments, some of which belonged to Mr. de Saussure. On the morning of the 18th of August, he set out from Chamouny, with three companions, two of whom were English and one a Genevese, and twelve guides. The day was remarkably fine, and there was every probability of the continuance of that heat, which, for some time before, had been greater in this country than had been remembered for many years. By night-fall they reached, without any obstacle, the *Grand Mulet*, a lofty and bare rock, which rises from the midst of the snow, and affords tolerable protection to those persons who are hardy enough to attempt this ascent. They had scarcely made their dispositions for the night, when a thunder storm came on with violent wind and rain, which drenched them to the skin, and rendered it very difficult for them to keep their tent up. The next morning was so misty and cloudy that they thought it dangerous to proceed; and resolving to remain where they were till the weather should alter, they sent two guides to Chamouny for provisions. The next night was much more tranquil than the former had been; and when they were roused by their guides at 2 o'clock in the morning, they found the stars shining bright, and the appearance of the weather upon the whole much improved. Still, as there were clouds about them, they resolved to postpone their departure for two hours:—The Genevese gentleman had suffered so much in the ascent from shortness of breath, that he determined to return, at any rate, to Chamouny; and at 4 o'clock, he set out with two guides on the descent, and Dr. Hemel, with the two other gentlemen, proceeded to ascend; by nine in the morning, they reached the *Grand Plateau*, the last halting place, within an hour and a half's walk of the summit. The horizon was perfectly clear, and the sun was now shining with all its splendour. They were all in the highest spirits. The guides threw down their ladders, declaring, as all danger was passed, that they would no longer be encumbered with them. Dr. Hemel attached a paper to the leg of a carrier pigeon, on which was written, *arrivés à la Cime de Mont Blanc, le 20 d'Aout* a—*heure du matin*, leaving a space for the insertion of the hour when they had actually accomplished their object. They breakfasted, and about 10 set out from the *Grand Plateau*, skirting the ascent towards the summit, the guides leading the way. They had not proceeded far, up to the mid-leg in snow, when they all felt a sudden pressure upon the leg, for which they could not account,

and in an instant—the whole party was overwhelmed by the snow from above, and precipitated to a considerable distance towards the *Grand Plateau*. One of the Englishmen, who was stronger than the rest of the party, was the first to extricate himself, and he saw not a human being near him; others of the party emerged by degrees, one by one. Five guides were still missing; an anxious search was immediately commenced, and a crevice was at length discovered, which they had all narrowly escaped, and into which the guides had fallen. Two of them were happily rescued; but though the search was continued with the utmost hazard for an hour and a half, the other three could so where be found. At the reiterated instances of the rest of the guides, Dr. H. and his companions very reluctantly determined to set forth on their return to Chamouny, which place they reached by 10 o'clock at night."

### ANCIENT SUPERSTITIONS.—No. II.

Among the many kinds of omens used by the ancients may be reckoned *Sneezing*, to which they appear to have paid a very particular observance: indeed divine honours were thought due to it, and Athenæus, in endeavouring to prove that sneezing was sacred, observes, that as the head was generally accounted holy from it being customary to swear by it, so likewise were sneezes that proceeded from it to be revered as holy: in short, Aristotle \* in express terms tells us, that sneezing was considered a deity, *To Hapnaisiōs Suez epistates*. Xenophon † likewise says, that the soldiers unanimously worshipped it as a god. Whether however this be the fact or not, there can be little doubt but that sneezing was in great regard among the ancients; for if a man happened to sneeze at certain times, or on a particular side, this was considered as a sufficient reason for either dissuading them from, or persuading them to, business of the greatest importance. Thus when Themistocles was in the act of offering sacrifice, three beautiful captives were brought to him, and at the same moment, the fire burnt clear and bright, and a sneeze happened on the right hand, upon which the soothsayer Euphrantides, embracing him, predicted the memorable victory which he afterwards obtained ‡. And a similar sneeze happening while Xenophon was making a speech, was the cause of their constituting him general. That the observance of this superstition was very ancient, appears from the virgins in Theocritus §, who thus congratulate Menelaus upon his marriage with Helen:

Οὐκ ἄν' ἄν' αὖ, ἀνὰ τὴν ἐνὶ στήθεσσι  
ἐν τῷ στήθεσσι.

Εὖ Σωκράτης.

Homer ‖ also alludes to this custom, when he thus introduces Penelope rejoicing at a sneeze of her son Telemachus:

- \* Problem. sect. xxxiii. cap. 7.
- † De Expeditione Cyr. lib. iii.
- ‡ Themistocles Vita in Plutarch.
- § Idyll. viii. ver. 16.
- || Odys. viii.

Οὐχ ὁραὸς ἢ μὴ τοῦτο εἰναι τὸν οὐρανόν.

Sneezing it appears, however, was not always a lucky omen, but depended in a great measure on the alteration of circumstances: Theocritus makes the sneezing of the cupids to have been an unfortunate omen to a certain lover:

Σιμυχίδας πρὸς ἑστέον· ἐνὶ πύργῳ.

And according to the scholiast on this passage, τὸν οὐρανόν οἱ μὴ ἰδόντες ἀφιδάμα, ἢ δὲ ὄλκον. Some sneezes are profitable, others prejudicial. When Xenophon was persuading his soldiers to engage the enemy, a sneeze was accounted so dangerous an omen, that they appointed public prayers to expiate it. If any person sneezed between midnight and the following noon, it was fortunate; but if from noon till midnight, it was unfortunate; and Aristotle has endeavoured to explain the reason of this difference. If a man sneezed at the table while they were clearing it, or if another happened to sneeze upon his left hand, it was unlucky; if on the right hand, however, it was lucky. If in the undertaking any business, two or four sneezes happened, it was a lucky omen, and was a sufficient encouragement for a man to proceed in it; if more than four, the omen was neither good nor bad; and if one or three, it was unlucky; and if two men were deliberating on any business, and both of them happened to sneeze together, it was a propitious omen. I shall now conclude this paper with some remarks on spitting.

Spitting was generally considered by the ancients as an action of abhorrence and detestation, and the avorter of omens; thus by spitting into the bosom, it was supposed that fascinations were averted; this custom it is conjectured, was practised in the time of Theocritus, from the following verse of Callimachus, which is cited by the scholiast on Theocritus:

Δαίμων, τοῦ πόθου τὸν ἰσχυρὸν ἔχων.

We must observe, however, that this was done thrice, three being considered a peculiarly sacred number. Hence Dāmonas, who is introduced by Theocritus as representing the behaviour of Polyphemus, having praised himself, adds, that by the advice of old Cottyrius, he had thrice spat into his bosom, to prevent fascination:

Ὅς μὴ βαρύνῃ δὲ τῆς ἐς ἱπὸν ἔκτατα κολύμβῃ.

Ταῦτα γὰρ ἂν γὰρ μὴ Κοττύριος· ἐξιδάδα.

Hence it was usual to reprove those who assumed more than they had a right, by telling them to spit into their bosoms; an example of which occurs in Lucian. In order to avert fascinations from infants, the ancients tied a thread, composed of different colours, about the neck of the child, then spat on the ground, and taking up the spittle mixed with dirt, put it upon the forehead and lips of the infant; and there is evidently

an allusion to this custom in the following lines of Persius §:

Ecce aris, aut metum Divum matertera, cum  
Exemlit puerum: frontemque atque unda labella  
Infami digito, et haurialibus ante soluta.  
Exspiat, urentes oculos inhibere perita.

It was also usual among the ancients to spit three times into their bosoms at the sight of a madman, or one afflicted with an epilepsy; and Theocritus has preserved this custom:

.....τῆς ἐς ἱπὸν ἔκτατα κολύμβῃ.

and this was done, as has been before remarked, in defiance as it were of the omen, and as a mark of the greatest contempt and aversion. And the custom of our modern pugilists spitting in their hands before the commencement of their combat, is no doubt made use of from the superstitious idea that formerly existed, that spitting was the means of averting wickera, and thereby giving a threefold blow to his antagonist. Boys in the north of England have a custom of spitting their faith, or, as they call it, their soul or soul, when required to make assertions in an affair of consequence. The colliers also, in their combinations for the purpose of obtaining an increase of wages, are said to spit upon a stone together, by way of cementing their confederacy: and it is likewise a custom among us, when persons agree in sentiment, or are of the same party, for them to make use of this popular saying, "they spit upon the same stone."

CAIUS.

## ARTS AND SCIENCES.

To the Editor of the Literary Gazette.

Dear Sir,—I send with great pleasure the following extract of a communication which I have received from a friend at Paris.

Paris, Sept. 17, 1820

On Monday last the 11th of this month, a truly singular experiment was repeated in the Academy of Sciences, with complete success, for the purpose of demonstrating the influence of galvanic, or rather voltaic electricity on the magnetic needle. If the wire made to communicate with the two poles of the pile of volta is held over the needle at a small distance, and in a situation parallel to its direction, the needle instantly quits the magnetic meridian, where it is supposed to have remained in equilibrium and at rest. This deviation may extend to 45°. If you place the wire below the needle, a similar deviation is observed, but in a contrary direction; that is, from North to East, if the first has been from North to West; and vice versa. †

§ Sat. ii. ver. 31.

|| Idyll. xx. ver. 11.

By a slip of the pen, my correspondent has written *au dessus*, (below) in both places; undoubtedly, he meant to write *au dessus* (above) in one of them; but which I cannot determine. L.

† The word if again causes uncertainty here; but the result is sufficiently remarkable to excite curiosity, and induce a repetition of the experiment.

The first idea of this experiment is due to M. Oersted; a very distinguished Danish philosopher. It is calculated to interest the friends of science, even without anticipating how it may be at some future time applied. Was not the magnetic needle a mere object of curiosity, long before it directed the engineers in making a survey, or guided the bold navigator across the ocean?

## CONSUMPTION OF SMOKE.

To the Editor of the Literary Gazette.

Sir.—The idea of consuming smoke, whence, if practised on the large scale to which the public attention is at present directed, so much advantage is anticipated, is by no means of recent formation. In the memoirs of the *Academie Royale des Sciences*, &c. for 1686, there is an account of an invention for this purpose by M. Dalesme, an academicien, introduced under the title of "*Reflexions de M. de la Sire sur la machine qui consume la fumee, inventee par M. Dalesme*." This M. (Phillipe) de la Sire, for there were two academiciens of the name, was royal professor of mathematics and architecture, and author of many papers on subjects connected with the sciences in the Memoirs of the Academy, as well as a considerable number of separate works. The principle of Dalesme's contrivance, (which by the way is not very particularly explained in the paper alluded to,) was to make the smoke and flame descend by a tube through the burning charcoal, whereby they (*sic in orig.*) were entirely consumed. Charbon, in the word used here, in allusion to a fire of wood; of course, the meaning is equally applicable to coals, as used in this country. I remain, your constant reader,  
London, Sept. 23d. 1820. J. G.

## LITERATURE & LEARNED SOCIETIES.

FITZDAM, THE SAILOR-PORT.

Our notice of this individual having excited a very strong interest, we have had several letters requesting us to assist in directing and promoting a plan for his benefit, and offering aid in various ways. Nothing could be more grateful to our feelings, than to co-operate in such a duty, and help to rescue so much of genius from poverty and depression. But we had truly stated, that we had no knowledge whatever of the poet, except what his works and our anonymous friend had afforded. We have not at present, even the means of tracing him; and the annexed letter, which we received too late for last week's Literary Gazette only corroborates the truth of our representation; without giving us any clue to the object of our solicitude.

To the Editor of the Literary Gazette.

Sir,—The Harp of the Desert by a Poor

§ See Literary Gazette, No. 168.

§ Idyll. vii. ver. 96.

¶ Problem. sect. xxiii. cap. 11.

† Idyll. vi. ver. 39.

‡ Πάσις ἢ Ἐξ Χαίτης.

Sabor," as mentioned in your last number, was published by us on his own account; and we lament, that notwithstanding its great merits, the sale has been so very limited, that we have not been able to repay the author the expenses it cost him in printing; although, as you truly stated, he is at this time labouring under pecuniary difficulties.

We are, Sir, Your obedient servants,  
 Charing Cross, WHITMORE AND FENN,  
 Sept. 1st, 1820.

We called on Messrs. Whitmore and Fenn, but they knew nothing of the "Whereabouts" of Fitzadam; and we have at this time no other hope, but that this explanation may meet his eye, or the eye of someone who knows him, (perhaps of some of our literary friends about Edinburgh,) and thus lead to his communicating with us; by which, in the usual language of advertisements, we can assure him, he will hear of something to his advantage.

## FINE ARTS.

### ON ENCAUSTIC GLASS PAINTING, BY DR. SCHWIGHAUSEN.

The art of encaustic painting on glass, that is, the art of burning transparent coloured images on glass, was neglected from the beginning of the eighteenth century, so that it may be said to have been lost towards the middle of that century. This could scarcely have happened had not the art of glass-making been so much changed since Kunkel's time, and continual improvements been made in the beauty, clearness, and size of the panes of glass, the utility, novelty, and low price of which caused painted windows to go out of fashion.

It is true there had been always workmen, especially glaziers, who employed themselves in repairing old painted windows, or in composing new ones; but they for the most part made shift with old coloured glass, with which they formed new pictures as well as they could; and they seldom endeavoured to re-discover lost colours. Hence we have in several countries traces of the continuation of glass painting in the eighteenth century, from which some critics have thought themselves authorized to believe that this art never was lost.

In truth, when we reflect that the writings of Kunkel and Leveit upon this art were published, the first at a time when glass painting was still practised, and the latter soon afterwards, we can discover no other reason why we can no longer work after the precepts of those masters, than the softness of our glass at present, and the difference of its component parts, compared with the glass of earlier times.

Before glass was manufactured for economical purposes, there must have been coloured glass; for the first operations in metallurgy must have furnished glass; and, according to Count Caylus, arabesque seem to have been designed on coloured glass, before the use of glass was extensive. But the

idea of making coloured glass windows must have originated with the monks of the western world, who were induced to adorn the churches of their convents with it, from the want of clear window glass. It seems too that the monks were at first in the exclusive possession of the art of preparing the colours, and staining the glass; that in the sequel, as may be conjectured from Leveit's work, the glass painters obtained the colours, or entire coloured plates, from them, which they manufactured in large quantities, or had got made in glasshouses to which they had easy access. Hence perhaps it may come, that till the fifteenth century, little glass painting was done, except for church windows.

At the commencement the glass was coloured through and through, and figures were composed only by joining together several pieces of glass. Afterwards opaque and semi-transparent shadowings were burnt in upon such glass coloured through and through. Still later, the colourless glass was coloured on one side, and where it was necessary, the colour ground off again, till at length shadows were burnt in on one side and colours on the other.

Though by these and various other characteristics it may be easily discovered to what century a glass painting belongs, yet the ancient glass paintings have certain general physical and chemical properties, so that we cannot affirm that our modern artists have recovered the ancient art, unless their paintings on glass possess the same properties. In the present state of chemistry it is easy to prepare and burn in upon glass, a coloured borax glass, or a very fluid lead glass; but as such painting may be easily effaced by muriatic or nitrous acid, or caustic alkali, tests which the ancient glass paintings resist, unless indeed they are too slightly burnt in, such modern glass paintings do not authorize us to infer the re-discovery or the restoration of the ancient lost art.

If therefore the glass paintings of M. Birrenbach\* bear the above mentioned tests, and have, in other respects, the physical properties of those of the ancients, they have a great advantage over those of the manufactories of Berlin, Vienna, and Dresden: but if this is not the case, M. Birrenbach has, like them, only invented a new kind of glass painting. It would be necessary to expose to the same tests all modern glass paintings, particularly those of M. Frank at Munich, M. Diehl at Paris, and M. Egginton at Birmingham, before we can assert that any of them have re-discovered or restored the ancient encaustic glass painting.

The ancients did much with small means; they joined little pieces of glass together to compose their figures. It is seldom that more than three colours are found in one

\* M. Birrenbach is an ingenious artist of Cologne, who asserts that he has recovered the ancient method of glass painting; he proposes to communicate the secret by way of subscription, and wants 200 subscribers at about 10 guineas each. The Prussian government at Cologne has given him 400 dollars by way of encouragement.

piece of glass. The ancient glass painting is almost wholly composed of beautiful smooth metal-like shadowing, which laid on of different thicknesses gives different gradations on the one side; on the other yellow and blue, and consequently green; or red, ground down and left dead white, or painted yellow where the red was ground down; and finally, blackish, brown, or grey shadowing applied behind for darker shades or half transparent tints. The rest consists in optical illusion well applied, and in joining the pieces of glass with lead. We ought not to be surprised that ancient and often very valuable glass paintings, are disfigured by joinings or flaws; the ancients were not more certain or more fortunate in the cooling of the glass than we are.

We meet likewise with paintings on transparent whitish glass, executed in a grey shadowing only, without any other colour, which the French call *en grisaille*. Such pieces are generally painted by great masters, who would not spend their time in the troublesome operation of laying on the colours.

Among the artists who have attempted during the eighteenth century to restore glass painting, and of whom I have any knowledge, is a Dannecker of Strasburg, who, between the years 1750 and 1760, restored some windows in the minster, and some of whose paintings are to be seen in the library of that city; but which in their physical and chemical qualities do not come up to those of the ancients. I remember also to have read of an English artist, who between the years 1780 and 1790, is said to have sold 200 guineas for a glass painting only a few inches high and broad, executed by him. It seems to me that it was Francis Egginton, whose successor I presume to be Raphael Egginton in Birmingham, who is stated to have received a commission for a church in Italy.

Another artist is Mr. John George Böhm of Urach. I have had an opportunity of examining several of his paintings, and have told him personally that several of his colours cannot stand the test of muriatic and nitrous acid. I also pointed out to him a means of avoiding this fault, and he wrote me word that he had afterwards done so. But he knew how to prepare the beautiful sanguine red of the ancients, and to lay on yellow in various gradations from the palest straw to the deepest orange, on the same plate of glass; many that he burnt were one foot high.

As I occupied myself, for my recreation, from 1803 to 1811, in trying to find out the colours of the ancient glass painting, I obtained such satisfactory results that I was sometimes tempted to make them public; but I desisted, because I feared that I might injure meritorious artists, who had spent time and money in acquiring similar knowledge.

I have examined some painted drinking glasses of the manufacture of Mr. Mohr, who, if I mistake not, worked first at Schwelm, then at Dresden, and now in Berlin, and another similar drinking glass, which was shewn me as coming from a Vienna manufactory; and I found that the colours cannot

stand the mineral acids and dye, and in general do not possess the physical and chemical properties of the ancient glass paintings.

The most beautiful, striking, and splendid glass painting of our times, is said to be that of M. Diehl, porcelain manufacturer, at Paris. He has executed paintings, and exhibited them for money, consisting of one piece six feet high and five feet wide, each of which is said to have been four times in the fire. There is only one little drawback, viz. that it is not permitted to view the paintings at a shorter distance than eight feet.

I have not yet seen any of the performances of Mr. Frank in Nuremberg, and am therefore unable to give any account of them. I however consider it as certain, that an artist who has a porcelain or glass manufactory at command will make a more rapid progress than one who is destitute of this advantage.

In the late exhibition of the works of French industry, there were some new specimens, said to be very satisfactory, of the performances of Mr. Mortelque Devilly, who, together with Mr. Golett, is mentioned as a good painter on glass, in a report of Lenoir's in the *Moniteur*, and from this in the *Archives des Découvertes*, for 1811, where their works are described.

Of the works of M. Birrenbach, I have had an opportunity of examining but one picture burnt in on glass. It was of one colour, painted only on one side of the glass, with a brown colour, which was very smooth, without being shining, and of various degrees of transparency, because it was laid in of different thicknesses. By the judicious introduction of the lights, and the force of the shadows, it produced a powerful effect. The colour bore the test with mineral acids, and caustic lye; but it is a colour which is not met with in ancient glass paintings. If M. Birrenbach's other colours possess the first quality, his method probably deserves the preference to others of modern date; but this is still to be examined and determined.

I hardly think, however, that M. Birrenbach will get 200 subscribers at 10 guineas each, unless sovereigns and princes interest themselves to procure for their dominions this new enjoyment, which would be the more desirable if it could restore the ancient solemn gloom to our churches, in which at present every thing appears too light.

## ORIGINAL POETRY.

[By Correspondents.]

FROM THE ITALIAN.

Il piacer della campagna.

Sweet spot! it is not for thy sky of blue,  
'Tis not for thy dewy green,  
That in yonder dell I would rather dwell,  
Than be a jewel'd quene.  
Oh, 'tis not to stray at breaking day,  
While thy flowers are glistening still,

• Scratching in.

† The writer does not seem to be acquainted with several British artists, eminent in this art; some of whose performances have been noticed in the *Literary Gazette*. E.D.

And drink of the stream like a silver gleam  
That floats down thy purple hill.  
But who could gaze on thy evening's rays,  
Who breathe its breath of balin,  
But like a spell feel o'er her steal,  
The hearts' delicious calm?  
And sweeter to rest by yon wood-dove's nest,  
On the heath and the blossomed broom,  
Than sleepless to lie in the canopy,  
Hung round with pearl and plume.

TRISTINO.

### THE EPITAPHES.

A Critique on London Burial Grounds.

A resurrection man, named Joe,  
Did with a brother through the Church-yard go,  
Which two new marble tombs set quite a grace  
on:  
Upon the first, "Here lies," &c. &c.,  
The unbelieving body-snatcher saw,  
And said, "Here no one lies, but the stone-  
mason!"

"That's a wrong epitaph then (quoth his friend),  
But is that juster on the next that's penned,  
All 'Sacred to the Memory' of the dead!"  
"Faith (answered the vile scolding scallard Joe),  
Our Surgeon's Hall, knows 'tis more apropos;  
It left nought sacred else in this grave-bed."  
Hob Goblin.

HOR. Lib. i, Ep. xi, TO BULLATIUS, IMITATED.  
To Dr. J. G. Leath.

What thinks, my Leath, of Horace? what of  
Rome,  
Fam'd through the world for Peter's sacred  
dome?  
What of Versailles, once more the Bourbons'  
court?  
Say, are they less or greater than report?  
Or are they all to Thames and London mean,  
Paris a village, and a ditch the Seine?  
Or is your wish (like Gibbon and Voltaire),  
In some Swiss town, to breathe the Alpine air?  
Or, sick of sailing, and with jolting sore,  
In Shetland would you dwell, to move no more?  
Shetland you know (for Scotchmen meant by  
fate),  
Not Man or Scilly half so desolate:

Yet have I wish'd, even there, for life, my lot,  
My friends forgetting, by my friends forgot,  
Far distant to behold the raging main,  
And ne'er be toss'd upon its waves again.  
But, neither he who rides from York to town,  
Whom mud bespatters, and whom showers half  
drown,

Though hous'd in comfort at the Bear or Bell,  
Would choose for ever at an inn to dwell:  
Nor he, who from the East a cold has caught,  
For whose relief the rocking bath is brought,  
(Though the fierce pest remits, while he is in)  
Would sit for life in water to the chin.  
Nor you, though toss'd by storms to Helvoet, there  
To Dutchmen sell your yacht, and turn Myn-  
heer †.

• HOR. Lib. i. Ep. xi.  
Quid tibi visa Chios, Bullati, notaque Lesbos?  
Quid concinna Samos? quid Cressi regia Sardin?  
Smyrna quid, et Colophon? majora minorave  
fama?  
Cunctaque prae Campo et Tiberino flumine sor-  
dent?

An venit in votum Attalici ex urbis una?  
An Lebedum laudas, odio maris atque viarum?  
Sic Lebedus quid sit, Gabii desertior atque  
Fidenis visus; tamen illic vivere vellem,  
Oblitusque morum, oblitescendus et illis,  
Neptunum procul terrâ spectare furentem.

Who, when the very flies in July sweat,  
Needs wrap in woollen from the head to feet?  
Or in December's snows, and shivering air,  
Wants drawers of muslin for his only wear?  
Or, through a crust of ice, to bathe in Thames?  
Or fires in August, when the dog-star flames?  
And yet, my friend, to him, whose mind is right,  
Florence, and Venice are as needful quire.  
Then, while occasion favours, hasten home,  
And bless the distance between you and Rome;  
Where'er kind Heaven a cheerful hour shall  
send,

To take the gift a grateful hand extend.  
Nor to another year your joys postpone.  
Another year may come, and find you gone;  
But, have it still, (where'er you dwell) to say,  
Not unenjoy'd my years have pass'd away ill.  
If sense and prudence must to ease restore us,  
And not the wat'ry main wide-spread before us;  
Those, who beyond the ocean run, will find  
Their climate chang'd; indeed, but not their  
mind.  
Laborious idleness! from place to place  
In ships and chariots happiness we chase.  
While, what you seek, is here:—is even at Skyre:  
For 'tis, what reason can alone supply §.

H. C.

### STANZAS FOR MUSIC\*.

Non è sempre il mori, come altri crede  
Grave:—anzi è caro a chi contrito è Dio,  
Ogni cura mortal! posta in oblio  
Qual già s'en departì: cotal s'en riede.  
Tasso.

My race is almost run, my days are nearly done,  
Yet my heart still is buoyant, my spirits are  
light;

It is but as the blaze of the dying taper's rays,—  
Life's last vivid flash, ere it fades into night!

In my day spring of youth, with a bosom full of  
truth,

And feelings unwarp'd, or unwither'd by  
wrong;

With every sail unfurled, o'er the waves of the  
world

My bark of existence sped gaily along.

My pilot was Hope, and I fancied I could cope,  
If guided by him with that storm-troubled sea.

† Sed neque, qui Capnâ Romam petit, imbro  
lutoque

Aspersus, vult in caupona vivere; nec, qui  
Frigus collegit, furnos et balnea landat.  
Ut fortunatum plenè præstantia vitam;  
Nec, si te validus jactaverit Auster in alto,  
Idcirco navem trans Ægeum mare vendas.

‡ Incolunt Rhodos et Mitylene pulchra facit,  
quod

Pennula Solistio, campestre nivalibus auris,  
Per brumam Tiberis, Sextili mœnne caninus.  
Dum licet, ac vultum serrat Fortuna benignum,  
Roma laudetur Samos, et Chios, et Rhodos ab-  
sens.

§ Tu, quamcumque Deus tibi fortunaverit  
horam,  
Grata sume mann; neu dulcia differ in annum;  
Ut, quocumque loco fueris, vixisse libenter  
Te dicas:

— Nam si ratio et prudentia curas,  
Non locus effusi latè maris arboris, aufert;  
Cœlestis, non animus, mutat, qui trans mare  
currat

Stronon nos exerceat inertia! navibus atque  
Quadrigis petimus bene vivere: quod petis, lte  
est;

Est Ulubris animus si te non deficit æquus.

• Air—Auld Robin Gray.

Till dashed on Passion's rock, and shattered by the shock,  
I soon found how unskilful a helmsman was he.

But years have flitted past, and tried in many a blast,  
We both have grown wiser and steadier than of yore,

The rack hath o'er us rolled, and now cheerily we hold  
For a haven from whence we shall wander no more!

My days are well nigh done, my goal will soon be won,  
And repose from the buffets of Fortune be mine,

Where Hate, however fierce, or sorrow may not pierce,  
To bid my cold bosom a moment repine.

O, look! I can brook on thy awful front to death,  
And can turn to thee now with a heart void of gloom;—

To him whom Time can bring no balm on its wing,  
There sure must be healing, and rest in the tomb.

ARION.

### SKETCHES OF SOCIETY.

*Letter from a Württemberg Gentleman travelling in Italy.*

*Naples; August 18, 1820.*

In order to escape the bad air, which began to have an effect on my health, I resolved to exchange Rome for Naples. Not only with a view to examine several remains of antiquity, but also to make myself acquainted with the inhabitants of the mountains, I took the road by Velletri, Cora, Sezza, and Piperno, to Terracina. These are still quite ancient Roman towns, built of stone, finely situated about the mountains, and very populous: the open country is very fertile. The inhabitants, though industrious, are miserably poor, which they ascribe to the heavy taxes. They now speak every where with great joy of the Neapolitans, whom they otherwise hate, as much as they do the Romans. They asked me numberless questions respecting the States of Germany, and affirmed that the Germans were very happy, in being able to travel about the world, and gain instruction, which it was impossible for them to do. It is not to be denied that all the experience and knowledge, and therefore the character of this people, are still pretty much those of antiquity; hence the greater quickness of their practical understanding of the affairs of life; but we must infinitely lament the want of cultivation of the reason and the heart, which can only be effected by pure Christianity: As the extracts from the Bible which are given to them in general contain only moral precepts, they know hardly any thing of religion and its objects; and hence the habitually sensual tendency of their lives. In general these people are very orderly and good, especially when they have not been spoiled by too frequent intercourse with travellers. When I came to Terracina,

I was questioned pretty strictly by the police, what I would do at Naples at such a critical time, and why I had passed over the mountains: In the kingdom of Naples I found the people in the midst of rejoicings, sports, and dancing. The first thing I had to do was to put on a tri-coloured cockade, which procured me friendly treatment every where. Not only the towns, but the roads are occupied by a strong military force, as far as Gaeta, where it ceases. At the police office in the latter city, they asked me, "whether the Romans were still asleep, or whether they would soon follow the example of Naples?" and other similar questions. After the sublime and quiet Rome, with its glorious works of art, Naples makes a very disagreeable impression, which is not removed on a nearer acquaintance. What thronging, driving, bustle, and noise! and for what? It is in nature alone, who here pours into the lap of man all her treasures, that we find the Divinity, about whom man gives himself no concern: The theatre, with its forces and its Turkish music, which overpowers all the nerves and senses, is their highest object, though all means are now employed to carry the madness still farther. The religious festivals resemble the ancient Bacchanalia, for they generally play Turkish music, and make a noise for three nights together before the image of the Madonna, and a wooden punchinello vomits out fireworks, which are lighted by a priest. It strikes me as very remarkable, that the farther we advance to the South, the more do the religious festivals resemble the ancient Greek worship. The churches are without steeples, which none but the pious old German feeling, so noble and so great, could erect, as a symbol of the Christian religion, which leads upwards to heaven and immortality. It is with a childish little bell, and the rhythm of a dance, that the people are summoned to appear before the eyes of the Eternal! The music of the mass, which ought to fill the heart with devotion, is still more adapted to the senses than the music of the theatre. The Society of the Carbonari has formed itself into lodges throughout the kingdom, which are now held openly: 60 or 80,000 of them have likewise organized themselves as soldiers, to provide for the public security, and the observance of the constitution in the absence of the regular troops, who are embarked for Palermo. It is a most animated scene when they go to do duty at the principal guard-house. Before are some priests, then the tri-coloured standard, with Turkish music; then the Carbonari, in all kinds of dresses; then the people, increasing like an avalanche as they proceed, rejoicing, and crying, *Emilia la Costituzione, il Re, la Carbonaria!* and we be to him whom they meet, with his mouth shut. White handkerchiefs were, from all the windows, and a stranger in Naples thinks that the city must be destroyed, so great is the tumult; but when they reach the place of their destination, the greatest noise ceases at once, and they all disperse as if nothing had happened. From 20 to 25 pamphlets appear every day, some of which breathe

only vengeance against the late and the present ministers, and against the Sicilians, and they have already given occasion to some bloodshed. There are also three or four journals written with great freedom, Sicily, except Palermo, is quiet, and the whole kingdom is now perfectly safe; for what reason the journals here have complained very bitterly of some articles in German journals, especially the *Algerine Zeitung* (The Universal Gazette, published at Augsburg, one of the most esteemed, and most ably conducted of the continental journals).

E. D.

### THE DRAMA.

**COVENT GARDEN.**—In consequence of those law-suits, which were a joke to nobody but the Lord Chancellor, and a plague to nobody but the lawyers, much discord arose in that temple of harmony the Open House. The season was however far advanced; and it was hoped, that as winter had not far set in till May, it would not prematurely terminate before the end of August. But what are the hopes of man! The shock-takers received the severest of shocks; the scene-shifters could shift no longer; the dancers getting into debt, were likely to be laid by the heels; the musicians came to full stop; singers of the highest calibre could not raise the lowest note; the first *buffos* and *buffas*, became the dullest drabs in the world; and the orchestra cowering together, struck for wages under the leader of the band. Seeing that nothing could be done, as there was nothing in it, the treasurer carefully locked up his iron chest; and the door-keepers finding that the doors could keep themselves when shut, openly walked away.

In this dismal state of things, the managers of Covent Garden Theatre, with really a laudable feeling towards the unfortunate performers at the Italian House, and a praiseworthy anxiety to produce a new source of amusement for the public, engaged the *opera de ballet*, to diversify and enrich for a limited period, the entertainments at Covent Garden. It might be anticipated, that this proof of zeal and diffidence would have been liberally acknowledged by the frequenters of the theatre; but it should seem as if the Ghost of Evil had taken entire possession of at least a portion of the people of this country. Instead of plaudits, hisses were heard; and instead of approbation, opposition was the reward of a laudable exertion to please the British public. We are not in the habit of being grave in such matters as theatrical arrangements; but unless we are prepared to pay homage to a spirit which would soon degrade us into a nation of brutes, and nasty ferocious growling brutes too, we must set our faces against such contemptible and illiberal proceedings as these; against sour and venomous a display of ignorance and discontentedness, as would thus create prejudice and narrow-minded egotism. From the pot-house to the play-house, and from almost the last source of rational amusement

which the curse of politics has left uncontaminated.

On the second night, the little pretty piece 'Jocunde,' got up for the display of the agility and grace of the ballet, was witnessed with much delight; and since then the malcontents have been put down by overwhelming majorities of gratified spectators.

On Thursday, Mr. Horn resumed his station on these boards, as Young Meadows, in Love in a Village. He is, as when he left them, a pleasing, but not a powerful singer. Miss Green was the Rosetta; and occasionally seemed to forget that she had a large theatre to fill with her voice. Both, however, deserve favourable notice. A different ballet was produced, in which the Opera House dancers were well received.

**HAYMARKET.**—*Over the Water*, a farce altered from the French piece *Deuxes et Cahis*, by Mr. T. Hook, has been added to the attractions at this theatre. It is a lively inconsistent thing, and furnishes a few excuses for laughter, though very little ground for critical remark. It may suffice to say, that the recomposer has adapted his materials cleverly to the English taste and fashion, and that the consequence has been, the continued approbation of audiences for a whole week!

## VARIETIES.

Mr. Rabbini, first flute player at the theatre of La Scala at Milan, lately performed at the *Opera Italian* at Paris. The French critics do not speak very highly of his talents.

The celebrated sculptor Thorwaldsen is about to visit Warsaw, to execute a monument to the memory of Prince Joseph Poniatowsky.

There is at present to be seen, at Arbouche, a beautiful phenomenon of nature, arising from stagnate water by the late hot weather. In a basin belonging to a mill-work, stop some time ago from working, the combination of gases, occasioned by the decomposition of the water, has become so powerful that, after dark, its surface appears as if sparkling with fire; and when a stout, or other weighty substance, is thrown in to disturb the fluid, a brilliant bluish flame immediately takes place.—*Provincial Journal.*

*A Hebrew pun, for the benefit of Hebrewists only.*—A Jew not long since failed for a considerable sum, and a meeting of his creditors was of course called. On examining his accounts one of these gentlemen expressed his apprehensions that the bankrupt would be very defective. Indeed, said a brother Israelite, I am sorry to agree with you; he will be defective in *Pe nun* (pay none).

*Pun proceed.*—The facetious Jeremy Keller, one of the oldest and most respectable members of the Irish bar, was once rallied, by a brother barrister, for not prefixing an O to his name. O Keller, Jeremiah O Keller! why, said he, the very sound would give you a claim to *un doubted* antiquity of family. Nay, replied Mr. Keller, I agree with old Alvan, *O datur ambigua.*

*A bull from England.*—In the eighteenth number of the Imperial Magazine, published last month in Liverpool, we have the following passage in a paper on 'Ancient Manners and Customs of the English.' 'The nuns of St. Mary Kingston, in Wilts, were often seen coming forth into the Nymph Hay, with their rocks and wheels to spin, sometimes to the number of seventy; all of whom were *not nuns*, but young girls sent there for education.' So the nuns of St. Mary's were not nuns, according to this Imperial bull-breeder.

*A bull from Ireland.*—A gentleman in a provincial city of Ireland, who had been for a couple of weeks employed on valuation juries, was summoned on the petty jury for the assizes, which unluckily for him commenced on the day the valuations had concluded. He was a good deal vexed at this new intrusion on his time, and in his indignation exclaimed, Why then, is not this too bad! I am here put on this jury, just after having been on juries a fortnight this week.

*A considerate man.*—A basket woman coming out of a market place in a town in Ireland, loaded with a basket full of provisions, met a very parsimonious gentleman, who observed that she was rather heavily laden. Ah! God bless you, sir, answered she, you were always a considerate man, you never break poor women's backs by loading them with your joints of meat.

## METEOROLOGICAL JOURNAL.

SEPTEMBER, 1820.

Thursday, 21.—Thermometer from 37 to 60.

Barometer from 29.64 to 29.60.

Wind S. W. 3 and 4.—Morning clear; the afternoon generally cloudy, with a heavy storm of thunder and lightning about 2 o'clock, with showers of rain and hail: in the evening it became again clear.

Rain fallen, .275 of an inch.

Friday, 22.—Thermometer from 37 to 57.

Barometer from 29.86 to 30.05.

Wind N. W. 1, and W. 2 and 4.—Morning clear, clouds generally passing the rest of the day.

Rain fallen, .175 of an inch.

Saturday, 23.—Thermometer from 43 to 68.

Barometer from 30.17 to 30.15.

Wind S. W. 1 and 4.—Clouds generally passing. A shower of hail about 3 o'clock in the afternoon.

Sunday, 24.—Thermometer from 56 to 66.

Barometer from 29.89 to 29.94.

Wind S. W. 2, and W. 4.—Morning cloudy, with rain in the early part; the afternoon and evening generally clear.

Monday, 25.—Thermometer from 42 to 56.

Barometer from 29.64 to 29.90.

Wind W. 2 and 4.—Cloudy till noon; the rest of the day generally clear.

Rain fallen, .05 of an inch.

Tuesday, 26.—Thermometer from 43 to 52.

Barometer from 29.98 to 30.26.

Wind W. by N. 1, and 4.—Generally cloudy; a little sunshine at times.

Wednesday, 27.—Thermometer from 30 to 52.

Barometer from 30.27 to 30.25.

Wind S. W. 4.—Generally cloudy, with heavy showers of rain at times.

On Monday the 2nd of October, at 37 minutes; 46 seconds after 6 o'clock, the 3rd Satellite of Jupiter will immerse into his shadow, and the same Satellite will emerge at 44 minutes, 54 seconds after 9.

Edmonton, Middlesex.

JOHN ADAMS.

## TO CORRESPONDENTS.

We thank C. A. B. for his letter, which, at any rate, affords matter to "give us pause"; since the migration of such, in our allowance, deserves a whole theatre of others.

The Third Quarterly Part of the *Literary Gazette* for 1820, containing the 13<sup>th</sup> Numbers, from *Midsummer* to last Saturday, is now ready for delivery.

"Solomon Sapience" will always be a welcome correspondent; many accepted articles shall appear as early as possible.

## BOOKS PUBLISHED THIS DAY.

THE LONDON MAGAZINE, No. 10, for October, published by Baldwin, Cradock, and Joy, contains the following articles:—1. *Lord's Word*; 2. *Oxford*; 3. *The Parrot of the Valtandrius*; 4. *Table Talk*, No. IV, On the Present State of Parliamentary Eloquence; 5. *The Garden*; 6. *The Cider Cellar*; 7. *Liebig's Descriptions of Hogarth's Works*, No. 11, *The Rake Progress*; 7. *The Ape*; 8. *Oehlenschlaeger's Correggio*; 9. *Sonnet*, the *Leaves* are falling; 10. *Lochaka* and her Daughter, by Madame de la Motte Fouquet; 11. On the Character and Writings of James Shirley, No. 111; 12. *Star Gazing*; 13. On the Connection between the Character and Poetry of Nations; 14. *The Abbot*, by the author of *Waverley*; 15. *The Collector*, No. VII; 16. *The Drama*; 17. *Reports of Music*; 18. *Gleanings from Foreign Journals*; 19. *Literary and Scientific Intelligence*; 20. *Historical and Critical Summary of Public Events*; 21. *Agricultural Report*; 22. *Commercial Report*; 23. *The usual Literary and Commercial Information*, Tables, &c.

\* The first Number having been reprinted, complete Sets from January may still be procured.

Francis Chantrey, Esq. R. A.

THE NEW MONTHLY MAGAZINE of October 1, will be embellished with a fine Portrait, accompanied by an interesting Memoir of Francis Chantrey, Esq. R. A., and will contain, among other interesting articles:—1. *Remarks on the Abbot*; 2. *Poetical Meditations*, Lord Byron; 3. *On Talking and Talkers*; 4. *Recollections*; 5. *Measure of living in a Country Town*; 6. *On the Poetry of Wordsworth*; 7. *Mr. Ray's second Letter to Mr. Malton on the General Abrogation of Commerce*; 8. *Letters from a New Correspondent*; 9. *Negative Allusions*, Review in a *Gazette*, by Paul Ponder, Gent.; 10. *Voyage from Paris to St. Cloud*, concluded; 11. *The French Revolution judged by its Results*; 12. *Festivals of the Japanese*; 13. *On the Literature and public Education of the Modern Greeks*; 14. *Intelligible Odes*, cheerful Riddles, and gay Sonnets; 15. *The French and Spaniards contrasted*, &c. &c. London: Printed for Henry Colburn and Co. Conduit Street; and sold by Bell and Bradbury, Edinburgh; and J. Cumming, Dublin.

In Royal 8vo. price 10s. 6d. boards.

LIFE OF JAMES CRICHTON, of Glenny, commonly called the Admirable Crichton. With an Appendix of original Papers. By PATRICK FRASER TYTLER, Esq. F. R. S. E. Advocate. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and W. and C. Tait, Edinburgh.

In 8vo. price 12s. boards.

A TREATISE ON THE PLAGUE, designed to prove it contagious, from Facts, collected during the author's residence in Malta, when visited by that Malady in 1813; with Observations on its Prevention, Character, and Treatment: to which is annexed, an Appendix, containing Minutes of the Author's Evidence, given before the Contagious Committee of the House of Commons, accompanied by these Reports. By SIR ARTHUR BROOKE FAULKNER, M. D. Fellow of the Royal College of Physicians, late Physician to His Majesty's Forces, and Physician in Ordinary to His Royal Highness the Duke of Sussex. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 194.

SATURDAY, OCTOBER 7, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*The Miscellaneous Poems of William Wordsworth.* London, 1820. 4 vols. 12mo.

We merely take up this work to notice it as a new, neat, and portable edition of all Mr. Wordsworth's published poems, except *The Excursion*, and a few small pieces. There are also some poetical additions, but not of a very prominent character; and some prose strictures upon composition, criticism, and English bards, which offer much food for reflection, though strangely unconnected in form, and still more strangely inserted under the title of "Prefaces" at the ends of the volumes.

Our readers are aware that we have not the felicity to be devoted worshippers at the shrine of that sect, among whom Mr. Wordsworth is so distinguished an apostle. It is our melancholy fate to be but temperate admirers of what has been called the *Lake School*; while at the same time, we acknowledge most of their principles to square with the true and genuine gospel of poetry, and confess many of their beauties, even in practice. But we have thought them mistaken in some very essential points, and never can be persuaded to relish as grand, what is mean; as natural, what is affected; and as exquisitely simple, what is ludicrously puerile.

As it is not our purpose, however, to enter upon any critical dissertation on this occasion; and as Mr. Wordsworth's last production was so much in unison with our minds, as to cause us to forget some of our ancient antipathies, if not to make converts of us; we shall now content ourselves with recommending these volumes, and quoting two or three of the minor pieces, which (without referring to former separate publications, but trusting to our memories) appear most novel in their contents.

September, 1819.

The sylvan slopes with corn-clad fields  
Are hung, as if with golden shields,  
Bright trophies of the sun!  
Like a fair sister of the sky,  
Unruddied deth the blue Lake lie,  
The Mountains looking on.

VOL. IV.

And, sooth to say, yon social Grove,  
Albeit uninspired by love,  
By love untaught to ring,  
May well afford to mortal ear  
An impulse more profoundly dear  
Than music of the Springs.  
For that from turbulence and heat  
Proceeds, from some narrow nest  
In Nature's struggling frame,  
Some region of impatient life;  
And jealousy, and quivering strife,  
Thereto a portion claim.

This, this is holy!—while I hear  
These vesper of another year,  
This hymn of thanks and praise,  
My spirit seems to mount above  
The anxieties of human love,  
And earth's precarious days.  
But list!—though winter storms be nigh,  
Unchecked is that soft harmony:  
There lives Who can provide  
For all his creatures; and in Him,  
Even like the radiant Seraphim,  
These Choristers confide.

Upon the same occasion.

Departing Summer hath assumed  
An aspect tenderly illumed,  
The gentlest look of Spring;  
That calls from yonder leafy shade  
Unfaded, yet prepared to fade,  
A timely carolling.

No faint and hesitating trill,  
Such tribute as to Winter chill  
The lonely red-breast pays!  
Clear, loud, and lively is the din,  
From social Warblers gathering in  
Their harvest of sweet lays.  
Nor doth the example fail to cheer  
Me, conscious that my leaf is near,  
And yellow on the bough:—  
Fall, rosy garlands, from my head!  
Ye myrtle wreaths, your fragrance shed  
Around a younger brow!

## SONNETS.

Ere's lingering clouds extend in solid bars  
Through the grey west; and lo! these waters,  
stealed

By breezeless air to smoothest polish, yield  
A vivid repetition of the stars;  
Jove—Venus—and the ruddy crest of Mars,  
And his fellows, beautifully revealed  
At happy distance from earth's groaning field,  
Where ruthless mortals wage incessant wars.  
Is it a mirror?—or the nether sphere  
Opening its vast abyss, while fancy feeds  
On the rich show!—But list! a voice is near;  
Great Pan himself low whispering through the  
reeds.

"Be thankful then; for, if unholty deeds  
Ravage the world, tranquillity is here!"

Oxford, May 30, 1820.

Ye sacred Nurseries of blooming Youth!  
In whose collegiate shelter England's Flowers  
Expand—enjoying through their vernal hours  
The air of liberty, the light of truth;

Much have ye suffered I from Time's gnawing  
tooth,  
Yet, O ye Spire of Oxford! Domes and Towers!  
Gardens and Groves! your practice overpowers  
The soberness of Reason; 'till, in sooth,  
Transformed, and rushing on a bold exchange,  
I slight my own beloved Cam, to range  
Where silver Isis leads my striding feet;  
Pace the long avenue, or glide adown  
The stream-like windings of that glorious street,  
—An eager Novice robed in flutt'ring gown!

Oxford, May 30, 1820.

Shame on this faithless heart! that could allow  
Such transport—though but for a moment's  
space:  
Not while—to aid the spirit of the place—  
The crescent moon cleaves with its glittering  
prow  
The clouds, or night-bird sings from shady  
bough;  
But in plain day-light—She, too, at my side,  
Who, with her heart's experience satisfied,  
Maintains inviolate its slightest vow.  
Sweet Fancy! other gifts must I receive;  
Proofs of a higher sovereignty I claim;  
Take from her brow the withering frowns of Eve,  
And to that brow Life's morning wreath restore:  
Let her be comprehended in the frame  
Of these illusions, or they please no more.

June, 1820.

Fame tells of Groves—from England far away—  
Groves that inspire the Nightingale to trill  
And modulate, with subtle reach of skill  
Elsewhere unmatched, her ever-varying lay;  
Such bold report I venture to gain say:  
For I have heard the choir of Hammond thrill  
Chanting with indefatigable bill;  
While I bethought me of a distant day;  
When, haply under shade of that same wood,  
And scarcely conscious of the dashing oars  
Plied stealthily between those willowy shores,  
The sweet-souled Poet of the Seasons stood—  
Listening, and listening long, in rapturous mood,  
Ye heavenly Birds! to your Prolegomena.

MR. DAWSON TURNER'S TOUR IN NORMANDY.

Having in our last Number entered so copiously into a view of this pleasing publication, we shall now deem little more necessary than to pursue our task of extracting a few of the striking or entertaining anecdotes contained in the second volume, which is devoted chiefly to Lower Normandy; though besides Caen, Falaise, and Lisieux, we have some interesting notices of Jumièges, Gisors, Evreux, &c. At St. Georges de Bocherville, the original seat of the Tanquerville family, we are informed there is still a charter with the seal of Cœur de Lion attached to it in red wax and in fine preservation. The seal, on one side, represents the king seated upon his throne, with a pointed beard, having his crown on his head, and a sword in one hand, and sceptre in the other: on the other side he is on horseback, with his head covered

\* Walsingham is the country alluded to.

with a cylindrical helmet, surmounted with a very remarkable crest, in the form of a fan: on his shield are plainly distinguishable the three lions of England.

Of Junieges we find the following account with pain: it is a lesson to be sure to all ages and to every people, a touching one to pride and pomp and ambition; but still it is distressing to see it taught by brutality and ignorance in times which we venture to call enlightened.

"The lofty towers of the abbey of Junieges are conspicuous from afar: the stone of which they are built is peculiarly white; and at a distance scarcely any signs of decay or dilapidation are visible. On a nearer approach, however, the Vandalish of the modern French appears in full activity. For the pitiful value of the materials, this noble edifice is doomed to destruction. The arched roof is beaten in; and the choir is nearly levelled with the ground. Two cart-loads of wrought stones were carried away, while we were there; and the workmen were busily employed in its demolition. The greater part too of the mischief appears recent: the fractures of the walls are fresh and sharp, and the fresco paintings are unchanged.—Had the proud abbatial structure but been allowed to have existed as the parochial church of the village, the edifice might have stood for ages; but the French are miserably deficient in proper feeling; and neither the historical recollections connected with Junieges, nor its importance as a monument of architectural antiquity, could redeem it from their tasteless selfishness. In a few years, its very ruins will have perished; and not a wreck will remain of this ancient sanctuary of religion and of learning.

It was in the year 654 or 655, that St. Philibert, second abbot of Rebas, in the diocese of Meaux, founded this monastery."

We have heard of equally unfeeling and sacrilegious dilapidations upon some of the finest monuments in England, within these few years. But what perhaps inclines us to lament for Junieges in particular, is, that it was truly an institution for the encouragement of literature; since "the records of the monastery contain a curious precept, in which Abbot Godfrey, about the middle of the 11th century, directs that prayers should be offered up annually upon a certain day, *pro illis qui dederunt et fecerunt libros*." Nobody prays for us poor book-makers now a days; and we fear that booksellers and publishers are not so saintly as the holy father who succeeded St. Philibert.

The next abbey which has attracted us in a peculiar manner, from the author's researches, is St. Evrou, or St. Evroul, one of four Benedictine monasteries within the diocese of Lisieux. This was "the sanctuary where Orlericus Vitalis, to use his own expressions, 'delighted in obedience and poverty.'—This most valuable writer was an Englishman; his native town being Attingham, on the Severn, where he was born in the year 1075. He was sent to school at Shrewsbury, and there received the first rudiments, both of the *humanities* and of ecclesiastical education. In the tenth year of his

age, his father, Orlericus, delivered the boy to the care of the monk Rainaldus. The weeping father parted from the weeping son, and they never saw each other more. Orlericus crossed the sea, and arrived in Normandy, an exile, as he describes himself, and 'hearing, like Joseph in Egypt, a language which he understood not.' In the eleventh year of his age he received the tonsure from the hands of Mainierius, the abbot of St. Evroul. In the thirty-third year of his age he was ordained a priest; and thenceforward his life wore away in study and tranquillity. Aged and infirm, he completed his *Ecclesiastical History*, in the sixty-seventh year of his age; and this great and valuable work ends with his auto-biography, which is written in an affecting strain of simplicity and piety.—The Ecclesiastical History of Orlericus is divided into parts: the first portion contains an epitome of the sacred and profane history of the world, beginning with the incarnation and ending with Pope Innocent II. The second, and more important division, contains the history of Normandy, from the first invasion of the country, down to the year 1141. Though professedly an ecclesiastical historian, yet Orlericus Vitalis is exceedingly copious in his details of secular events; and it is from these that his chronicle derives its importance and curiosity. It was first published by Duchesne, in his collection of Norman historians, a work which is now of rare occurrence, and it has never been reprinted.

"Valuable materials for a new edition were, however, collected early in the eighteenth century, by William Bessin, a monk of St. Ouen; and these, before the revolution, were preserved in the library of that abbey. Bessin had been assisted in the task by Francis Charles Dujardin, prior of St. Evroul, who had collated the text, as published in the collection of Norman historians, with the original manuscript in his own monastery, to which latter Duchesne unfortunately had not access, but had been obliged to content himself with a copy, now in the Royal Library at Paris. It is to be hoped, that the joint labours of Bessin and Dujardin may still be in existence, and may come to light, when M. Liquet shall have completed the task of arranging the manuscripts in the public library at Rouen. The manuscript which belonged to St. Evroul, and was always supposed to be an autograph from the hands of Orlericus Vitalis himself, was discovered during the revolution among a heap of parchments, thrown aside as of no account, in some buildings belonging to the former district of Laigle. It is now deposited in the public library of the department of the Orne, but unfortunately, nearly half the leaves of the volume are lost. The earliest part of what remains is towards the close of the seventh book, and of this only a fragment, consisting of eight pages, is left. The termination of the seventh book, and the whole of the eighth, are wanting. From the ninth to the thirteenth, both of these inclusive, the manuscript is perfect. A page or two, however, at the end of the work, which contained the author's life, has been torn out.—At the

beginning of the sixteenth century, the manuscript was complete; for it is known that, at that time, a monk of St. Evroul made a transcript of it, which extended through four volumes in folio. These volumes were soon dispersed. Two of them found their way to Rouen, where they were kept in the library of St. Ouen: the other two were in that of the abbey of St. Maur de Glanfeule, on the Loire. A third, though incomplete, copy of the original manuscript was also known to exist in France before the revolution. It formerly belonged to Coslin de Cambort, bishop of Metz, by whom it was presented, together with four thousand manuscripts, to the monks of St. Germain des Prés at Paris. But the greater part of the literary treasures of this abbey fell a prey to the flames in July 1793, and it is feared that the copy of Orlericus perished at that time.

"The original code of St. Evroul, was discovered by M. Louis Dubois, whom I have already mentioned in connection with the ruins of Neomagus. He is an antiquary of extensive knowledge and extraordinary zeal. His *History of Lisieux*, which he has long been preparing for the press, will be a work of great curiosity and interest."

This gentleman allowed Mr. Turner to copy an original letter from the Princess Borghese, Buonaparte's sister, to the Empress Marie Louise, which fell into his hands as librarian of Alençon. We transcribe it *literatim et punctatim*, as a specimen of the talents of no mean branch of the Napoleon family.

"*Madame et tres chere Sœur,*  
je recois par la Prince Aldobrandini la lettre de V. M. et la belle tasse dont elle a daigné le charger pour moi au nom de L'empereur, je remercie, mille fois votre aimable bonté, et j'ose vous prier ma tres chere sœur d'être auprès de L'empereur l'interprete de ma reconnaissance pour cette marque de souvenir.—Je fais parler beaucoup le Prince et la Princesse Aldobrandini sur votre santé, sur votre belle grossesse, je ne me lasse pas de les interroger, et je suis heureuse d'apprendre que vous vous portez tres bien, que rien ne vous fatigue, et que vous avez la plus belle grossesse qu'il soit possible de desirer, combien je desire chere sœur que tous nos vœux soient exaucés, ne croyez cependant pas que si vous nous donnez une petite Princesse je ne l'aimerai pas. non, elle nous sera chère, elle ressemblera à V. M. elle aurait sa douceur, son amabilité, et ce joli caractère qui la fait chérir de ceux qui ont le bonheur de la Connaître—mais ma chère sœur j'ai tort de m'appesantir sur les qualités dont serait douée cette auguste princesse, vous nous donneriez d'abord un prince un petit Roi de Rome, jugés combien je desire nos bons toscans prient pour vous, ils vous aiment et je n'ai pas de peine à leur inspirer ce que je sens si vivement.

"Je vous remercie ma tres chere sœur de l'intérêt que vous prenez à mon fils, tout le monde, dit qu'il ressemble à L'empereur, cela me Charmé il est bien portant a present, et j'espère qu'il sera digne de servir sous les drapeaux de son auguste oncle.—adieu ma chère sœur soyez assés bonne pour Conserver un souvenir à une sœur qui vous est

tendrement attachée. Napoléon ne cesse de lire la lettre pleine de bonté que V. M. a daigné lui écrire, cela lui a fait sentir le plaisir qu'il y avait à savoir lire, et l'encouragement dans ses études—je vous embrasse et suis,

"Madame et très chère Sœur  
de V. M.

"La plus attachée  
et affectionnée Sœur  
"ELISA."

By way of interlude between the acts of grandeur we may quote that

"Norman cider is famous throughout France: it is principally, however, the western part of the province that produces it. Throughout the whole of that district, the lower classes of the inhabitants scarcely use any other beverage. Vines were certainly cultivated, in early times, farther to the north than they are at present. The same proofs exist of vineyards in the vicinity of Caen and Lisieux, as at Junieges. Indeed towards the close of the last century, there was still a vineyard at Arzenge, only four miles south-east of Caen: and a kind of white wine was made there, which was known by the name of *Vin Hart*. But the liquor was meagre; and I understand," says Mr. Turner, "that the vineyard is destroyed." Upon the subject of the early use of beer in Normandy, tradition is somewhat indistinct. The ancient name of one of the streets in Caen, *rue de la Cerroisier*, distinctly proves the habit of beer-drinking; and when Tacitus speaks of the beverage of the Germans, in his time, as *honor ex hordeo vel frumento in quantum similitudinem vini corruptus*, it seems highly improbable but that the same liquor should have been in use among the cognate tribes of Gaul. Brito, however, expressly says of Flanders, that it is a place where,

Raris ævola locis facit umbram, vinea nequam:  
Indigenis potus Thetidis miscetur avena,  
Ut vice sit vini multo confecta labore.

And the same author likewise tells us, that the Normans of his time were cider drinkers.—  
..... *Sicæneque potatrix*  
*Algin tumentis* .....

Non tot in autumnol rebus Algen tementis  
Unde liquore solat sicæne sibi Nestora gratum.

"Huet is of opinion, that the use of cider was first introduced into Neustria by the Normans, who had learned it of the Biscayans, as these latter had done from the inhabitants of the northern coast of Africa."

We must now return to Olericus Vitalis, from whom the author has copied some details relative to the death of William the Conqueror, not generally known to the English reader; and some indeed which are quite new to us.\*

About a mile from Caen is the village of St. Germain de Blancherie; from the quarries of which, as Stow informs us, the stone was brought for the building of London Bridge, Westminster Abbey, and many other public edifices in this country.

At Bayeux our travellers saw the famous tapestry known by the name of that town. Mr. Turner remarks on the incorrectness

with which the French artists have copied this very curious piece of historical needlework, but teaches us to expect a very different work from the hands of Mr. C. A. Stothart,\* who has been employed by the Antiquarian Society to make a fair simile of the whole. Of the tapestry Mr. Turner gives us a very interesting account, which we transcribe.

"Till the revolution the tapestry was always kept in the cathedral, in a chapel on the south side, dedicated to Thomas à Becket, and was only exposed to public view once a year, during the octave of the feast of St. John, on which occasion it was hung up in the nave of the church, which it completely surrounded. From the time thus selected for the display of it, the tapestry acquired the name of *le toile de Saint Jean*; and it is to the present day commonly so called in the city. During the most stormy part of the revolution, it was secreted; but it was brought to Paris when the fury of vandalism had subsided. And, when the first Consul was preparing for the invasion of England, this ancient trophy of the subjugation of the British nation was proudly exhibited to the gaze of the Parisians, who saw another Conqueror in Napoléon Bonaparte; and many well-sounding effusions, in prose and verse, appeared, in which the laurels of Duke William were transferred, by anticipation, to the brows of the child and champion of Jacobinism. After this display, Bonaparte returned the tapestry to the municipality, accompanied by a letter, in which he thanked them for the care they had taken of so precious a relic. From that period to the present, it has remained in the residence appropriated to the mayor, the former episcopal palace; and here we saw it.

It is a piece of brownish linen cloth, about two hundred and twelve feet long, and eighteen inches wide, French measure. The figures are worked with worsted of different colours, but principally light red, blue, and yellow. The historical series is included between borders composed of animals, &c. The colours are faded, but not so much so as might have been expected. The figures exhibit a regular line of events, commencing with Edward the Confessor seated upon his throne, in the act of dispatching Harold to the court of the Norman Duke, and continued through Harold's journey, his capture by the Comte de Ponthieu, his interview with William, the death of Edward, the usurpation of the British throne by Harold, the Norman invasion, the battle of Hastings, and Harold's death. These various events are distributed into seventy-two compartments, each of them designated by an inscription in Latin. Ducarel justly compares the style of the execution to that of a girl's sampler. The figures are covered with work, except on their faces, which are merely in outline. In point of drawing, they are superior to the contemporary sculpture at St. Georges and

elsewhere; and the performance is not deficient in energy. The colours are distributed rather fancifully: thus the fore and off legs of the horse are varied. It is hardly necessary to observe that perspective is wholly disregarded, and that no attempt is made to express light and shadow.

"Great attention, however, is paid to costume; and more individuality of character has been preserved than could have been expected, considering the rude style of the workmanship. The Saxons are represented with long mustachios: the Normans have their upper lip shaven, and retain little more hair upon their heads than a single lock in front.—Historians relate how the English spies reported the invading army to be wholly composed of ecclesiastics; and this tapestry affords a graphical illustration of the chroniclers' text. Not the least remarkable feature of the tapestry, in point of costume, lies in the armor, which, in some instances, is formed of interlaced rings; in others, of square compartments; and in others, of lozenges. Those who contend for the antiquity of Duke William's equestrian statue at Caen, may find a confirmation of their opinions in the shape of the saddles assigned to the figures of the Bayeux tapestry; and equally so in their cloaks, and their pendant braided tresses.

"The tapestry is coiled round a cylinder, which is turned by a winch and wheel; and it is rolled and unrolled with so little attention, that if it continues under such management as the present, it will be wholly ruined in the course of half a century. It is injured at the beginning: towards the end it becomes very ragged, and several of the figures have completely disappeared. The worsted is unravelling too in many of the intermediate portions. As yet, however, it is still in good preservation, considering its greatness, though, as I have just observed, it will not long continue so. The bishop and chapter have lately applied to government, requesting that the tapestry may be restored to the church. I hope their application will be successful."

At Bayeux there is the following legend: "Once upon a time, the wicked canons of the cathedral murdered their bishop; in consequence of which foul deed, they and their successors for ever, were punished, by way of penance, annually to send one of their number to Rome, there to chant the epistle at the midnight mass. In the course of revolving centuries, this vexatious duty fell to the turn of the canon of Cambremér, who, to the surprise of the community, testified neither anxiety nor haste on the occasion, Christmas-eve arrived and the canon was still in his cell: Christmas-night came, and still he did not stir. At length, when the mass was actually begun, his brethren, more uneasy than himself, approached him with his delay; upon which he muttered his spell, called up a spirit, mounted him, reached Rome in the twinkling of an eye, performed his task, and, the service being ended, he stormed the archives of the Vatican, where he burned the compulsory act, and then returned by the same conveyance to Bayeux, which he reached before the mass was com-

\* The son of our eminent academician, and possessed of talents not unworthy of his lineage: we certainly anticipate a work of the most perfect kind from his great abilities.—Ed.

\* These we shall insert in our next Number. Ed.

pleted, and, to the unspeakable joy of the chapter, announced the happy tidings of their deliverance."

This story belongs to too many places to be worth repeating, were it not for the odd Latin distich, which is preserved as having been extemporized by the demon as he was flying over the Tuscan sea, and by which he thought to get his rider to the bottom of it. The verses read both backwards and forwards.

*Signa te, signa, tenerè me tangis et angis;  
Roma tibi subito motibus ibit amor.*

We have now occupied as much of our limits as we can spare to this agreeable work; and have only to add, that the author speaks very highly of Mr. Colman's Norman Antiquities, and also of a History of Anglo-Norman Poetry compiled by the Abbé de la Rue, and now ready for the press. The subject is unquestionably one of deep interest.

#### PARIS.

In the present dearth of new publications, while we take the opportunity of filling our Journal with a greater proportion of miscellaneous matter than of our staple, Review, a slight work on the amusements of the French capital may be allowed a slight notice. It is entitled "An Appendix to the Descriptions of Paris," and written by Madine Domeier, a German Lady\*. Were we not most liberal critics and gallant chevaliers, we might say that it reveals both its foreign and female origin; but as we want nothing from it but a few paragraphs to amuse our readers, we shall leave the worthy authoress in full possession of all the consequence which authorship gives; and neither state that she treats of trite subjects, nor that she takes very often very erroneous views of them. It is with the better parts of Mad. Domeier's appendix that we shall concern ourselves; and thus intending, we shall commence with an extract, which, whatever her own merits as a traveller may be, evinces a good deal of discrimination in regard to the merits of other tour writers.

"The limits," she tells us, "of the human intellect are such, that the most accomplished traveller will only be able to impart useful information on a certain number of objects which fall in the immediate sphere of his own particular knowledge. Large works, therefore, on foreign countries, discussing a variety of heterogeneous matters, often contain compilations, collected without taste, and opinions, formed without proper judgment. Such works are perhaps more profitable to write than to read; but the worst is, that they tend to widen the breach between different nations. If travellers, therefore, contented themselves with communicating such observations only as their talents and pursuits qualify them to make with correct-

ness and veracity, fewer prejudices would be propagated, and nations would judge each other with more equity."

This is all very true, except that we exceedingly doubt the notion that such laborious productions as are here described, are "more profitable to write than to read."

We believe, that in this respect, the profit is perfectly equal, for O cannot be graduated. Mrs. Duncieir visits Paris, and during a few weeks, runs about to see every thing, just like other folks. But what other folks have generally limited to the benefit of their private friends, reserved to enliven their conversations and lengthen their stories, this more liberal lady has chosen to unlock to the public at large. Now, we will acknowledge after all, that her offence is not heinous; for we consider this to be a fairer course than that of boring us individually, in *propria persona*, with the tales and observations gathered in excursions to Margate or to Paris. A printed encroachment upon our patience can be dismissed at any moment without rudeness; but a *viva voce* communication is a favour not easily got rid of consistently with politeness. And again, we may be sure not to read a tiresome book twice, but we have no security against being obliged to listen to the same dull narration of common place facts and extraordinary nothings half a dozen of times. These arguments are all we can alledge in support of Mad. Domeier's literary labours; and we assure the good-natured world, that it is not without considerable difficulty, that we have found so much to plead for them. At page 19, we read as follows:—

"On Saturday morning I visited some shops in the rue Vivienne, which is the Bond-street of Paris. It seems that the transactions between vender and purchaser are become intricate and difficult of late. Many English travellers, from having been formerly too liberal in their dealings with French tradespeople, who no doubt often abused it, are now verging to an opposite extreme, and for fear of being duped, hardly ever buy any thing without long and tedious bargaining. The French, on their part, regulate their demands accordingly, asking frequently a third more than they intend to take, all which proceedings make shopping laborious in France."

This is a just picture of some of our country people: are the feelings and manners of Britons changing at home and abroad?

Among the spectacles, Mrs. D. went to Mr. Comte's little Theatre. "He is an admirable ventriloquist, and performed some scenes with an invisible neighbour to the great delight of the company, by no means very select. When the curtain was drawn up a second time, a man was seen walking on the ceiling, dressed like a fly, who was called *homme-mouche*. After he had taken some turns backwards and forwards he threw off his disguise, and danced on a rope with his feet upwards, in which awk-

ward position he prepared and ate a plate-full of salad, and drank several glasses of wine. There is no doubt that it must be extremely difficult to go through this evolution; but it had better have been impossible, as Dr. Johnson said of a difficult and unharmonious piece of music."

Our fair informant is somewhat addicted to the fantastical. When gratified, there are no bounds to her admiration. *Ex. gr.*—

"The gardens of the Tuileries, planned by the famous Le Notre, are majestic beyond conception. The imagination may please itself in fancying these strait and long avenues, the limits of which no naked eye can perceive, as being infinite, and thus their regularity is not monotonous, but produces an imposing grandeur."

"At the end of the performance (of the *Misanthrope*) some verses in praise of M. de Molière were thrown from the pit on the stage, with cries addressed to the actors, 'Lisez! lisez!' and on their non-compliance with this peremptory demand, some little disturbance arose in the pit, which was, however, immediately quelled by one of the performers coming forward and saying to the audience, 'Messieurs, nous n'avons pas la permission de lire des écrits qu'on jette sur le théâtre.'"

At the Garden of Plants "one of the enclosures contains eight hundred various species of fruit trees, reared in different parts of France; another, contains four hundred and sixty different plants for domestic uses, and in some parts they have made experiments of uniting different species of trees together, the fruit of which is said to partake of a many different flavours. (!!) With true French humour they have nicknamed one of the plants charlatan, because Pliny, the naturalist, has ascribed to it some qualities which it does not possess."

"On Wednesday morning we saw the Luxembourg, another gorgeous royal palace, the long galleries of which are filled with pictures of ancient and modern artists. French painters seem to excel particularly in perspective, some of their landscapes and views of the interior of palaces and churches, produce a most perfect illusion." (!)

At the French Academy, on the distribution of the Prizes, "The greater part of the literary men then in town were present, and amongst them the venerable Abbé Sicard, the great benefactor of so many human beings. He has greatly improved the Abbé l'Epée's method; but not content with liberal benevolence, he has extended its influence beyond the Atlantic, by lately sending two of his pupils to America, to form an institution there for the instruction of the deaf and dumb. The capacity of these youths was so great, that they learned the English language during the voyage." (! !)

But it is not worth while to multiply these *softeners*; and we shall quote a few observations of a different kind. At Serre, the writer says—

"A magnificent china table was shown us, of large dimensions, destined as a present from the King of France to the Prince Regent of England, his present Majesty, for which

\* Our landlord at Rouen told me, that a foreign gentleman bargained for his cup of coffee before he paid for it.

\* London, 1820. 12mo. pp. 168.

the former paid the sum thirty-six thousand francs."

The following is to us quite a new fashion of dancing:—

"On Saturday evening we went with my obliging friends, the Baron and Baroness de P..., to a ball, at Ranelagh, in the Bois de Boulogne, where about a hundred couples were assembled. It is very strange to see young ladies dance with so little spirit as the French generally do. A friend told me, that it was thought unbecoming and beneath the dignity of a woman of fashion to dance with the spirit and vivacity of an opera dancer. But they go too much into the opposite extreme. After Maria-Antoinette had arrived in France, the higher classes applied particularly to dancing, because the young and gay princess excelled in it. But nobody dances now at court, and this amusement is become obsolete. The lower people, however, less guided by fashion than by their inclinations, like it as much as ever, and their very walking in the streets is a kind of dancing step. Nay, the man who swept my rooms (for men in hotels perform most domestic offices), did it in the following curious manner. He put his feet on two hair brooms, covered with damp house cloths, moving alternately one foot after the other, till he had actually danced away the dust from the floor."

The authoress proceeds in a complimentary way, to draw an infamous character of French female morals, and especially of Parisian:—

"It is remarkable, that the generality of young ladies are not only deficient in animation when dancing, but that they are altogether too serious and grave in society. Several Frenchmen told me that they preferred the conversation of well-bred English ladies to that of their own countrywomen. It has been remarked at all times, that females of the higher ranks in France are too reserved whilst single, and too free in their social intercourse with the other sex after they are married. However that may be, I am far from wishing to invidiate, that conjugal fidelity and domestic happiness are not frequently met with in France, and even in Paris."

As an Epitaph is the last of all things, we shall finish this notice with an Epitaph, which Mad. D. informs us, is visible in the burial grounds of Pere la Chaise.

"Amongst the monumental inscriptions, most of which were simple and unassuming, there was one, however, which struck me as a very absurd conceit. A cock was standing on a tomb with the following inscription: 'Je veille ici, pour vous éveiller le dernier jour du jugement.'"

Henry VIII. and George IV.; or the Case fairly stated. By Thomas Haral. London, 1820, 12mo. pp. 240.

Without entering into the political opinions of Mr. Haral, which are friendly towards the king and his ministers, we notice this publication simply to say that it will be found useful, as containing a constitutional view of the law of divorce, and a his-

torical illustration of prosecutions for adultery, &c.; a concise sketch of the trials of Henry the Eighth's Queens, and a summary of the proceedings in which Queen Caroline has acted so prominent a part since the year 1796. It is subdivided into four parts. The part whence it takes its name is that least skillfully managed; the other parts contain much valuable information at the present time. A very neat frontispiece, with portraits of Henry, Anne Boleyn, George IV. and the Queen, ornaments the volume.

#### THE JESUITS.

*The Emperor Joseph II.'s opinion of the Jesuits.—From a Letter to the Duke de Choiseul, (lately published.)*

I know these people thoroughly; I know all the plans they have accomplished, their endeavours to spread darkness over the earth, and to govern and trouble Europe, from Cape Finisterre to the North Sea. In China they were Mandarins; in France academicians, courtiers, and confessors; in Spain and Portugal the grandes of the kingdom; and in Paraguay kings. Had not my great uncle, Joseph I. become Emperor, we might have seen in Germany, Malagrida, Aveiros, and an attempt at the assassination of a sovereign. But he knew them thoroughly; and when the Sanhedrim of the order once suspected his confessor of honesty, because he showed more attachment to the Emperor than to the Vatican, he was summoned to Rome. He foresaw the cruel fate that awaited him, if he should be obliged to go there, and begged the Emperor to prevent it. Every thing that the monarch did to hinder it was in vain; even the Nuncio, in the name of his court, demanded that he should be removed. Incensed at this despotism of Rome, the Emperor declared, that if this priest must absolutely go to Rome, he should not travel without a numerous escort, for that all the Jesuits in the Austrian dominions should accompany him, and not one of them should ever return. This unexpected, and for those times, uncommonly resolute answer of the Emperor, caused the Jesuits to desist from their purpose.

#### CHAPTER. II.

*Sketch of my uncle Zachary, and Ned the Barber.*

It was amid such originals, and surrounded by such imagery, that my thinking faculties were early diverted to the most interesting reveries, excited by the appearance of comical faces, which declared in vast varieties the genuine English Humourist, and the witchery of imagination created by the appearance of ancient walls, and the interiors of buildings, hoary with decay. Hence I conjured up I know not how many associations of the manners, habits, and customs, of the times before, which urged my curiosity to gather from

all the aged people I could meet, every thing worth knowing of what they had witnessed of the past; so that whilst a boy, I felt acquainted with the characteristics of unsophisticated London for more than half a century; and the humourists, and eccentrics of the days of queen Anne, and George the first, were as familiar to me as though I had lived among them. Indeed I was born a gossip; I was educated among gossips, and up to this moment know no amusement so great as that of sitting round a winter's evening fire, with the remnant of that gossiping fraternity, who, like myself, delight to hold a case about "auld lang sene." Yet it is strange, but not more strange than true, that I had no participant in this penchant for collecting local knowledge of characters and customs of old, for my youthful colleagues were like the boys of the present day, ever restless for something new, when marbles gave way to tops, and tops to kites; these, and rambling in the fields, occupied their gay thoughts, when we were liberated from school.

My speculations and comical turn, as it was called, did not escape observation however, for the demolition of an antiquated building, even before I had attained my eleventh year, was the cause of a melancholy that betrayed itself in my old-fashioned face. The clergyman of our parish, a facetious fat old gentleman, having seen me sketch some jutting gables at the back of St. Anthony Sheerhog, on the morning of the baptism of my sister Jemima, desired me to bring my portfolio, after dining with the family on the day of the ceremony; when pouring me on the subject of antiquity, and finding me more apt perhaps than he imagined, he gave me a queen Anne half-crown, and christened me "Old Mortality." This circumstance most likely, as it was very generally known, gave Sir Walter the hint, for it occurred more than forty years before that bright star of the north was numbered in the glorious constellation of British Poets.

My uncle Zachary, or more properly speaking, my great uncle Zachary, a retired horse milliner, was my first patron, and NED the BARBER, my greatest admirer. Ned to me was an oracle; he was the most complete humourist I have ever known, and no mean antiquary. How he became a common foot soldier I could never learn, for some said he was very well born; but such he had been, and having got a hurt in Flanders, he was discharged, and placed on the out pension list at Chelsea; he moreover had a small annuity from the mother of an officer whom he gallantly saved in the battle at Minden. Ned for all this was but a barber's man, for he was a sot. He was a great breeder of canaries, a tolerable judge of metals, and had a collection of curious prints; it was to him, good-natured soul! I owed several impressions of old St. Paul's cathedral, engraved by Hollar for the interesting work on that gothic structure by "Master William Dugdale."

Ned knew every body, and was an eye

• Sadler's ironmonger.

witness, as it should seem, of every extraordinary event; he was talking with sergeant End of the guards, the moment before young Alout was shot in the cowhouse at Newington Cross, and preserved to his dying day a jacket stained with the blood of that unfortunate youth, being one of those who picked him up. Ned, like most heroes, was humane; at when shaving my great uncle Zachary the morning after the event, and telling the story, his hand trembled so that he could not proceed. Hogarth was there, and listened attentively to the barber's tale. "I have seen many a comrade fall," said Ned, "but nothing ever cut me like this;" and then with a convulsive sob he cut my uncle Zachary on the upper lip: I believe it was partly my uncle's fault, for he was blubbing.

It mostly happens, that a little evil is rendered a great misery, where the feelings of the perpetrator are too sensitive. "Plague take you!" in great passion, said my uncle to the already much afflicted Ned, who was, when not too far gone, if we may credit general report, certainly the most dextrous shaver in the town. Colweb, scraped half, Friar's balsam, and every styptic that could be thought of was applied; blood-stone, and the street door key was put down the back, and all in vain; the wound bled most uncharitably for Ned, and most provokingly for my father, uncle Zachary, Hogarth, and all the party, and it was one o'clock ere they could start for the object of their meeting. For Hogarth had called, by appointment, to walk over London bridge, among the tens of thousands of other curious Londoners, to St. George's Fields to view the spot of this recent catastrophe. Poor Ned skulked away, and I sincerely felt for his chagrin. He called at night after the party had returned, to enquire about my uncle Zachary's lip. "The old citizen heard his voice," Hogarth and the group were talking of Wilkes, with their pipes, over a bowl of punch. "Come in Ned," said my father, looking in my uncle's face, anticipating his kind wishes.—"Come in Ned," and filled him a glass of the fragrant liquor. Ned bowed and drank their healths, and began to stammer his apology for what happened in the morning; but my uncle interrupted him with, "I heartily forgive thee, Ned; it was as much my fault as thine, and I like thee for thy feeling. The truth is, the old gentleman had been mulling to himself all the way back from St. George's Fields, "Poor Ned, it was no fault of his;" and his coming in afforded my uncle relief, for he felt compunctions for his harshness to my old favorite. So whilst Hogarth was asking him some further particulars about young Allen, my good great uncle was wrapping something in a paper which he secretly slipped into Ned's hand, with a whisper, "You will open it carefully." I afterwards learned it was a curiously chased tobacco box; containing a broad

piece. This, the *thoughtless Ned* soon melted; but the *grateful barber* kept the box in memory of my uncle to the last.

#### CHAPTER III.

*Containing some account of the Master and Mistress of Ned the Barber.*

My father had three wigs; two were of the same pattern, with two curls on each side; these were every-day wigs, one of which Ned regularly brought, nicely powdered, every morning when he came to shave master and my uncle; the other he took away to dress; the third was a Sunday wig; this was carried off on the Friday, and returned on Saturday morning. I recollect my father giving orders for a new Sunday one, of the same pattern as that worn by Garrick; and I think I see old "Heck-beck," weaving the caxonawl in his shop up four steps at the corner of the street. This appellation attached to old Bumpstead, called Bump by my father, arose out of his waggish humour, heck-beck being indicative, according to the dubbing of my father's coterie, of a "smock-faced man." For old Bumpstead had no more hair upon his chin than his wife; and it had been matter of wonder if he had. Ned was full of chat; his dry humour was irresistible; Hogarth called him the "Prattling Barber of Baglial". He used to strap his razor an hundred times more than there was occasion for, to prolong his gossip, when he shaved my father's head; whereas, old Bumpstead shaved, and never *spoke out*, and said little more than "Yes, Sir, and no," packed up his razors, covered the soap lather, put the paraphernalia in an old buffette, turned out of the parlour into the kitchen, bent his head, and went away. How many severe jokes did my father cut at old Bump, to the displeasure of my mother, who always pleaded for the unoffending. My father liked the smock-faced Heck-beck and his wife, none the more for being foreigners—French refugees. But what did my manly-hearted sire feel, on hearing, some years afterwards, that the old couple had died within a week of each other, at the poor house of the parish in which they had paid scot and lot forty years, poor, gentle, honest souls! and how his heart smote him on hearing that it was discovered that they were sisters! Ned had died long before; and though it was supposed he opened all his heart to my father, yet this secret the generous barber carried to his grave.

#### CHAPTER IV.

*Gill Stuart and his Aunt Prudence.*

Gill Stuart had a maiden aunt; she was an ancient and wore a narrow hoop, a queue,

and a hood, and might have passed in a glass case for one of the elder Mrs. Salmon's waxen ladies in Westminster Abbey. We used to call her the Scottish silyl. She was a strange being, making it a rule, among other eccentricities, to show herself but once in her life to any male or female friend or acquaintance of the family. It was reported, that she kept a book, and entered the name, place of abode, age, and descriptive physiognomy of those who had been honoured by an interview; and it was a rare accident that admitted a second time to "the presence." I say the presence, for she maintained that she was of the royal house. She was never seen out of doors; and such was her reluctance to strange faces, that the parson of St. Mary le Strand, commonly called the New Church, on being requested to pray by her in an illness that threatened to send her to the grave, the pious man was constrained to read the prayers for the sick in a closet attached to her chamber, with the door ajar; and although she knew he would not see her, yet she had her face rouged preparatory to the interview.

Prudence (Stuart), for that was her christian name, resided in the attic; and her study, museum, and bed room, all on the same floor, were at the back of the old house, commanding an off-skip, bird's-eye view all along St. George's Fields to the ascent leading to the windmill on the top of Nun-head hills, over the red pantile roofs on the Surrey side of the Thames. This, she said, was her rural demesne, which she contemplated *à la distance*, as she did mankind.

Gill, then a boy, a shade older than myself, (who, had he lived longer, might have attained to an almost equal degree of singularity in his way,) was her greatest favourite. Indeed, he did dub her heir, before he was born, provided the embryo should prove a male. Gill, had he been less volatile, was the only one among my playfellows who gave promise of becoming an antiquary. He sometimes brought me information of a "new old building," as he called it, that had eluded my research, which he had discovered in his rambles, and which he would never have noticed but for his cronic Ephraim. Gill was one of those good-natured, and kindly officious fellows, that willingly lent a knee finder's nose, but was too idle to pursue the game. He had the least portion of selfishness that ever was doled out to man, although, like "Tam O' Lyn," he was a "Scotsman born."

Worthy Gill, most persevering in all good offices for his friends, could never be roused to do any mighty matter for himself. The life and soul of his regiment, the money-lender to every good hearted comrade of the mess, keeping no book of principal or interest, never in debt, sober, brave as a lion, the sarcastic scourge of duellists, and the chosen umpire by both sides in all disputes. Even the rebel soldiers, who knew his virtues, after uttering a few oaths and prayers, said he was too good a fellow to fill an American grave so soon, when at the close of the battle of \*\*\*\*\* they laid him respectfully wrapped in his sash, under the blood stained sod. Yes, worthy Gill! old as I am,

† The unfortunate son of a cow-keeper, who was unintentionally shot by a detachment of the guards, during the memorable riots occasioned by Mr. Wilkes being sent to the King's Bench prison in the year 1762.

‡ The curiously wrought piuch-beck tobacco

should I find that "I am read," my next work shall be devoted to his biography.

Gill had no rest until he had brought about an acquaintance with aunt Pru; for so he called her, and myself; he was a confident dog, and assumed the manners and phraseology of One even a wit too, who had lived much longer and seen more of life. But he had by nature the largest stock of *bien decir*, and the least of *mauvaise honte*, of any youngster in our parish, which was not lacking of population; in fact, he did every thing like a man.

"You must know my aunt, old Ephraim," said the saucy Gill, "for I know you were designed for each other." Now I had then not entered my "teens," and she might have added my years to fifty, and been yet *under age*. She looked even ten more than that. Gill succeeded, and she was a *host* of information; chapter and verse, she could with little rummaging of her brain, point to the local history of the oddities of that age, from Charing Cross west, to Cornhill east, and nearly fill up the transept from old Somerset House south, to Montague House north: Old Tabby as she was to others, she was a very "Tablet of Memory" to me.

Prudence Stuart was a great prognosticator; but her pre-knowledge was mingled, rather strongly too, with her pre-judices; and her fore-tellings, were sometimes *bitter* forebodings, when the parties were *not to her taste*. I had the "good hap" to be only second to Gill in her good graces, and so she cast my Fortune. It is but doing her justice to her memory however, to say, that she comprehended Old Lilly; knew how to construct all the houses, quarters, crannies, and crinkum crankums of a horoscope; and was as well acquainted with the intentions of the Fates, as though she had been the fourth daughter of the father and mother of that "skin and grief," sisterhood. She knew the secrets of the Planets almost as well as the age wight, our worthy contemporary I\*\*\* V\*\*\*, although the *scouring* Georgium Sidus, had not then shed its portentous light, to illuminate such mystical speculators.

Several of Prudence Stuart's foretellings have suited to a T; some are yet unaccomplished, but among others she wrote upon the aforementioned horoscope, which she folded up in the form of an Asiatic puzzle, and sent to my mother—That "I was cut out for the *chair* of a learned body." My mother received this very courteously, though she never was gratified by a sight of "Aunt Pru." My father, who had any day rather been ferried over the Styx than the Tweed, and moreover not being very ceremonious in his phrase, called her a "Scotch canting painted old Jesabel," and swore "she had dealings with the devil." My mother, on the contrary, though not at all in the spirit of contradiction, thought her a very extraordinary person, and regarded her none the less for being a Stuart. Indeed the two ladies professed a great respect for each other. Prudence had heard nought but "good report" of the matron, whilst the matron, on her part, esteemed aunt Pru, because she heard she was pious, and ordered

coals to be sent to her distressed neighbours in frost and snow.

*Errata*.—In last No. p. 613, l. 21 of the second col. For soldier, sailor, and mariner, read, soldier, sailor, and marine. Also (l. 7.) for connoisseur character, read, connoisseur of character.

## ORIGINAL CORRESPONDENCE.

A CONCISE VIEW OF THE INCONSTANCY OF THE CLERGY ANTERIOR TO THE REFORMATION.

To the Editor of the Literary Gazette.

Sir,—The subject of which I am about to treat is I confess singular, but I hope, on that account, not the less interesting to many of your literary readers. The want of a sufficiently uninterrupted series of materials will prevent me from presenting them with so regular a view of it as I could wish; but still the loose fragments (rather I must confess, a "rudis indigestaque moles," here collected, will exhibit a tolerably correct idea of those excesses and indiscretions which eventually proved one of the principal instruments of depriving the clergy of their power, and reducing them to a state of indigence and poverty. It is undoubtedly astonishing, that the Ecclesiastics should have yielded so much to the frequency of this vice, when it was usual to chain up in their religious houses, books inculcating a directly opposite line of conduct, and containing tales calculated, as one might have supposed, to warn them against its indulgence; but alas! Monachism, as an ingenious writer\* has justly remarked, was an institution founded on the first principles of religious virtue wrongly understood and wrongly directed. As soon as its duties became mechanical operations, the work was performed and the principle disregarded; while the heart left open to the world, was constantly prompting those aberrations, which naturally result from the opposition of sentiment to duty.

*Gildas*, who wrote about the year 565, has left behind him the following description of the clergy at that period. "Sacerdotes habet Britannia, sed insipientes: quamplurimos ministrans, sed imprudentes: clericos, sed raptores subdolos: postores, (ut dicuntur) sed occasione animarum lupos paratos: (quippe non commoda plebi providentes, sed proprii plenitudinem ventris querentes.) Ecclesie domus habentes, sed turpis lueri gratia eas aduentes: populos docentes, sed præbendo *paucissima exempla vitæ, multoque moribus præcepta Christi spernentes, et sua libidine votis omnibus implere curantes, &c. &c.*" This invective against them he continues through fifteen pages. It is supposed, by Dr. Henry, in his History of England I, that the Anglo Saxons who settled in this country, A.D. 449, were on their first arrival particularly chaste, a virtue they were supposed to have inherited from their ancestors the

Germans; but that the imprudent zeal of the clergy in attempting to carry this virtue to a greater height than the laws of nature or the good of society would admit, produced a bad effect on the manners of that people, especially on the behaviour of the Ecclesiastics. *Keafrit*, Earl of Mercia, in a donation to the Abbot *Aldelmus*, in 680, thus writes on the depraved and corrupt state of the country. "Fortuna fallentis seculi proci non facteo immarcescibilium liliorum candore amabili, sed felicitate vitandæ corruptionis amaritudinis odibilis, filios in valle lachrymarum fæstentes carnis rictibus venenosus mordaciter dilacerat, quæ quamvis aridissimo sit in felicitibus attractabilis, Ache-ronis tamen ad unâ Cocytus insitus alti sulci-veniat boantis Impudenter est delevit §. The same words are repeated in a grant to the Monastery of Meldun, by King Athelstan, A.D. 938. In reading, however, the chronicles of the monks, we rarely find them implicate any of their own profession in these unchaste proceedings, but inveigh merely against the laity. Thus the faults of an Edgar and an Edwy are astonishingly magnified; while St. Dunstan, St. Winifred, St. Edmund, and a thousand others, are held up as shining models for imitation, and described as scourging themselves with thorns, rolling in the snow, &c. &c., in order to escape the libidinous attacks of the devil. One of the exploits of St. Edmund, is very curiously related in a MS. of The lives of the Saints, from which it appears, that he was even from his childhood inclined to piety and virtue, and a bitter enemy to every description of lewdness. As it is not very long, I shall insert it for the amusement of your readers. It describes the manner in which he treated the daughter of his hostess, who was in love with him:—

His ostesse had a douter, & ther he was at lene,  
That lounde moche this holi childe, gef þ he hit migte winne.  
Heo ð ne kothæ nether non other wit; heo ð fouteðe for to do  
Folic nig and dai, gef heo migte bringe him ther to,  
Heo ð had him, that heo ð moste anigt to his bedde ð wende.  
This holi man ð ne wernede hure nogt, ac duede ase thende.  
Heo was glad inow, for k er heo hadde wel ofte,  
A nig ð the heo sei hure time, to his bedde heo com wel softe.  
Hure clothes heo duede of swon, as rigt is of bedde,  
And naked hure made to crepe in, ac ð felliche hure speelde,  
For Seint Edmund hadde a smarte ð gerd; this woman ð adon he bredde  
And leide yþ on hure naked bodi, that þ heo in awaude,  
He ð ne sparde rig ne side nether, er heo to gronde bledde,

wolde ⁊ chasti so.

Hearne has inserted these lines in his Glossary to the Chronicles of *Peter Langtoft*, from which I have taken them. From the frequent precepts and reprimands however given to the Ecclesiastics, and the numberless canons made against unchasteness, we may readily conclude, that the clergy were far from imitating the conduct of St. Edmund; but on the contrary, gave themselves up to the indulgence of this vice. Thus, *Pope Sergius*, at the end of the seventh century, in an injunction to the monks of Meldun, writes: "Hortamur vos in Dei laudibus et orationibus studiosi, atque per vigiles abstinentie, castitumque purificationis tenaciter inhaerentes; et a little lower down adds, "innuatiolatos vos non solum de cogitatione carnali, sed etiam a sermonibus noxiis et cogitationibus custodire, ut castitatem atque sobrietatem corporis simul et spiritus vestri, ante Dei oculos luceat," &c. Aldebrand likewise makes use of these words to St. Wilfrid. "Posco, ut nequaquam prostibula lupanarium nugas in quibus pompulenta prostituta delitescunt, lenocinante luxu adeas;" and, moreover, advises him to refrain from reading; "lascia potarum carmina." Bede tells us, that the Abbess of Walton Monastery, in John Beverley's time, had a carnal daughter, who was a nun of that house; and we learn from some old rhymes of *Abbot Malvern*, that the "Clarks" of Gloucester were banished by Canute on account of their vicious living. The Anglo Saxon laws against fornication and adultery were very severe; but the only persons who suffered by them were the laity, the clergy always contriving to escape the penalties.

back nor side neither, ere she to ground. With  
⁊ shed. ⁊ Learn. ⁊ Foul. ⁊ Little of foul.  
⁊ End. ⁊ Went. ⁊ Back. ⁊ She got. ⁊ Longed  
not to go thither any more. ⁊ Afterwards died.  
⁊ Confessor said. ⁊ Be. ⁊ They found. ⁊ Chastity.

I refer such of your readers as may be desirous of being acquainted with the penalties attached to fornication, rape, and adultery, by the Anglo Saxons, to the laws of Alfred, B. 11, 10, 25, 29. Canute, 24, 49. Edm. 4. Edgar, 34, 25, 32, 33, 34, 35, 36. Ethelred, 4. Concl. Bebrand, 4, 8. Northumb. Presbyt. Leg. 63. Ethelric, 10, 11, 12, 14, 16, 81, 82, 83, &c. &c. &c.

The distinction observed between the laity and ecclesiastics is singularly marked in the series of questions put to Pope Gregory by Austin, in 601; the XIVth. of which was, "May a man after an impure dream receive the communion, or if he be a priest administer it?" After some deliberation, his holiness replied, that a man in the case mentioned ought not to communicate, but a priest might! By a canon of the synod of Berghamsted, held 697, under Withard King of Kent, adultery is punished by penances, and if the offender be obstinate, by excommunication. At the council of Calcuth held in 785, a canon was made, that bastards, particularly the children of nuns, should be incapable of inheriting. In a like council of both orders, held by King Edmund at London, in 944, one of the canons ordained, that unchasteness with a nun, should be on equal crime with adultery, and subjected to the same penalties. And in the reign of Canute, the compensation for a rape on a nun was as high as murder, besides deprivation of Christian burial.

The character of the clergy about the year 1065, may be pretty correctly ascertained from the writings of one of their own class; who relates, that King Edward, in this year falling sick, saw a vision, wherein appeared to him two holy men, who told him, that "primores Anglie, Duces, Episcopi, Abbates, non sunt ministri Dei, sed Diaboli &c."

Indeed the ordinary tenor of the monks proceedings may be learnt from the following verses, written at the beginning of the 12th century; wherein the author having reproved their indolence, gluttony, &c. thus alludes to their unchastity.

An other abbate is ther bi  
For soe a great nunnerie;  
Up a river of sweet milk,  
Whar is plenty gret of silk.  
When the summeris day is hote,  
The young nunnas takith a bote,  
And doth ben forth in that river,  
Both with oris, and with stere:  
When hi buth far from the abbei  
Hi maketh him naked for to plet,  
And leith dune into the brince,  
And doth him sleilich for to swimme;  
The yung monkes that hi seith,  
Hi doth ham up, and forth he fleeth,  
And comith to the nunnas anon,  
And each monk him takith on,  
And smellich berith forth har prei,  
To the mochel gret abbal, &c. &c. &c.

Pope Honorius II. having appointed John de Crema as his legate in England, he accordingly presided in a council held on September the 9th, A.D. 1126, when one

• Ibid. 420. • Higd. Polychron. p. 284.  
• Wart. Hist. Eng. Poet. p. 11. Hicke.  
Thes. tom. i. pp. 132, 133.

• What follows is too distinct and broad for our pages. Ed. The quotation thus concludes.

And think monk that clepeth best,  
And doth is likam all to rest,  
Of him is hope, God hit wote,  
To be some vader Abbot."

of the regulations was, that the clergy should keep no women in their houses, except their sisters, aunts, or those of whom there could be no suspicion; but that very night after the council had broken up, the legate, who had declined with great warmth in honour of immaculateness, and inveighed with no less vehemence against the horrid impurity of married clergy, was actually caught in bed with a "frail fair one;" and his detection was so public, that being unable to shew his face openly any more, he sneaked out of England with the greatest secrecy and precipitation. *Walter de Mapes*, the facetious archdeacon of Oxford, and chaplain to Henry II., wrote a satire on *Pope Innocent*, in defence of the marriage of the clergy; the following is an extract from it.

O quam dolor anxius, quam tormentum grave,  
Nobis est dimittere quoniam est suave!  
O flomane Pontifex, statuat prave,  
Ne in tanto crimine mortuam, cave.  
Non est Innocentius, innoce neres,  
Qui quid facit ducit, studet aboleri.  
Et quod olim Juvencus voluit habere,  
Modo vixque Pontifex vult probare.

Gignere precepit vetus Testamentum,  
Ubi Novum prohibet ausquam esse inventum.  
Dedit enim Dominus maledictionem:  
Viro, qui non fecerit generationem;  
Ergo tibi consulo per hanc rationem,  
Gignere, ut habbas benedictionem.

And he concludes thus:—

Ecce jam pro clericali munus allegavi,  
Nec non pro Presbyterii plura comprobavi.  
Pater Noster nunc pro me quoniam peccavi,  
Dicat quisque Presbyter cum aliis nunci.

King John during his reign, we are informed, was so enraged at the interdict which he compelled every priest's concubine to pay a grievous fine.

At a synod held at Oxford, by Cardinal Langton, A.D. 1222; the 28th canon prohibits clergymen to keep concubines publicly in their own houses, or to resort to them in other places, so openly as to occasion scandal. And at another synod, held at Canterbury by the same Cardinal in the same year, three men were condemned; one of whom was a deacon, who, to marry a Jewish woman, had actually circumcised himself. At a council held also in London, A.D. 1237, by Cardinal Otho, the 16th rule is against priests keeping concubines; and again, at one assembled at Reading, under Archbishop Peckham, in 1279, the same canon is repeated; so that we may easily conclude what little effect they had in correcting and preventing this vice.

## To the Editor of the Literary Gazette.

Sir.—If the following observations be thought sufficiently interesting to your readers to deserve a place in the Literary Gazette, they are much at your service.

ALEXANDER THE GREAT.

Sir William Drummond, in his *PEPI TON* (OIKIOE, (vide the Classical Journal, vol. 16, p. 89 to 95,) doubts if *Duld Karnien*, means Alexander the Great. I have no hesitation in declaring, without apprehension of contradiction, that there is not *any doubt* but this is the term by which that conqueror was and is designated, in the language of the sons of Israel. (Arabic.)

There appears, however, to be a mistake in Sir William's orthography, as the Arabic words are *Bû el Karnien*, which literally translated, signify the father of two horns, in allusion to his power and conquests in the east and in the west. The term horn, in the East, and in Africa, is emblematic of power.

## THE EGYPTIAN CUBIT.

Sir William Drummond in his learned dissertation in the sciences of the Egyptians and Chaldeans, discusses the various opinions of the learned men of Europe, respecting the exact length of the Egyptian cubit. Sir William, in that dissertation, which is inserted in the Classical Journal, vol. 16, p. 270, says, the Egyptian cubit called *Arde*, is estimated by Bishop Cumberland at 21  $\frac{1}{2}$  English inches; by Freret at 20  $\frac{3}{4}$  French inches, by D'Anville, at 19 French inches and 8 or 9 lines: but all these calculations are erroneous; for having resolved upwards of sixteen years in Africa as a merchant, where only the Egyptian cubit is used as a measure, I can assert from my own knowledge, that the Egyptian cubit, of which Sir William speaks, is exactly 20  $\frac{1}{2}$  inches English measure: and that seven Egyptian cubits make exactly four English yards.

## MATAMORES.

In my travels in Africa, annexed to Shabeny's account of Timbuctoo and Iousa, reviewed by you in the 171st and in the 178th number of the Literary Gazette, I have committed a considerable error; for in page 339 of that work, I have used the term *matifers*, when speaking of *matamores*, the first being a reservoir for water, the latter for corn. A description of the latter will be found in the note, page 195 of that work. I do not know how I can better apologize to a liberal public for this blunder, than through your intelligent vehicle of literary intelligence. A long period has elapsed since I was a resident in Africa, and time destroys all things; our memories are frail and treacherous, and we lose much for want of a record. I am, Sir, &c.

JAMES G. JACKSON.

## TALES OF MY LANDLORD.

## To the Editor of the Literary Gazette.

Sir.—The character of Caleb Balderstone, in the *Bridal of Lammermuir*, has been objected to by many, as being overstrained; and it has been alleged by the Edinburgh

Review, that he belongs more to the Italian school of burlesque, than to that of humorous delineation of genuine character. With these objectors and critics, I confess I do not agree. Old Caleb appears to me, to be a very fair portraiture of an attached old servant to a falling house, with the fortunes of which he has completely identified himself. I am confident, that in every-day life, instances may be found of servants concealing the poverty of their masters as zealously, scheming as assiduously, and lying as earnestly, as the last retainer of the house of Ravenswood. He is, in fact, but the lying valet of an upper order, a more subtle wit, and a more chivalrous dog, than Sharp in Garrick's (if it be Garrick's) farce. I believe, if his artifices were fairly examined, it would be found, that there is not one of them which has not been resorted to by these desperate defenders of family honour these "faithful servants to their master, and rogues to all the world beside."

None, for example, of all the expedients of Caleb, is more extravagant than the burning, or pretending to burn his master's castle, to avoid giving a reception to the Marquis. And yet we find that poverty actually, in real life, compelled a nobleman of the sister kingdom to have recourse to a similar stratagem. As the story is curious, I shall transcribe it from Smith's History of Cork, vol. i. p. 151. There certainly is a difference between the stories; but what was projected in Ireland, might, without much stretch of fancy, be conceived to be done in Scotland; and I believe the reader will confess, that the activity of the steward of Mogeely bears some similarity to the desperate fidelity of the old domestic of Wolsolope. "On the banks of the Bride, are the ruins of several of Desmond's castles. Nogelly, two miles W. of Tallow, was a principal seat of the Earl himself. It takes its name from the parish church, which in old Irish was named *Moidhealladh*, i. e. the church of the vow. At this castle, resided Thomas, the great Earl of Desmond who had a favourite steward, that often took very great liberties with his lord; and by his permission, tyrannized over the earl's tenants, equally with his master. This steward, unknown to the earl, gave an invitation in his lord's name to a great number of chiefs of Munster, with their followers, to come and spend a month at this castle. The invitation was accepted, and crowds of gentlemen flocked in, to the great surprise of Desmond, who began to be alarmed lest sufficient provisions should not be found for such a number of guests. They had not stayed many days, when provisions in reality began to fail, and at last, the earl's domestics informed him, that they could not furnish out a dinner for the next day. The earl was in a great strait, and knew not what to do, for his pride could not brook to let his guests know any thing of the matter; besides his favourite steward, who used to help him in such difficulties, was absent. At length, he thought of a stratagem to save his credit; and inviting all his company to hunt next morning, ordered his servants to set fire to

the castle as soon as they were gone, and pretend it was done by accident. The earl and his company hunted all the forenoon; and from the rising grounds, he every moment expected with a heavy heart, to see Mogeely in a flame. At length, about dinner time, to his great surprise, his favourite steward arrived, mounted upon a fresh horse, whom the steward, I presume, not the horse) the earl threatened severely for being so long absent at such a juncture. The steward told him he arrived just time enough at the castle to prevent his orders from being executed; and farther, that he had brought a large prey of corn and cattle, sufficient to sustain him and his company for some months; which news not a little rejoiced the earl, who returned with his guests to the castle, where they found sufficient plenty of every thing they wanted."

The *rustic* in the tale is transferred from the master to the man; and justly, for it would not be consistent with the high honour of Ravenswood; but I should not be astonished if this story gave the first idea of the burning of the castle. The steward's behaviour at the end of the adventure at Mogeely, is quite à la Balderstone. I am, Sir,

Sept. 16, 1820. Yours, &c.,  
Middleton, Co. Cork. G. S.

## ARTS AND SCIENCES.

## THE ECLIPSE OF THE SUN, ON THE 7TH SEPTEMBER.

[Extracts from various Communications.]

*Manchester Observatory, Sept. 9th.*—The very remarkable solar eclipse of the 7th instant, could only be observed here at intervals, the sky being at times covered with clouds. The commencement was wholly lost, and a pretty thick cloud passing over at the end, that moment could only be estimated: the subsequent statement is therefore not certain within a few seconds. On the other hand, the observation of the two principal moments, the formation and the disappearance of the solar ring, was very good, because the sun was entirely free from clouds during the whole time of its annular appearance.

The following are the moments of these three phases, as noted in the Grand Duke's Observatory here. First internal contact of the edges, at 2<sup>h</sup> 37' 37<sup>s</sup>.8 true time; second internal contact of the edges, 2<sup>h</sup> 42' 32<sup>s</sup>.0 true time; end of the whole eclipse, 4<sup>h</sup> 0' 50" nearly. These data coincide very accurately with those we before gave. The formation of the solar ring took place in a very remarkable manner. The extremely narrow annulus seemed, about a second before the ring was completely formed, to be interrupted in some places, and the separate parts then ran in a moment into one another, like two globules of water or quicksilver, that are very near together. The cause of this appearance is, doubtless, to be sought in the great inequalities in the moon's edge; the more level parts of which suffered the sun's light to appear, while the more elevated parts interrupted it. Indeed, during the whole eclipse, several lofty mountains on the moon's edge, particularly on the

southern part, were plainly to be distinguished. A similar phenomenon took place also, at the disappearance of the annulus; for it parted not in one place, but in several at the same time; so that for a moment the fine thread of light seemed to be broken into several parts. Nothing was perceived of any phenomenon, the cause of which might be looked for in the lunar atmosphere. The thermometer and barometer were observed several times during the eclipse. The thermometer was from 1 till 2 o'clock, at 15°·3; towards 3, a little after the middle of the eclipse, it fell to 13°·8; and about 4, at the end of the eclipse, it rose again to 15°·1. This small difference of one degree and a half leaves it uncertain whether it is to be ascribed to the eclipse. The barometer stood from 1 to 3 o'clock, at 28 inches 0·6 lines; in the hour from 3 to 4, it rose to 28 inches 0·9 lines. About the middle of the eclipse, there was a sensible diminution of the daylight, which if the sky had been entirely clouded, would doubtless have been considerable. The sun was wholly free from spots.

*Augsburgh*, 10th Sept.—We were unable to observe here with perfect accuracy the beginning of the remarkable eclipse on the 7th, on account of the passing clouds, which after half past 12 o'clock seemed to hinder all observation. From 34 minutes past 1 till 38 minutes past 3, we were able to make accurate observations, though frequently interrupted by clouds; after which, the sky was entirely covered with clouds, so that no observation could be made of the end of the phenomenon. For the present, we subjoin only some of the many observations of the Rev. Mr. Stark. At 2<sup>h</sup> 28<sup>m</sup> the moon appeared to be of a dark copper colour; at 2<sup>h</sup> 30<sup>m</sup> 31<sup>sec</sup> the chord between the tips of the horns, caused by the interposition of the moon, amounted to 29<sup>m</sup> 57<sup>sec</sup> and 7 tenths, in parts of the sun's diameter. From the time of the closing till that of the opening of the ring, formed by the entrance of the whole moon within the sun's disc, there passed 5<sup>m</sup> 47<sup>sec</sup> and a half; at the interesting moment of the central eclipse, objects on the earth appeared of a yellow colour, inclining to violet: Reaumur's thermometer fell 34 degrees, and the manometer indicated  $\frac{1}{4}$  French grains less porosity: a large burning glass produced combustion at the time of the central eclipse.

*Frankfort, on the Maine*, 11th September.—The following are the results of the observations made by Mr. Ulrich, architect, of this city, with several friends of astronomy, upon the solar eclipse on the 7th instant, with two very good instruments; viz. an achromatic telescope by Wilson, and a reflecting telescope by Hurter.

1st. The beginning of the eclipse, the edge of the moon apparently coming in contact with the edge of the sun, was at 1<sup>h</sup> 14' 14" P. M. true time, at Frankfort. 2d. At 1<sup>h</sup> 59' 14" the moon covered 6 inches of the sun's diameter; and at 2<sup>h</sup> 36' 44" it covered 11 inches; therefore, the moon advanced one inch on the sun's diameter in 7' 30". 3d. At 2<sup>h</sup> 37' 29" the tips of

the horns joined on the sun's north-west limb, and the ring was formed: and at 2<sup>h</sup> 43' 49", the tips of the horns parted, the moon breaking through the ring: the annular duration of the eclipse was, therefore, 5' 35<sup>1</sup>/<sub>2</sub>, and the middle of the whole eclipse was at 2<sup>h</sup> 40' 16<sup>5</sup>/<sub>2</sub>". The ring was now about 36<sup>1</sup>/<sub>2</sub>" broad, on the sun's lower limb, and 16<sup>1</sup>/<sub>2</sub>" broad on the sun's upper limb. 4th. Inequalities on the moon's edge were very distinguishable; and when the tips of the horns were about 10" asunder, two lighter points appeared at this place, which quickly joined and united with the tips of the horns. 5th. When 9 inches of the sun's diameter were eclipsed, a burning glass would not set fire to tinder or touchwood, and the warmth in the focus was scarcely perceptible on the hand. 6th. The daylight diminished, and the shadows of objects grow faint. The diminution of the temperature of the air, from the western side, was also very considerable. 7th. When the moon broke through the ring, the sun was covered with clouds, so that the end of the eclipse could not be observed; but, according to the above data, it must have been at 4<sup>h</sup> 6' 19<sup>1</sup>/<sub>2</sub>" and consequently, the whole duration of the eclipse was 2<sup>h</sup> 52' 5".

*Bamberg*, 9 September.—At 2<sup>h</sup> 40' the disc of the sun was almost wholly covered by the moon, but the ring was not yet quite formed. This appearance lasted but two minutes, the sun being immediately covered again with thick clouds. At Wurtzburg, the ring was plainly seen at 2<sup>h</sup> 30' with the naked eye; the beams of the sun being rendered fainter by the interposition of thin clouds. Both the light and the temperature of the air were sensibly diminished.

*Munich*, 10 September.—At the Observatory of Munich, the only one where the eclipse of 7 September was to be seen perfectly central, the observation was very imperfect, on account of the cloudy sky. The only part that was accurately observed was the first internal contact, or the moment of the formation of the ring. This was at 13<sup>h</sup> 59' 36<sup>1</sup>/<sub>2</sub>" sidereal time, or 2<sup>h</sup> 53' 23<sup>1</sup>/<sub>2</sub>" mean time. The final closing of the ring took place with the rapidity of lightning. There was no indication of a lunar atmosphere: the points of the horns, and the profile of the lunar mountains on the edge, appeared almost incredibly clear and defined.

In the middle of the city of Munich, about 65 Bavarian feet above the surface of the river Isar, the following observations were made. At 1<sup>h</sup> 27', the thermometer was at 14°; the barometer, 26 inches 7·7 lines: at 2<sup>h</sup> 56', therm. 13°; barom. 26 inches 7·7 lines: at 4<sup>h</sup> 16', therm. 12°·9; barom. 26 inches 7·9 lines. The wind was constantly north, and clouds passing. At 2<sup>h</sup> 45' the light was sensibly diminished.

*Stuttgart*.—The sun was visible only at intervals through the passing clouds. The beginning of the eclipse was hidden by a cloud; but soon after, i. e. at 1<sup>h</sup> 17' 30", a small segment of the sun was seen to be obscured. A cloud also hindered us from observing the first moment of the formation of the ring. The middle of the annular ap-

pearance was estimated at between 2<sup>h</sup> 44' to 45'; the end of the annular appearance was observed through thin clouds at 2<sup>h</sup> 47'. The eclipse ended at 5<sup>h</sup> 5' and a few seconds. The appearance of the ring was very interesting, even to the naked eye, the sun being more or less veiled by clouds. At the middle of the eclipse, many spectators thought they observed a sensible though small diminution of the light, which did not seem to be entirely the effect of the clouded sky, and an uncommonly gloomy appearance of terrestrial objects.

*Strasbourg*.—The clouds dispersed about the middle of the eclipse, so that it could be accurately observed. Here too it was annular. The annular appearance lasted only from 2<sup>h</sup> 37' to 2<sup>h</sup> 39' 4". Thin clouds afterwards passed over the sun, but without impeding the observation. The diminution of the daylight was sensible. When the eclipse was at the height, it seemed as if the full moon shone; no stars were visible, only Venus was seen in the horizon.

*Berlin*.—Clouds hindered any observation of the beginning of the eclipse, and they did not disperse so as to shew the sun, till 1<sup>h</sup> 45'. Clouds frequently crossed afterwards. At the middle of the eclipse, the daylight was sensibly fainter, and the almost annular appearance of the sun, was an extremely interesting sight through thin clouds. As far as the state of the atmosphere allowed, the necessary observations were made at the Observatory.

*Hamburg*.—The sky being covered with clouds, continually interrupted the observation. The sky was sensibly obscured.

*Holland*.—The eclipse was observed at Leyden, by Mr. Ekama; beginning, 0<sup>h</sup> 43' 51"; end, 3<sup>h</sup> 34' 59".

*Utrecht*, by Mr. Schroeder; beginning, 0<sup>h</sup> 48' 50"; end, 3<sup>h</sup> 37' 48".

*Breda*, by Mr. Nahuys; beginning, 0<sup>h</sup> 49' 54"; end, 3<sup>h</sup> 38', true time (calculated according to an accurately drawn meridian).

Messrs. Ekama and Nahuys, observed the planet Venus west of the sun, at the time of the greatest obscuration.

Mr. Ekama observed, that the ends of the illuminated horns were not exactly defined, and so in steady, that it was difficult to measure their distance, as they were joined by a thread of light, and the whole not distinctly bounded.

At Utrecht, Fahrenheit's thermometer fell during the eclipse, from 68<sup>1</sup>/<sub>2</sub>° to 64°; at Groningen, from 67° to 62°. Professor L'illens remarked, that this eclipse had no effect on the poultry and wild pigeons, but that the bees assembled in their hives, as they do towards evening. It was also remarked, that during the eclipse some flowers closed, and opened again as it passed off.

Rome 26th August.

*Progress of Science*.—About seven or eight months ago, Mr. Settele, Professor of Astronomy to the Academy della Sapienza, laid before the Maestro del sacro Palazzo, the manuscript of his course of lectures, to obtain leave to print it. This was refused, because Settele taught the motion of the

earth round the sun, a doctrine which is known to be condemned by the Court of Rome, and for broaching which Galileo was thrown into prison. Application was therefore made to the Inquisition, to solicit a decision conformable to the present state of the sciences. The holy office gave its decision a few days ago, and permitted the publication of the above named work, as well as the public teaching of the Copernican system. But Mr. Settele is in a note commanded to remark, "in conformity with the truth," that it cannot appear surprising that Galileo's theory experienced opposition at a time when it was still new, and by no means generally adopted; and that the persecution which Galileo suffered, was to be attributed more to his conduct, and to the improper language which he used, than to the system which he attempted to prove.

## BOTANY.

Communicated by Mr. Phillips.

The ash-tree, which is this year unusually full of fruit or seeds, commonly called keys, will be found worthy the attention of those who are fond of the curiosities of nature. The pod of the fruit is in shape like a bird's tongue, having only one cell that contains a seed of the same shape. By opening the pod carefully with a pen-knife, the umbilical cord will be found running from the stalk to the upper-end of the fruit, where it enters to convey the nourishment to the germ, which (on opening from the reverse end,) will be found the future tree, so formed both in trunk and leaves, as not even to require the assistance of magnifiers to see the perfect plant. I am not aware of any other kernel that affords so distinct a resemblance of its parent; or that this circumstance has been noticed to the public in any work.

**NEW INVENTION OF LE BATEAU ROULANT.**—Some trials of a boat on a new construction have lately been made at Paris. In the second trial, the inventor placed himself with his apparatus below the platform of the Pont Neuf. He set out from this point at ten minutes before ten, having on board Mr. Dacheux, an experienced mariner, who took charge of the helm. Messrs. Marlet and Thibault, inspectors of the navigation, followed in another boat, to observe the operations. In twenty minutes at the utmost, he proceeded beyond the Pont Royal, after having passed and repassed under the arches, and landed opposite the Quay d'Orsay. There he made his land apparatus act, and roll the boat to the School of Navigation, which was the end of his expedition.

The author of this ingenious discovery wished to prove, that by the aid of his machine, we may with equal ease roll on land and navigate on water, without the aid of the wind, or even of ordinary oars; and that the motions on both elements are neither interrupted, nor the velocity impeded. The whole secret lies in the moving power which makes it act, and remains constantly the same, except that the hinder wheel becomes the rudder when the boat is in the water.

You may go with the wind favourable or against you; tack, ascend, or descend a river, at pleasure. The author asserts, that with a small decked vessel of this kind, it would be possible in calm weather to cross the channel rapidly, without fear of being overtaken by any boat.—*Foreign Journals.*

## FRENCH SOCIETY OF NATIONAL INDUSTRY.

At a late general meeting of the above society, the prizes proposed for this year were distributed. Count De Lasteyrie presided. A prize of 1,200 francs was presented to M. Chevanard, and 1,000 francs to M. Galteaux, for improvements in the manufacture of carpets. Gold medals were also awarded to M. M. Appert of Paris, and Quinton of Bordeaux, for their plans for the preservation of food.

The following new prizes were proposed:—

1st. 2,506 francs for a machine to polish optical glasses.

This prize will be delivered in 1821.

2d. 1,500 francs for the manufacture of bars of copper for the use of gold-wire drawers. This prize to be delivered in 1822.

3d. A prize of 3,000 francs for the manufacture of paper from mulberry leaves; to be awarded in 1824.

## BIBLIOGRAPHY.

To the Editor of the Literary Gazette.

Sir.—The following singular piece of Bibliographical information is extracted from the correspondence of the Rev. Dr. Pinkerton, attached to the 16th Report of the British and Foreign Bible Society, page 34:—

After stating the difficulty of obtaining a correct translation of the Old Testament into the Georgian tongue, he says, "There seemed no alternative left but to request the Georgian department of the Holy Synod, at Tiflis, to send two or three young men of promising talent to study the Hebrew, or Greek, at the Spiritual Academy at Petersburg, in order to obtain a correct version of the sacred text in the Georgian tongue, as no individual belonging to that nation could be found qualified for this work. A resolution of the committee to this effect was accordingly taken, and a copy of it sent to Georgia. In the mean time, an edition of the Georgian New Testament, in the Civil character, was resolved on; and I was requested by the committee to consult with the Georgian Princes in St. Petersburg, respecting the exact form of character to be adopted, and to superintend the printing of this edition. I applied, therefore, to Prince George, one of the sons of the late King Heraclius, who furnished me with some of the finest manuscripts in the Civil character. One morning, while employed with the Prince, in the winter of 1817, in examining the specimens of the characters, and con-

versing on the difficulties which impeded our furnishing the Georgians with a complete version of the sacred writings, he mentioned to me, that while lately reading in the annals of their nation, and of the reign of his ancestor, in Georgia, he had fallen upon a passage in which it was said, that when St. Euphemius translated the Holy Scriptures into the Georgian language, he deposited a copy of it in the Iberian, or Georgian Monastery, at Mount Athos. After hearing this piece of interesting information, I collected the particulars from the Prince, and lost no time in laying them before our noble president, Prince Galitzin, requesting him to use means for ascertaining whether such a manuscript of the Holy Scriptures in the Georgian language still existed in the Iberian Monastery of the far famed *αγιον ορους*; and after many months expectation, to our great joy, an answer was returned, that this precious manuscript was still preserved! The following letter from the librarian of that Monastery, Nicephorus, contains the interesting particulars, which puts the fact beyond a doubt.

"According to the request of your Highness, I have made proper search in the library of this Monastery. I have found different books in the Georgian language, of which some are written on parchment, and others on paper.

"For a very long time we were entirely ignorant of their contents, having no knowledge of the Georgian language. It is only between four or five years that a Georgian monk, named Laurentius, visited this Monastery, whom we requested to examine these works; and it is from his testimony and explication that the annexed catalogue has been prepared.

"Among the said books, there are two large volumes of the *Old Testament*, on parchment. We possess also some other manuscripts in the Georgian language, which are not indicated in the catalogue, and of the names of which we are still ignorant.

"Respecting a manuscript of the Bible, translated by St. George, the first apostle of Christianity in ancient Iberia, we are entirely ignorant. The manuscript of the Georgian Bible which we possess in our library, is in the hand-writing of St. Euphemius, the Georgian, the founder and patron of this holy Monastery, the Chrysostom of this nation, and the first who translated the Old and New Testaments into the Georgian language, and who gave to his countrymen translations of other works, and also composed several himself.

"It is impossible for us at present to transcribe these books, as none of us understand the Georgian language; and it is equally impossible for us to part with the originals mentioned in the catalogue, as the most terrible excommunication and anathemas have, from time immemorial, been pronounced by the holy Synod and the Patriarchs, against those who should dare to carry away, or in any manner whatever dispose of, a single volume of this library: the preservation of it is due to these sage precautions.

"At different periods, learned travellers and others have had permission to read these books; but none of them were ever allowed to carry a single volume out of the monastery.

"From these circumstances your Highness will observe, that the only way to attain the laudable and Christian object in view, will be to send some persons learned in the Georgian language, in order to take a faithful transcript of the Georgian Bible, or of any of the other MSS. which may be found salutary or useful.

"When such individuals shall arrive here, they shall be fraternally welcomed by us; and we shall do our utmost to afford them every possible facility in order to obtain the desired object.

(Signed)

NICEPHOR.

Librarian of the Ilibrian Monastery."

Among the manuscripts named in the catalogue referred to, which are all in the Georgian language, and thirty-nine in number, and mostly on theological subjects, are the following—the *Old Testament*, in two volumes; the *four Gospels*; the *Acts of the Apostles*; the *Psalmes*; the *Gospels*, in the vulgar idiom (or rather, I suppose, in the Civil character); the *Commentaries of St. Chrysostom on Matthew's and St. John's Gospels*; the *Works of St. Gregory the Theologian*; the *Discourses and Moral Maxims of St. Basil the Great*; the *Autograph Works of St. Euphemius the Georgian*, &c.

While in Constantinople, I spoke with the Patriarch Gregory on the subject; and he warmly recommended the plan proposed in the above letter, as the best for attaining the object we have in view. I had also an opportunity of conversing with Hilarion Iricus, the Archimandrite of the said Monastery, who happened to be at Constantinople at the time, and who confirmed to me every thing contained in the letter of Nicephor. On inquiring of the Patriarch, in what age St. Euphemius lived, I was answered by one of his Archimandrites present, that he lived in the *eighth century*.

## ORIGINAL POETRY.

[By Correspondents.]

FAREWELL WILD HARP! \*

Farewell, wild harp! whose slumbering melody  
With venturous touch I have essayed to wake;  
Harp, which high bards to notes of ecstasy  
Have struck, till heaven's bliss archway seems'd  
to shake;

And some a softer tone have bid thee take,  
While numbers passing sweet, yet wild and torn,  
As their own fate, they pour'd from hearts  
that broke.

So the bird leans her bosom on the thorn,  
And warbles sweetest then, when most her breast  
is torn.

And not in vain, oh! not in vain the lay,  
Thou' Fame should ne'er upon her votary  
glance;

Thou' he go down to darkness and decay,

\* Copied from among the additions to a forthcoming new edition of the writer's *Odes*, &c.

Unwept, unhonour'd, 'mid the world's mad  
dance,  
Where wealth, pomp, pleasure, mightier claims  
advance;  
Yet it may loose him from care's subtle ties,  
And soothe his soul, like incense, which per-  
chance

Will not majestically mount the skies,  
Yet accents the altar still whence first it strove to  
rise.

Farewell! there's misery in the word, yet bow,  
With eager ear, upon the sound we dwell;  
Farewell! it dims the eye, and clouds the brow,  
Yet the heart breaks unless we say "Fare-  
well!"

And oh! my harp, unhidden notes will swell,  
Saddening my song, as o'er thy strings I cast  
A trembling hand; and broken accents tell  
My heart is throbbing as I say "thou' past,"  
And breathe to thee a long farewell, perhaps a  
last.

Sept. 27, 1826.

HENRY NEEDLE.

## SONNET ON A COWARD.

Search through the ample world with curious  
mind,

And tell me if the coward's life be not  
Meanest in every station. Not a spot

Under the broad expanse of heaven you find

Extend to him its honours. All mankind

Level their scorn against his base-born soul:

Contempt will follow him from pole to pole;

And he that honour's sacred laws can't bind,

Roams mad the crowd a lonely wanderer.

The sneering laugh, the keen contemptuous jest,

Hear fire upon his head; the bitter slur

And ceaseless taunt his coward heart molest:

Loathed in the dust at last his corse is trod,

Like the vile worm in his congenial sod.

W. F. P.

## EPIGRAM.

Quoth angry Tom to Will, "I much suspect  
That in your face a swindling rogue I view."

"Thy fact," says Will, "for if my eyes reflect,  
They show one rogue reflected into two."

A. M. A.

## LINKS.

Oh! hark to the voice of the pestilential gale,  
That swells o'er the bosom of India's sea!

It comes like the breath of the fell Upar tree,  
Wafting onwards the sighs that its victims be-  
wail.

Hark!—it whispers the death of the young and  
the brave,

Of the soldier that struggles for glory no  
more,

Of the seaman that beats on the merciless  
shore,

And the millions it sweeps away—reckless to  
save!—

Two summers their mantles of verdure have  
shed,

Since beneath its dark influence Frederic fell;  
You stone the sad tale will too mournfully tell,

In a stranger-land rais'd o'er his mould'ring  
head.

But his virtues it tells not—they linger for ever,  
Recorded on Memory's tablet of steel;

It tells not the pang that affection will feel,  
When she thinks on the ties, that the blast fail'd  
to sever.

Yes! years may revolve—and this fabric decay,  
And he bid after thee, in the desolate tomb;

But ne'er will that time of false-heartedness  
come,

When we come to remember thy life's parting-  
day!

## SKETCHES OF SOCIETY.

TAMEIAMEIA, KING OF THE SANDWICH ISLANDS.

The death of Tameiameia has been mentioned in several public papers. This sovereign and his kingdom, which has been never formed in the present century, are generally interesting, on account of the peculiarity of the circumstance, and highly important to all those nations which trade in the Pacific Ocean. We therefore lay before our readers the following authentic details, derived from the communications of the learned Dr. Adelbert Von Chamisso, who visited the Sandwich Islands in 1816—17. These details will be the more welcome, as the publication of Lieutenant Otto Von Kotzebue's Account of his Voyage round the World is still delayed,\* a supplement of which work will contain the observations of Mr. Chamisso, who accompanied the expedition as naturalist.

The deceased sovereign of the Sandwich Islands, Tameiameia, a man of distinguished abilities, after he had voluntarily done homage to King George III. (that is to Captain Vancouver, as his representative,) and placed himself under the protection of Great Britain, conquered from the main Island Owhyhee, the other islands of the group; and the king of the western Island, Atoti, submitted to him of his own accord to avert the storm which threatened him. This vassal, protected by the Russian American Company, lately rebelled against his sovereign, but soon repented of his rash step, and did homage again. Tameiameia, during the war between England and the United States, remained faithful to his engagements, and England rewarded him with the present of a handsome ship, built at Port Jackson.

By the situation of his islands, which renders them the natural staple place of the trade between China and the northern and eastern shores of the great ocean, by their fertility, and especially by their produce of the Saunders wood, he accumulated great riches, procured himself ships and artillery, and even attempted to get his flag admitted at Canton: his ships were commanded by Europeans, and manned half by European sailors and half by natives; the voyage succeeded perfectly, though the object partially failed. He formed a very accurate judgment of the characters of those Europeans who offered him their services. He was liberal to them when they deserved it, and a great part of the land has come into their hands as fiefs, which they enjoy without exciting the envy or ill will of the natives. Tameiameia neglected no opportunity to obtain instruction from strangers; but he notwithstanding always adhered to the spirit and manners of his people.

There have never been any missionaries on the Sandwich Islands. The statement in

\* The only accounts of Mr. O. Kotzebue's voyage yet published may be found in the *Literary Gazette*, Numbers 14, 25, 26, 27, 28, 38, 39, 47, 48.

the Missionary Reporter of 1818, that the sole heir of the kingdom is educated for this pious office, in the school of the Foreign Missions, at Cornwall, in America, is only a proof how true a native of Owhyhee knows how to give himself importance out of his native country. The real heir of the kingdom, Lio-Lio (Leo-Rio) a son of Tameiameia, and on account of his descent on the mother's side, of higher rank, or in fact more holy (taboo) than his father, who dared not appear before him but with his head uncovered, is of a mean understanding, and addicted to idleness and drunkenness, and inherits none of the qualities of the old hero; only courage cannot be denied him, as this is a virtue common to all the inhabitants of Owhyhee.

The kingdom of Tameiameia will fall to pieces at his death. His great vassals had already divided it among them, while he still governed with entire power; and they awaited in good harmony and well prepared the moment in which he should close his eyes, to take each formal possession of his share. No European, however powerful he may be as a chief in these islands, could ever think of ruling the Owhytheans, and none has ever thought of it. Much less could an European power think of the conquest of the Sandwich Islands, even if civil war favoured the conquerors, for these islanders will suffer no foreign yoke, and are too strong to be easily extirpated. Tamura, king of Atueli, will regain and preserve his independence in his island. Kareimoku, called by the Europeans Billy Pitt, descended from the house of the chiefs of Manwee, and who, at the time of the conquest of this island, being still a child, was spared by Tameiameia's generosity, who educated and loved him, and raised him to the highest honours and power, is at present governor of the island of Owhoo, the most important of the whole group, because it alone has a harbour (Hannaruru), defended by a fort with many guns. He will take possession of this island for himself. Teimotu, of the ancient royal family of Owhyhee, who is strictly allied with Kareimotu, obtains Manwee as his share, and the weak Lio Lio will not be able to maintain himself, except by arras, in possession of the hereditary island of Owhyhee.

*A new St. Cecilia, or Triumphs of Music!*—The Ravenna Gazette is full of a triumph of Signora Rosa Morandi, a celebrated singer, which she herself announces. She says—"she has received permission from authority to be publicly crowned; that she will sing with her usual perfection, particularly the magnificent rondo, which has always been received with such rapturous applause. That, according to usual custom, a golden shower will fall with innumerable sonnets, panegyrics, &c. in which admiration will be expressed in the most beautiful verses: and after this, several cupids will descend, with garlands of flowers, doves, and other birds; and in the midst of this opera-

parade, the crown is to be placed on the head of the artiste. After this exhibition, the incomparable singer will be drawn home in a splendid car with six horses, accompanied with beautiful music: all the streets will be illuminated, and fireworks displayed in her honour; and she will retire amidst a discharge of grenades, serpents, and sky-rockets."

#### *To the Editor of the Literary Gazette.*

Sir,—In the prevailing rage for hyperbole and metaphorical expression, I am afraid there is some risk, if carried much farther, that the writings of the present and former ages may be unintelligible to future ones; and that it may become necessary for authors and editors to have a running margin to the works they put forth, denoting the passages to be understood literally, and those where the words are used hyperbolically;—to mark those which assert the naked truth, and those which magnify or diminish it till it almost ceases to be so.

In tracing effects to their causes with the calm discrimination of a philosopher, I think I may venture to assert, with but little fear of contradiction, that this style of expression has introduced a corresponding hyperbolical change in our manners. I mean to say, that a man's character and circumstances in life are now no more to be judged of by the cut of his coat or general demeanour, than the meaning of an author, or the truth of his narration, is to be gathered from the literal meaning of the expressions employed in the pages of our modern publications. I can recollect the time, when servants and working people, yea, even respectable tradesmen, could be distinguished by their dress as well as by their conversation,—and when the rich, the respectable, and the mechanic, could be remarked at the distance of a street. But happily, or unhappily, these days seem to be for ever gone by; and the only real distinction between master and servant now consists in having the choice of the apartments of the house, and the first cut of meat at the table; with the additional pleasure of paying solely for both.

I can also remember the period when upper servants in families, lawyers, and shopkeepers' clerks, were designated by their christian names, if spoken of by their masters or mistresses; but all of these, by common consent, seem now to have dropped this distinctive mark of inferior situation for the equalizing title of *master, mistress, or miss*. A lady's maid \*, or a housekeeper, would feel very much hurt indeed, if called by their christian denomination; and a journeyman tradesman would take it as an insult, were he addressed in the ancient form. In fact, the words *master and miss* have so far changed their meaning, that, in place of signifying really and truly the

\* *Maids* has become a term of dubious import, and in many cases might mislead pious young men of understanding in its former and literal sense. Woman *servant* is the appropriate term, as it implies neither virgin purity nor incontinence.

master of a family, or a young lady in respectable circumstances, they have become merely terms denoting the difference of sex.

In one respect, however, this change in manners and dress has been of advantage. In place of those ancient and formal distinctions between master and servant, there is now a uniformity in both, which many think very desirable; and it may be recorded, to the honor of British wealth and liberality in the 19th century, that our servants are better dressed, fed, and lodged, than the barons, knights, and high born dames of former days. This equalizing principle has also this further advantage, that gentlemen need not be ashamed to be seen in company with their female servants; and ladies incur no discredit in being found with their well-dressed lacquies.

But I proceed to instance examples of the present hyperbolical mode of speaking and writing. On meeting an old acquaintance, I have been frequently saluted with "My dear friend, I have been dying with impatience to see you!" when in fact, there were no evident symptoms of this fatal termination of kindness in his appearance or expression. A young lady whom I met the other day at dinner, and who I thought had taken a fancy to my person; on my taking leave of her, laid her fair hand upon my shoulder, and prayed me very bewitchingly "not to allow her to be long without the pleasure of seeing me;" but on calling at her house the very next day in my best attire, though I saw her at the window, she had desired the servant to say, that "she was not at home." On waiting on an old pupil with whom I had made the tour of Europe, he professed, in the warmest manner, "that he was never so much delighted and honoured in his life" as by my visit; and yet, I was scarcely out of the room, when I heard him characterize me to his companion as "a troublesome old pedant." And it has chanced to reach my ears, that an affecting elegy, which I wrote upon the death of his favourite pointer, Peeping-Tom, and which he was pleased to say to myself, was superior to any thing that had ever been composed, he represented to others, as "most intolerable stuff."

There is not a shopkeeper or tradesman now, that would not be offended if he were not dubbed *esquire* on the back of his letters; and there is scarcely an author of a sixpenny pamphlet, who does not print his name with the same adjunct. I do not at all object to this mode of addressing my tailor or shoemaker, provided my so doing gives them pleasure. I merely mention the circumstance, to notice the change which has taken place in the meaning of the word; for in my younger days, it always meant a man possessed of landed property, and of comparative wealth. To make the thing complete, and in compliment to the fair sex, I beg to suggest that they likewise should have a share of the passing honours; and that, since they have relinquished the title of *mistress* to their nurses and housekeepers, they should adopt the prefix of *lady* to their family names. I am aware, that in many cases, the *accollement of the wife or*

apocryphal of a half-pay lieutenant or country apothecary, or others in similar circumstances, is frequently announced in the newspapers, under the title of "The lady of Captain Firebrault," "the lady of Dr. Grapplefever," or "the lady of Andrew Shoeshanks, esquire," has been safely delivered, &c. &c. And I am told, that all this is managed for the matter of a few shillings paid at a newspaper office, for the announcement of the important intelligence. But I am anxious to put something on record which may enable future times, if it shall be of any consequence to them, to distinguish between the wife of a shoemaker or shopkeeper, and the female sex of barons, baronets, &c. to whom I have been accustomed to think such title of right belonged. After all, however, I am not sorry for the transmutation, as it gives us consequence in the eyes of foreigners; and we may leave it to them to find out, that the title of *lady*, in place of denoting female nobility, is merely the distinctive mark of the one sex, as that of *gentleman* is of the other.

If this change, however, is to be followed out to its utmost extent, I should propose, that in our liturgy and sermon books, the vulgar term "*brethren*," applied to hearers who have nothing in common, might be altered to suit the prevailing taste for hyperbole; and "*dearly beloved brethren*," give way to "*ladies and gentlemen*," or to phrases more suited to present ideas and prevailing modes of speech.

Further, in the reprinting of the works of our celebrated authors, the puritanical affectation of the simple name should be laid aside, and the word *esquire* added at full length on the title pages. Our authors would, by this simple expedient, be at once put upon a level with those landless barons and literary counts of other countries who take it into their heads to write books; and our fashionable circles would relish the poetry of Shakespeare and Milton in a much higher degree, if they knew the books to have been written by *William Shakespeare, esquire*, or *John Milton, esquire*.

I could mention a thousand other instances had I spare paper at hand. But I conclude at present, with remarking, that *friendship* seems to have lost its ancient meaning; *honour* is not now what it was in former days; the difference between *virtue* and *vice* has almost ceased to be remarked; and *love* has no existence but in novels or among peasants. A *good man*, is he who has plenty of money; and a wise and prudent one is he who best can take advantage of the necessities or follies of his neighbours. One would almost be ashamed in these times to be called *honest*; and to be *religious* would lay one under the imputation of methodism. A strictly *honourable* man may violate all the laws which bind society together without

losing that character; and a *very plebeian fellow*, may ruin his own health or embarrass his family, without any sin against good breeding. In fine, the decalogue, as at present worded, is completely inapplicable to modern manners; and as people have a strong propensity to do what is forbidden, I see no safe way of bringing back our morals to their former healthy state, than by enacting, by authority of parliament, the commission of the crimes forbidden in the *ten commandments*. In this case, the natural tendency of human beings to find enjoyment in what is prohibited, would infallibly lead them to practice as vices, the virtues which our religion teaches, and for unsuccessfully inculcating which, the tenth part of our income is by law appropriated.

I am, Sir, Your most humble servant,  
PETER PANGLOSS, LL.D. F.R. & A.B.S.

### THE DRAMA.

The Theatres this week have produced no novelty of remarkable notoriety. The English Opera House has closed its summer campaign in a manner suitably formal. At Covent Garden stock pieces, of the growth of the last two years, have been performed, with little variety in the casts. This Theatre was also shut one night (Tuesday), in consequence of the death of its respectable proprietor, the senior Mr. Harris; a tribute due to his long connection with the house, and, indeed, with the national drama. We were not personally acquainted with this gentleman, and can therefore say nothing in the style of the notices which have appeared in the daily journals, touching his private character; nor should we follow the example, even were we competent to the task. As an individual in society, we have always understood Mr. Harris to have been eminently entitled to regard; but it is as supreme director of Covent Garden Theatre alone, for many years, that his actions become public property. In this light we think no one will deny him the praise of having shown a spirit of princely magnificence and liberality; and of having done much towards extending the splendour of dramatic representation in all its adjuncts. He further proved himself to be a judicious critic, and a sound judge of what was likely to please—at least, in so far as we can appreciate from the majority of successful works produced under his auspices, and without knowing any thing of the merits or demerits of what he rejected. Still, however, Mr. H. appears to us to have done great injury to the drama of England. His partiality for spectacle paved the way to that tremendous enlargement of the theatres, which has nearly banished natural acting, and introduced exaggeration in its stead; which has in so great a measure superseded sterling tragedy and comedy by melo-drame and burlesque. We have no doubt that it may be said in reply to this, that the proprietor of the theatre merely consulted the public taste: we are however of opinion, that if he did not create, he contributed much

to confirm the lapse and decay of right feeling in this respect. Be that as it may, the height of our charge is an error in judgment, generated by the change which previously converted theatrical property, like most other matters in this country, into a mere commercial speculation, nearly divested of literary character. This is the source of the perpetuation of many existing evils, and of many alterations which we cannot but lament. Hence we grieve to see adwosons and church-livings sold to the highest bidder; hence we regret to see learned titles (not honours, purchasable for a few pounds; hence we deplore the portrait-trade in gross, call it likeness or bust, which usurps the name of the *fine arts*, in painting and sculpture; hence we marvel at the encouragement of literature and literati, not by kings and illustrious nobles, but by booksellers and publishers, who feel so much for learning in distress, that they will always relieve it; and for ability in repute, that they will usher it into notoriety, provided the rules of The Trade are not put *hors de combat* in the calculation; hence we are concerned to see every invention of human ingenuity, every production of human genius, every thing of which a *prun* can be made, become the object of traffic and base consideration, instead of maintaining the glorious prerogative of being, because worthy of being, and insensible of as unmoved by debasing and extrinsic capacities. Therefore, when we say that Mr. Harris has (as we conceive) lowered the tone of dramatic production, nothing can be further from our intention than to impute personal blame to a man of whom we think highly, and whose head is hardly covered with the turf which hides all frailties; but simply to express our sentiments upon his having followed the fashion of the times when at the head of an important concern; and added another to the list of those establishments which the lust of gain, the debtor and creditor habits of Britain, have engulfed, by transforming from their original natures into pure business speculations—sacrificing the sciences, arts, honours, literature, and still graver, if not higher objects, all to the *Balance Sheet*.

At the Haymarket, the two or three poor performers, and the dozen supernumeraries, have continued to bear the season towards its close. As we are not querulous critics, we have found no fault; but as the Green Man says, the "plain fact" is, that except having a little stage and little auditory they have done less than little for the drama. With the advantages the Haymarket possesses for genuine acting, it ought to have overwhelmed its inconveniences in the parts allotted to the company (we mean the visitors, not the manager's company); but it has for years past achieved nothing, as estimated with reference to its capabilities, and especially to its powers of contrast with the winter houses. Common sense has demanded theatres where seeing and hearing were possible; and the Haymarket, in six actors out of seven, and in nine pieces out of ten, has demonstrated that it was of no consequence whatever whether you either saw or heard.

† Among other reasons for adopting the term *wife*, in place of *wife* or *spouse*, may be mentioned, that it may and may not imply, that the parties are married, according to circumstances. The latter terms are only applicable to peasants, or others with whom marriage still constitutes a binding obligation,

## FOREIGN DRAMA.

## THEATRE ROYAL ITALIEN.

*Il Fazzoletto* (the Handkerchief) a comic opera, in two acts; the music by M. Garcia.

The subject of this opera is the well known adventure attributed to *Lady Montague*. It has already been dramatised under the title of *Le Mouchoir*, at the Gaieté, and *L'Anglaise à Bagdad*, at the Vaudeville. Though the dialogue of *Il Fazzoletto* is superior to the general run of Italian operas, yet its success must be attributed wholly to the excellent music of M. Garcia. We might, perhaps, occasionally wish for more expression, but the most graceful melody prevails throughout the whole opera, embellished by the richest accompaniments. In the first act there is rather too much of recitative and chorus; but we remarked a *duetto*, admirably sung by Madame Ronzi Debegnia and Garcia, and a delightful *quintetto* and *finale*. The second act contains an air, *Ala! se voi concessa*, which is charmingly adapted to the clear and pure voice of Madame Ronzi Debegnia. Madame Garcia played the *soubrette* with great spirit. The scenery, decorations, and dancing, are of the most superb description.

## VARIETIES.

The late Sir Boyle Roche, in Ireland, was usually set down as the author of all descriptions of bulls in his time; and he really used to make a great many. He however vented some tolerable witticisms, and in fact, it was pretty generally suspected that the bulls were very often designedly made, to amuse his companions in the Irish House of Commons. One of his puns is perhaps worth preserving. It was argued in his presence, whether Dante or Milton was the superior poet. "I think," said he, "Horace, a very competent judge of poetry, has decided against Dante long ago." "Horace!" said one of the disputants, expecting a new bull; "when could Horace say any thing about Dante?" "Don't you recollect," replied Sir Boyle, "that he asserts most roundly *Dante minor*? Ep. I. xvi. 22."

*Anecdote.*—The silver coins of the Czar Iwan were, during the reign of the Empress Elizabeth, prohibited in Russia, under very severe penalties; at which period a carpenter, a native of Germany, who had worked several years in St. Petersburg, intending to go back to his native country, provided himself with a regular passport, and embarked at Cronstadt, in a vessel bound for Lubeck. Just as the ship was about to sail, an officer of the government came on board, and forbade him to take any silver, especially silver coin; asking him whether he had any? Without hesitation, the carpenter answered that he had none, except a few silver roubles, with which he intended to pay the captain for the passage. He was desired to show these roubles. He did so; and there was found among them one rouble with Iwan's effigy. He was asked from whom he had received this coin? To this he could not give any satisfactory answer, as he had laid by these roubles at different times for his voyage, without particularly noticing

them. He was dragged to prison, from thence to Petersburg; and, notwithstanding all his asseverations of innocence and ignorance of offence, he was sent to Siberia.

*Original Anecdotes of the late Sir Peter Parker, Bart.*—The late Sir Peter Parker, who was killed on board the *Menelaus*, in America, in 1814, was a brave and very skilful officer, but uncommonly wild and thoughtless. He was once on a cruise up the Mediterranean; and after having been some months at sea, went on shore at Malta, there, happening to be greatly gratified by a band of instrumental performers that he casually met with, he ordered them to go on board his ship: they did so, and he speedily followed, and sailed off with them on a cruise for six or eight months, when he unshipped them at the place where he took them on board. This lively freak nearly lost him his commission. His father, who was Admiral of the Fleet, was so provoked at his numerous irregularities, that he determined to hold no communication with him, further than what was absolutely necessary in his public capacity as Commander in Chief. While sailing at the head of a numerous fleet in the Atlantic, he received a communication from his mother, in which she desired to be remembered to her son, which he effected in the following manner:—"Make a signal (said the Admiral) for the *Menelaus* to lay to:" this was done. "Now make the signal for the Captain to come on board:" this was done also, and Captain Parker, in his boat, proceeded to the Admiral's ship, which, when he had gained the deck of, he was met by his father, who saluted him with the following laconic speech—"I have received a letter from your honoured mother, dated (so and so); she is perfectly well, and desires to be remembered to you.—Now pack off; I've nothing more to say to you."

## SOLON'S GRAVE.

*From a German Journal.*—"It is well known that we have hitherto been uncertain where the great Grecian legislator, Solon, was buried. A writer at Berlin has now received from the Deserta of Siberia, a letter, containing authentic information, that Solon's grave had happily been discovered between the river Argun and the little river Urlungus, on the frontiers of Russia and China. The letter contains also a drawing of the monument over the philosopher's grave, in the form of an obelisk, the top of which is probably damaged by the effects of time; with an inscription as simple as it is remarkable: '*Here lies Solon, who gave us laws. Men like him!*' The inscription is in the Mongol language; it has been translated by various Chinese literati, each separately, and upon comparison all the translations were found to be identical. Professor Gubitz is engaged in engraving this monument on wood, which, together with the written communication, he will insert in his Journal, called the *Companion*." This must be some blunder: we always understood that Solon died and was buried in Cyprus!—Ed.

Dr. Wade, agricultural professor to the

Dublin Society, sometimes lectures his class in the fields, among the productions on which he is lecturing. As he was thus employed one day, treating on potatoes in the beds themselves, he took occasion to speak in favour of this practice. Why, doctor, said one of his auditors, I think you are very right to lecture here by the side of the beds; for you know the faculty always recommends students to attend *clinical lectures*.

## NORTHERN EXPEDITIONS.

Letters from Quebec, 16th August, state that intelligence has reached there, from the over-land expedition under Lieut. Franklin. It had arrived safely at Fort Chippawain, in the Athabasca country.

*Parisian joke.*—On the day of the eclipse, when all the inhabitants of Paris were without doors, provided with heliostopes and pieces of smoked glass, an Englishman was seen driving furiously in a fiacre along one of the principal streets. "Where does my lord wish to go to?" said the driver. "To see the eclipse," exclaimed the Englishman, thrusting his head out of the coach window; "only drive up as near to it as possible, for I am short-sighted."—*French paper.*

## METEOROLOGICAL JOURNAL.

SEPTEMBER, 1820.

Thursday, 28.—Thermometer from 38 to 64.

Barometer from 30, 25 to 30, 60.  
Wind S. W. 4.—Generally clear till noon; the rest of the day cloudy.

Rain fallen, 2 of an inch.  
Friday, 29.—Thermometer from 47 to 60.  
Barometer from 30, 18 to 30, 37.

Wind N. and N. E. 4.—Cloudy, till noon. The rest of the day clear.

Rain fallen, 1 of an inch.  
Saturday, 30.—Thermometer from 35 to 65.  
Barometer from 30, 29 to 30, 20.

Wind N. 4, and S. W. 2.—Clouds generally passing, sunshine at times. A misting rain in the morning.

## OCTOBER.

Sunday, 1.—Thermometer from 46 to 58.

Barometer from 30, 28 to 30, 45.  
Wind N. W. 14, and W. 4.—Generally clear.  
Rain fallen, .05 of an inch.

Monday, 2.—Thermometer from 45 to 56.  
Barometer from 30, 53 to 30, 62.

Wind W. 1, and N. W. 4.—Morning clear; clouds generally passing the rest of the day.

Tuesday, 3.—Thermometer from 49 to 57.  
Barometer from 30, 68 to 30, 72.

Wind N. E. 3, and N. 1.—Generally clear.  
Wednesday, 4.—Thermometer from 32 to 56.

Barometer from 30, 68 to 30, 63.  
Wind N. E. 2 and 4.—Generally clear till the evening, when it became cloudy and rained. A white frost in the morning.

On Monday the 9th at 26 minutes, 22 seconds after 7 o'clock, the 1st Satellite of Jupiter will emerge from an eclipse.

On the same day, at 40 minutes, 30 seconds after 10, the 3d Satellite of Jupiter will immerse into his shadow, and will emerge at 46 minutes 47 seconds after 1 in the morning.

In our next, the time of an occultation of the Moon and Jupiter will be inserted.  
Edmonton, Middlesex. JOHN ADAMS.

*Erratum.* In the imitation of *Horace's Epistle to Bullatius*, in our last—in the first line, for "*Horace*" read "*Florence*."

BOOKS PUBLISHED THIS DAY.

of every day in the week. Selected by the late E.  
PEARSON, D.D. with a Memoir of the Editor, in 12mo.  
the 4th edition, price 2s. 6d. 6d.

*Dr. H. hitcher's History of Yorkshire.*

Part III. in folio, on fine dry paper, 2l. 2s. and on im-  
personal drawing paper, with proof impressions of  
the plates, price 3l. 10s.

**A GENERAL HISTORY OF THE COUNTY OF  
YORK,** by **THOMAS DENHAM WHIT-  
KER**, LL.D. F.R.S. F.R.S. Vicar of Whalley, and  
Rector of Heyham, in Lancashire. The Landowner in  
this work, from beautiful Drawings by J. M. W. Turner,  
Esq. R.A. and the Architectural Subjects by Mr.  
Buckler, will be delighted by the Morning and Evening  
manuscript, by J. H. K. Esq. LL.D. 8vo. 10s. 6d. and the wood-cut vignettes by Mr. Beaman.  
Printed for Longman, Hurst, Rees, Orme, and Brown,  
Paternoster Row; and Hurst, Robinson, and Co. Chap-  
side, London; and Robinson and Hermann, Leeds.

Part IV. will appear about Christmas.

Preparing for the Press.

**THE PRIVATE AND CONFIDENTIAL COR-  
RESPONDENCE OF CHARLES TALBOT**, Duke  
of Shrewsbury, during the reign of King William the  
Third, never before published, illustrated with Hutton  
and Biographical Narratives from the Original Docu-  
ments, in the possession of the Duchess of Buccleuch  
to whom the Work is inscribed, by permission. By  
WILLIAM COXE, F.R.S. F.R.A. Archdeacon of  
Whitch. The Work will be illustrated with a Portrait  
of the Duke of Shrewsbury, from an original Picture by Sir  
Peter Lely, preserved at the Charter House. The con-  
tents will contain the Private and Confidential Cor-  
respondence of the Duke of Shrewsbury with King  
William, from the Revolution to the year 1700; and  
with the leading members of the Whig Party, namely  
Lord Somers, Lord Wharton, Mr. Montague, after-  
wards Lord Halifax, and Admiral Russell, Earl of Or-  
ford, during the same period. It will also comprise his  
Epistolary Intercourse with Robert Earl of Sunderland,  
with the Earl of Galway, who commanded in Portugal  
in 1693 and 1694, and with the Earls of Jersey and Port-  
land, and Sir Joseph Jekyll, who were employed  
in negotiating the Peace of Ryswick.

"It is intended to comprise the Work in one  
Quarto Volume.

"The gentlemen who are desirous of obtaining  
Imperial Paper Copies, to correspond with the other  
works of the Author, are requested to send their names  
to Messrs. Longman and Co. as no more will be printed  
than the subscribers ordered."

London: Printed for Longman, Hurst, Rees, Orme,  
and Brown, Paternoster Row.

London: Printed for the Proprietors, by W. POPE,  
of Chancery Lane. Published every Saturday, by  
the S. P. P. S. at the Literary Gazette Office, 40,  
(Exeter Change, Strand, where Communications, post  
paid, are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

SATURDAY, OCTOBER 14, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### HISTORICAL SKETCHES.

*The History of the Anglo-Saxons: comprising the History of England from the earliest period to the Norman Conquest.* By Sharon Turner, F.A.S. London, 1820. 8vo. 3 vols.

Considering Mr. Sharon Turner's history of our Anglo-Saxon progenitors to perhaps the most interesting and important work that has been published our times, it was with no small degree of satisfaction that we saw this convenient and moderate-priced edition of the work from the press. Were we at setting out to deliver our opinion of the author, we are sure we should expose ourselves to the charge of flattery; for our admiration of the indefatigable diligence, unconquerable zeal, the extraordinary talents, and, above all, the straightforward, honest, impartial judgment he has displayed, could not be expressed without employing a phraseology of flatterer more than can pass without suspicion for truth in these jealous days. It may be that even a feeble execution of the design which we project, namely, that of giving a careful analysis of his excellent performance, will be at the same time a more acceptable service to our readers, and a more tangible illustration of the merits of the author. We are, that if we succeed in furnishing any thing like a condensed abstract and connected view of his labours in the compass of a few of our numbers, we shall be rendering to him most effectual eulogy, and supplying to the public the most gratifying of information, while leading us to consult the original.

It is now fifteen years since the first edition of this very valuable production was issued in parts. Mr. Turner was, happily, contemporaries and country, induced to devote his attention to the Anglo-Saxon, which lay unexamined in so many libraries, by perusing the *Quida* or *Death of Ragnar Lodbrok*; and thus to revive, by almost say to create, that spirit of research into these memorable antiquities, which not only his own industry and ability, but his example, has converted from obscurity into light, and from obscurity into a literary splendour. How peculiarly

curious, how nationally interesting, how universally instructive, the intelligence gathered from the records of our ancestors is, it would be supererogatory to dilate upon; suffice it to say, that it is here we have to look for the germs of our constitution, and the grand sources of our habits, customs, and feelings as a people. And we shall but further add, that the author seeming to make Gibbon his model for style, is himself a model of sound unbiassed mind, candidly stating every matter deserving of record, and wedded to no hypothesis or theory to which (that common curse and bane of historians) facts are tortured and reality sacrificed.

The inquiry is divided into books, and these again into chapters. The first book treats of men in their earliest social forms, civilized and nomadic nations. It then investigates the first population of the west of Europe, and especially of Britain, by the Kimmurian and Celtic tribes; the arrival of the Phenicians and Carthaginians, the acquaintance and intercourse of the Greeks, and the invasion and conquest by the Romans.

To this book we shall at present confine ourselves, and endeavour to produce a synopsis of what Mr. Turner has collected on the subject from the older writers most worthy of belief.

The true history of ancient Europe may most rationally be derived from the distinction between the *Celtic* and *Gothic* nations, suggested by Dr. Percy fifty years ago. From the language of the former may be traced the ancient Gaulish; ancient British, whence the Welsh, Armorican, and Cornish; and ancient Irish, with its derivatives the Irish, Erse, and Manx: from the latter, spring the old or Anglo-Saxon, whence the English, Lowland Scotch, Belgic, and Præcic; the Franco-theories, whence German, Saxonian, and Swiss; and the Cumbrie or old Icelandic, whence Icelandic, Norwegian, Danish, and Swedish. But to these two general languages, Mr. Turner finds it necessary to add a third, the Slavonian or Sarmatian; and these three indicate to us the great stocks of the people who originally occupied, and whose descendants, with few later intermixtures, now occupy the western regions of Europe.

The population of our quarter of the globe, as far as tradition and fair inference can be brought in aid of history, seems to have flowed from the east (the fountain of all emigration by which the world has become inhabited) in three great streams, following each other at distinct intervals, and speaking different tongues. The earliest comprised the Kimmurian and Celtic race; the second, the Scythian, Gothic, and German tribes; and the last, the Slavonian and Sarmatian nations.

The inhabitants of England are descended from the first two genera; most of the modern continental nations from the second; and the natives of Russia, Poland, Bohemia, and the adjacent countries, from the third.

It is very easy, because very natural, to conceive the various causes which in the earliest ages produced the separation of families and tribes from the civilized family of mankind in the east, and taught them to roam towards other parts in search of food, independence, territory, or dominion. As wave succeeds wave, so must the human flood have rolled on, till the whole earth was covered. We are most concerned in the motions of the nomadic Kimmurians and Kelta, who from the Asiatic Bosphorus gradually overran Europe, the former proceeding chiefly to the north-west, the latter towards the west and south.

These nations were ignorant of Grecian and Roman literature, and of the sciences of Egypt, in consequence of their early separation from the civilized communities before these intellectual improvements were attained, and their subsequent loss of intercourse. The human race was thus divided into two classes; the settled and enlightening, and the roaming and barbarous. Their collisions, in after times, have created all the varieties which we now behold. Knowledge, refinement, inventions, on the one hand, and vigour, activity, and force on the other, have been infused in different proportions as circumstances controuled, till the national compounds of the age in which we live have been formed and completed.

Leaving the first nations of which we have any notice in a civilized state, the Egyptians, Phenicians, Assyrians, Chinese, and Babylonians, and their later offshoots the Carthaginians, Greeks, Persians, Hindus, and Romans; we turn to our nomadic or wandering ancestors, whose migrations by land preceded those by sea, and consequently must have rolled inland from the east, till the frozen regions of the north and farthest shores of ocean on the west were peopled.

Language is one of the two surest guides for tracing the descent of nations; and in many cases, particularly when the remotest antiquity is involved, it appears to us to be superior to the other great means, corporeal form and feature. There can, at least, be no doubt that the three languages which we have mentioned, the Celtic, Gothic, and Slavonic, (otherwise called from the names of the nations Kimmurian, Scythian, and Sarmatian) distinctly indicate the three main streams of population, of which the first two (as we have observed) flowed to the north and west, and the last impinged upon the eastern frontier of Europe. Yet these tongues, and all their ancient and modern

variations, are so obviously related to each other, as to show that they spring from the same parent stock.

The first entrance of the Kimmerians into Europe is an event lost in the deepest antiquity. The Scythians, in the time of Herodotus, were in their turn impelling them from the Danube *inwards*; and Homer alludes to them as dwelling on the Pontus at the extremities of the ocean, enveloped in mists, clouds, and *darkness* (whence, in all probability, the *Euxine or Black Sea*). These dates carry us back above 2,500 years, or to from six to eight centuries before the christian era.

Attacked on the European side of their Bosphorus by the Scythians, the Kimmerian nations then, if not before, seem to have retreated westward towards the German Ocean; and, gradually dispersing, spread over Europe. We have no certain tradition of the way in which this occupation was effected; for barbarians, in a nomadic state, have no records to light our enquiries. About a century before Cæsar, however, we find the Kimmerians alarmingly known to the Romans under the appellation of Cimbrî. At this period a great body of them quitted their settlements on the Baltic, entered the Hyrcanian forest which covered the largest part of ancient Germany, and being repulsed by the Boiæ, descended on the Danube. Within a few years they penetrated Noricum, Illyricum, and even Gaul and Spain, defeating Narbo and other Roman consuls in many battles. The Celtiberi drove them from Spain into France, where they formed a junction with the Teutones, another eruption from the Baltic, and, under their kings or leaders Boius, Bojorix, and Teutobochus, burst into Italy with tremendous force. Marius and Sylla destroyed two or three hundred thousand of them, and nearly the whole of the desolating horde was annihilated. From this period the Kimmerian power declined in Europe; and those tribes which originally marched from Thure to Jutland, covering Europe in their intermediate course, were in the time of Claudian nearly limited to their settlements on the German ocean; on those coasts of the Elbe and its vicinity which presented the greatest facilities for emigration into England and Scotland. Indeed it is evident that the Kimmeri, or Kimbri, soon after reaching these shores, found their way across, in their rude vessels, to Britain. The most ancient inhabitants of our island, all investigation teaches us, were the Cymri (pronounced Kumri), by which name their descendants continue to be called in Welsh literature, the most pure of any that has been derived from an ancient period. The name of Cumberland, Cumbria, is also very favourable to this presumption; but the Welsh traditions are unquestionably its most important auxiliaries. The first Triad declares, that when Pryddin (Britain) first assumed that name and adopted a settled government, "there was no tribute to any but to the race of the Kymry, because they first obtained it; and before them there were no men alive in it, nor any thing else but bears, wolves, beasts, and the oxen with

high protuberances;" and the fourth Triad derives the Kymry themselves under Hu Gadarn (Hu the Strong) from the country of Summer, called Deffrobani, where Constantine is.

The Kimmerians, thus presumed to be our progenitors, dwelt in subterraneous habitations. In battle they wore a head-piece representing some horrible animal gaping, or other fearful figure, and added a high floating crest to enhance the terror of their appearance. They used white shining shields and iron mail; and fought with the axe or long-sword: thinking it honourable to die in the field, and base to perish of disease. Human sacrifices were part of their religious rites.

Upon closely investigating the remains of antiquity, we discover another ancient people, a branch of the Kimmerians, placed in some of the western regions of Europe at the era when Greek history begins. These were the Kelts, calling themselves *Celta* or *Kelta*, the *gæls*, and afterwards *Gælatæ* of the Greeks; and the Galli of the Romans. These occupied Gaul, Spain, and the southern parts, probably contemporaneously with the occupation of the north and north-west by their brethren the Kimmeri, whose progress we have just been following. Their invasions of Greece, Italy, and Rome, are familiar to every reader of history. There can be no doubt but that the intercourse between Gaul and Britain led to many settlements of the Kelts in our island, and that from them, as well as from the more northern Kimri, the population of the country ensued. The Kelts, owing to their position on the maritime regions more within the reach of the civilized nations of antiquity, began to be civilized anterior to the Kimri; and the Phœnic colony at Marseilles, four hundred and fifty years before the christian era, tended greatly to diffuse among them commerce, literature, and the arts. In their warlike expeditions, also, the Kelts acquired a knowledge of many beneficial improvements, which they carried back, together with their plunder, into their own territories. Their diffusion in Spain further brought them into contact with the more intellectual Phœnicians and Carthaginians; and therefore, we may fairly presume, that the descendants of the Kelts in Britain, rude as they were, were more refined than the descendants of the Kimmerians. But it is likely that there was a portion of the people of these isles superior in civilization to either; we allude to the offspring of these very Phœnicians and Carthaginians, who, in the pursuit of their commercial enterprises, visited Britain. Inscriptions in their language have been found at Malta; and since Mr. Turner's publication appeared, we have recorded a remarkable circumstance which points to their having reached the Cape of Good Hope. At all events they were in Spain, and founded Cadiz; and therefore it is far from improbable that they sought tin in Britain (their *Coutreides*).

The knowledge of Britain in early ages by the Grecians is obscurely stated by several authors: to what extent it was carried, is not now to be ascertained. After the Roman conquest, however, we arrive at clearer data.

About forty-five tribes are enumerated among the possessors of the country. From Kent to Cornwall, which became the Roman district, Britannia Prima, were the Cantii (Kent with its four kings) Regni, Bibroces, Atrebatæ, Segontiaci, Belgæ, Durobriges, Hædri, Carnabii, Damnonii: In the peninsula of Wales were the Silures, Ordovices, and Dimetæ. Between the Thames, the Severn, the Mersey, the Humber, and the ocean (that district which afterwards formed the Flavia Cæsariensis), were the Trinobantes (whose capital was London) Iceni, Coritani, Cassi, Dobuni, Hwicci, Ancalites, and Carnabii: In the Maxima Cæsariensis of the Romans, our Lancashire, Westmoreland, Cumberland, Yorkshire, Durham, and part of Northumberland, were the Setantii, Volantii, (both occasionally spelt with a instead of e) and Brigantes: The five nations of the Roman province Valentia, comprising the chief part of Northumberland from Hadrian's Wall and to the Wall of Antoninus in Scotland, were the Otadini, Gadeni, Selgovæ, Novantes, and Damnii: Beyond these, in North Britain, were the tribes included in the Roman Vespasiana, the Horestii, Vecturones, Taialii, Vacomagi, Albani, and Attacotti: And in the rest of Scotland were the Caledoni, Cantæ, Iugi, Carnabii, Catini, Merte, Carnoanæ, Cerones, Creones, and Epidii. Cæsar's accounts of many of these tribes, their habits and druidical worship, are too well known to warrant re-capitalization. It would also be superfluous to dwell on the progress of Roman conquest; suffice it to say, that the civilization, dress, language, and learning of that people, gradually spread among the natives; great military roads were constructed, and great military stations were taken up, which in time became our principal towns and cities.

About the beginning of the third century, the Saxons and Angles began their invasions; but as the introduction of these nations forms a memorable epoch in our history, we shall here conclude our epitome of its earliest features, and reserve for our next the view of the Saxons, their origin and connexion with Britain.

#### PARTICULARS OF THE DEATH OF WILLIAM THE CONQUEROR.

[Pursuant to our promise, we quote the following from Turner's *Tour in Normandy*, as particularly interesting upon a memorable event in English history.]

"The King's decease was the signal for general consternation throughout the metropolis of Normandy. The citizens, panic struck, ran to and fro, as if intoxicated, or as if the town were upon the point of being taken by assault. Each asked counsel of his neighbor, and each anxiously turned his thoughts to the concealing of his property. When the alarm had in some measure subsided the monks and clergy made a solemn procession to the abbey of St. Georges, where they offered their prayers for the repose of the soul of the departed Duke; and archbishop William commanded that the body should be carried to Caen, to be a-

tered in the church of St. Stephen, which William had founded. But the lifeless king was now deserted by all who had participated in his munificence and bounty. Every one of his brethren and relations had left him; nor was there even a servant to be found to perform the last offices to his departed lord. The care of the obsequies was finally undertaken by Herluin, a knight of that district, who, moved by the love of God and the honor of his nation, provided at his own expense, embalmers, and bearers, and a hearse, and conveyed the corpse to the Seine, whence it was carried by land and water to the place of its destination.

"Upon the arrival of the funeral train at Caen, it was met by Gislebert, bishop of Evreux, then abbot of St. Stephen's, at the head of his monks, attended with a numerous throng of clergy and laity; but scarcely had the bier been brought within the gates, when the report was spread that a dreadful fire had broken out in another part of the town, and the Duke's remains were a second time deserted. The monks alone remained; and, fearful and irresolute, they bore their founder "with candle, with book, and with knell," to his last home. Ordericus Vitalis enumerates the principal prelates and barons assembled upon this occasion; but he makes no mention of the Conqueror's son, Henry, who, according to William of Jumièges, was the only one of the family that attended, and was also the only one worthy of succeeding to such a father.—Mass had now been performed, and the body was about to be committed to the ground, "ashes to ashes, dust to dust," when, previously to this closing part of the ceremony, Gislebert mounted the pulpit, and delivered an oration in honor of the deceased.—He praised his valor, which had so widely extended the limits of the Norman dominion; his ability which had elevated the nation to the highest pitch of glory; his equity in the administration of justice; his firmness in correcting abuses; and his liberality towards the monks and clergy; then, finally, addressing the people, he besought them to intercede with the Almighty for the soul of their prince, and to pardon whatsoever transgression he might have been guilty of towards any of them.—At this moment, one Ascelin, an obscure individual, starting from the crowd, exclaimed with a loud voice, "the ground upon which you are standing, was the site of my father's dwelling. This man, for whom you ask our prayers, took it by force from my parent; by violence he seized, by violence he retained it; and contrary to all law and justice, he built upon it this church, where we are assembled. Publicly, therefore, in the sight of God and man, do I claim my inheritance, and protest against the body of the plunderer being covered with my turf."—The appeal was attended with instant effect; bishops and nobles united in their entreaties to Ascelin; they admitted the justice of his claim; they pacified him; they paid him sixty shillings on the spot by way of recompense for the place of the sepulture; and, finally, they satisfied him for the rest of the land.

"But the remarkable incidents doomed to attend upon this burial, were not yet at an end; for at the time when they were laying the corpse in the sarcophagus, and were bending it with some force, which they were compelled to do, in consequence of the coffin having been made too short, the body, which was extremely corpulent, burst, and so intolerable a stench issued from the grave, that all the perfumes which arose from all the censers of the priests and acolytes, were of no avail; and the rites were concluded in haste, and the assembly struck with horror, returned to their homes.

"The latter part of this story accords but with what De Bourgueville relates. We learn from this author, that four hundred and thirty years subsequent to the death of the Conqueror, a Roman cardinal, attended by an archbishop and bishop, visited the town of Caen, and that his eminence having expressed a wish to see the body of the duke, the monks yielded to his curiosity, and the tomb was opened, and the corpse discovered in so perfect a state, that the cardinal caused a portrait to be taken from the lifeless features.—It is not worth while now to inquire into the truth of this story, or the fidelity of the resemblance. The painting has disappeared in the course of time: It hung for a while against the walls of the church, opposite to the monument; but it was stolen during the tumults caused by the Hugonots, and was broken into two pieces, in which state De Bourgueville saw it a few years afterwards, in the hands of a Calvinist, one Peter Hodé, the goaler at Caen, who used it in the double capacity of a table and a door.—The worthy magistrate states, that he kept the picture, "because the abbey church was demolished."

"He was himself present at the second violation of the royal tomb, in 1572; and he gives a piteous account of the transaction. The monument raised to the memory of the Conqueror, by his son, William Rufus, under the superintendence of Lanfranc, was a production of much costly and elaborate workmanship: the shrine, which was placed upon the mausoleum, glittered with gold and silver and precious stones. To complete the whole, the effigy of the king had been added to the tomb, at some period subsequent to its original erection.—A monument like this naturally excited the rapacity of a lawless banditti, unrestrained by civil or military force, and inveterate against every thing that might be regarded as connected with the Catholic worship.—The Calvinists were masters of Caen, and, incited by the information of what had taken place at Rouen, they resolved to repeat the same outrages. Under the specious pretext of abolishing idolatrous worship, they pillaged and ransacked every church and monastery: they broke the painted windows and organs, destroyed the images, stole the ecclesiastical ornaments, sold the shrines, committed pulpits, chests, books, and whatever was combustible, to the fire; and finally, after having wreaked their vengeance upon every thing that could be made the object of it, they went boldly to the

tomb-hall to demand the wages for their labors.—In the course of these outrages the tomb of the Conqueror at one abbey, and that of Matilda at the other, were demolished. And this was not enough; but a few days afterwards, the same band returned, allured by the hopes of farther plunder. It was customary in ancient times to deposit treasures of various kinds in the tombs of sovereigns, as if the feelings of the living passed into the next stage of existence;—

..... que gratia currum  
Armorumque fuit vivis, que Carlo nitentes  
Pascere equos, eadem sequitur tellure repostos.

The bees that adorned the imperial mantle of Napoléon were found in the tomb of Childeric. A similar expectation excited the Hugonots, at Caen. They dug up the coffin: the hollow stone rung to the strokes of their daggers: the vibration proved that it was not filled by the corpse; and nothing more was wanted to seal its destruction.

"De Bourgueville, who went to the spot and exerted his eloquence to check this act of violence, witnessed the opening of the coffin. It contained the bones of the king, wrapped up in red taffety, and still in tolerable preservation; but nothing else. He collected them with care, and consigned them to one of the monks of the abbey, who kept them in his chamber, till the Admiral de Châtillon entered Caen at the head of his mercenaries, on which occasion the whole abbey was plundered, and the monks put to flight, and the bones lost.—"Sad doings, these," says De Bourgueville, "*et bien peu reformez!*"—He adds, that one of the thigh-bones was preserved by the Viscount of Falaise, who was there with him, and begged it from the rioters, and that this bone was longer by four fingers' breadth than that of a tall man. The bone thus preserved, was reinterred, after the cessation of the troubles: it is the same that is alluded to in the inscription, which also informs us that a monument was raised over it in 1642, but was removed in 1742, it being then considered as an incumbrance in the choir."

#### LODGE'S PORTRAITS.

##### Parts XI. XII. XIII. and XIV.

In these four parts the portraits are of—Anne Bullen, Sir Anthony Denny, Cardinal Wolsey, Thomas Lord Seymour, of Sudley, and Henry Fitzalan Earl of Arundel, the last of that illustrious name, by Holbein; Robert Devereux Earl of Essex, by Hilliard; Heneage Finch Earl of Notingham, John Graham first Viscount Dundee, and Thomas first Lord Clifford, of Chudleigh, by Lely; Thomas Wriothesley Earl of Southampton, by Merrett; George Carew Earl of Totness, Edward Somerset Earl of Worcester, and Sir Walter Raleigh, by Zuccherro; Dorothy Percy Countess of Leicester, Richard Weston Earl of Portland, William Russell, first Duke of Bedford, Lucius Carey Viscount Falkland, George Gordon second Marquis of Huntley, and Frances Howard Duchess of Richmond, by Vandeyck; Thomas Howard Earl of Arundel, by Rubens; Robert Spencer Earl of Sunderland, by Carlo Maratti;

Francis Bacon Viscount St. Alban, by Van Somer; Lady Arabella Stewart; Francis North first Lord Guildford, by Riley.

Among these, the heads of Lord Dundee and Lord Huntley appear to us to be engraved with distinguished excellence, by Messrs. Agar and R. Cooper. Lady Arabella Stuart has none of the beauty of her race, and there is a very striking resemblance between Seymour of Sudley and the usual portraits of Henry VIII. which is the more curious on account of his marriage with Katherine Par, the monarch's widow.

Many other portraits lately exhibited in the British Institution occur in Mr. Lodge, engraved from pictures in other collections; and judging from the custody of the originals, probably of higher authority for authenticity. It is to be regretted that the plan of the work did not admit of more than one picture of the same person; as in our opinion, various likenesses of the same individual by different masters, when of peculiar eminence, and the portraits possessing more than usual excellence, would form a pleasing comparison of the powers of the painters. An instance of this may be cited in the portrait of Thomas Howard Earl of Arundel, which formed No. 64 in the catalogue of the British Institution, and is undoubtedly one of the finest pictures even of the great Vandike; but the splendid portrait by Rubens of this distinguished patron of the fine arts, was very justly preferred for the purpose of engraving in Mr. Lodge's collection (Part 12) and is, perhaps, the most vigorous and noble specimen of portrait painting extant of this immortal master. It has enriched the walls of the British Institution in a preceding exhibition, from the Earl of Warwick's collection; and we feel so much delight in the recollection of it, that we cannot rest satisfied that it should not have been placed beside the Marquis of Stafford's Vandike, which we also think would be acceptable to the subscribers to Mr. Lodge's work, notwithstanding they already possess Mr. Scriven's admirable engravings from Rubens. It is a fact, perhaps unknown to the majority of our readers, that the late Duke of Norfolk offered the late Earl of Warwick a thousand pounds for this portrait of his ancestor, which, however, was not accepted.

Besides the sources of comparison which we have already mentioned, there is another in existence, well known to the lovers of the fine arts: in the contemplation of which we have enjoyed nearly as much pleasure as in the British Gallery itself. We allude to Mr. Bone's admirable series of enamels, copied, in some instances, from the finest of these originals, and in others, from equally celebrated pictures in the collections of the nobility and persons of ancient family. We are acquainted with nothing that can exceed the beauty and interest of this superb design; which furnishes a proof of the riches which a private artist may accumulate by the exercise of his own talents, at least when those talents are of the high order of Mr. Bone's. Till his successful experiments and exertions were crowned with success, enamel painting in this country had no claim beyond

adorning a locket, or a snuff-box lid. Now it takes a proud place with the other branches of the art; and we have in these large specimens, not only an inestimable perpetuation of the most memorable subjects, but a display of the extraordinary ability which has lifted a delightful source of gratification far above the sphere to which it was before confined.

Of the memoirs, that of Robert Devereux Earl of Essex is so original and well written, that we have been almost tempted to extract it entire; but on reviewing the whole series, and looking as heretofore rather to miscellaneous than to formal explanation, we have finally determined to adhere to our first plan in bringing this magnificent work under the public view. We shall therefore proceed to make a few unconnected selections from the four parts indicated in our outset. In the life of Carew Earl of Totness, who commanded so long in the Irish wars of Elizabeth, there is a curious letter from him to her Majesty, which singularly unfolds the parenthetical and courtier style of that age. It is as follows:

"Sacred and most dread Sovereign,  
"To my unspeakable joy I have received your Majesty's letter, signed with your royal hand, and blessed with an extraordinary addition to the same, which, although it cannot increase my faith and zeal in your Majesty's service, whiche, from my cradle, I thank God for it, was ingrafted in my heart, yet it infinitely multiplies my comforts in the same; and wherein my endeavors and poore merites shall appear to be shorte of such inestimable favours, my never dying prayers for your Majesty's eternal prosperitie shall never faile to the last day of my life. But when I compare the felicitities which other men enjoy with my unfortunate destinie, to bee deprived from the sight of your royal person, which my heart with all loyal affection, injurious to none, ever more attends, I live like one lost to himselfe, and wither out my days in tormente of minde until it shall please your sacred Majesty to redeem me from this exile, which, unless it be for my sinnes, upon the knees of my heart I doe humbly beseech your Majesty to commiserate, and to shorten the same as speedily as may be. Since my time of banishment in this rebellious kingdome, for better than a banishment I cannot esteeme my fortune that deprives mee from beholding your Majesty's person, although I have not done as much as I desire in the charge I undergoe, yet, to make it appear that I have not been idle, I thank God for it, I have now at length, by the meanes of the White Knight, gotten into my hands the bodie of James Fitz Thomas, that archtraitor, and usurping Earle, whom, for a present, with the best conveniencie and safetie which I may find, I will by some trustie gentleman send unto your Majesty, whereby I hope this province is made sure from any present defection. And now that my taske is ended, I doe in all humilitie beseech that, in your princelie consideration, my exile may ende, protesting the same to be a greater affliction to me than I can well endure; for, as my

faith is undivided, and onely professed, as by divine and humane lawes the same is bound, in vassallage to your Majesty, so does my heart covet nothing so much as to be evermore in attendance on your sacred person, accounting it a happinesse unto me to dye at your feet; not doubting, but that your Majesty, out of your princelie bountie, will enable me by some meanes or other to sustaine the rest of my dayes in your service, and that my fortune shall not be the worse in that I am not any importunate craver, or yet in not using other arguments to move your Majesty thereunto then this.—*Assai demanda qui ben serve e face.* So, most humble beseeching your Majesty's pardon in troubling you with these lines, unworthy your divine eyes, doe kisse the shadowes of your royall feet.

"From your Majesty's citie of Corke, this third of June, 1601."

King James and the first Charles raised Carew to the dignities of baron and earl: he died in 1629; but what is most deserving of notice respecting him is, that "Bishop Nicholson says he wrote 42 volumes relating to the affairs of Ireland, which are preserved in the archiepiscopal library at Lambeth, and four more of extracts from the Cotton manuscripts." Harris, in his Irish History, tells us that four large volumes, containing "chronologies, letters, muniments, and other materials belonging to Ireland," are in the Bodleian library; and Dugdale states that several others were sold by his executors to Sir Robert Shirley. Speed incorporated some of his materials, (Reign of Henry V.) in his History of Great Britain; and his principal work, the *Pacata Hibernia*, is well known.

The twelfth Part is various and amusing: a letter from Somerset, Earl of Worcester, to Gilbert Talbot, Earl of Shrewsbury, in February 1603, gives, among other things, a lively picture of the preparations of that day for a grand court ceremony—we transcribe a portion of it.

"Nowe, my good Lord, to awnswere your last desier: yt is verie certeyn that his Ma. hath resolved that the Parliament shall begyn the 19 of Marche, and that he will shortly remove to Whithall, but goethe to Royston to hunt, while in the meane space the Queen may remove, and the howsould, and himselfe to retorne thether: from thence to the Tower the 12 of March; the 15 to passe thorough London to Whithall, wihout any fest at all; and this is more then certenly told bee told you, for this day yt was decreed. It is lykewyse resolved that every man shall weare what apparell himself listeth, and we here resolve to ryde upon footclothes, som of one color, som of another, as they lyke; hut the most that I heare of are of purple velvet imbrodered, as fayer as they purse wyll afford meanes. The great Ladys are appointed to ryde in chariots; the Baronesses on horsebake, and they that have no saddles from the King must provide of theyre own: the number provided are 20, wch were provided against the coronation, of crimson velvet; and this is all I can adverte you for that matter.

"Whereas your Lo. sayeth you wear never percuticularly adversted of the maske, I have been at 64 charge wth you to send youe the booke wch wyll enform youe better then I can, having noted the names of the lades applied to eche goddess; and, for the other, I would lykewyse have sent youe the ballet, yf I could have got yt for money; but these booke, as I heare, are all cawled in, and in truthe I wyll not take upon me to set that downe wch wyser then my self doe not understand. This day the King dined abrode wth the Florentine Imbiassadore, who taketh now his leave very shortly: he was wth the King at the play at nyght, and sooped wth my Lady Ritche in her chamber. The Frencbe Queen, as yt is reported, hath sent to our Queen a very fyne present, but not yet delivred, in regard she was not well thes 2 dayes, and can not abrode, therfor I cannot advertess the particulars; but, as I heare, one part is a cabinet, very cunningly wrought, and inlayed all over wth muske and amber grease, wch maketh a sweet savour; and in every box a severall present of flowers for head trying, and Jewells. She hath lykewyse sent to dyverse councellers fayr presents of Jewells, & to mayny ladies: some to those about the King, as Sr Thomas Earskin, Sr James Hey, and others. What the meaning is I cannot conceyve as yet, but tyme wyll discover that wch rarenes maketh a wonder."

The life of Lord Sunderland in the same part affords a perfect example of political profligacy and utter worthlessness: yet he had a principal hand in bringing about our glorious Revolution!

The Earl of Arundel, so famous for his collection of vertu, is an interesting specimen of biography: perhaps the account of the final fate of those treasures may be acceptable to our readers.

"It is somewhat strange, (says Mr. Lodge,) that he should not have taken all possible precautions to fix his unparalleled collection always in the possession of his male heirs; and indeed, his apparent carelessness on that head might lead us to suppose that he rather wished it to be dispersed, as in fact it was within a few years after his decease. He divided his personal estate between his eldest and second surviving sons, Henry Frederic Lord Maltravers, and William, afterwards Viscount Stafford. Henry, second son of the former, and sixth Duke of Norfolk, about the year 1668, gave a part of his moiety, the celebrated Parian Chronicles, as they are called, to the University of Oxford, and the remainder descended to his son Henry, the seventh Duke, and were afterwards mostly possessed, we know not by what means, by his divorced lady. She sold the statues to the Earl of Pomfret, (whose widow gave them also to that University,) and left the gems to her second husband, Sir John Germaine, whose second wife, Lady Elizabeth (Berkeley), owned them in her widowhood, not many years since. Lord Stafford's portion remained with his heirs till 1720, and was in that year sold by auction at his house, called Tart Hall, just without Buckingham Gate, which was then

pulled down. Some curious relics of the collection fell into the hands of the Hon. Charles Howard, ancestor of the present Duke of Norfolk, as residuary legatee to his grandmother, the dowager Countess Althea; and were by him carried to his mansion at Greystock Castle, where they still remain."

In Part XIII. there is a brief but able life of Cardinal Wolsey, in the commencement of which Mr. Lodge shows, that so far from being the son of a butcher at Ipswich, his family belonged to the class of rich and respectable gentry, and the real name Wuley. Indeed, it would not be difficult to vindicate this great man from most of the aspersions with which his memory has been loaded.

In the sketch of the life of Frances Howard Duchess of Richmond, undoubtedly one of the most stately and pompous dames that ever breathed, there are copies of the verses reported to have been penned in his own blood, and sent to her when Lady Hertford, by Sir G. Rodney, previous to shooting himself for love of her, and her ladyship's answer, &c. We need hardly say, that we consider these poetical effusions to be after-productions by some other person; but as they are rather remarkable, we shall copy a few passages. Sir George is made to write—

Sweete poison; precious woode; infectious Jewell:

Such is a ladie that is faire and cruell.  
Howe well could I with ayre, camelon like,  
Live happie, and still gazing on thy cheeke,  
In which, forsaken mee I must thinke, I see  
How goodlie love doth threaten care to mee.  
Why dost thou frowne thus on a kneelinge soule,

Whose fautes in love thou may'st as well controule?

Am I too meane in ranck? I knowe I am,  
Nor can I raise the stocke from whence I came.

I am no Barron's sonne, nor borne so high:  
Would I were lower, soe I were not I:  
As lowe as enry's wishes could impart,  
Soe I could set my sighes beneath my heart.  
Ladie, in breefe, my fates does so intend,  
The period of my daies drawes to an end:  
Tha threat of my mortalitie is spunn, e  
Cancell'd my life, my threat of frailtie runne.  
Death stands before my eies, and says my doome

By destinie to die was not yet come;  
Tells me I might have liv'd, and tells me truth;  
I am not sick yet in my strength of youth;  
But says in such a lamentable case  
I must not live to overlive disgrace;  
And yields strong reasons, for, says death most clearelie,

Such is her pleasure whom thou lov'st most clearelie.

He goes on to speak fairly of the lady's husband as a Seymour; but alludes to his advantage in point of years, and seems to think that if himself had been as nobly born, he would have been a fitter partner;

For youth had then been match'd, a goodlie thinge,  
Not to the aspleas autumn, but the springe.

In good set phrase, he then proceeds to argue for dying, because he had "no hart to live," and adds quaintly enough,

Herein my greifes and I shall well agree:  
I'll bury them, as they have buried mee.

In reply, the lady lays down the case with all the subtlety of a casuist, and professes her resolution to be faithful to her marriage vows, though her lord is *oldish*.

For she says:

My heart is gone;  
You are not hee, and I must have but one.  
To him I have engaged by blithness truth:  
Love is not wise in age; most rash in youth;  
And I applaud my fortune, which have mett  
That fate which grave discretion doth begett.  
T'ermes age the autumn; 'tis a better play,  
To stage in winter than to weep in May.  
Somethinge I know; content is match'd with yeares.

When to wedd younge is as to marry leares.

In conclusion, she almost ridicules his threat to commit suicide.

No, no! I never yet could heare or prove,  
That there was ever any dyed for love;  
Nor would I have you be the man beginne  
The earnest dounce for such a sportive sinne:  
For that would prove a laughter for an age;  
Stuffe for play; fitt matter for a stage.

But the poor gentleman was really in earnest: his final answer is exquisitely ludicrous, on the brink of the grave.

What shall I doe that am undone?

Where shall I flie, myselfe to shunne?

Ah, me! myselfe, myselfe, must kill,

And yet I die against my will.

In starry letters I behold

My death in the heavens enroll'd:

There finde I, wrytt in skies above,

That I, poore I must die for love.

'Twas not my love deserv'd to die;

O, no, it was unworthie I.

I for her love should not have dy'de,

But that I had no worth beside.

Ah, mee! that love such wo procures,

For without her no love endures.

I, for her vertues her doe serve,

Does such a love a death deserve.

Having finished this lamentable composition, Sir George ran himself upon his sword, and so ends this sad eventful history.

#### *Campaspe, an Historical Tale; and other Poems.* Southampton, pp. 40.

This little poem, founded on the surrender of Campaspe by Alexander to Apelles, is the production of a lady whose compositions have more than once been noticed in our columns. It seems to have been written some time, though only now published, and that imperfectly, in a provincial town. We presume, however, that it is to be found with the London booksellers; and quote a passage to exemplify its style. When Alexander announces to the beautiful maiden his resolution to sacrifice his love on the altar of friendship, the story thus proceeds—

With mute indignant pride CAMPASPE heard,  
This strange request from lips so dear prefer'd:  
Restrain'd her tears, repress'd her struggling sighs,  
Nor from the ground once rais'd her burning eyes:

Reply'd with all the stillness of Despair,  
And mark'd the limit of existence there.  
Breathing,—not living,—from that fatal hour  
She sank in slow decay. The vernal flow'r,

Transferr'd by hands unconscious of its worth,  
Thus shines its alike blossoms on the earth.

With calm austerity, and meek delay,  
Still she defers the promise'd nuptial day.  
Her lip no smile bestows, her eye no tear,  
One dead to Hope, insensible of fear ;  
Her chill indiff'rence to each earthly thing,  
To all that pleasure, all that pain, can bring :  
Inspir'd around a strange mysterious awe,  
A being not compris'd in Nature's law.  
A moon-like softness soon usurp'd the place  
Of all her varying eloquence of face ;  
Save when a glancing lustre, wild and high,  
Flash'd sudden from her dark dilated eye.

When those inspiring eyes for ever clos'd,  
One smile of joy on her pale lips repos'd ;  
Her first, her last, reproach—this dying smile—  
With fearful Beauty grac'd her funeral pile,  
And left a sting in ALEXANDER's breast,  
The whirlwind of his future days confest.

Ne'er can the noble mind to bliss aspire,  
That once has quench'd Affection's sacred fire :  
Each pain inflicted on the heart it loves,  
Throbless that heart, a dreadful Hydra proves.  
The Night's companion? Sleep's eternal dream!  
First image offer'd by the morning beam!  
Nought then relieves like the loud clang of arms,

The frantic contest, Danger's dazzling charms :  
Extremes alone a moment's ease bestow ;—  
And in their form what crimes familiar grow !

But scenes like these a bolder touch demand,  
More glowing colours, and a firmer hand.  
Enough for me, in this sequester'd shade,  
To paint the sorrows of a love-lorn maid.

The following is one of the two minor poems, which are inserted at the end : the thought is very pretty, and the expression good.

#### ON A BUSH ROSE.

Pale fragrant Rose, with ev'ry gentle art,  
I'll seek thy frail existence to prolong,  
Press thy last relic fondly to my heart,  
Revive thy memory in plaintive song.  
Nor brilliant color stol'n from morning skies,  
Nor dazzling tints thy modest charms improve,  
Thy snowy leaves each foreign hue despise,  
Save the faint bloom of unrequited Love.  
And that within thy bosom, hapless flow'r,  
Remains conceal'd from ev'ry human eye,  
Till ferid suns oppress thy faint hours,  
Did thee unfold thy secret—blush—and die.  
While weeping Love prepar'd her tomb,  
So sunk this bosom's earliest friend!  
Such was her freshness,—such her bloom,—  
So did her silent sorrows end.

*Tales founded on Facts.* By Mrs. Grant, author of 'Sketches of Life and Manners,' &c. London, 1820. 12mo. pp. 203.

There are four tales in this little volume, viz. Ellen, Glencoe, The Captive, and The Author. They are naturally and pleasingly written, without much effort at style ; and what we might find to censure on the score of carelessness in some parts, and a want of *easiness* in others, is amply compensated by the sound moral tone of the whole, which recommends the book as exceedingly proper for youthful readers. We select

as much as we have room for of the shortest, though not of the best tale, as a specimen.

#### THE AUTHOR.

Paris gave birth to a brilliant genius in De Foissal. At an early period of life he found himself an orphan, with little to depend upon, but the exertion of his talents. These, however, he duly appreciated ; and with all the warm expectation of youth, fondly looked forward to the years of affluent happiness they were to purchase him. The dramatic art was his forte ; and the unbounded applause which he met with from his first efforts, bid fair to realize his hopes. Eited with his success, he communicated the glad tidings to the blooming fair he had destined for his bride, and believing his future fortunes depended upon himself, hastened the consummation of his wishes by leading her to the altar.

De Foissal was an enthusiast :—his writings were distinguished by elegant language and beautiful sentiments ; yet touched by the pen of romance, and wound together in highly-wrought, though interesting and well delineated narratives. To love or friendship he admitted no bounds. He maintained that they were the most exalted, and the most amiable passions the human soul was capable of experiencing ; and that no other should be put in competition with them. His hope was of that sanguine nature, which sinks into despair under the pressure of disappointment : he erected an ideal fabric, without a solid basis, and never dreamed that it might prove the vain chimera of a fanciful imagination.

United to the object of his tenderest affections,—proud of the praises which were heaped in his favor through Paris—and enriched with a temporary supply of money, received as the reward of his labors—De Foissal, with a share of that vivacity which attaches itself to his countrymen, believed he might bid defiance to care. Nevertheless he again employed his pen, and exultingly calculated on the additional fame and increased wealth he should acquire by his second performance—in the mean time he enjoyed all the comforts that could pertain to domestic life.

Madame De Foissal had some pretensions to beauty, and possessed a warm affectionate heart, with a sweetness of disposition, that delighted all who knew her ; but she partook of her husband's enthusiasm.

De Foissal's second play at length made its appearance. All Paris flocked to the theatre ; and the house rung with the applauses of the audience. The trembling author was there incognito ; and language would be poor to express the enraptured feelings he experienced, at the homage which the favorable judgment of the public paid to his talents. The remuneration for this work he expected would be proportioned to its flattering reception ; but he was disappointed. He remonstrated ;—excuses were offered. And at length he was told, that the managers were scarcely repaid for the great expense they were at in bringing

forward his pieces ; and that they could only in future accept them at a more moderate rate. Their terms were far below what De Foissal had calculated upon receiving ; and pride would not suffer him to degrade himself by the acceptance of a reward so inadequate to the support of his family. He retired in disgust.

The flattering visions he had indulged began to fade in the sad reality of evil.—Writing was literally his profession ; and he was at a loss how to turn his talents to any other account. His wife, terrified at the approach of poverty, which threatened to overwhelm them, endeavored to ward it off by exercising her skill at embroidery. But, alas ! the utmost she could earn at this employment could but ill supply the wants of a family. She had two children ; and to fulfil the duties that maternal affection dictated, and yet devote a large portion of time to her needle, she was obliged to encroach upon those hours usually allotted to 'tired nature's sweet restorer, sleep.' The consequence of this practice soon shewed itself o'er her fragile form ;—and her pallid cheeks and wasting strength declared as once her mental anxiety and personal fatigue.

De Foissal, distracted to see the wife of his bosom a prey to ill health, accompanied by all the miseries of pecuniary difficulties, determined to make another effort. He again wrote, and, humbled by suffering, accepted the terms before proposed. He was indignant ; but, alas ! that was a feeling which, while it served to increase his affliction, did not better his circumstances.

Of the many admirers De Foissal gained by his dramatic writings, not one patron stepped forward. It was the fashion to approve of his works, but no one thought of enquiring how far their author was rewarded. In short, his renown, like posthumous fame, was of no real service to him on whom it was bestowed.

No friend assisted the disconsolate De Foissal ; but with the little supply he had received from the sale of his work, he hastened to procure a physician for his beloved wife, and insisted on her giving up her employment for a time. The children, who about this time fell ill of the measles, added to his distress ; and the necessary medical attendance, with the continued wants of his family, soon reduced him to extreme penury. Yet his pride prevented him from making his situation known ; and among his few intimates, not one was acquainted with his pecuniary embarrassments—but they preyed deeply upon his own mind. He renewed his employment of the pen with double ardour, sitting up often whole nights to accomplish his work, reflecting that as he received so little for each performance, the only method left him was to write the more. Madame De Foissal, still languishing under the effects of former exertions, again applied herself to embroidery ; but she sunk under the effort. De Foissal now threw away his pen in despair, and became a prey to despondence, earnestly wishing for death as his only friend. "Yes," he would say in the warmth of his enthusiastic nature, "death

will be our deliverer,—one short struggle will enable us to escape from our earthly prison; we shall then fly this tuncment of clay—and, clad in robes of glory, reach the mansion of bliss."

His unhappy wife participated in his sentiments, and listened to him with melancholy satisfaction; "but our children!" said she, as he was one day declaiming on the sunning prospects of futurity. The idea seemed for a moment to check the currency of his thoughts, and his brow assumed a pensive cast; then, as if suddenly reanimated, he exclaimed, "We will take them with us, my beloved; we will lead them to a happy immortality." Madame De Foissi, weary of a life of suffering, and trembling to look forward to what might be the lot of her innocent babes, left without protection in a pitiless world, acquiesced in her husband's resolves. Yet still they lingered; and day after day passed, till at length their last shilling was expended. They now no longer hesitated; the idea of a violent death was discarded, from the fear that paternal affection would prevent them inflicting it on their children. They therefore adopted the cruel, lingering one, of starving!

The door was carefully secured, and taking the infants in their arms, they lay themselves on the bed. The poor children for some time slept in happy innocence, unconscious of the fate to which their hapless parents had devoted them. At length, awakened by the powerful calls of nature, they cried for bread. The miserable parents soothed, and succeeded in pacifying them. Several persons knocked at the door; and the self-deceiving victims, dreading that their purpose would be discovered, stifled the sobs of their little ones, and scarcely ventured to breathe themselves.

M. Manoir, one of De Foissi's most intimate acquaintance, had called several times. He thought it extraordinary that he could never find any one at home; and at last determined to break open the door. The sight that then presented itself was awfully affecting. De Foissi and his wife lay in a perfect stupor, insensible to every thing around them; the little girl, pale and emaciated, was scarcely able to articulate a sound—but the tears paced down her little cheeks, as she fixed her hollow eyes on her wretched parents. The boy seemed to have most strength, and was pulling the bed clothes, crying incessantly,—“mamma—papa—wake—Lewis is hungry; sister is crying; Lewis is tired of sleep—do awake, pray do.” M. Manoir was mute with horror, and for some moments too much agitated to think what was necessary to be done. Little Lewis, observing him, made an effort to approach; but weakness overpowered his limbs, and he sunk to the ground. This accident recalled M. Manoir's ideas, and he hastened to take proper methods to restore his friends to life and animation. He called in a physician, and then waited upon the benevolent Marchioness of De Pomranco, to whom he told the melancholy tale. She was much affected with the relation—ordered that every requisite attendance should be procured; and

begged to be informed, when they were so far recovered as to be able to converse.—This was soon effected by proper nourishment, administered with caution and tenderness.

M. Manoir then conducted the Marchioness to their lodging. Informed of what this available being had done for them, M. and Madame De Foissi threw themselves on their knees, and burst into tears. “Rise, my friends,” said the Marchioness in gentle accents; “little thanks are due to me, and I come not here to exact them. The deplorable situation to which you have been reduced has greatly shocked me; and I own, I feel inexpressibly hurt at the reflection, that any human being should be exposed to such complicated misery, while I, and many others in this city, are surrounded with affluence: but you must pardon me, while I declare that I attach much blame to both of you. You, M. De Foissi, in particular, I cannot exculpate—I am aware of your laudable yet ineffectual struggles to support yourself and family; yet ought you to have stopped there? Should you have suffered false pride to get the better of nature, and all the best principles of man?—Should you have allowed its baneful influence to operate over your mind, and prompt you to become a murderer? Where was your tenderness as a husband, when by the high coloring of your fallacious arguments, you beguiled the wife of your bosom into a belief that the awful crime of suicide was in your case a virtue; and thus persuaded her to join you in self destruction? Unhappy, mistaken people! how could you look at these helpless innocents, and doom them to a fate so cruel! how could you listen to their plaintive cries, and still remain firm to your fatal purpose! Was there no friend to whom you would deign to confide your distress? Could you suppose human nature so very abandoned, that none would be found to stretch out the hand of benevolence to assist unmerited wants like yours? And, above all, presumptuous man,” added she, sternly, “had you no confidence in your Creator? Know you not that a murderer is marked by God himself, and that eternal misery may be expected to await that unrepentant sinner, who distrusting the mercy of his Redeemer, dares to rush uncalled into his presence!

After further animadversions—

The Marchioness paused. M. and Madame De Foissi acknowledged their guilt with every mark of contrition and repentance, and promised that they would endeavor to atone for it by the purity of their future lives.—The excellent Marchioness, happy in her benevolence, hastened to exert her interest to procure De Foissi a sincere employment; and in a short time he found himself in possession of a handsome independence.

The Marchioness arrived at a good old age—delighted to behold the happiness of her friends, and to afford them continued proofs of her unshaken friendship: and these cherished and ever grateful friends pointed her out to their acquaintance as the amiable

source of all their felicity. Could many of the gay and affluent form an idea of the delightful sensations which then overflowed her heart, they would perhaps be tempted to “go and do likewise.”

*Memoires de M. le Baron Pergami, Chambellan, Chevalier de Malte, Chevalier de Saint Sepulchre, &c. traduits du manuscrit Italien.*

(From a French Journal.)

[At the present period, without entering into the merits of the case, we trust the following translation will be acceptable. It is the only notice of the subject which we have seen, and consequently, the only one we could take. It is, however, but just to say, that it is from a journal hostile to the cause of the Queen.]

The *Sieur Pergami*, alias *Baron Bergami*, who, as all the world knows, has by turns been the courier, steward, chamberlain, and factotum of an illustrious Princess, was of course bound to write his memoirs; that being a tribute which the public naturally expect from all who enjoy celebrity. M. Pergami's memoirs are brief; about sixty pages suffice to relate the secrets of his sudden elevation, which is astonishing even in the present age, and calculated to excite the emulation of all the bearers of dispatches, estafettes, and couriers in Europe.

M. Bergami, it would appear, has been shamefully traduced; his origin is by no means obscure. He is connected with an illustrious house, and has a long line of noble ancestry, like other people; it is pure modesty that deters him from publishing the rank of his family and the place of his nativity. “Besides,” he proudly exclaims, “when Jeanne d’Arc saved her king, did any one dream of enquiring into the particulars of her birth?” Lest the correctness of this comparison should not be fully appreciated, it is necessary to inform the reader, that the *Sieur Pergami* saved the life of the Princess whom he had the honour to serve; and we sincerely hope, for the sake of the cause which Mr. Brougham is so ably defending, that *Sieur Pergami* may resemble the virgin of Vaucouleurs in every other particular.

Young Pergami possessed an ardent and romantic turn of mind. His imagination was influenced by the perusal of the Holy Scriptures, and he had already resolved to become a priest, when a French regiment happened to march through the town where he resided. The rolling of the drums and the din of arms, suddenly proved the means of changing his profession; he contemptuously threw aside the cassock, assumed the military uniform, and entered the ranks as a private soldier. His promotion was rapid. It is not mentioned in what battle or what particular engagement M. Pergami was made an officer; but fate suddenly stopped his military career.

A gossip, whose words were said to emanate from Heaven, at that period made a great noise in Italy; M. Pergami accidentally went to visit her. The inspired air of the sybil, the gloomy cavern in which she announced her prophecies, the sepulchral lamp, and all the attributes of necromancy,

made a deep impression on the mind of the young soldier, and he could not resist the desire of becoming acquainted with his future destiny. "You will degrade yourself to be elevated," said the gipsy; "you will save the life of a great Princess at the hazard of your own; the injustice of man will punish the gratitude of a woman; you will sow the seed of discord in a great Empire, and your name will resound through the whole world." This prophecy almost bewildered Pergami. The delightful hope of saving the life of a Princess, and sowing discord in a great Empire, had well nigh deprived him of his senses. In a short time he obtained his discharge from the army and retired to a cottage. Here he remained for some time; but as no Princess appeared, he thought it advisable to abandon his retreat and mix with society. He soon learnt that a Princess of the family of Napoleon, whose beauty, he gallantly observes, had been immortalised by the chisel of Canova, was to visit the grand theatre of Turin, on her way through that city. Pergami of course repaired to the theatre, and taking his station immediately below the box of the Princess, endeavoured to attract her attention. But, alas! all his efforts were vain! The Princess never once deigned to cast her august eyes on the Sieur Pergami. It cannot be the right one, said he, on retiring from the theatre—the oracle must have spoken truth, and I shall doubtless find her!

Shortly after, the Princess of Wales arrived at Milan. A secret foreboding assured Pergami that the prediction was about to be fulfilled. He endeavoured to get acquainted with some of the persons in the Princess's suite; and at length, applied for a situation in the household of the illustrious traveller. Every post was occupied, except that there was one vacancy for a postillion. A postillion! M. Pergami blushed at the very thought. "My natural pride, he (observes), was shocked at the idea of accepting so low a situation; but recollecting the words, 'You must degrade yourself to be elevated,' I no longer hesitated to apply for it." Pergami did well; a little shame is soon overcome. Besides, did not Peter the Great work as a ship-wright? and even Philopœmen did not disdain to cut wood on an emergency.

"Oh you! (it is the author of the memoirs who is speaking.) Oh you, whose cold hearts have never known the anxiety attendant on the fulfilment of a prediction, how can you imagine the sensation I experienced, when for the first time I had the honour of receiving an order from the Princess's own mouth! How Pergami's heart must have leapt for joy! On the route to Naples, Pergami, as has already been observed, twice saved the life of his royal mistress. But, it will be asked, by what extraordinary accident, could a postillion twice save the life of the Princess of Wales. Did he put to flight a troop of banditti? Did he rescue the Princess from flames? Or did he discover some atrocious conspiracy at the moment when it was ripe for execution? We know not. A mysterious veil covers all

these circumstances, as well as the particulars relating to Pergami's family, the place of his birth, and the battle in which he was made an officer. We are however bound to believe, on the authority of M. Pergami, "that the heroic generosity of the Princess, obliges him to be silent on this subject."

Meanwhile the prediction was gradually fulfilled. One day, when concealed in a cabinet adjoining the Princess's chamber, Pergami heard her Royal Highness, in conversation with King Joachim, pronounce a most flattering eulogium on her courier. On the following day the King granted an audience to the fortunate postillion, questioned him most condescendingly, and smiled at the gipsy's prophecy. This interview excited Pergami's ambition, and his hopes were soon realized by new favours. We shall not follow our hero to the masked ball, where one of the Princess's attendants, enraged at not having succeeded in captivating the heart of the chaste courier, assumed a dress similar to that worn by the princess, with the view of injuring her mistress's reputation. This incident is of little moment. But we must call the attention of the reader to the favours which were successively heaped on Pergami: at Genoa, Milan, Como, and Venice, he received brilliant marks of the kindness of his protectress. At every post he obtained some new proof of her favour. At length the dignity of chamberlain was conferred on him. As to his title of Baron, M. Pergami does not distinctly mention whether it was given him by the Princess, or whether he received it from his mysterious ancestors. Nor is he more precise in informing us how he was created a knight of Malta.

In Palestine, honours of every description were accumulated on the happy Baron. The emotion he experienced in this holy region is indescribable; and very little would have induced him to become a priest once more. Pleased with his ardent devotion, the fathers of the Holy Sepulchre created him a knight of the order which bears that name: and the Princess herself instituted, expressly for her chamberlain and another of her servants, a new order of knighthood, entitled the order of *St. Caroline of Jerusalem*.

The interest of these memoirs is increased by many curious details and anecdotes. For example, to guard against the fatal effects of the excessive heat in Syria, the Baron assures us that the Princess was accustomed to cover her head with the *half of a melon*. This precaution, however, did not succeed quite so well with the Baron, who, together with several others of the Princess's suite, experienced a sort of vertigo; and one day when the cook was preparing dinner, in a sudden fit of insanity he seized the spit, and brandishing it about like a spear, declared that he was the *first Knight of the Crusaders*.

A little girl is now introduced, who is said to be the daughter of Pergami. We cannot help feeling angry at not having been sooner informed that he was married. But as he was constantly travelling from one part of the world to another, he may perhaps say with *Pamphile*:—

En voyageant je l'avais oublié.

Besides, M. Pergami did not write his memoirs to tell us about his wife. The oracle did not announce that by visiting Greece and Palestine, in company with his wife, he would sow discord in a great empire. But to return to little Victorine. She was lively, ingenious, and intelligent. The Princess doated on her. On quitting Syria her Royal Highness asked the child what she would like to carry away with her as a memorial of her journey; "My ass," replied Victorine, and her whim was instantly gratified. These acts of condescension so fully proved the favour enjoyed by Pergami, that the crew of the vessel thought it their duty to prepare a *fête* in honour of his birth-day.

His return to Italy, his residence in the vicinity of Milan, and the Princess's journey to Tyrol, afforded the Baron new opportunities for showing his devotion. Nothing was wanting for the complete fulfilment of the gipsy's prophecy, but to sow discord in a great empire. Every one may judge how far this has been accomplished. The Baron is anxiously awaiting the result of the Queen of England's trial, and if it be necessary, he declares his determination to draw aside the veil which now conceals many of the principal actors in this grand drama. It is probable, therefore, that the second part of his memoirs will neither be the least interesting nor the least scandalous.

## WINE and CHATS.

OR AFTER DINNER CHIT-CHAT.

By a Cockney Grey Beard.

CHAPTER V.

Old Home.

I crave indulgence but for this one chapter more about the old premises. You who have good mothers will forgive me for its length. I know not, for all my boasted reminiscence, how long it is since I first threatened to write a book.—It cannot be much less than half a century when she to whom I addressed all my best actions began to rouse my spirit of prostration to an effort, with "Well, my son Ephraim, when are we to expect thy promised volume?" Gentle spirit, I will try my hand, and redeem my pledge. It is a grateful offering due to the shrine of thy memory, when a few pages are left upon its altar, then courteous reader I will tell thee all I know of other good folks,—or rather, all that may be told without offence, of all I've known either by observance or report.

The countenance of her that gave me birth, I can best describe in the language of those who on seeing her, even at first sight, have been heard to say, "she looks benignity."

When old master died it was a sad day in the manufactory. "Sorrow," the undertakers were apt to whisper to the mourners, "Sorrow is dry," and then they handed the wine about. People did as they were bidden on these solemnities, and took it as 'twas offered; yea, they took wine and cake, and cake and wine, and thrust their fingers into mourning gloves, that by hard pulling reached of every finger barely the second joint; they did just as the undertakers bade, but then

they whispered and they bade so courteously, and with obsequiousness so becoming!

Silence reigned in the shops; the workmen, honest souls, were dry—their lips were parched, but their sorrow was only moistened by a tear.—They had to seek other employ. Of old master they ever spoke as one "more sinned against than sinning." But when they spoke of "mistress," whose benignant face they never saw again, the mention was accompanied with a heart-felt sigh. It is likely she outlived them all, as her life was long. Whilst labour and disappointment, poverty and intemperance, thin the prolific recruitings of the more humble ranks; the sand of their glasses ran fast to premature decay. Yes, the memory of "old mistress" was rooted in their hearts; and well it might—she was their best stay; their kind counsellor and friend; the mild rebuker of the men's impiety; the shelter of the women in the convulsions storms too prevalent in humble life; the letter-writer of the deserted wife to her roving helmsman; the guardian of their children; their physician and spiritual guide; the centre of a little community, and the fond object of its veneration.

I could make a volume of her original sayings, and another of her country stories. She was born at a farm-house, wherein butter had been churned for the table of the Plantagenets; in a neighbourhood too where customs were yet in being that have escaped the researches even of the learned Mr. Douce. And I verily could *prick* the air to many an ancient song, recorded by that intelligent chronicler of ancient lore, which the artless minstrelsy of feasts and harvest-homes had chanted to her tuneful ear. Among the most simple, well do I recollect—

On yonder hill there sits a hare,  
And she was overgrown with care,  
Because her form was grown so bare;

So ho!

And there was run sir, run sir, run,  
And there was turn sir, turn sir, turn,  
And o'er the bogs, she lur'd the dogs,  
So ho!

How prettily, when I was a boy, did she sing to *Ephraim*, *Jemima*, *Sarah*, *Jabub*, and tummy little *Zac*.

Hoist! hoist! says Richard to Robin,  
Hoist! hoist! says Robin to Robin,  
Hoist! hoist! says John, all alone,  
Hoist! hoist! says every one.

But the favourite of all, which we rarely could induce her to sing, and then only to us big boys—and O! how musically did her voice chime the bells to

Tom Tower's a-married  
Sing bibberam boam,  
He took him a wife  
He brought her home;  
She made him a cuckold  
Before it was known;  
And the bells shall be muffled,  
Sing ding, dong, ding boam.

I know there are those who would say, "I would not tell this of my mother." To such I may answer, that I would have begged her to sing it, in her artlessness, in the presence of Queen Charlotte of blessed memory,

and she would have loved her for it, as we did, had her majesty known but half her virtues.

How often has she sat upon my bed, when her white hair proclaimed her many winters past that term the "sweet singer of Israel" has assigned to man, and with a cheerful spirit that yielded to my unreasonable love of gossiping, told me new tales of Home, and after the clock had told us 'twas the "witching time of night," with the affection of former days, tucked in the quilt that she sat upon, drawn the curtain, and taking her chamber light, has said "child, child, 'tis time for all sober people to go to sleep."—Why has our holy church prohibited obits for the dead?

#### CHAPTER VI.

##### *A Peep at the Old Metropolitans.*

The first pencil, or rather crayon, that I possessed, was given to me by that right worthy crone of my uncle Zachary, William Hogarth. It was one of those which may be still remembered by "men of my standing," one end was of common commercial black-lead, the other red-chalk, ready pointed, and inclosed in a case of reed. I had made a drawing of a humorous scene, which had been described by Ned the Barber, of a lamp-lighter's funeral, with pen and ink. The great *limner*, for so he was called, was pleased with some of the characters in this juvenile attempt, and presented me with a dozen of these crayons.

Hogarth was very kind and condescending to young folks, and one of those who, unlike too many wags, would bear, as well as perpetrate a joke. My father, among others, had an apprentice, who, if I may use the expression, *unfortunately* looked more wicked than he was, for it was held among the sages in my time, as a "good sign to be better than a body seemed." Kit Sugars, was his name; his father worked in the shop too, and he had the physiognomy of an old sinner, though a decent man enough. Kit had a hanging look, that's certain, and no stranger would venture to give change when he was sent out, even though the guinea was Tower weight. Hogarth, who had sketched many a comical countenance from time to time upon the plastered wall, took one of my crayons, and drew with black and red poor Kit's pliz. It was too like, and required not the title *FILCH*, which the painter wrote beneath.

It was common sixty years ago to designate both male and female by the titles of the characters of the *Beggars Opera*, and

\* It was the custom when a *favorite* lamp-lighter died, for his fraternity to attend the funeral, which was at night. Almost all the lamp-lighters in town walked at this mournful procession, dressed in white jackets and cocked hats, bearing their flaming torches. His son about ten years old, in the same garb, already drunk, acting as chief mourner.

† The *Beggars Opera* had an amazing run. It was brought out in 1728. I remember an old maiden lady, the daughter of a tenant of the Duke of Queensberry, Gay's patron, who attended the representation with the Duchess for several nights in succession. It was the making of Co-

much offence has been given to the pretty maidens who trundled their mops at the street doors early in the morning, by the butchers, fishmongers, and others, young men who were returning from Leadenhall, Stock-market, Billingsgate, and the like bustling scenes of early resort; and many a "drizzling shower" has been trundled on the crisped curls of a grave dyslaster, or an apothecary's wig, intended for some saucy and more active wight, by the mop of a Polly Peachen or a Lucky Lockit.

But to return to Kit;—I have observed before, that Hogarth sometimes met his match. Kit was a clever fellow, and being diligent, was independent—he cared for nobody. He was nettled at the laugh excited by the caricature; so seizing a bit of chalk, he sketched on the inside of a cup-board door, Hogarth and his dog Trump;† and inspired by the satiric spirit of retaliation, wrote underneath "The Two Pugs." There it remained. Kit had too much good temper to affront his master, by a sudden warfare with his friend. And what looker-on volunteers to "put the bell upon the cat's neck?"

This was too *biting* a satire long to remain dormant. Scott, another crone of my uncle Zachary and my father, called in to invite them to see a large picture which he had just completed, of *Old London Bridge*,; with the

vent Garden Theatre, and so injurious to that of Drury Lane, that it did not recover its reputation with the public until Garrick took the management.

It was wittily observed, that the *Beggars Opera* made "Rich gay, and Gay rich."

Perhaps no dramatic piece ever excited so much public interest, or made so much noise, as this. The admirers of *Shakespeare* endeavored to *cry it down*.—The amateurs of music *cried it up*. The *aries* were printed on ladies' fans.—The *modistes* shook their heads at its immoral tendency. Even the magistrates interposed, and wrote to Rich to suppress its performance. Yet so great was the rage for this novelty, that a party of children publicly performed the piece at the theatre in Lincoln Inn Fields, when the managers sent a book of the songs across the stage by a *fly*ing cupid, to Frederick, Prince of Wales. Hence George Hanwell was called for as an antidote to the *Beggars Opera*.

† This favourite dog always accompanied Hogarth. It was named Trump, and was modelled in terra-cotta, as well as its master, by Rou-billiac. Trump is represented too in Hogarth's satirical print of "Churchill the Bruiser."

‡ This very interesting picture of Old London Bridge was exhibited at the British Gallery, among other specimens of the English school, in the spring of 1817, together with the works of Hogarth, Wilson, Zoffany, and the best contemporary painters.

Perhaps no single piece affords to the antiquary so perfect a *bit* of the former state of London. An account of some remarkable inhabitants of these ancient houses, will appear in a future chapter.

Another specimen of this artist's topographic pencil I have lately seen at a picture dealer's in St. Giles's. It is a large piece, and represents the Adelphi Terrace whist building, from the Thames. In this it is introduced what I remember to be most picturesque.—The water-house at the bottom of Villiers-street, and the rude

overhanging tottering houses that had recently been pulled down. "What have we here?" said Scott, looking at Kit's head upon the wall, and turning towards the original, and then again at the portrait—"Why Kit," looking significantly in his face, "do you mean to pocket this affront?" Scott was a mischievous wag. "I have had my revenge, Sir," said my father's apprentice; and then leaving his loom, and begging Mr. Scott to walk into the next shop, he opened the cupboard door, and exhibited his handy work.

Doth any direful ill portend,  
No enemy can match a friend.

Scott screamed with laughter; and rowed the "little wisp should feel this sting." And then he laughed again most boisterously. "Give me the chalk," says Hogarth's friend. The blushing Kit obeyed, for he felt proud of his success; and then Scott wrote over the poignant satire, "*Lex talionis*."

The next day my father, great uncle Zachary, Hogarth, and Scott, all together came stamping up to the old shop. "Well, Filch," said Hogarth. Kit bowed, and sent the shuttle from right to left, and from left to right, quicker than lightning, and his feet ran over the treadsles with monstrous clatter, but not loud enough to deafen the stunning laughter that burst from the other shop.

Hogarth had "seen the sight;" he laughed loudest of the group; when flying back again he exclaimed, "Kit, you dig. I love you from my heart;" and going to the wall, he, in spite of all the efforts of his friends, obliterated his caricature; and turning to him whom it represented, said, "Kit, if you rub out me and my dog, I'll break your bones;" and there it remained upon the cupboard door, until the old premises, like the "baseless fabric of a vision, left not a wreck behind."

Nothing appeared to gratify this great dramatic painter more, than to be told some genuine instance of the moral effects of his prints. He gave my father a set of his "Industrious and Idle Apprentice," in narrow black frames, in the presence of the youths who worked in the shops, and desired they might hang in the "pattern room," as a "pattern to you, young shopmate," looking archly at Kit, said he. The tool box was brought, and he drove the nails in the wainscot, and hung them himself; and such, I verily believe, were the beneficial effects of that pictorial and affecting series, that many a youth of the shop, turned out a good man from the contemplation of these early efforts of the painter's fruitful genius. Fervently do I wish from my heart, that these were faithfully copied, and distributed to every manufactory in His Majesty's dominions. Yea, as the language of painting is universal, that they were distributed abroad too, for the advantage of the youth of the industrious class throughout the civilized world.

The diffusion of these at home would produce more good than a thousand tracts,

houses at Hungerford-stairs; Inigo Jones's Water-gate, and buildings up to Whitehall, many of which have been removed to make way for modern improvements.

which the pious and the philanthropic disperse at vast expence. For here vice is naturally depicted in its most odious shape, and its consequences rendered strikingly terrible; whilst emulation is rationally excited, and the path to happiness and riches made obvious to the meanest perception.

Hogarth, I remember hearing my uncle Zachary say, was stimulated to try his talent at these moral compositions, by reading a translation of the works of a cynical French philosopher, who with Gallic flippancy, maintained that painting was a useless art!!

Hogarth may be included amongst those British worthies who mainly contributed to the improvement of the manners of the last century—a fellow labourer with Addison and Steele, with Hawksworth, and the still more illustrious Johnson, in the cause of PUBLIC VIRTUE.

"In walks of humour, in that cast of style,  
Which, probing to the quick yet makes us smile;

In comedy, his natural road to fame,  
Nor let me call it by a meaner name;  
Where a beginning, middle, and an end,  
Are aptly joined; where parts on parts depend,  
Each made for each, as bodies for their soul,  
So as to form one true and perfect whole,  
Where a plain story to the eye is told,  
Which we conceive the moment we behold;  
Hogarth unrivalled stands, and shall engage  
Unrivalled praise to the most distant age."

This poetic eulogy, candour extorted from an offended contemporary wit. Had the clerical satirist, the brauer Churchill, added "all his conscience had approved," it would not have remained for a more virtuous and a kinder pen to render justice to our worthy artist.

It is delightful to go back to those days, and as it were, to hold converse with such honoured shades. Hogarth's death, I have heard my father say, spread a general gloom. It was the subject of lamentation in every tavern, and all the social clubs were long accustomed to drink to his memory. The sensitive Sterne felt it a dread shock to his fragile frame; and Garrick's sad countenance rendered a while the green-room dull. Sterne brooded over the privation in silent sentiment. Garrick's more active, yet no less tender muse, soothed his affection by dictating this epiphany for his departed friend.

"Farewell, great painter of mankind,  
Who reach'd the noblest point of art;  
Whose pictur'd morals charm the mind,  
And through the eye correct the heart.  
If genius fire thee, reader, stay;  
If nature touch thee drop a tear;  
If neither more thee, turn away,  
For Hogarth's honour'd dust lies here."

No man perhaps was ever a greater enthusiast in his art, than he. It was ever premost in his thoughts, and London in the reign of George II., afforded ample subject for his pencil. This was the last epoch for the "development of character."

Whose imagination, however rich, could picture none, the grotesque cast of London's bustling narrow city, even but sixty years ago? Or who that had not perambulated Fleet-street, to wit, midst the thousand

monster signs, swinging and loudly creaking in a wintry wind, joining in concert with the multifarious wares suspended o'er the open shops, and huge projecting bulks, pots, brazen kettles, tongs, and frying-pans, jingling discordant over-head, together with the crowds of oddities jostling each other right and left from off the greasy, quaggy pebbles, against the stubborn posts. Aye, who I ask, could dream of what it was, seeing what it is?

Then the tailor was well known, tho' lacking his symbols of the shears and goose, whilst a stay-maker was distinct from him. A barber could be descried the full length of Cornhill. Then it was each branch of business that a man pursued stood manifest either in his coat, or hat, or wig, his apron, sleeves, jacket, or general *grais*. Then the observant could divine almost as well of what profession, business, trade, place, office, calling, appointment and persuasion any one was as he could tell the commodity sold in every shop, by the significance of its sign.

Then the purblind might discriminate 'twixt an arch-bishop and a prelate subordinate, an arch-deacon and a dean; a vicar and a curate, by outward garb as well as superficial measurement; might know a tavern-keeper from him that did an ale-house keep. No one mistook a pettyfogging lawyer for an undertaker, nor parish-clerk nor sexton for a beadle, nor regular physician for a puffing patry cook, nor apothecary for either. Nor did even a country lord, newly dubbed a peer, after a month's sojournment amidst the ever changing scene, accept a leather-dresser for a persequer, or he for a baker's agent, tho' all the three were white as miller.

All the watch-makers of Clerkenwell, masters, journeymen, apprentices, looked as "like to like," as dial plates. The weavers too of Spitalfields were of the same cut and trim, as tho' each were the manufacture of the loom. Then it was, "O, rare the times!" that matters of exterior appearance were a very personal superscription, and told you in language plain enough, in what street each man lived, and what he did daily to earn his mutton.

## ORIGINAL CORRESPONDENCE.

A CONCISE VIEW OF THE INCONTINENCE OF THE CLERGY ANTERIOR TO THE REFORMATION.

(Continued.)

The rules respecting the behaviour of the monks and nuns were excessively strict, thus, Lanfranc appointed, in the priory of St. Gregory, Canterbury, "ministros quoque ac custodes, qui modis omnibus observarent ne aliquis eis desesset, neque viris ad feminas, vel feminis ad viros accedendis facultas ulla adesset."\* but these regulations were, I fear, little regarded; for it appears that the nuns of St. Sepulchres, Canterbury, were, at the command of Pope Boniface VIII., in his letters to Archbishop Wicliffe and his suffragans, confined to their cloisters in 1306, for their irregularity and

\* *Engl. Hist. No. 1.*

ill behaviour.† Indeed, we may obtain the clearest view of the manner in which the clergy lived during the 14th century, (allowing for a little exaggeration in the account,) from a pamphlet, printed afterwards in 1531, and entitled, “*The priar and complainte of the plowman vnto Christe written not long after the yere of our Lord 1300*,” in which the writer breaks out into the following complaint:—“*Leue a Lorde, zif good men forsaken the compaignie of woman, and nedes the moten<sup>b</sup> haue the gouernayle of man, then moten they ben<sup>c</sup> yecoupled with schrewes, and therefore thy spoushode, that thou madest in clenesse from synne, it is now ychaunged in to lykynge of the flesch; and Lorde, this ys a gret myschefe vnto thy puple.¶ And yonge prestes and men of religion for defaulte of wikes makeen many ryemen horeu, and drawen thrower hynel<sup>c</sup> to consume many other men to synne; and the ese that they lyuen in, and their welfare, ys a gret cause of this myschefe. And Lorde, we thinke, that these ben quante<sup>c</sup> orlers of religion, and none of thy secte, that *roten taken<sup>c</sup> horeu*, whilke God forfende, and forsaken wyues that God commaundes and gyuen her selfe to ydelnesse, that is the moode of all nouzties.” And in another place, he says, “*Lorde, what herenge<sup>a</sup> ys it to fetch dead menues bones out of the ground there as they schulden kyndelich roten, and schryuen<sup>b</sup> hem in gold and in silver? And suffren<sup>a</sup> the quyke bones of thyne images perishe for defaulte of sustenance, and roten<sup>b</sup> in the hoore house in alomiable lecherie<sup>a</sup>.” Again, “*And Lorde, he that calleth hymself thy eiser<sup>b</sup> up on earth*,” will not suffren prestes to taken hem wyues, for that ys azuisin his law: but Lorde, he will *dispenen with hem to hepen horeu* for a certen sum of mon<sup>a</sup>. And Lorde, all horeuome ys forfended<sup>a</sup> in thy law. And Lorde, this makes puple for the most parte leuen that lecherie ys no synne.” §, A similar character of the above, is observable in the following lines of Robert Laandlag, written towards the close of the (14th) century: after enumerating several clerical vices, he makes a priest speak thus:**

I am occupied euery day, holy day and other  
With idle tales at the ale; and other while  
in churches.  
God’s paine and his passion full slyde<sup>b</sup> I thinke  
I theoreu;  
I visited neuer feble men, ne fettrid folke in  
pitte;

† Walsingham Hist. Angl. Anno 28 Edw. I. & A.D. 1301. Bately’s Edit. of Somner. p. 37. Folio.

‡ This scarce work is reprinted in the Harl. Misc. vol. i. It was this pamphlet that gave rise to the two invectives of Chaucer and Langland.

§ Beloved. <sup>a</sup> They must. <sup>c</sup> Be. <sup>d</sup> People. <sup>e</sup> Evil. <sup>f</sup> Canning. <sup>g</sup> Will take. <sup>h</sup> Worship. <sup>i</sup> Eschirine. <sup>j</sup> Suffer. <sup>k</sup> Rot. <sup>l</sup> The Pope. <sup>m</sup> Money. <sup>n</sup> Forisiden. <sup>o</sup> The Golden Fleece.” by Orpheus Junior, in 1626, which reproves very severely the lives of the *quondam* clergy, are some severely corroborative lines which we may not quote.

¶ Seldam.

I have heer here an harlotrie, or a somer  
gaine,  
Or leasings to laugh at, and bilye my neigh-  
bours,  
Then all that euer Marke made, Math, John,  
And Lucas,  
And Ugiles; and fasting daies, all these let I  
passe,  
And lie in bed in lent, and mi leman in mine  
arnes.

Chaucer, who wrote his poem of “*The Court in Love*,” in 1346, represents a crowd of monks, friars, and nuns, as attending it, and grieving, that they are exiled from it, by being confined in convents, &c. The monks and friars use these words:

Then sode the monkes and freres in the tide,  
Well may we curse our abbe’s and our place,  
Our statutes sharpe to wing in copes wide,  
Chastly to kepe us coule of love’s grace,  
And never to fele no comforte no solace;  
Yet suffre we the hete of love’s fire,  
And after other hapely we desire.

O fortune cournd I why nowe and wharfore,  
Hast thou, they said, beraste us liberte,  
Sith nature gave us &c.

And appetit to love and lovers he:  
Why mote we suffre soche aduante  
Diane to serve, and Venus to refuse?  
Ful often this matter doth us muse. V. 1114.

The author of the Golden Fleece, (already quoted below in a note,) ascribes this unchasteness to their being prevented from marrying; and insinuates, that nunneries were erected by their suggestions, so as to be able, by means of them, to satisfy their irregular inclinations; although this opinion cannot be subscribed to, yet, as the passage is curious, I shall insert it without any apology:—“*For themselves being to continue for ever unmarried, they burned in lust, and left no trick unattempted to beguile wives and maidens. But among all their sleights, they preasayed above all, when they drew men to build nunneries, that they might allure prettie wenchies thither, with whom they might loue the more freely to coole their raging lusts. Insomuch, that the wariest of them, seeing some of their sweet hearts too fruitful, they studied phisic, and gave them drenches to destroy their fruit; or if that wrought not the effect, for the credit of their vtorias, they held it no great sinne to murder it, as soon as ever it came to light: which diuellish acts of theirs since the preaching of the Gospel are daily discovered in pounds and other hidden places, where the skuls of many infants haue bene lately found.”—Page 62. The horrible characters of the religious in those days, are interspersed through all the writings of Chaucer, particularly in his Canterbury Tales, his Plowman’s Tale, &c. &c.; in the last, he thus reprobrates their vanity and incontinence:*

Of scarlet and grene gais gounes,  
That mote be shopen for the newe,  
To clippen and klesse in toones,  
The damozelles that to the dance seue:

Meennis wives thei wolliu bold,  
And though that thei bin right sorry,  
To speke that shull not be so bold,  
For somping to the consistory.

And make them sale with mouthe, I lie,  
Thou that it sawin with their eye,  
His leman holden openly,  
No man so hardy to aske why.

They use horeuom, and harlotrie,  
And couetise, &c.

At the *Notabilis Visitatio de Selburne*, in Hampshire, A.D. 1387, by William of Wykeham, among various irregularities practised in that monastery, was this:

V. Item, quia ostia ecclesie alic; claustris prioratus vestri predicti non seruentur, nec seruantur temporibus debitis, nec modo debito, ut decreuit, sed custodia corundem agitur et omittitur multoties negligenter, adeo quod suspecte persone et alie inhoneste, per ecclesiam et claustrum iustissimum incedunt frequenter in tenebris aut; umbra temporibus eadem suspectis et illicitis indenter; unde dampna et scandala varia pluries procurrent et inopostumer verisimiliter poterant procreare; &c. He likewise complains, that some of the canons, living dissolutely after the flesh, and not after the spirit, had slept naked in their beds without their breeches and shirts, § which was a grievous violation of one of the Augustine rules.

I think I have advanced a sufficient number of authorities, to prove the generality and frequency of this vice among the clergy; their religious duties were in fact a mere mockery; the devotion they displayed was assumed; and exclusively confined to the ceremonious fooleries of the Popish ritual, without either their hearts being engaged, or their minds elevated towards the merest sect of their gracious and beneficent Creator. In short, I cannot conclude this paper with greater truth or propriety than in the words of Malvern, who, in the following quaint lines, tells us in what light he considered religion in those days:

Now is religion a rider, a romer by streate,  
A leader of love days, and a loud beggar;  
A pricker on a palfrey from maner to maner,  
A heape of bounds, &c. Pass. X.

(To be continued.)

To the Editor of the Literary Gazette. ||

Sir,—Having observed in the Literary Gazette of the 7th instant, an anecdote of the late Captain Sir Peter Parker, which I know

† Chaucer, ed. Crry. pp. 173 & 189.

‡ Even so late as the reign of Anne, in all indictments, &c. the term *personae suspectae* was used to signify w.—a.

§ Vid. Gills. White’s Hist. Selburne, in App.

|| X. Item, quod nonnulli canonici domos secundum carnes potumque secundum spiritum dissoluti videntes, &c.—unde jacent in lectis nupque femoralibus, &c.

|| It will readily be believed that we could mean no disrespect to the memory of this gallant sailor, who fell gloriously fighting his country’s battles. The anecdotes (inserted without much consideration) appeared to us to be nothing more than descriptions of eccentricities rather characteristic of our gallant seamen—frolics in no respect discreditible to the brave officer to whom they were imputed, and the recollection of whom we cherish with feelings of the highest sympathy and admiration. Etc.

to be wholly unfounded, I take the liberty of addressing you, with a view to correct the mistake.

From my intimate acquaintance with the family, I can take upon me to assert, that in no instance had he ever incurred the displeasure of either his father or his grandfather. He was the son of Vice Admiral Christopher Parker, who died in 1804, and grandson of Sir Peter Parker, who died Admiral of the Fleet of England in 1811. I can further assure you, that he never served at any time under the command either of his father or grandfather.

I trust, that after this explanation, you will feel the propriety of doing justice to a gallant officer, who lost his life in the service of his country; and remove any unfavourable impression against his memory, which your report may have occasioned, by a frank and candid avowal of the mistake. I am, Sir,

Your humble servant,  
VERITAS.

## ARTS AND SCIENCES.

### THE NEW CONTINENT.

We have been favoured with the following extract from the log-book of the brig *Williams*, by a vessel just arrived from Buenos Ayres. It states several particulars respecting the newly-discovered continent of New Shetland, or South Shetland; and as every thing relative to this matter is interesting, we lay it exactly as it has reached us before our readers. There was a map with the packet, but it appears, (with the exception of Dalrymple's chart) to be similar to that in Brewster's Philosophical Journal, which may be referred to.

*Extract from the Brig William's Log Book, on a Voyage from Buenos Ayres to Valparaiso. Feb. 19th 1819.*

*1st Track.*—Having sailed round to the eastward of the Falkland Islands, and keeping our reach to the southward and westward, winds variable from south to south west, in lat.  $62^{\circ} 40'$  south, and long.  $60^{\circ} 00'$  west by chronometer. Land or ice was discovered ahead, bearing S. E. by S. distant about 2 leagues, blowing hard gales with flying showers of snow, the day breaking at 6 A.M. wore ship to the northward, at 9 A.M. more moderate and clear; a large field of ice was distant 10 miles; at noon moderate and fine weather; lat. observed,  $62^{\circ} 17'$  south, long.  $60^{\circ} 12'$  west; wore ship and made sail for land again at 2 P.M.; the large body of ice bore west distant 4 miles; at 4 P.M. tacked ship the land or islands bearing S. E. by E. to S. S. E. distant 10 miles; the weather fine and pleasant. It was discovered to be land a little covered with snow; down tacks and steered to N. W. at 6 P.M. the ice E. N. E. distant 1 mile floating about, and whales and seals observed in abundance; afterwards made all sail on our intended voyage.

*From Valparaiso to Montanidio.*—May 12th.

*2nd Track.*—On my arrival at Valparaiso, this land being doubtful from not having

sounded, I determined on looking for it again, and steering in a parallel of  $62^{\circ} 12'$  south for the Islands, when in lat.  $67^{\circ} 00'$  west, on 15th June at 6 P.M. and in the above lat. found the vessel completely beset with broken ice, standing immediately to the north, under easy sail, and going at the rate of  $1\frac{1}{2}$  to 2 miles per hour; night very dark; it was found impossible to make further progress this season, in consequence thereof we abandoned the attempt, and stood on for our destined port. On arrival, notwithstanding all the precaution that was observed, the ice had torn off the vessel's bottom several sheets of copper.

*From Montanidio to Valparaiso.*

*3d Track.*—After departing from this place, we were favoured with fine weather and a fair wind, which allowed us to pass Cape Horn in 14 days, the wind then favourable to go to the westward; however, as it was our intention to make the islands, we stood away S. S. E. and on the 15th Oct. at 6 P.M. made them distant 3 leagues, in lat.  $62^{\circ} 30'$  south, and long.  $60^{\circ} 00'$  west; bore up and sailed towards them; at four miles distant sounded in 40 fathoms, fine black sand, islands bearing E. by S. at S. E. by S. sounded again in 60 fathoms, sand bottom. Hauled off during the night to north; at daylight stood in at three leagues distance from the islands; sounded and found 95 fathoms, fine sandy bottom, at 8 A.M. clear pleasant weather; saw the main land bearing S. S. E. distant from the islands about three leagues. Having now as far as the Cape found the land to run off to N. E. coasting to the eastward, sounded and found it similar to the former.

The point which is called North Foreland, bearing E. by S. we looked for in it, and got the island to bear N. W. distant half a league, sounding regular from 20 to 35 fathoms; fine bottom, sand and gravel; finding the weather favourable, sent in the boat and succeeded in landing; it was found to be barren and covered with snow; seals were observed about the shore in abundance. Night coming on the boat returned, when we made sail off the shore for the night; in the morning altered the course so as to keep the land to the southward in view. At 11 A.M. the North Foreland bore E. S. by E. distant five leagues; the land then took a S. E. direction.

After this we hauled to the westward, and proceeded on our voyage.

I again from variable winds made Cape Williams, and perceived some trees on the land to the S. W. of the Cape, stretching in a S. W. direction; the weather became thick and squally; made sail to the westward, having sailed about 150 miles S. W. W. The weather becoming more settled, saw another headland bearing about E. N. E., distant about 10 leagues, very high; by observation, in lat.  $62^{\circ} 53'$  south, and long. per chronom.  $63^{\circ} 40'$ , west of Greenwich, named the Smith's Cape; found the land to extend at the Cape in a southerly direction. Finding it dangerous to proceed further to the southward and in an unknown coast, shaped my course for Valparaiso, where I arrived on 23d Nov. 1819.

It is to be remarked, that the land was

taken possession of in the name of Our Sovereign Lord George III., King of Great Britain and Ireland, and in this name planted the Union, and left a board stating the discoverer, &c.

### TRIGONOMETRICAL SURVEY.

We learn from a northern correspondent, that Dr. M'Culloch, of Blackheath, has been in the Shetland Isles all this summer, by order of the Board of Ordnance, being associated with the trigonometrical survey, under the late General Mudge, and continued by Captain Colby. The leading object of the survey is to ascertain the specific gravity and density of the earth at the stations, and in the circuits where the Zenith Sector was placed; for determining the extreme northern point of the meridional arc begun by the late General Roy, and now continued from Dunoon to Baltia. These corrections are required to determine any eventual errors arising from a deviation of the plumb line, and also the local influences capable of affecting the pendulum, as used by Dr. Gregory and M. Biot, and more lately by Captain Kater. The whole is connected with similar observations, carried on for some years past, on the meridional arc in question as it passes through England and Scotland. This effect on astronomical instruments was first noticed by the French and Spanish astronomers in South America, and applied by Dr. Maskelyne to the problem of determining the earth's density. It is treated at full length in Baron de Zach's work, and the necessity of attending to it was strongly urged by the late lamented Dr. Playfair. The conduct of the Board of Ordnance, in selecting Dr. M'Culloch for an investigation of such importance to science, deserves the highest praise, and is an earnest of the attention they have paid to the due and accurate execution of this important work. Dr. M'Culloch is farther, we are informed, extending his observation, so as to form a geological map of the Shetland Isles, which will be added to the general geological and mineral map of Scotland, in which he has made so great progress, and which, we understand, will be shortly published by the Board of Ordnance in a form corresponding with that of the maps now publishing under their inspection.—(*Edin. Even. Courant.*)

## ORIGINAL POETRY.

[By Correspondents.]

TO CINDERELLA.

Sweet Cinderella! thine the graceful skill,  
To wield the housemaid's dirt-destroying broom;  
'Tis thing Archæus' venom'd blood to spill,  
Or weakness drive her from her silken loom!  
I saw thee (well against my ribs might throb  
My heart) as on thy chequer-apron'd knee,  
With ruby arm, and glove-shathed hand the hob  
Thoud'st polliah, 'till reflected thou might'st see  
Well as in Warren's bright-embalmed boot,  
Thy toil, impassioned charms, and humid face;

Nor dream that ought above thy slipper's foot,  
My greedy gaze could mischievously trace.

'Tis thine with pliant wrist to twirl the mop—  
Science refin'd! to untutor'd maids denied;  
The circling wool throws forth the "big round drop,"

And the bright crystal shower scatters wide.

Oh! have I seen thee wanton in the sun,  
And mark with mirthful eye the glitt'ring rays;

Then turn thee quickly round in vengeful fun,  
And aim the rainy torrent in my face!

Think, Cinderella! of the happy day  
When plump I met you on the kitchen stairs,  
I seiz'd a kiss, — and for my amorous play,  
Your wash-hand water took me unawares!

Bethink how oft I have confest to thee,  
My bosom burn'd with thee to rule the roast;  
You'd fondly listen, while you made the tea,  
And laugh for mischief when I burnt the toast.

Oh! as my plate I'd polish, did I swear  
Thou wert more worth than gold and silver too;

That if with me my fortune thou would'st share,  
I'd pawn my soul to Isachou the Jew!

And now thou'lt leave me for the dapper groom  
Who drives you out in Master's new calash:  
Soon will he take Suetonia in your room—  
Cinder! he only wants to "cut a dash!"

He talks of love, of flames, of fire and brimstone,  
And vows that all is true he ever spoke;  
It's all a lie! for his falsehood, I would him  
stone—

The fiery groom you'll find will end in smoke.

I have been constant as the Jack, my Cinder!  
His fickle heart you ne'er can hope to catch;  
My breast soon lit—as sparks soon kindle tinder,  
And all I long and sigh for is a match!

Still I forgive, and should'st thou e'er hereafter  
Find that his vows are false, my heart sincere  
We'll make it up again, in mirth and laughter,  
And thou again shalt find a welcome here.

But should'st thou thou still forget both me and mine,  
Still turn upon me that relentless frown;  
Yet let mine ashes, Cinder! join with thine,  
And—let the dustman have 'em for a crown.

EDGAR.

*Impromptu.—On a Young Lady with an Impediment in her Speech.*

"Now Tom, 'tis your turn—come give us  
your toast."  
"Here's Maria!" "Why she? Not one charn  
can she boast."

"There, sir, you are wrong—to deny it is  
vain;  
Though her face is, her language can not be  
called plain."

#### RUSTICS AND SCHOOLMASTERS.

"O knew he but his happiness, of men  
The happiest he." So whilome Thomson  
sung,

Extolling thereby with his deathless pen  
The blades, who dwelling rural shades among,  
Fatten calf, ram, goose, bullock, cock or hen,  
And grub the earth, and shovel up the dung;  
Set so little happy, that I think  
When Thomson praised them he was much in  
driak.

Good, grossy Jemmy! were you asked to change  
With him of whom you thus bepraise the lot,  
You'd think, I ween, the offer somewhat strange,  
And answer—"Thank you, sir, I'd rather  
not."

And own you much preferred the kitchen range,  
And dulcet murmurings of the well lined pot,  
To any range of starved poetic trees,  
Or happy whisperings of the western breeze.

Elsewhere he gives his praises as he ought,  
Singing or saying to his sounding lute,  
"Delightful task! to rear the tender thought,  
To teach the young idea how to shoot!"

Ay, that's the happiness indeed! which nought  
Surpasses here on earth beyond dispute;  
What do I say? on earth? I'm sure 'tis given  
As a supreme beatitude in heaven.

O tribe of pedagogues supremely blest!  
To whom this most delightful task 'pertains,  
Yours is the tranquil sunshine of the breast,  
And yours the bliss ye bland Arcadian swains:

Although I should contrive to do my best,  
And bite my nails, and beat my head for  
brains,

Yet I should not be able to express  
Your most exalted glorious happiness.

'Tis yours, high seated on exalted throne,  
Armed with awe-striking sceptre in the hand,  
With eye of lordly glance, and haughty tone,  
Order your tiny train to hold command;

And many a dolorous sigh and cowering moan,  
Attends the waving of that magic wand,  
By which you make the elements of speech  
Mount upwards to the cranium through the  
breach,

High is your rule, extending far and wide  
O'er venerable Grammar's gay domain;  
Noun, pronoun, verb, you see on every side,  
Owning the sway despotic of your reign.

'Tis yours to lord in prim prosodial pride,  
O'er long and shorts of hexametric strain,  
And yours the rule, unquestioned as the Pope's,  
O'er rhetoric's figures, and o'er rhetoric's tropes.

"Delightful task!" (I quote it once again)  
Is yours, the young idea to nreap!  
I envy you your lot, you happy men,  
So sweet the pastime, and the toil so dear.

I—but I see my too loquacious pen  
Has tired the reader's eye, and hearer's ear—  
So true to verse,—I go to fill a jorum  
And drink "Salute pedagogicorum!"

M. J. F.

#### LYRICS.

##### I. Love.

In vain you bid my muse aspire  
To sing of loftier themes;  
Nought melts so sweetly from the lyre,  
As love's delicious dreams.

Oh, how can sing but what they feel;  
And I feel only love,  
And Eve's soft hour, when triflers steal,  
A ramble in the grove!

Oh, rather far than feast with kings,  
With Emma would I stray,  
When her eye says ten thousand things  
Her tongue may never say!

In those fond moments, when she turns  
Her amorous lips to mine,  
And all my soul within me burns  
With extacy divine!

Or when she every boon denies  
To make me fonder seek;  
While soft desire lights up her eyes  
And burns upon her cheek.

Oh! these are themes that I can sing,  
For these my passions more;  
My lyre, tho' changed, thro' every string,  
Would only answer love!

#### II. Time's Furlough.

Oh! by the paleness of thy face,  
And wildness of thine eye,  
A lover's eye can quickly trace  
What thoughts beneath them lie.

Then why not gather love's sweet flowers  
Before their bloom is dead?  
They lose their freshness, when the hours  
Of youth's sweet May are fled!

W. G.

#### BILLINGSGATE MUSIC.

Hark! Billingsgate music  
Melts o'er the sea,  
Falling light from some alcoushous,  
Where Kerry men be;  
And fishwomen's voices  
Roar over the deep,  
And waken around us  
The billows from sleep.

Our potatoe boat gently  
Wades over the wave,  
While they call one another  
Rogue, baggage, and knave!  
We listen—we listen—  
How happy are we,  
To hear the sweet music  
Of beauteous Tralce!

Tralce Bay, Sept. 1, 1820.

W. F.

#### SKETCHES OF SOCIETY.

##### THE WANT OF A PENNY..

*For want of a penny in one's pocket, it is impossible to conceive the vexations to which one may be exposed in all places, but certainly no where more than in Paris. Nothing can plead more forcibly in favour of economy than the following narrative, which we extract from a French journal, for the benefit of those who visit Paris.*

"Anxious to find the minister from whom I was about to solicit a favour for my best friend, I left home in a hurry, and forgot my purse. The keeper of the Pont-des-Arts", however, soon reminded me of my neglect; and as mere civility is not accounted good payment there, more than elsewhere, I turned back, in order to pass over the Pont-Neuf. One of those artists who take their station on the edge of the foot-path, proposed to brush the dust off my shoes for a penny. I passed on and pretended not to hear him. On reaching his Excellency's house, I learned that he had set out for his country seat about five minutes before, namely, just while I was going round by the Pont-Neuf. My friend was anxiously awaiting his appointment! Vexed by this unlucky accident, I mechanically sought for something to divert my spirits. I drew out my snuff-box; but to my mortification it was empty, and I am not in the habit of running in debt at the tobacconist's.

"I walked slowly on, and a miserable  
There is a toll upon this bridge, and none on the Pont Neuf, which is higher up the river Seine. Eq.

picture soon attracted my notice. A wretched family, stretched on the street, in a state of starvation, implored me to give them a single penny. Alas! I was even poorer than they. Raising my eyes to heaven, I discovered a slight degree of darkness. I was about to enquire the cause, when a little boy begged me to look at the eclipse through his smoked glass, for a penny. In spite of my curiosity, I walked on, and postponed for twenty-seven years the pleasure which I might have enjoyed at the present moment.

"Plunged in melancholy reflections, my attention was suddenly attracted by a man running out of breath, and roaring, *Ulla la lita!* I recollected that I had ventured to purchase a ticket in the lottery; but unluckily I could not, at that moment, conveniently ascertain whether or not Fortune had ceased to persecute me. I continued to walk on, but was soon stopped by a real *Carbonaro*, who was sweeping the streets—*pauses, pauses*, he exclaimed. Being totally unable to fulfil the second condition, I was resolved to evade the first, and I escaped with a hearty laughing.

"Meanwhile as uproar in the street announced the publication of the new ordinance relative to Sub-Prefects, in which one of my old college-companions was deeply interested. I was all anxiety to learn the particulars; but what was my mortification when the fellow who was selling the ordinance, roared out, with Stentorian lungs, that its price was *only one penny*. Vexed beyond all endurance at these successive disappointments, I entered a church, where I hoped to enjoy a little rest, while at the same time I fulfilled a pious duty; but I had not been there more than five minutes, when I recollected that there was to be a collection for the benefit of the poor. I immediately left the church—the museum was at hand; I proceeded thither, but was informed it was necessary to leave my stick at the door. It may naturally be supposed that when I determined to postpone my pleasure till to-morrow, my passion for the fine arts easily accommodated itself to the ill fortune I had experienced throughout the day. Three ladies of my acquaintance arrived at the door in a coach. I ran to assist them in alighting, when immediately four flower women thrust their baskets under my nose, and begged me to buy the ladies a bouquet for *only one penny*. Like a skilful general I turned the position, and accompanied my three friends as far as the vestibule, whence I returned only to fall a prey to the persecutions of the officious fellow who had opened the coach door, and let down the steps. However I soon got rid of him by replying, with the air of a *Cressus*, that I had no change, and the by-standers little suspected the full truth of the assertion.

"I now hastened home; and taking the necessary sum, flew to the *spring-bank*, where I deposited the little capital which will secure to me a revenue of five centimes per

• Equivalent to our excellent Savings Banks; and though the inconveniences of this lively

day, being, by sad experience, too well convinced of the inconveniences that may arise from the want of a penny."

#### FAMILY COMFORT.

To the Editor of the Literary Gazette.

Sir.—I am a young lawyer, and went last Monday to visit a friend, to whom I shall give the name of Barnet. He has long pressed me to quit the turmoil of London, for Halcyon Hall, which he calls his earthly Paradise. He relinquished the bar on marrying a person to whom he was fondly attached, and is the father of a very promising family. With health, talents, prosperity, love, and esteem, mingled in his cup, he seems to have little to do in this world, but thankfully to enjoy, and cheerfully distribute its blessings.

The day after my arrival, when conversing on some interesting topics with Mrs. Barnet, she remarked it was cold.—I disented—and our conversation continued as before: but on her husband's entrance, she repeated the remark, with a sort of childish appeal to his pity in her face. He said it was remarkably warm, one of the warmest days this summer.

She.—(with increasing, and well performed shiverings).—"You may think it warm, who have walked to the farm, like the well-fed mayor, when he visits the prisoners' cold cells; but we, who have been sitting still, find it remarkably cold."

He.—"I have not walked to the farm—I am sure I go very little to the farm—the poor farm—but I assure you 'tis very hot."

She.—"The thermometer was lower in my room to-day than yesterday."

He.—"It's higher now in the shade."

She.—(with chattering teeth).—"I feel it colder—horridly cold."

Mr. Barnet left his coffee cooling, to seek the thermometer; but alas! even this impartial umpire decided nothing, for the debate was continued, as to the different effects of cold, though the degrees might be the same, as it was modified by damps, high winds, health, situation, &c. &c. Physics, metaphysics, illustration, authorities, anecdotes, victimisms, were all pressed into the service with unsparing, but perverted ingenuity, and the debate lasted as long as our time of being together in the morning.

We were talking very comfortably at dinner, when the propriety of giving to one of the children some mutton, very little roasted, being questioned by his mother, and supported by his father, led us a second wild goose chase. The habits of the Greeks and Romans—the practice of our pugilists and running gentlemen—the moral effects of eating raw meat—its property of inspiring cruelty—the opinions of eminent physicians and of fruitful matrons—the danger of a progress from this taste to cannibalism, all passed in review, and the debate was only adjourned

writer are not likely to affect those who may place their money in such receptacle, we trust the lesson may be felt by those to whom a penny is still more valuable. Ed.

by Mrs. Barnet's leaving us for the drawing room.

Conviction, of course, is never produced or even affected; and as to pleasantness, you know how seldom family joys are amusing. They are usually either insipid to indifferent hearers, or sub-acid; and the wastefulness of the joker, that insists on catching that his patient, is to me unspeakably tiresome. In short, I shall take my leave immediately unless they adopt what I now venture to propose, knowing your entertaining paper meets their eye. My plan is, that when we assert an opinion or a fact, and the other differs, the first speaker should have the privilege of making a rejoinder, and then the matter should drop, or be referred to a secret committee. This would leave those powers of conversation my friends eminently possess, free for more agreeable topics, and clear their countenances from a certain anxious expression, for which no other circumstances in their habits or state of mind appear to lay the smallest foundation.

I have the honour to be, Sir, &c. &c.  
Halcyon Hall, Oct. 1.

#### THE DRAMA.

COVENT GARDEN.—Nothing of a novel nature has been produced since our last. Indeed it seems to be the system of the Winter Theatres now to begin the season without much effort, and reserve their strength for after Christmas. The old dramas acted here however, *Henri Quatre*, *Rob Roy*, *The Antiquary*, &c., together with the alterations in the house, have drawn full audiences.

HAYMARKET.—At this theatre a Mr. Hicks, who made his debut in that part last year at Covent Garden, has repeated *Hamlet*. His faults are perhaps curable, for they consist most prominently of a stoop, a drawl, and an entire want of marking in the dialogue; and good sense and practice may remedy these defects. In other respects he is a tall, slender, gentlemanly person, with a good eye and expressive countenance. Mild and vigour, if he possess the one and rarely supply the other, may make him a performer or belonging to the superior class: as yet *Hamlet* is above his powers.

#### VARIETIES.

M. St. Martin, the author of *Memoires sur l'Arménie*, &c. has been chosen a member of the Academy of Inscriptions and Belles-lettres, in the room of M. Tchern, deceased.—(French Paper).

The King of Prussia has appointed M. Von Tieck, the sculptor, to be a professor of the Royal Academy of Fine Arts at Berlin.

M. Rabboni, first flute player at the theatre of La Scala at Milan, lately performed at the *Opera Italiana* at Paris. The French critics do not speak very highly of his talents.

The celebrated sculptor Thorwaldsen is about to visit Warsaw, to execute a mo-

nument to the memory of Prince Joseph Poniatowsky.

**SCULPTURE.**—The works of the students who were admitted to compete for the grand prizes of sculpture, have been exhibited in the gallery of the Academy of Fine Arts.

The figures are about four feet high. The subject is *Cain the moment after he has murdered Abel*. Two of the figures particularly merit attention; namely, those marked 5 and 7.

The 5th is remarkable for the simplicity of the attitude, and the correct expression of the head. It is however to be regretted, that the play of the muscles is somewhat too feebly defined in the lower part of the figure, and the feet do not sufficiently participate in the general motion. The idea which is naturally formed of the uncouth figure of Cain, and the terror with which he must have been seized on hearing the voice of the Almighty, sufficiently prove that the subject ought to be treated in the powerful style of which Michael Angelo has furnished so many excellent models.

The 7th would leave almost nothing to be wished for, if the head were rather more youthful. The motion of the body is given with perfect truth, and the whole figure is remarkable for anatomical correctness.

#### French Journal.

**Vaulting Ambition.**—A rope-dancer lately applied to the magistrate of a little town in Switzerland, for permission to perform within his jurisdiction. The magistrate refused, observing that the country was already overrun with mountebanks: "but, (said the dancer) I am not one of the common class; I send a proof of my superiority:" with these words he leaped completely over the head of the magistrate, and this feat of agility gained him the indulgence he applied for.

A number of persons at Darlaston, having read in a Birmingham paper that the Eclipse would be "visible from that town at such an hour, actually left their employment, and went over to Birmingham to see the Eclipse.—*Sheffield Mercury*.

**Egyptian Mummy.**—A mummy, in a high state of preservation, presented to the Hunterian Museum of Glasgow, has recently been examined by several learned persons of that city. An account of the condition of the corpse, &c. has been published in the newspapers but it does not seem to give any important information: indeed one of the remarks is ludicrous, for it is first stated that the face was "apparently female," and then that "there appeared upon the chin not the slightest vestige of hair, but that upon the eyebrows was distinctly and finely arched." Surely, the Glasgow literati, though they may have read of a bearded Venus, did not expect a beard on the chin of an Egyptian lady! The hair upon the head is of a golden colour, which we consider to be rather a remarkable circumstance; but as the nose is also described as Roman, it seems probable that this female was not a native of the land of dark beauties.

**Smoked Sausages.**—There is a disease very prevalent in Wurtemberg, but little known

elsewhere, which is induced by eating smoked sausages, and is most fatal every spring, especially in the month of April. A pamphlet on this subject by Dr. Justus Kerner, has appeared at Tübingen. According to this work, 76 persons were taken ill from eating smoked sausages in a very short time, and in quite different parts of the kingdom; 37 of these died; others, dried up to mummies, carried the poison in them for many years. The liver sausages are the most dangerous; of 24 persons who ate of them, 12 died. It appears by Kerner's discoveries, that this poison is not prussic acid. It is different from all hitherto known poisons, inasmuch as it leaves the brain and the spinal marrow unaffected, but suspends the action of the sympathetic or ganglion system in its whole extent. Hence, a very remarkable result for physiology: Thus, for instance, in a person infected by the sausages, not the slightest pulsation of the heart was perceived for months together; while, notwithstanding this, the pulsation of the arteries remained almost regular. This poison appears, according to Kerner, to have the most resemblance to the venom of the *dipsas serpent*, or to the supposed effects of the aqua tofana.

**French Names.**—The following whimsical period commences an article in one of the Paris journals:—

"Il existe à Londres, aux frais du gouvernement, une école d'arts et métiers, que l'on nomme *Blue Coat* d'où sont sortis des hommes du premier mérite."

Who could suppose that this oddly spelt government institution, which sends out men of the highest abilities in the arts, is Christ's Hospital, or the Blue Coat School?

**Lusus Nature.**—A curious phenomenon at present engages the attention of the inhabitants of Clermont, in France; namely, a little monster, the offspring of a cat and some unknown male animal. It possesses the playfulness of a dog, while its mouth, claws, and teeth, resemble those of a cat. Its hair is soft, brown on the back, and white as snow on the paws and belly. It usually barks, but mews when called by its mother.

There is at present to be seen, at Arbuthnot, a beautiful phenomenon of nature, arising from stagnate water by the late hot weather. In a basin belonging to a salt-work, stopt some time ago from working, the combination of gases, occasioned by the decomposition of the water, has become so powerful that, after dark, its surface appears as if sparkling with fire; and when a stone, or other weighty substance, is thrown in to disturb the fluid, a brilliant bluish flame immediately takes place.—*Provincial Journal*.

**Stockholm, Sept. 8.**—Major Graner, who set sail last year to endeavour to open a trading passage between Chili and the East Indies, by a different course from that which has hitherto been taken, has discovered a groupe of islands, which have not been marked by any navigator. The largest has received the name of the *Isle of Oscar*.

#### LITERARY NOTICES.

**The Salic Law.**—Paris, September 2.—M. Carion Nisas, jun.—has just published a French translation of the Salic Law, accompanied with notes. It is strange enough that this oldest code of laws has been long since known to us only by an emunctum which it does not contain, namely, the custom of the Salic Franks, which has become a fundamental principle of the French monarchy—the exclusion of females (and their descendants) from the succession to the throne. This law, founded on custom alone, has never been a written law at any period of the monarchy, and it is erroneously that some commentators and lawyers have thought it to be contained in the 62d chapter of the Salic Law. M. Bignon observes, "A law must have been held in high estimation, to be so strictly observed that it never was necessary to reduce it to writing."

**An Armenian Gazette** is printed in the Armenian Convent, which is situated on one of the Islands in the Lagoon of Venice. The articles are, for the most part, translated from the best Italian newspapers. Numerous copies are sent to Constantinople, and then dispersed over the Levant. Three of them go to the Seraglio of the Sultan. By their aid the political bulletins are controlled which the Hospodars of Moldavia and Wallachia are obliged to send in every week.

#### METEOROLOGICAL JOURNAL.

OCTOBER, 1820.

**Thursday, 5.**—Thermometer from 44 to 60. Barometer from 30, 54 to 30, 47. Wind N. E. 4. and 2.—Generally clear; light clouds passing during the morning.  
Rain fallen, .025 of an inch.  
**Friday, 6.**—Thermometer from 43 to 61. Barometer from 30, 42 to 30, 38. Wind N. E. 2 and 4.—Clear.  
**Saturday, 7.**—Thermometer from 43 to 63. Barometer from 30, 37 to 30, 32. Wind N. E. 1.—Generally clear.  
**Sunday, 8.**—Thermometer from 41 to 60. Barometer from 30, 35 to 30, 38. Wind N. E. 1.—Cloudy till noon, the rest of the day clear.  
**Monday, 9.**—Thermometer from 40 to 55. Barometer from 30, 38 to 30, 23. Wind N. E. 4.—Cloudy.  
**Tuesday, 10.**—Thermometer from 42 to 53. Barometer from 30, 32 to 30, 30. Wind N. E. 4.—Cloudy.  
**Wednesday, 11.**—Thermometer from 41 to 57. Barometer from 30, 18 to 30, 14. Wind N. and N. E. 4.—Generally cloudy.  
Rain fallen, .025 of an inch.  
On Monday the 16th at 21 minutes, 58 seconds after 9 o'clock, the 1st Satellite of Jupiter will emerge from an eclipse.  
On Wednesday the 18th, there will be an occultation of the Moon and Jupiter.  
It will begin at 15½ minutes north of the Moon's centre, at 42 minutes 27 seconds after 4 o'clock in the afternoon (clock time), and end 13½ minutes north of the Moon's centre, at 12 minutes 56 seconds after 5.  
Edmonton, Middlesex. JOHN ADAMS.

Erratum.—Page 617, col. 2, 1. 90 from the bottom, for *posters* read *pastors*.

## BOOKS PUBLISHED THIS DAY.

In 8vo. 12s. a third edition of  
**THE SKETCH BOOK OF GEOFFREY CRAY-**  
 ON, Gent. vol. 1. Printed for John Murray, Al-  
 bion Street.

By the same author, printed uniformly with the above,  
 a new edition of  
**KNICKERBOCKER'S HISTORY OF NEW YORK**,  
 from the beginning of the World to the end of  
 the Dutch Dynasty, 8vo. 12s. Also, Sketch Book, vol. 2,  
 8vo. 12s.

In 8vo. 12s. a new edition of  
**A HISTORY OF NEW YORK**, from the Be-  
 ginning of the World to the End of the Dutch  
 Dynasty; containing, among many surprising and cu-  
 rious details, the memorable Foundings of Walter  
 Duerloo, the disastrous Projects of William the Third,  
 and the chivalric Achievements of Peter the Head-  
 strong, the Three Dutch Governors of New Amster-  
 dam; being the only authentic History of the Times  
 that have ever been published. By **DIEDRICH KNICK-**  
**ERBOCKER**, author of the Sketch Book. Printed for  
 John Murray, Albion Street. By the same author,  
 a new edition of the Sketch Book, 2 vols. 8vo. 24s.

In 12mo. price 9s. boards.  
**ESSAYS AND SKETCHES OF LIFE AND CHA-**  
**RACTER.** By a Gentleman who has left his  
 Lodgings.

"We have seldom perused any similar volume with  
 higher pleasure. It is written throughout with great  
 facility and elegance, and bears every where indubi-  
 table marks of an upright and honourable mind, richly  
 cultivated both by study and travel."—*Blackwood's*  
*Magazine*, August, 1820.  
 Printed for Longman, Hurst, Rees, Orme, and Brown,  
 London.

*Dr. Whitaker's History of Yorkshire.*  
 Part III., in folio, on fine demy paper, 2l. 2s. and on su-  
 per-royal drawing paper, with proof impressions of  
 the plates, price 4l. 4s. of

**A GENERAL HISTORY OF THE COUNTY OF**  
**YORK.** By **THOMAS DUNHAM WHITAK-**  
**ER**, LL. D. F. S. A. F. R. S. Vicar of Whalley,  
 and Rector of Heyham, in Lancashire. The Landscapes in  
 this work, from beautiful Drawings by J. M. W. Yar-  
 ner, Esq. R. A. and the Architectural Subjects by Mr.  
 Buckler, will be engraved by Messrs. Landseer, Middle-  
 man, Pye, Scott, J. Le Keux, H. Le Keux, W. Smith,  
 &c.; and the wood-cut vignettes by Mr. Bannan.  
 Printed for Longman, Hurst, Rees, Orme, and Brown,  
 Paternoster Row; and Hare, Robinson, and Co. Cheap-  
 side, London; and Robinson and Hermann, Leeds.

Part IV., will appear about Christmas.

*Italian Language.*  
 In 12mo. price 6s. bound. The third edition of  
**A COMPENDIOUS AND EASY GRAMMAR**  
**OF THE ITALIAN LANGUAGE**; comprising a  
 new and improved Classification of the Verbs, and ex-  
 planatory Rules, with a Syntax annexed to each. Re-  
 vised and improved, with the addition of a series of in-  
 dicational Phrases, and Vocabulary of those words which  
 most frequently occur in conversation. By **M. SAN-**

Handsomely printed on foolscap 8vo. price 5s. boards.  
**FANCY'S WREATH**, a Collection of Poems,  
 on various Subjects. By **J. L. STEVEN**.

"Give me as spark of Nature's fire,  
 That's not the learning I desire;  
 Then tho' I drudge thro' dub an mire  
 At plough or cart,  
 My muse, tho' hamely in attire,  
 May touch the heart."

Printed for Scattergood and Letterman, Ave-Mar-  
 lane, London; and sold by Flindall and Cravagh,  
 Plymouth; Olry, Stonehouse; and all other booksellers.

Preparing for publication,  
**A JOURNEY round the LIBRARY of a**  
**BIBLIOMANIAC**, or Century of Notes and Re-  
 membrances concerning Rare and Valuable Books. By  
**WILLIAM DAVIS**, Bookseller, author of the "Olio of  
 Bibliographical and Literary Anecdotes and Memoirs," &c.  
 Among the Curiousities noted in this Journey will be  
 found, Accounts of Madden's Memoirs of George the  
 Sixth; Rucraft's England's Champions, &c.; Sher-  
 borne's Letters to the People of England; Holland's  
 Herology; Heath's Chronicle of the Civil War; Bal-  
 lathore's Gaudia Poetica; and various other Books of  
 equal rarity and value.

*Curtis on Surdities.*  
 The second edition, considerably enlarged and improved,  
 price 7s. 6d. bds.

**A TREATISE ON PHYSIOLOGY AND DIS-**  
**EASES OF THE EAR**; with new modes of treat-  
 ment, illustrated by a variety of interesting Cases, and  
 accompanied with a Plate of Improved Acoustic In-  
 struments, by **J. H. CURTIS**, Esq. Aurist to the King.  
 &c. Printed and sold by J. Anderson, Medical Book-  
 seller, West Smithfield, and Fearman, 178, New Street  
 Street; of whom may be had, a German Translation of  
 the above Work, by Professor Bubbi, of Leipzig.

*Sporting Anecdotes.*  
 Embellished with a Characteristic Frontispiece, repre-  
 senting Eight Varieties of Sporting Amusements,  
 price 9s. boards, or 12s. elegantly bound.

**SPORTING ANECDOTES**, Original and Se-  
 lected, (many of them concerning our late King);  
 including numerous Characteristic Portraits of Persons  
 every Walk of Life, who have acquired notoriety  
 from their Achievements on the Turf, at the Table, and  
 in the Diversions of the Field; the whole forming a  
 complete Definition of the Sporting World. By  
**PIERCE ROAN**. London: Printed for Sherwood,  
 Neely, and Jones, Paternoster Row.

1. Mr. Egan has, in a little octavo Volume, entitled  
**Sporting Anecdotes**, contrived to amass together  
 all the Particulars of Horse, Dog, and Man, worthy of  
 being known. It is a happy composition, full of  
 whim and particular phraseology, with a slip of morality  
 in it, like a bit of lemon-pest in one's punch, and de-  
 lightfully flavoured with the choicest lime-juice of story.  
*Baldwin's London Magazine*, August, 1820.

*Beckford on Hunting.*  
 Elegantly printed in 8vo. on fine rose paper, and il-  
 lustrated with numerous cuts, price 14s. in boards,  
 a new edition of

**THOUGHTS ON FOX AND HARE HUN-**  
**TING**, in a Series of Letters to a Friend. By **PETER**  
**BECKFORD**, Esq. The Publishers beg leave re-  
 spectfully to recommend the present edition of Mr.  
 Beckford's valuable Work, to the notice of Sporting  
 Gentlemen. It will be found to surpass all preceding  
 editions, in elegance of paper, printing, and illustra-  
 tion. The author's Notes, also, which have long been  
 omitted, are here introduced, and render this edition  
 peculiarly desirable.

Mr. Beckford, in his book entitled "Thoughts on  
 Hunting," has so well described our present Practice  
 of Hunting, and given such solid and rational advice  
 on the subject, that his Treatise has, from the date of its  
 publication, become a general text book; indeed, as  
 persons that delight in Field Sports should be in pos-  
 session of it.—*Scott's British Field Sports*.

London: Printed for Sherwood, Neely, and Jones,  
 Paternoster Row.

*The Sports of the Field, &c.*  
 In 8 vols. demy 4to. price 7l. 17s. 6d. boards, or 5 vol-  
 ume royal 8vo. price 5l. 5s. boards.

**RURAL SPORTS**; or, a Description of the  
 Pleasures and Amusements arising from the Art,  
 the Fields, the Waters, and the Forests; being Rules  
 and Directions for Shooting, Fishing, Hunting, Tru-  
 ling, and Management of Dogs for Shooting, Coursing,  
 Hunting, &c. With an Abbreviation of the Laws rela-  
 tive to each; Interpersed with Stories and Anecdotes  
 from Natural History. By the Rev. W. B. DANIEL.  
 Illustrated by seventy-two Plates, representing one  
 hundred and eighty-three Figures of Dogs, Beasts of the  
 Forest, Land Birds of Sport, Water Fowl, Fish, &c.  
 Principally from Drawings by Remigie, and engraved  
 by Scott. Printed for Longman, Hurst, Rees, Orme,  
 and Brown; and Cadell and Davies, London.

*Crutwell's Housekeeper for 1821.*  
 Improved by Red Lines ruled across the Page, price 2s.  
**CRUTWELL'S ORIGINAL HOUSEKEEPER'S**  
**ACCOUNT BOOK**, for the Year 1821, being an  
 easy, concise, and complete Method of keeping an ex-  
 act Account of every Article made use of in a Family  
 throughout the Year. To which are added, Marketing  
 Tables, Receipts in Cookery, a correct List of Stamps  
 for Bill and a Table of the Assessed Taxes, &c.  
 Printed for Longman, Hurst, Rees, Orme, and Brown,  
 London; and R. Crutwell, Bath.

In the press, and speedily will be published, in 8vo.  
**A HISTORY OF THE various Species of the**

## REVIEW OF NEW BOOKS.

### HISTORICAL SKETCHES.

#### The Saxons.

Having in our last traced the earliest known movements of the human race in Europe, and particularly in Britain, and seen the first settlements of Kimmerians and Kelts, we resume Mr Turner's excellent history\*, in order to give an epitome of the origin of the Saxons, their national state, and their supercession of the Romans in our native land.

The Anglo-Saxons, who transported themselves from the Cimbric peninsula and its vicinity in the 5th and 6th centuries into England, were branches of the great Saxon confederation, which from the Elbe extended itself at last to the Rhine. Before their encroachments the ancient inhabitants and Roman colonists disappeared or submitted, and Saxon laws, language, manners, government, and institutions, overspread the country.

Of this people, the Gothic ancestors of by far the greatest portion of our population, Ptolemy of Alexandria, is the first writer who makes any mention. In his time, namely, the beginning of the 2d century, the Saxons dwelt, on the north side of the Elbe, its three islands, North Strand, Busem, and Heligland, and the neck of the Cimbric Chersonesus, the territory now divided into Jutland, Sleswick, and Holstein: they must therefore have been but an inconsiderable nation, or rather tribe. Tacitus does not notice them. Our author thinks it probable that they were one of the German or Teutonic, that is to say, Gothic or Scythian tribes, who for more than a thousand years, (reckoned before and after Christ,) propelled the more ancient Kimmerians towards the west and south; and that they were descended from the Sakai, or Saka-Sakai-Sunna, or the sons of Sakai, abbreviated into Sakauns, offering a very reasonable etymology of the name Saxon.

Pliny mentions the name Sakai among the most distinguished people of Scythia; and Strabo notices the important fact, that a part of Armenia was called Sakasina, from their conquest of it. This seems to give a geographical locality to our primal ancestors, and to account for the Persian words that occur in the Saxon language, as they must have come into Armenia from the northern regions of Persia. Stephanus speaks of the Saxoi, a people on the Euxine; and it is quite a feasible conjecture,

that a tribe of this parentage and name traversed Europe from Asia, and fixed on the shores of the German Ocean. And we may here advantageously call in, as a corroboration, the recollection of the traditional descent of Odin by Snorre, in the Edda and his history. This great ancestor of the Saxon and Scandinavian heroes is said to have migrated from a city on the east of the Tanais, called Asgard, and a country called Asaland, implying the city and land of the Asæ, or Asians.

A few words of the ancient Scythian language (the probable parent of all the Gothic tongues), have been preserved—*g-ampaios*, sacred ways—*arima*, one—*spou*, an eye—*oior*, a man—*pata*, to kill—*grouca-sum*, white with snow: and their chief gods were Tabiti, Papaio, Oitosuros, Artimpasa or Arrippasa, Thamimasadas, and Apia, wife of Papaio, whom Herodotus compares with the Vesta, Jupiter, Apollo, Venus, Neptune, and Earth of the Grecian mythology. They had also a warlike deity, like Mars, to whom they annually sacrificed horses, sheep, and prisoners, but the name is lost. They were famous bowmen; drank the blood of their enemies, especially of the first whom they slew; scalped the dead, and either presented the heads to their kings, or converted the skulls into drinking cups. They had many diviners, who used willow rods for their predictions. In these customs our Gothic progenitors resembled them.

Seated on a very limited district on the Elbe, as we have described the Saxons to have been in the time of Ptolemy (say Anno Domini 141); we learn from the next mention of them, by Eutropius, that they had made rapid strides towards power within the ensuing century, and were then commencing, on a larger scale\*, that career of maritime depredation, which speedily rendered them so famous and so terrible. As the Roman dominion declined in Germany posterior to the bloody victories of Germanicus, the Saxons, and other independent northern nations, grew rapidly strong. In the beginning of the 3d century, in the reign of Caracalla, we find these tribes dwelling on the North Sea, sending an embassy to Rome, to offer peace for a certain sum of money, which was paid. Maximin, the savage Thracian Emperor, dreadfully avenged this insult, by desolating Germany; and Spenser, in a recent publication, very naturally

\* Gennasus, one of the Batavi, but who had become a leader of the Chauci, began this plan of warfare, which the Saxons afterwards so eagerly pursued, in A.D. 47, when, with a fleet of light ships from the Batavian marshes, he invaded Lower Gascony, and plundered Gaul.

and very happily supposes, that his barbarities paved the way for that important confederation of the inhabitants of the Lower Rhine and the Weser, which, under the name of Franes, withstood the Roman arms, and preserved the liberties of Germany. Western Europe was, on the overthrow of the Roman empire, parcelled out by these warlike spoilers, whose improved posterity now occupy and govern our quarter of the globe. It was behind this barrier of the Franes, between them and the Romans, and through their naval expeditions, that the Saxons gathered superior strength. The events which first led to extended maritime piratical enterprise among our barbaric ancestors, were the return voyage of a numerous body of Franes, &c. whom Prolus had transported to the Euxine; and the usurpation of the purple by the Meonassian pilot Carausius, A.D. 287. He, to maintain his authority in Britain and on the coasts of Gaul, entered into alliances with the Germans, Saxons, and Franes; and being a skilful sailor, imitated the latter two in navigation and the art of naval war, besides giving them ships and experienced officers. Thus taught and encouraged, their pre-disposition acquired fresh force: and a subsequent alliance with Magnentius, the murderer of Constantine, about 60 years later than Carausius, tended materially to enhance their consequence, and develop their propensities for plundering on the ocean.

By these means, and nourished by a succession of propitious circumstances, about the beginning of the fourth century, the Saxons united with states both to the north and south of them, for predatory purposes. These additions of strength (whose nominal distinctions of Chauci, Frisii, Chamavi, Batavi, Toxandri, Morini, Cimbr, Jutes, Angles, &c. merged into the general appellation of Saxon), augmented their fleets, gave new terror to their hostility, and recruited their losses with perpetual population. This tremendous league lasted till the Saxon expedition to Britain: and then began to dissolve.

The connection of the Saxons with the Jutes and Angles was the most important in its consequences as to Britain; and we shall therefore bestow a few words upon that subject. The Jutes inhabited that part of Jutland formerly called South Jutland, the modern duchy of Sleswick. Hence came the little invading band under Hengist and Horsa. The Angles, whose locality does not appear to be correctly ascertained, were a neighbouring tribe in the north of Germany.

At the era when the Saxons first attacked the coasts of Britain, other enemies, the Picti, Scoti, and Attacotti attacked the coun-

VOL. IV.

\* Vide Notit. Gera. lib. iv. p. 338.

try on the north and north-west sides. But they were generally defeated, and the sanguinary struggle continued till the beginning of the fifth century, when Alaric and his Goths subdued the western empire of Rome, and the Alani, Suevi, Vandali, &c. ravaged the western world.

The Britons of this epoch, A.D. 407-409, asserted their independence; and the Armenians across the Channel instantly followed their example. Our island, it may be presumed, retained nearly the same form which it possessed in the later periods of the Roman residence: viz. was divided into five provinces containing two Municipia, nine Colonie, ten Civitates, with the Latio Jure, twelve Stipendiarie, and many other towns. England may be conceived to have consisted of thirty independent Civitates at the time it resumed its liberties; and these would, on that occasion, become thirty independent states or republics. A letter addressed by the Emperor Honorius to the Civitates of Britain, is a sort of evidence of an arrangement of this nature. After A.D. 410 these separate governments had each its chief magistrates or *duumviri*, their senate, their subordinate decurions, and inferior senate or curie, for civil affairs; and their bishop and clergy for ecclesiastical concerns, but commonly extending to lay business.

Contests arising, the island, according to Gildas (no good authority except where corroborated by others or having his representations strengthened by the consideration that they could hardly in the nature of things fail to be true), becomes a prey to civil wars: and St. Jerome mentions Britain as being at this era "fertile in tyrants;" which Procopius confirms. The royal chiefs were at last so numerous that we read of kings of Devonshire, Cornwall, Kent, Glastonbury, Deira, Bernicia, several kings of Cumbria, several of Wales, and others in the north and west of England, about the time of the Saxons. We find Malgoune styled by Gildas the de-throner of many tyrants; and Nennius states the Saxons to have fought, and Arthur to have marched, with the Kings of the Britons.

This was the state of things.—Britain was invaded by the descendants of the Kinnemras, Kelts, with the Phenician and Roman additions; and had for two centuries maintained a desultory warfare with the Scotti and Picti, and the Saxons, when a more permanent invasion ensued in 449, and Hengist and Horsa, with three Saxon cycles or vessels, appeared on the coast, at Ebbsfleet in the Isle of Thanet, near Richborough. The party under these leaders could hardly amount to more than 300 men, and they were retained by the British king Gurrethyr, or Vortigern, and his chiefs, as subsidiary soldiers, to assist them against their Irish and Scottish enemies. As usually happens, the mercenaries soon began to usurp authority. In the seventh year after his arrival, Hengist is stated, in the Saxon Chronicle, to have begun his Kentish Kingdom. The Angli almost entirely, and the Jutes and continental Saxons in great numbers, poured in, and flocked to the standard of the successful Hengist. The

Britons resisted these encroachments, and at first successfully, but the Saxons ultimately prevailed; and Hengist firmly established, and transmitted to his posterity, a kingdom in Kent. Ella, another Saxon chieftain, encouraged by his example, in like manner founded a kingdom in Sussex; and Cerdic, beginning with Hampshire in the south part of Britain, that of Wessex; which finally absorbed all the others.

It was against the latter that the renowned King Arthur fought so long and so valiantly. His efforts limited the invaders to Hampshire, and some contested parts of Somersetshire; and it was not till after his death, that the junction of the nation of the Angli with the Saxon colonists led to the subjugation of Britain. The invasion of the Angles, however, is too important a point to be taken up at so advanced a page; and we therefore break off here, to commence with an account of it in our next historical sketch.

*A History of New York, from the Beginning of the World to the End of the Dutch Dynasty, &c.* By Diedrich Knickerbocker, &c. London, 1820. 8vo. pp. 520.

As we had the pleasure of introducing the Author of the Sketch-Book (Mr. Irving) to the British public, we feel a sort of friendly interest in the success of that ripened acquaintance which he has since cultivated with it. We were, therefore, glad to see the present volume as an English publication, though in point of fact (we believe) it preceded, as an American one, the earliest labours of Geoffry Crayon; and the voice of fame across the Atlantic had long apprised us of its merits and popularity. It exhibits very considerable talents, and is throughout a lively and grotesque performance. Much humour, neat observations on men and on human actions, a drolling way of treating subjects of every kind, and a sportiveness of fancy mingled with some originality, and a good deal of aptness for the ridiculous, are its characteristic traits. May it not seem paradoxical to add, that we have been fatigued by the perusal of this clever volume? But we have experienced that sensation; and while we could not help saying towards the writer, "I like thy wit well in good faith;" neither could we help feeling, at the same time, that he did ill in giving us so tremendous a quantity of it. Nearly 600 honest octavo pages of jest and play, is entertainment beyond the stretch of human faculties to relish. Laughter is a very fatiguing exercise, and cannot be carried on so long. Rich dishes cloy sooner than plain fare. We may have too much even of a good thing. In short, Mr. Diedrich Knicker-

bocker's history wants relief. It may be amusingly taken up by fits and starts; but no mental powers can withstand so continuous and so strenuous a claim to attention, especially in the shape of irony and joke, which are the most potent exhausters of the mind.

Owing to this cause we have felt ennuie while perusing the pleasantest parts of these lucubrations. Had Mr. Irving contented himself with such bounds as De Foe, as Swift, as Voltaire, prescribed to themselves, we think he would have been more effective: in so far as he has exceeded them, though he may have displayed to greater extent the fecundity of his imagination and scope of his abilities, he has not added to the recreation of his reader, since brevity is the soul of wit, and tediousness the limbs and outward flourishes.

We hope we are understood not to speak this disparagingly, for we have prefaced it with a candid character of the work, and shall fortify that opinion with several extracts, to show that the author is all that we have said in his praise. But first we shall state what the general nature of his production is. There is a whimsical introduction, giving an account of the fictitious author, his habits, adventures, reception in society, and destiny. Then beginning *ab ovo*, the history, throws a rapid but philosophical coup d'œil over the creation of the world (discussing cosmogony and cosmography too with a degree of skill worthy of the Cosmogonist in the Vicar of Wakefield), and the circumstances, some of them real but most of them conjectural, of its pristine population. Descending to more modern times, Noah's flood is recorded with several new features; and we arrive logically enough, at the peopling of America. Here we shall take our first quotation.

#### CHAPTER IV.

*Showing the great difficulty Philosophers have had in peopling America.—And how the Aborigines came to be begotten by accident—to the great relief and satisfaction of the Author.*

The next inquiry at which we arrive in the regular course of our history is to ascertain, if possible, how this country was originally peopled—a point fruitful of incredible embarrassments; for unless we prove that the Aborigines did absolutely come from somewhere, it will be immediately asserted in this age of scepticism that they did not come at all; and if they did not come at all, then was this country never populated—a conclusion perfectly agreeable to the rules of logic, but wholly irreconcilable to every feeling of humanity, inasmuch as it must syllogistically

prove fatal to the innumerable Aborigines of this populous region.

"To avert so dire a sophism, and to rescue from logical annihilation so many millions of fellow creatures, how many wings of geese have been plundered! what oceans of ink have been benevolently drained! and how many capacious heads of learned historians have been addled, and for ever confounded! I pause with reverential awe when I contemplate the ponderous tomes, in different languages, with which they have endeavoured to solve this question, so important to the happiness of society, but so involved in clouds of impenetrable obscurity. Historian after historian has engaged in the endless circle of hypothetical argument, and after leading us a weary chase through octavos, quartos, and folios, has let us out at the end of his work just as wise as we were at the beginning. It was doubtless some philosophical wild goose chase of the kind that made the old poet Macrobius rail in such a passion at curiosity, which he anathematizes most heartily, as 'an irksome agonizing care, a superstitious industry about unprofitable things, an itching humour to see what is not to be seen, and to be doing what signifies nothing when it is done.' But to proceed.

"Of the claims of the children of Noah to the original population of this country I shall say nothing, as they have already been touched upon in my last chapter. The claimants next in celebrity are the descendants of Abraham. Thus Christoval Colon (vulgarly called Columbus), when he first discovered the gold mines of Hispaniola, immediately concluded, with a shrewdness that would have done honour to a philosopher, that he had found the ancient Ophir, from whence Solomon procured the gold for embellishing the temple at Jerusalem; nay, Colon even imagined that he saw the remains of furnaces of veritable Hebraic construction, employed in refining the precious ore.

"So golden a conjecture, tinged with such fascinating extravagance, was too tempting not to be immediately snapped at by the gudgeons of learning; and accordingly there were divers profound writers ready to swear to its correctness, and to bring in their usual load of authorities, and wise surmises, wherewithal to prop it up. Vetalibus and Robertus Stephens declared nothing could be more clear—Arius Montanus, without the least hesitation, asserts that Mexico was the true Ophir, and the Jews the early settlers of the country. While Possevin, Becan, and several other sagacious writers, lug in a *supposed* prophecy of the fourth book of Esdras, which being asserted in the mighty hypothesis, like the key-stone of an arch, gives it, in their opinion, perpetual durability.

"Scarce, however, have they completed their goodly superstructure, than in trudges a phalanx of opposite authors, with Hans de Laet, the great Dutchman, at their head, and at one blow tumblers the whole fabric about their ears. Hans, in fact, contradicts outright all the Israelitish claims to the first settlement of this country, attributing all those equivocal symptoms, and traces of Christianity and Judaism, which have been said to be

found in divers provinces of the new world, to the *Demil*, who has always affected to counterfeit the worship of the true Deity.

"A remark," says the knowing old Padre d'Acosta, 'made by all good authors who have spoken of the religion of nations newly discovered, and founded besides on the authority of the *fathers of the church*.'

"Some writers again, among whom it is with great regret I am compelled to mention Lopez de Gomara and Juan de Leri, insinuate that the Cannanites, being driven from the land of promise by the Jews, were seized with such a panic that they fled without looking behind them, until stopping to take breath, they found themselves safe in America. As they brought neither their national language, manners, nor features with them, it is supposed they left them behind in the hurry of their flight—I cannot give my faith to this opinion.

"I pass over the supposition of the learned Grotius, who, being both an ambassador and a Dutchman to boot, is entitled to great respect, that North America was peopled by a strolling company of Norwegians, and that Peru was founded by a colony from China—Manco or Mungo Capac, the first Incas, being himself a Chinese: nor shall I more than barely mention that father Kircher ascribes the settlement of America to the Egyptians, Budbeck to the Scandinavians, Charon to the Gauls, Jufredus Petri to a skating party from Friesland, Milius to the Celts, Mariusculus the Sicilian to the Romans, Le Comte to the Phoenicians, Postel to the Moors, Martin d'Angleria to the Abyssinians; together with the sage surmise of De Laet, that England, Ireland, and the OrCADES, may contend for that honour.

"Nor will I bestow any more attention or credit to the idea that America is the fiery region of Zipangri, described by that dreaming traveller, Marco Polo, the Venetian; or that it comprises the visionary island of Atlantis, described by Plato. Neither will I stop to investigate the heathenish assertion of Paracelsus, that each hemisphere of the globe was originally furnished with an Adam and Eve: or the more flattering opinion of Dr. Romayne, supported by many nameless authorities, that Adam was of the Indian race—or the startling conjecture of Buffon, Helvetius, and Darwin, so highly honourable to mankind, that the whole human species is accidentally descended from a remarkable family of monkeys!

"This last conjecture, I must own, came upon me very suddenly and very ungraciously. I have often beheld the clown in a pantomime, while gazing in stupid wonder at the extravagant gambols of a harlequin, all at once electrified by a sudden stroke of the wooden sword across his shoulders. Little did I think at such times, that it would ever fall to my lot to be treated with equal discourtesy, and that while I was quietly beholding these grave philosophers, emulating the eccentric transformations of the hero of pantomime, they would on a sudden turn upon me and my readers, and with one hypothetical flourish metamorphose us into beasts! I determined from that moment not

to burn my fingers with any more of their theories, but content myself with detailing the different methods by which they transported the descendants of these ancient and respectable monkeys to this great field of theoretical warfare.

"This was done either by migrations by land or transigrations by water. Thus Padre Joseph d'Acosta enumerates three passages by land—first by the north of Europe, secondly by the north of Asia, and thirdly by regions southward of the straits of Magellan. The learned Grotius marches his Norwegians, by a pleasant route, across frozen rivers and arms of the sea, through Iceland, Greenland, Estotiland, and Narenberga: and various writers, among whom are Angleria, De Horna, and Buffon, anxious for the accommodation of these travellers, have fastened the two continents together by a strong chain of deductions—by which means they could pass over dry-shod. But should even this fail, Pinkerton, that industrious old gentleman, who compiles books, and manufactures Geographies, has constructed a natural bridge of ice, from continent to continent, at the distance of four or five miles from Behring's straits—for which he is entitled to the grateful thanks of all the wandering Aborigines who ever did or ever will pass over it.

"It is an evil much to be lamented, that none of the worthy writers above quoted could ever commence his work without immediately declaring hostilities against every writer who had treated of the same subject. In this particular, authors may be compared to a certain sagacious bird, which, in building its nest, is sure to pull to pieces the nests of all the birds in its neighbourhood. This unhappy propensity tends grievously to impede the progress of sound knowledge. Theories are at best but brittle productions, and when once committed to the stream, they should take care that, like the notable pots which were fellow-voyagers, they do not crack each other.

"My chief surprise is, that, among the many writers I have noticed, no one has attempted to prove that this country was peopled from the moon—or that the first inhabitants floated hither on islands of ice, as white bears cruise about the northern oceans—or that they were conveyed hither by balloons, as modern aeronauts pass from Dover to Calais—or by witchcraft, as Simon Magus posted among the stars—or after the manner of the renowned Scythian Alarix, who, like the New England witches on full-blooded broomsticks, made most unheard of journeys on the back of a golden arrow, given him by the Hyperborean Apollo.

"But there is still one mode left by which this country could have been peopled, which I have reserved for the last, because I consider it worth all the rest: it is—*by accident*! Speaking of the islands of Solomon, New Guinea, and New Holland, the profound father Charlevoix observes, 'in fine, all these countries are peopled, and it is *possible* none have been so *by accident*. Now if it could have happened in that manner, why might it not have been at the same time, and by the

same means, with the other parts of the globe?" This ingenious mode of deducing certain conclusions from possible premises is an improvement in syllogistic skill, and proves the good father superior even to Archimedes, for he can turn the world without any thing to rest his lever upon. It is only surpassed by the dexterity with which the sturdy old Jesuit, in another place, cuts the Gordian knot—"Nothing," says he, "is more easy. The inhabitants of both hemispheres are certainly the descendants of the same father. The common father of mankind received an express order from Heaven to people the world, and accordingly it has been peopled. To bring this about, it was necessary to overcome all the difficulties in the way, and they have also been overcome!" Pious logician! How does he put all the herd of laborious theorists to the blush, by explaining, in five words, what it has cost them volumes to prove they knew nothing about!

"From all the authorities here quoted, and a variety of others which I have consulted, but which are omitted through fear of fatiguing the unlearned reader—I can only draw the following conclusions, which luckily, however, are sufficient for my purpose—First, that this part of the world has actually been peopled, (Q. E. D.) to support which we have living proofs in the numerous tribes of Indians that inhabit it. Secondly, that it has been peopled in five hundred different ways, as proved by a cloud of authors, who, from the positiveness of their assertions, seem to have been eye-witnesses to the fact—Thirdly, that the people of this country had a variety of fathers, which, as it may not be thought much to their credit by the common run of readers, the less we say on the subject the better. The question therefore, I trust, is for ever at rest."

After some further caprichios, we have the author's version of the discovery of America, from which we select the commencement, as happily illustrative of his style and manner.

This right being fully established, we now come to the next, which is the right acquired by cultivation. "The cultivation of the soil," we are told, "is an obligation imposed by nature on mankind. The whole world is appointed for the nourishment of its inhabitants: but it would be incapable of doing it, was it uncultivated. Every nation then is obliged by the law of nature to cultivate the ground that has fallen to its share. Those people, like the ancient Germans and modern Tartars, who, having fertile countries, disdain to cultivate the earth, and choose to live by rapine, are wanting to themselves, and deserve to be exterminated as savage and pernicious beasts."

Now it is notorious that the savages knew nothing of agriculture, when first discovered by the Europeans, but lived a most vagabond, disorderly, unrighteous life,—rambling from place to place, and prodigally rioting upon the spontaneous luxuries of nature, without tasking her generosity to yield them any thing more; whereas it has been

most unquestionably shown, that heaven intended the earth should be ploughed and sown, and manured, and laid out into cities, and towns, and farms, and country seats, and pleasure grounds, and public gardens, all which the Indians knew nothing about—therefore they did not improve the talents Providence had bestowed on them—therefore they were careless stewards—therefore they had no right to the soil—therefore they deserved to be exterminated.

It is true the savages might plead that they drew all the benefits from the land which their simple wants required—they found plenty of game to hunt, which, together with the roots and uncultivated fruits of the earth, furnished a sufficient variety for their frugal repasts;—and that as heaven merely designed the earth to form the abode and satisfy the wants of man, so long as those purposes were answered, the will of heaven was accomplished.—But this only proves how undeserving they were of the blessings around them—they were so much the more savages, for not having more wants; for knowledge is in some degree an increase of desires, and it is this superiority both in the number and magnitude of his desires, that distinguishes the man from the beast. Therefore the Indians, in not having more wants, were very unreasonable animals; and it was but just that they should make way for the Europeans, who had a thousand wants to their one, and therefore would turn the earth to more account, and by cultivating it, more truly fulfil the will of heaven. Besides—Grotius, and Lauterbach, and Puffendorf, and Titius, and many wise men besides, who have considered the matter properly, have determined, that the property of a country cannot be acquired by hunting, cutting wood, or drawing water in it—nothing but precise demarcation of limits, and the intention of cultivation, can establish the possession. Now as the savages (probably from never having read the authors above quoted) had never complied with any of these necessary forms, it plainly followed that they had no right to the soil, but that it was completely at the disposal of the first comers, who had more knowledge, more wants, and more elegant, that is to say, artificial desires than themselves.

In entering upon a newly discovered, uncultivated country, therefore, the new comers were but taking possession of what, according to the aforesaid doctrine, was their own property—therefore in opposing them, the savages were invading their just rights, infringing the immutable laws of nature, and counteracting the will of heaven—therefore they were guilty of impiety, burglary, and trespass on the case,—therefore they were hardened offenders against God and man—therefore they ought to be exterminated.

But a more irresistible right than either that I have mentioned, and one which will be the most readily admitted by my reader, provided he be blest with bowels of charity and philanthropy, is the right acquired by civilization. All the world knows the lamentable state in which these poor savages

were found: not only deficient in the comforts of life, but what is still worse, most piteously and unfortunately blind to the miseries of their situation. But no sooner did the benevolent inhabitants of Europe behold their sad condition, than they immediately went to work to ameliorate and improve it. They introduced among them rum, gin, brandy, and the other comforts of life—and it is astonishing to read how soon the poor savages learnt to estimate these blessings—they likewise made known to them a thousand remedies, by which the most inveterate diseases are alleviated and healed; and that they might comprehend the benefits and enjoy the comforts of these medicines, they previous introduced among them the diseases which they were calculated to cure. By these and a variety of other methods was the condition of these poor savages wonderfully improved; they acquired a thousand wants, of which they had before been ignorant; and as he has most sources of happiness who has most wants to be gratified, they were doubtless rendered a much happier race of beings.

(To be concluded in our next.)

*Tragic Tales. Coningsby, and Lord Brekenhurst.* By Sir Egerton Brydges, Bart. 2 vols. 12mo. London, 1820.

Remembering Sir Egerton Brydges's zealous exertions on the subject of the Copyright Act, and looking at these tales as the relaxations of a wounded mind, we should be happy were it possible for us to award them our good report. But if we speak truth, we must say that they appear to us to be horrible without sublimity, tragical without pathos, romantic without interest, and altogether a strange mixture of commonplace, morbid sentiment, and flightiness. The first story ends in the assassination of the hero by the father of the heroine: the second paints the utmost depravity, murder, incestuousness, and idiocy, without one gleam of relief. We can imagine no one useful or moral purpose which such performances could effect. It is with regret we say so; but we must earnestly submit to the author the expediency of a more becoming and laudable exercise of his talents;—our ancient writers offer him still a fine field for cultivation, and his labours in that branch of literature will reflect infinitely greater lustre upon him than such productions as these.

Having thus candidly and honestly delivered our opinion, we shall select some examples from Sir Egerton's work, though not so much with the view of justifying them, as for the sake of exhibiting what we may rather approve than condemn.

The heroine in Coningsby is a poet-

cal enthusiast; the following neat little piece is given as one of her compositions :

*On Poets.*

"It is an idle trade, this poet's trade:  
So the stern sage, who takes the pompous name  
Of Man of Science, calls it: with wise saws  
He shakes his head, and swears, 'tis but an art  
Of forming clouds into fantastic shapes:  
And building airy castles, that each wind  
Will sweep away!—O leave him to himself:  
He deals in nothing but material forms;  
The spiritual world is mantled from his sight.  
He scorns, and gibes at what he cannot see;  
And takes his blindness for superior wit.

There are also, though we do not subscribe to all its dicta, both fine lines and fine thoughts in an

*Ode, on Dante.*

What constitutes the Poet? Not the trick  
Of rhyme, nor yet th' array  
Of imagery, as thick  
As heaven star-cluster'd, nor the play  
Of skillful words, that dance in coruscation gay.  
But the deep, solemn, elevated thought,  
That scorcs the ornament  
Of language, and is wrought  
By the high enthusiasm, bent  
On dreams that bound beyond this earthly orb's  
extent.

In nakedness of majesty it throws  
Its awe-inspiring charm  
On him, whose bosom glows  
With sympathetic grandeur warm,  
While groups of human ills retreating take th'  
alarm!

Such once was Dante, whose up-lifted soul,  
Borne on immortal wings,  
The stream of Song could roll  
Exhaustless from ethereal springs,  
That yet through countless tracts of years its  
echo rings.

He took the harp, that Heaven had made his  
boon;  
And, as his raptured hand  
Began the strings to tune,  
Celestial sounds at his command  
The flame, while fancy work'd a new creation  
faun'd.

Contrasted with the forms, his mental eye  
Saw trooping round about,  
The never ceasing sight  
Burst forth; and to the dismal route  
Of mortal griefs his song the knell of Death  
rung out.

He had no need of artifice: each note,  
Full in itself, was woe,  
Or majesty, or fraught  
With such a super-human glow  
Of virtue, that no art could such a charm bestow!

We wish the prose were unanswerable to these specimens of the verse; but the subjoined will show that it is of a far inferior character. Adelinde the poetess goes, in her father's absence, to meet her lover, whom she had permitted to keep a book of hers on their first interview.

"She grew pale by fits; her courage  
failed her; the tears came into her eyes.  
Her heart beat: she could not see: 'Oh!'  
said she to herself; 'for the quiet of bosom  
that I possessed a week ago!'. A figure was

seen at a distance advancing over the rise of the heath: it came nearer: a gun was in his hand: two dogs ran before him: it was Lord Drayton.

"He approached: the book was in his hand: he held it forward: 'You see,' he cried, 'I perform my promise, Miss Coningsby!—but will you permit me to keep this treasure?'—'Do not distress me so! I entreat you, Lord Drayton!' she answered: 'do not keep a record of my nonsense?'—'If it was nonsense, Miss Coningsby, I would not keep a record of it! But it is your writing; and that alone is a security, that it is not nonsense.'—'Lord Drayton,' she replied, with a look somewhat between an arch smile, and a blush of angry distress, 'You must lay aside your fashionable flattery, when you come into these tramontane regions!'—'I never,' he said, 'was a flatterer, Miss Coningsby! Here it would be worse than useless!—He looked in her face: she saw that his soul was bursting from his eyes: there was a flame in them, from which she turned, as from an over-dazzling fire! He offered the book: she put forth her white hand tremblingly: he kissed it with devotion: she withdrew it in an agony.—'Keep the book then,' she said almost indistinctly; 'and forgive its nonsense!'

"Lord Drayton put the precious volume within his waistcoat, next his bosom; and for a few moments was silent.

"The silence increased Adelinde's distress: she resolved to exert herself to break it. 'Now, Lord Drayton,' she said, 'I am entitled to ask a favour of you! I long to hear about my relations in England. Do you know my aunt, Lady Jane Falconer?'—'I am well acquainted with her,' he answered; 'she is an admirable woman; worthy to be your aunt! She has talents; accomplishments; disposition; and has not even lost her beauty: but early in life she was disappointed; and you know that she has refused every future offer of marriage. I will not say that she has not an occasional glance of the same expression. But who can be like you? Who ever had half the beauty you are gifted with? Who?—Adelinde interrupted him.—'Spare me, Lord Drayton! I fear you take me for an idiot of the woods, that you may flatter; and then laugh at!'—'Laugh at Miss Coningsby!' said he earnestly; 'I am not of the laughing sort; but, if I were, I could not laugh at an angel!'—'Lord Drayton, forgive me for entreating you to consider me as a rational being; not as a silly girl, for whom no compliments can be too high-flown! This solitude has taught me to be jealous of flattery; and pleased only with kindness!'

"Lord Drayton was somewhat confounded by these words: he knew how little flattery was meant by his expressions: how much in earnest he was; and how entirely his feelings equalled the warmth of his language. Never was any thing so charming as Adelinde. The variety of passionate or delightful feelings, that she had experienced in this interview, had still given new animation of her speaking countenance; the delicacy of her complexion; the soft tints of her light

brown hair; the symmetry of her form; the tender tones of her voice, all pierced the enthusiastic soul of this lover. He knew not how to convey to her the admiration with which he was struck. He felt awe! He would have pressed her to his bosom, if he had dared: would have fallen at her feet. But there was a divinity about her, that repressed liberties; and told him they would be ungenerous and unmanly insults!

"A longer continuance of this interview at present might endanger their future meeting. Both were almost instinctively convinced of this without naming it to each other. Had Coningsby known that Lord Drayton was sojourning in this neighbourhood, his person would not have been safe: such was the inveteracy of Coningsby's hatred to the very name."

This is very weak and very trite gossiping; but the graver objection is to its improper tendency. No virtuous daughter could act as Adelinde is made to act; and we must reprehend that laxity of expression, if not of principle, in other passages, which describes her mother as "unfortunate" in having committed adultery, and speaks of opposite conduct as the result of "dull prudence!" There is throughout a great deal too much of weeping, starting, and extravagance; but we are fain to take leave of our task, and in doing so beg to conclude with an extract of much practical force and justice, though rather severely applied to our senate.

"Lord Drayton had energies, for which the insipid course of fashionable life afforded no play. He was now three and twenty; and he had attended one session of parliament, as representative for a borough in his father's interest. But he had not sat in the senate a week, before he found it an arena little suited to his taste. He observed with astonishment, the time and even attention occupied by hard, vulgar, and illiterate men, whose mere insensible audacity alone could have made them persevere." This has recently been copiously exemplified.

*Fables from La Fontaine, in English Verse.* London, 1820. 8vo. pp. 370.

Report, we know not how truly, assigns this production, with the exception of four of the fables, to the pen of Mr. Croker. It is not unworthy of his talents: and there are certain passages in it more likely to be derived from his known political feelings, than to be considered as congenial with the spirit of La Fontaine. We could have wished it otherwise: for politics warp such a book out of its natural sphere, by converting instruction into satire, and pleasantry into bitterness. The all-pervading curse of our times infects society enough without being inwoven into our amusements, and inlaced with our literature. Expediency, wisdom, and virtue, private tranquillity and public happiness, demand that it should, as

far as possible, stand by itself, the prodigy, the disgrace, and the bane of the age. We are sorry that it has found its way into this otherwise admirable performance; and that instead of translations of the original, we should have imitations, opening the way to allusions and comparisons widely departing from the amiable character of their prototypes, and inconsistent with their fine quality of general, and not individual correction.

La Fontaine's distinguishing excellence, that in which he surpassed Gay and equalled Æsop, is the universal applicability of the sweet reflections scattered over his unaffected narratives. The exquisite nature and simplicity of his manner, the truth with which his animals speak and act, the grace and refinement of his language (a perfect model of the art of concealing art), and his charming wit, do not altogether recommend him so much to the world's applause, as the genuine goodness and kind heartedness with which every passing remark in the shape of advice is addressed, not to particular persons or affairs, but to mankind. It was this which obtained esteem, as well as celebrity for his fables on their first appearance; it was this which rendered them most beneficial for youth, while they were most delightful for mature years; it was this which inspired benevolence by example, while it taught wisdom by precept; and we do regret, that this has been in any degree abandoned by his very able imitator.

Having with due diffidence submitted these preliminary opinions, we proceed to exemplify the ingenious and entertaining manner in which the writer has executed his own design. The volume contains between sixty and seventy Fables; together with the French, on which they are founded. The latter are so generally read, that it is only requisite to notice, that those here reprinted consist of the most popular stories, such as the Wolf and the Lamb, the Dog and his Shadow, the Daw in borrowed Plumes, &c. The former, which are dedicated to Lord Sidmouth, may be appreciated by the following specimens. *La Fontaine's "Contre ceux qui ont le Dieu Difficile"* is thus rendered.

## TO THE CRITICS.

Had once the wit-inspiring Muse  
Smell'd on my birth with placid eye,  
For so with genius she imbues  
Her chosen, favour'd votary,

Then Æsop had adorn'd my song,  
With sweet Fontaine's gay fictions vying;  
Such subjects to the Muse belong—  
For verse was ever link'd to lying.

But sparingly on me the Nine  
Bestow their gifts:—weak Mistrust I!  
Nor hope my lays like his to shine—  
I've done my best, let others try.

Yet have I cloth'd in English dress  
Many a quaint tale of beast and birds;—  
Nay trees and plants their thoughts express,  
Blent with the magic gift of words.

"Friend," cries a Critic, "I'm afraid  
You give your work too much parade:  
Dull is the head which is not able  
To hitch in rhyme a childish fable!"

Had I but known, fair Sir, your taste  
Not thus my labour would I waste.  
Henceforth to subjects more sublime  
I'll dedicate my toil and time.

Instead of Brutes let better seek  
A Turk, or Moor, or monster Greek?  
Or tho' the classic theme I urge ill—  
Borrow a word'rous tale from Virgil?  
Censors no longer shall complain,  
So here begins the Epic strain.

While ten long years the Greeks their pow'r  
employ

To gain the walls of heav'n defended Troy,  
Rang'd on each side the Gods with armour  
strove;

Here Juno labours, there the Queen of Love,  
At length the foil'd besiegers call in aid  
For arts and arms renowned, the blue-eyed  
Maid:

Minerva's skill exceeds their bootless force.  
Prompted by her, they frame a monstrous  
horse

Of mountain size!—and in it's hollow side  
Glad in bright brass, her cowering heroes hide.  
Ulysses, great in council and the field;  
Stout Ajax, master of the seven-fold shield;  
Tydides—"Prithce babblers blast!

O spare us thy pedantic list—  
This mountain horse all credence shocks,  
Outdoes the Raven and the Fox!  
Your awkward stilts but make one smile,  
So Ill they suite your Muse's style."

Well then, again I'll change my plan,  
And write to please you if I can.  
From war and heroes pleas'd I turn  
To pay a more delightful duty.

To mighty Love I'll incense burn,  
And worship at the shrine of Beauty.

With old Anacreon gallly sport  
Where black or azure eyes pierce thro' one,  
Or else to eastern climes resort,

And flit 'mongst Houris with the new one:  
Where spicy breezes fair ones fan  
In the magic bower of Gennistan;  
Where Araby's Jasmies fragrant join  
With Sura's rose a garland to twine!—

"Stop, friend, that rhyme's not neeable!  
Your measure is slovenly;—mend your strain—  
Those few lines you must melt again  
In your Parnassian crucible."

Critic! since thus you turn the tables,  
Let me proceed to write my Fables  
In my own style and manner.  
Altho' to imitate is vain

The simply elegant Fontaine,  
Still let me rhyme beneath his banner!

There is all Fontaine's archness in the following, (from *La Lice et sa Compagne*.)

## THE TWO BITCHES.

A bull dog's lady, following nature's law,

'Could find no place to lay her cumbersome  
load;  
No kennel, hut, or hovel fill'd with straw,  
Where her blind brood might wait for  
eyes.

And their limbs gain a proper size  
To venture safely on a walk abroad.  
In this distress she visited a neighbour,  
And begg'd she'd lend a lodging for her labor.

Her neighbour, Mrs. Mastiff, was kind-  
hearted,  
Who said, "Tho' ladies I'm not us'd to  
lodge any,

My hut for once is yours;" and she departed,  
Wishing her toil a lucky minute,  
When'er she happen'd to begin it,  
And offer'd vows for safety of her progeny,  
Praying that fortune on them never frowning,  
Would save the pretty precious pupa from  
drowning.

After the month, the landlady just hinted  
The place might now conveniently be  
quitted.

Dame Pag-nose, much unwilling to be staid,  
Observ'd, her babes were still but tender,  
And as Dame Mastiff chose to lend her  
The hut, and kindly her condition pried,  
She hop'd to meet indulgence something fir-  
ther—

To turn out such poor sucklings would be mu-  
ther.

Dame Mastiff to this urgent plea consented,  
Week follow'd week—the tenants never  
stirr'd:

Her own necessities she represented:  
"Here," said the ungrateful Bitch, "I'm  
suted,

"Nor can my claim be well disputed:  
"Possession is nine-tenths of a law, I've heard  
"In short, my whelps have teeth, their limbs  
are stable—

"Now then eject us, if you think you're able!

To Mother Britain, as a dutiful son,  
I'm loth with her to use a filthy war;  
Else, I must needs confess, my Fable done,  
There's something moves me much to say,  
That Britain and America,

The first for soft good nature puff'd by fam-  
ous riches—  
The last once weak, whom commerce now en-  
riches—

Bear great resemblance to this brace of Bitches!

We select the remainder, rather as ac-  
count of their length and consequent fitness  
for our columns, than for their possessing  
any peculiar beauty:

## THE WALLEY.

Love once assembling all his creatures,  
Proclaim'd, "who'er dislik'd his lot,  
As far as outward form and features,  
Might have them mend on the spot.

Amongst the rest he saw the Ape—  
Thought him fit subject for beginning:  
But Jacko faultless found his shape,  
And saw the graces in his grinning.

Said Jack, "you might have pick'd a wou-  
"Sire, in the crowd that's here attending!  
"There's brother Bruin's half-lick'd person—  
"May need, I think, some little mending."

The Bear not wishing to complain,  
Said,— "That pert Jackanapes must do,  
"How many beasts desire in vain,  
"The comforts of this shaggy coat.

"Yon Elephant, oh height o'topping,  
"In clammy bulk perhaps is stronger—

"But sure his ears require some cropping—  
"Should not his tail be somewhat longer?"

The Elephant these changes scouted;—  
The same vain notions e'en prevail  
In his wise head; he rather doubted  
If not too large was fat dame Whale.

Contented was my lady Whale;  
While mistress Ant believ'd miss Mite  
Was made on much too small a scale,  
She thought her own dimensions right.

Not one there was in all the crowd  
Wish'd to be larger, smaller, straighter;—  
The ugliest monster there was proud  
Of the fair gifts bestow'd by nature.

Above the rest conspicuous Man  
Appear'd, than other creatures vainer.  
Great Jove contriv'd a simple plan  
To make this obvious truth the plainer.

At his command men Wallets bore:  
For holding faults was made the sack.  
One end, as usual hung before,  
The other close behind his back.

Each to his own dear failings blind,  
To find another's error labours;  
Packs up his own faults snug behind,  
And trains the front pouch with his neighbour's!

#### MAN AND HIS LIKENESS.

Once a lover there was, and he loved in strange  
fashion;  
The flame from his breast other feelings  
could drive all:

Himself was the object ador'd, and this passion  
Reign'd fix'd in his heart, without dreading  
a rival.

Our Dandy Narcissus, of comical shape,  
Was warp'd all awry, and his head was an  
ass's.

His mirror still shew'd him the face of an ape,  
But he always believ'd that the fault was  
the glass's.

Other mirrors repeated, alack! the same story;  
He swore that the world had together conspired

To spoil of his beautiful person the glory;  
So he made them his bow, and in dudgeon  
retired.

Removed from all glasses a fair lake he found,  
Which shew'd the same image most faithfully

frivolous,  
Yet so bright the reflection, so charming the  
ground,  
He could not help owning the view was de-  
lightful.

Now who do you think is this whimsical elf?  
I'll explain, lest you think me a mere idle  
prater.

'Tis the Mind;—'tis you, Reader—the Poet  
himself—

And our friends are the mirrors, which shew  
us as nature.

The Lake—the age maxims of one shrewd  
adviser,  
Who shews all the follies our hearts which  
envision:

Roehefoconsult may make most of us better  
and wiser—

Let Harold hold up his dark mirror to Byron.

#### THE HORSE AND THE WOLF.

When Nature, releas'd from the cold icy tram-  
mels,  
Which winter had form'd, all her lustre re-  
gains,

When the gold of the cowslip each meadow  
enamels,  
And the amethyst blends with soft emerald  
hues;

At this sprightly season of love and of joy,  
A Horse from his stable was sent by his  
master,  
In freedom these holiday hours to employ,  
And graze at his ease in a rich verdant  
pasture.

A wolf who was prowling in search of adven-  
tures,  
The glossy, plump animal joyfully spies:  
With caution the paddock's enclosure he enters,  
In hopes of possessing so tempting a prize.

"Ah! wert thou, stout beast," cries the thief,  
"but a mutton—  
"In a moment that carcass I'd seize as my  
own:

"As it is, some disguise I must artfully put on,  
"Before I can tear thy fat flesh from the  
bone."

So gravely saluting, he questioned the Steed—  
"Are you here, my fair Sir, for your health  
or your pleasure?"

"From the symptoms I fear you're a great  
invalid,  
"For in health men allow their poor nags  
but small leisure.

"As a pupil of Galen accept my assistance;  
"By feeling your pulse I shall find what  
your state is;

"I have travell'd thus far, from a very great  
distance,  
"To give the afflicted my best advice gratis.

"Very choice are the wise in selecting their  
food,  
"For plants that are noxious the functions  
disturb all,

"As Solomon knew well the bed from the  
good,  
"I can point out each root in old Culpeper's  
herbal."

The Horse Igrimm's character knew by repute,  
And plainly perceiv'd what the traitor de-  
sign'd:

So he says, "Learned Doctor, my pains are  
acute,  
"An abscess is form'd in my off-foot-behind."

"A delicate part!" quoth the Leech, "and  
indeed  
"In the choice of a surgeon 'tis well to be  
wary;

"Allow me to touch it, and then I'll proceed  
"Like a perfect adept in the art veter'nary.

"But first of your pain let's examine the  
cause—  
The horse launch'd his heels, and no kick  
could be kinder,

It crush'd to a mummy the hypocrite's jaws,  
And dash'd from their sockets each holder  
and grinder.

"All this I deserve," said the Wolf full of  
saddness:  
"In the trade of a butcher I'd been quite at  
home, ah!

"To change my profession was absolute mad-  
ness—  
"Who dares kill a patient without a diploma!"

We have only to add, that there are  
some smart notes, of a political de-  
scription.

*The Italian School's of Painting, with  
Observations on the present State of the  
Arts.* By the Rev. J. T. James.  
London, 1820. 8vo. pp. 307.

The Arts, though they mingle themselves  
more and more with the objects of our tran-  
sient and permanent regards; and though they  
are allowed, by every reflecting mind,  
to be as essential to the improvement of national  
taste, as requisite with commercial advan-  
tages, are yet far too generally considered as  
gratuitous ornamental appendages, exhibited  
among the sights and amusements of the day,  
to be enjoyed at a small expence, and for-  
gotten, like the rest of the routine of fashion-  
able time-killing.

This species of show, it has been observ-  
ed, brings us acquainted with works of art,  
and gives a stimulus to the talents of the  
native artist; and in aid of this, works tend-  
ing to illustrate the principles of painting,  
or to make us acquainted with the history of  
its professors, have occasionally appeared.  
Mr. James's work, with some introductory  
observations on the present state of painting  
at home and abroad, is principally confined  
to the rise and progress of the arts in Italy,  
interspersed with anecdotes of the different  
masters of the Italian schools, which schools  
are divided into those of Florence, Sienna,  
Rome, Naples, Venice, Mantua, Modena,  
Parma, Cremona, Milan, Bologna, Ferrara,  
Genoa and Piedmont, and Savoy.

By a work of this kind, it cannot be ex-  
pected that much public interest should be  
excited; though, limited to the artist and to  
the amateur, it will afford much gratifica-  
tion, and many useful hints.

In the arrangements of the different mas-  
ters according to the periods in which they  
flourished, we are brought acquainted with  
the names of some of whose existence we  
had never heard. Yet it is desirable to  
confine the attention to the leading masters  
of the several schools; for, as the author ob-  
serves, each of these gave rise to crowds of  
imitators, more or less successful; and a  
multitude of names and dates, however ne-  
cessary to historical records, adds only to  
the confusion of ideas, instead of affording  
a distinct view of the various styles: indeed,  
this can hardly be obtained without visible  
examples. With something of this practi-  
cal knowledge, the arrangement of the au-  
thor, and the pains he has taken to elass the  
Italian masters under their several dates and  
schools, will not be lost; neither, we trust,  
will the observations thrown out in many  
parts of the work.

One of the causes by which the decline of  
art is marked, is that of imitation, or the  
servile practice of following the manner of  
some particular school or master. It is not  
very easy to fix the bounds by which this  
practice should be regulated, it being, in  
many instances, an involuntary process, in  
which the mind is unconscious of any pecu-  
liar aim; and in some cases, (in opposition  
to the rule) the leading masters themselves  
have derived the greatest advantages from  
adopting the style of contemporary talent.

An able critic has observed, that the English school of painting is little, if at all, shackled with any sort of prescriptive imitation. Its character, like that of its country, follows no guide, but that which is directed by principles, and such only as are necessary to a just and suitable imitation. Hence that variety which distinguishes its exhibitions and galleries, and the consequence of which is that the pleasure of looking upon works of art remains unsated.

At what period the arts in this country will be allowed to have reached their climax, and from whence their decline shall be dated, is not very easy to say, any more than what can render their encouragement permanent. A love and taste for the arts among the opulent must afford something on which to build a hope; and it might be imagined, that when its patrons themselves enter upon its practice, that a proper appreciation of merit would be followed by discrimination and encouragement; unless, indeed, competition should interfere, in which case it may place the artist and the patron in the attitude of rivals, as we have seen in that of a master and his pupil. We do not here speak of the professional practitioner, for in that instance it is a necessary consequence, and only the struggle of emulation. But when the amateur is to divide the praise with the artist, he will not be apt to let any works beside his own interfere with, or break in upon exclusive commendation.

We cannot perhaps better explain this than by an anecdote.

A young lady in the country, from the display of her performances, was considered to be a tolerably good artist. She had received much instruction, and more praise. Her drawings, hung up, were admired by all. They were the theme on which her parents never tired.

"And did your daughter, madam, draw this—and this too—and this, and this?"

"All, all," was answered in the affirmative.

Now it happened on a day, when these praises and anecdotes were going on, that the master was present; and whether his wits or his discretion had taken flight, we know not, but only conclude it must have been so; for he was silly enough to put in for his share of praise, by claiming the greater part of the works as his own.

The result may be easily anticipated. The pupil was rendered insignificant—the instructor dismissed.

The arts may, in some instances, be in this predicament: the practical connoisseur may have no objection to making a collection from the old masters, but he may not so readily admit contemporary talent to mingle with his own.

A knowledge of the principles of the arts, as making a part of polite education, is far more likely to afford a just and adequate patronage.

Mr. James's work concludes with a brief history of the schools of sculpture, with observations on the styles of the different masters, tracing them from the grand and simple of M. Angelo, to the picturesque, (as he

calls it) of Bernini and his imitators, all of whom fell into this false style, with the exception of Du Fresnoy, better known by the name of il Fiamingo, on whose merits, as well as those of Benvenuto Cellini, he might have given more ample details. The works of the former are, perhaps, best compared with the forms of Corregio; and the life of the latter would have afforded great scope for observation and anecdote.
